ORGANIZATIONAL MAINTENANCE MANUAL

M48A5 TANK CHASSIS, TRANSPORTING: FOR BRIDGE, ARMORED-VEHICLE-LAUNCHED; SCISSORING TYPE, CLASS 60 (5420-01-076-6096)

<u>DISTRIBUTION STATEMENT A</u>. Approved for public release; distribution is unlimited.

CARBON MONOXIDE POISONING CAN BE DEADLY

Carbon monoxide is a colorless, odorless, deadly poisonous gas, which when breathed deprives the body of oxygen and causes suffocation. Exposure to air contaminated with carbon monoxide produces symptoms of headache, dizziness, loss of muscular control, apparent drowsiness and/or coma. Permanent brain damage or death can result from severe exposure. Carbon monoxide occurs in the exhaust fumes of fuel-burning heaters and internal-combustion engines and becomes dangerously concentrated under conditions of inadequate ventilation. The following precautions must be observed to make sure of the safety of personnel whenever the personnel heater, main or auxiliary engine of any vehicle is operated for maintenance purposes or tactical use.

- 1. DO NOT operate heater or engine of vehicle in an enclosed area unless the area is ADEQUATELY VENTILATED.
- 2. DO NOT idle engine for long periods without maintaining ADEQUATE VENTILATION in personnel compartments.
- 3. DO NOT drive any vehicle with inspection plates, cover plates, or engine compartment doors removed unless necessary for maintenance purposes.
- 4. BE ALERT at all times during vehicle operation for exhaust odors and exposure symptoms. If either are present, IMMEDIATELY VENTILATE personnel compartments. If symptoms persist, remove affected personnel from vehicle and treat as follows: expose to fresh air; keep warm; DO NOT PERMIT PHYSICAL EXERCISE.

THE BEST DEFENSE AGAINST CARBON MONOXIDE POISOING IS ADEQUATE VENTILATION.

For artificial respiration, refer to FM 4-25.11.

WARNING

HIGH VOLTAGE Used in the operation of this equipment

DEATH ON CONTACT May result if personnel fail to observe safety precautions.

Never work on electronic equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When **a** technician is aided by operators, he must warn them about dangerous areas.

Whenever possible, the master battery switch and battery ground straps should be either turned off or disconnected before beginning work on the equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Before you work around tracked vehicles, remove rings, bracelets, and wristwatches. These items may be caught on projections and cause injury or may be shorted across an electrical circuit and cause severe bums and electrical shock.

For artificial respiration, refer to FM 5-25.11.

WARNING

HAZARDOUS NOISE

- 1. Hearing protection (helmet) required.
- 2. Double hearing protection (helm et and ear plugs) required on road marches at speeds over 15 mph.

The following summary list is adapted from the warnings within this volume. However, all warnings should be observed as noted in the text.

Hold up rear drain valve seat when removing last screw attaching valve seat to hull floor. Valve seat is heavy and can cause injury if it falls.

Hold up front drain valve cage assembly when removing last screw attaching cage to hull. Valve assembly may fall and cause injury if cage is not held up.

Handle charged fire extinguisher cylinders with care. Do not jar or subject cylinders to temperature above 140 degrees F (60 degrees C).

Driver's hatch weighs approximately 130 pounds. Do not try to lift it alone.

The unit commander or senior officer in charge of maintenance personnel assigned to remove and dispose of contaminated gas filters must prescribe necessary protective clothing to be worn when replacing gas particulate filters. He must also prescribe necessary safety measures to be performed before new gas filters are installed.

Contaminated gas particulate filters must be handled in accordance with FM 3-5 and must be disposed of by trained personnel.

Dry Cleaning Solvent P-D-680 is toxic and flammable. To avoid injury, wear protective goggles and gloves and use in a well-ventilated area. Avoid contact with skin, eyes, and clothes, and do not breathe vapors. Do not use near open fire or excessive heat. The flash point for Type I Dry Cleaning Solvent is 100°F (38°C), and for Type II is 138°F (50°C). If you become dizzy while using Dry Cleaning Solvent, get fresh air immediately and get medical aid. If contact with eyes is made, wash your eyes with water and get medical aid immediately.

Compressed air used for general cleaning purposes will not exceed 30 psi. Use only with effective chip guarding and personal protective equipment (goggles, face shield, gloves, long sleeves, etc.).

Failure to correctly connect brake quick disconnect will result in brake failure and could cause serious injury or death.

TECHNICAL MANUAL

HEADQUARTERS DEPARTMENT OF THE ARMY WASHINGTON, D.C., 20 November 1981

ORGANIZATIONAL MAINTENANCE MANUAL M48A5 TANK CHASSIS TRANSPORTING FOR

BRIDGE, ARMORED-VEHICLE-LAUNCHED, SCISSORING TYPE, CLASS 60 (NSN 5420-01-076-6096)

REPORTING OF ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this publication. If you find any mistakes or if you know of a way to improve the procedures, please let us know. Submit your DA Form 2028 (Recommended Changes to Publications and Blank Forms) through the Internet, on the Army Electronic Product Support (AEPS) website. The Internet address is https://aeps.ria.army.mil. The DA Form 2028 is located under the Public Applications section in the AEPS Public Home Page. Fill out the form and click on SUBMIT. Using this form on the AEPS will enable us to respond quicker to your comments and better manage the DA Form 2028 program. You may also mail, fax, or e-mail your letter or DA Form 2028 directly to: AMSTA-LC-LPIT/TECHPUBS, TACOM-RI, 1 Rock Island Arsenal, Rock Island, IL 61299-7630. The e-mail address is ROCK-TACOM-TECH-PUBS@conus.army.mil. The fax number is DSN 793-0726 or Commercial (309) 782-0726.

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

HOW TO USE THIS MANUAL:

- Manual is divided into chapters.
- Chapters are by functional group code and are presented in same order as the RPSTL (Repair Parts and Special Tools List).
- Procedure indexes are on procedures that are four pages or more, and indicate how the procedure is set up, i.e., disassembly, removal, cleaning and inspection, etc.
- All references within this technical manual refer to page numbers.
- Steps are numbered and are to be performed in that order.
- Be sure to read all NOTES, WARNINGS, and CAUTIONS.
- Locator views are included wherever necessary. These will help you locate the item which the procedure is referencing.
- Jagged circle (♂) on locator (A) indicates a cutout and means the item is inside the vehicle.
- A (\sim) symbol represents the outside surface (B) of a piece of equipment that cannot be shown in its entirety.
- Callouts are shown by a circle with a letter inside.
- Locator arrows (C) are black, and mechanical motion arrows (D) are white.
- Broken leader arrow (---) indicates the item is either inside or under the tank and cannot be seen.

HOW TO USE THIS MANUAL - Continued

- An illustrated list of manufactured items includes complete instructions for making items authorized to be manufactured or fabricated and used at organizational maintenance.
- A maintenance information index lists all parts subject to maintenance tasks. It provides the location of all maintenance tasks related to a component in this manual.
- Certain sections of the manual have detailed "how to use" instructions at the beginning of the section - for example: troubleshooting.
- As a general maintenance practice, throw away all removed lockwashers, locknuts, o-rings, preformed packing, and cotter pins, and replace with new lockwashers, locknuts, o-rings, preformed packing, and cotter pins at installation.

CHAPTER 1

INTRODUCTION

Section I. GENERAL INFORMATION

SCOPE

Type of Manual: Organizational Maintenance.

Model Number and Equipment Name: M48A5 Tank Chassis, Transporting, for Class 60 Scissoring Type, Armored-Vehicle-Launched Bridge (M48A5 AVLB).

Purpose of Equipment: Provide a transportable bridge that can be launched and retrieved while providing maximum ballistic protection for the crew.

MAINTENANCE FORMS, RECORDS, AND REPORTS

Department of the Army forms and procedures used for equipment maintenance will be those prescribed by PAM 750-8, The Army Maintenance Management System (TAMMS).

REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR's)

If your M48A5 AVLB needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about our equipment. Let us know why you don't like the design. Tell us why a procedure is hard to perform. Put it on an SF 368 (Product Quality Deficiency Report). Mail it to: Commander, U.S. Army Tank-Automotive Command, AMSTA-Q, Warren, MI 48397-5000. Well send you a reply.

USE OF ENGLISH AND METRIC SYSTEM UNITS

Torque values specified in this manual are expressed in pound feet (lb-ft) or pound inches (lb-in.) followed by the metric equivalent in parentheses. The metric equivalent is expressed in system international units Newton meters $(N \cdot m)$. The metric system and equivalents conversion table is located on inside back cover of this manual.

DESTRUCTION OF ARMY MATERIEL TO PREVENT ENEMY USE

Refer to TM 750-244-6 for instructions on destruction of materiel to prevent enemy use.

ADMINISTRATIVE STORAGE

Refer to DA PAM 310-1 for instructions on administrative storage.

QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

a. No particular quality assurance or quality control manual pertains specifically to the M48A5 AVLB.

b. Defective material received through the supply system should be reported on SF 369, Product Quality Deficiency Report (QDR). Instructions, for preparing QDR's are provided in AR 702-7, Reporting of Quality Deficiency Data. QDR's should be mailed to: Commander, U.S. Army Tank-Automotive Command, ATTN: AMSTA-Q, Warren, Michigan 48397-5000. A reply will be furnished directly to you.

Section II. EQUIPMENT DESCRIPTION AND DATA

PURPOSE OF THE M48A5 ARMORED VEHICLE BRIDGE LAUNCHER

Capabilities and Features

- Provides a transportable bridge that can be launched and retrieved.
- Suited to a nuclear environment because armor protection reduces effects of blasts and radiation.
- Can be dispersed and concentrated rapidly over great distances.
- Provides deep penetration due to mobility and flexibility.
- Provides close combat vehicle support.
- Major components:
 - 1. Hull
 - 2. Power train
 - 3. Fuel system
 - 4. Air intake system
 - 5. Exhaust system
 - 6. Cooling system
 - 7. Electrical system
 - 8. Tracks and suspension
 - 9. Personnel heater
 - 10. Steering and shifting controls
 - 11. Accelerator controls
 - 12. Brake controls
 - 13. Fixed fire extinguisher system

LOCATION AND DESCRIPTION OF EXTERNAL COMPONENTS

(A) FIXED FIRE EXTINGUISHER HANDLE

Permits crew to release first and second shot of $C0_2$ into the engine compartment in the event of a powerplant fire.

(B) GRILLE DOORS

Provides access to engine and powerplant.

(C) PINTLE

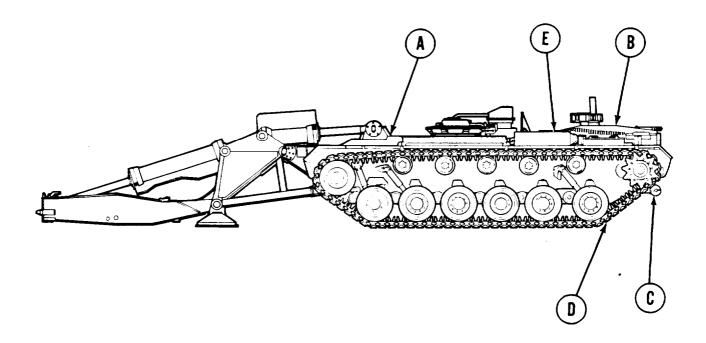

Permits attaching tow bar for towing or recovery of disabled vehicles.

(D) TRACK AND SUSPENSION

Includes transverse torsion bar type suspension which, by means of individually suspended roadwheels that are supported by support arms splined to torsion bars, gives optimum riding characteristics over all types of terrain.

(E) AIR CLEANER

Filters engine combustion air prior to delivery to engine turbocharger. Draws air through air intake screen. Removes larger dust particles in precleaned section and exhausts them by blower motor. Removes finer particles by surface-type air filter.

LOCATION AND DESCRIPTION OF INTERNAL COMPONENTS (1 of 2)

(A) TRANSMISSION

Transmits engine power to the final drives to move the vehicle. The transmission has two forward ranges, low and high, and one reverse range.

(B) UNIVERSAL JOINT

Transmits power from transmission to final drives. There is one universal joint on each side of the transmission.

(c) ENGINE WITH POWER TAKEOFF

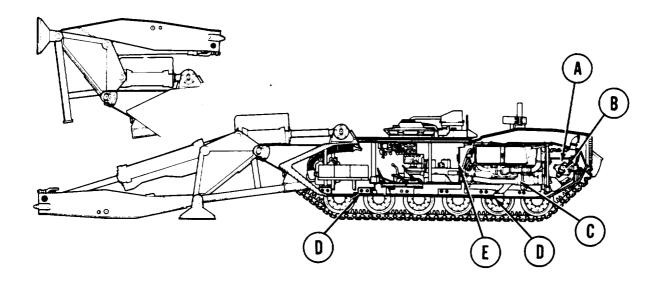

Provides power to move vehicle. Provides power to drive hydraulic pump.

(D) HULL DRAIN VALVES

Provides means for draining any water accumulated.

(E) ENGINE AIR CLEANER INTAKE

Provides means of drawing air from crew compartment for air cleaners. This is usually done during fording or during operation under dusty or sandy conditions.

LOCATION AND DESCRIPTION OF INTERNAL COMPONENTS (2 of 2)

(F) DRIVER'S CONTROL PANELS

Provides driver with means of monitoring all systems during vehicle operation. The panels are mounted to the right of the driver's station.

(G) BATTERIES

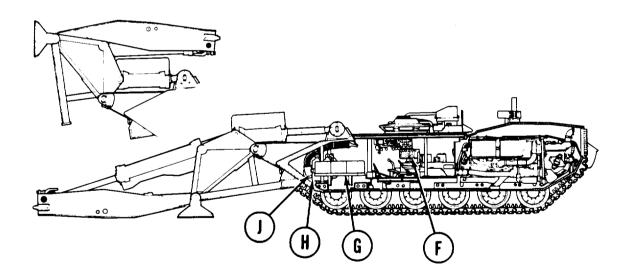

The six vehicle batteries are located forward of the operator on the hull floor, three on either side of the vehicle. They supply a 24-volt power source for the vehicle electrical system.

(H) FIXED FIRE EXTINGUISHERS

Provides a first and second shot of $C0_2$ into the engine compartment in the event of a powerplant fire.

(J) PERSONNEL HEATER

Provides heated air to hull and turret for crew comfort during cold temperatures. Heater is turned on by a switch located on driver's control panel.

TM 5-5420-226-20-1

LOCATION OF DATA PLATES

Refer to TM 5-5420-226-10 for location of data plates.

CHAPTER 2

PRINCIPLES OF OPERATION

Section I - FUNCTIONAL DESCRIPTION

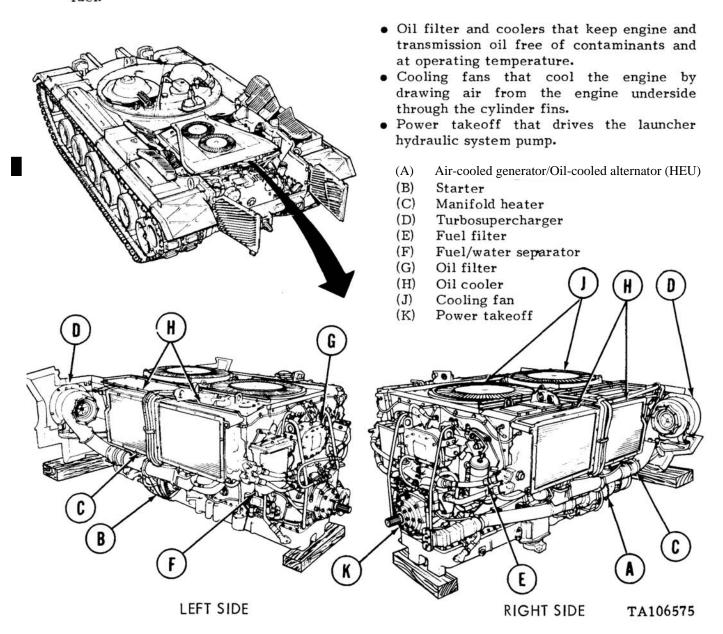

This chapter contains functional descriptions of engine and hull systems allocated to organizational maintenance, describing how the systems operate and how the systems relate to other equipment systems of the engine and hull. Systems described in section 2 are:

Engine
Fuel system
Exhaust system
Cooling system
Electrical system
Transmission
Final drive system
Braking system
Tracks and suspension system
Steering system
Hull-interior and exterior
Personnel heater system
Speedometer and tachometer
Fixed fire extinguisher system
Engine smoke generating system

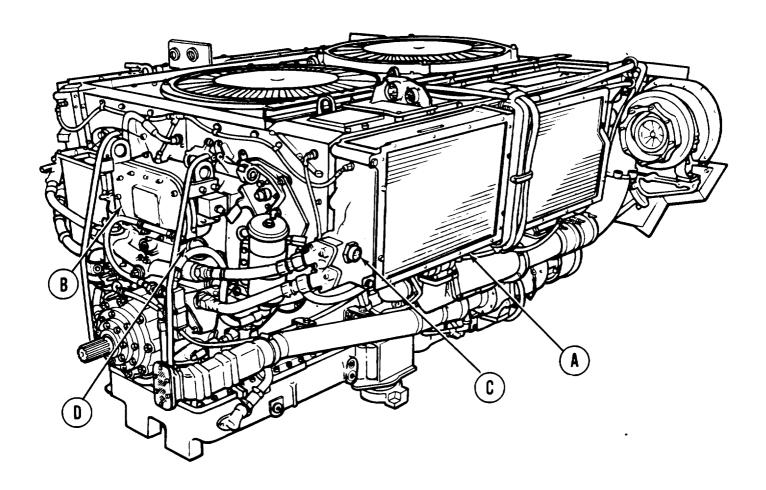

Section II - SYSTEMS OPERATION

ENGINE. The M48A5 AVLB is equipped with a Continental Model AVDS-1790-2D, that is a 12 cylinder, 90°, V-type, 4 cycle, air cooled, turbosupercharged diesel engine. Features of the engine include:

- 28-volt direct current air-cooled generator that provides vehicle electrical power.
- 28-volt direct current oil-cooled alternator that provides vehicle electrical power (HEU Configuration).
- 28-volt solenoid operated starter with circuitry that prevents starter activation when vehicle batteries are improperly charged.
- Intake manifold heaters that preheat intake air for easier cold weather starting.
- Turbosuperchargers that increase air intake pressure to produce a high density air that increases engine power.
- Fuel filter and fuel/water separator that remove contaminants and water from the diesel fuel.

ENGINE LUBRICATION SUBSYSTEM. Forced feed system, drawing oil from oil pan. Oil is forced through engine oil coolers and oil filter to engine oil galleries, bearings, turbosuper-chargers, fuel injection pump, and piston cooling spray jets. A pressure relief valve returns incoming excess unfiltered oil to oil pan. Oil filter and oil cooler bypass valves permit oil to bypass filters if clogged. Engine and transmission oil cooling is accomplished by external oil coolers on sides of engine. Valves in each cooler control oil temperature.

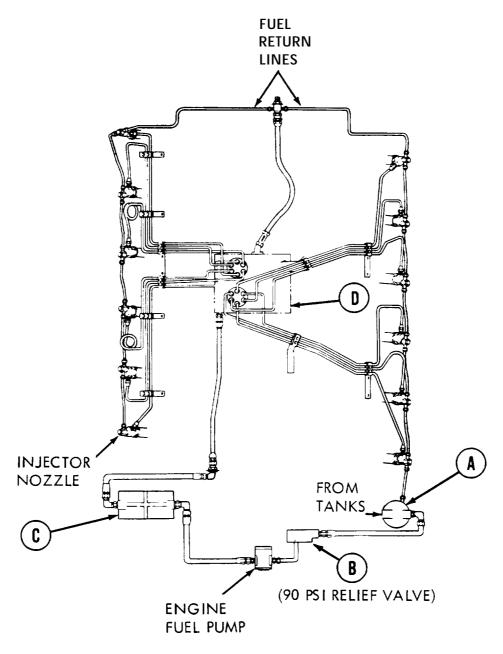

- (A) OIL COOLER
- (B) OIL FILTER
- (C) OIL COOLER BYPASS VALVE
- (D) OIL FILTER BYPASS VALVE

TM 5-5420-226-20-1

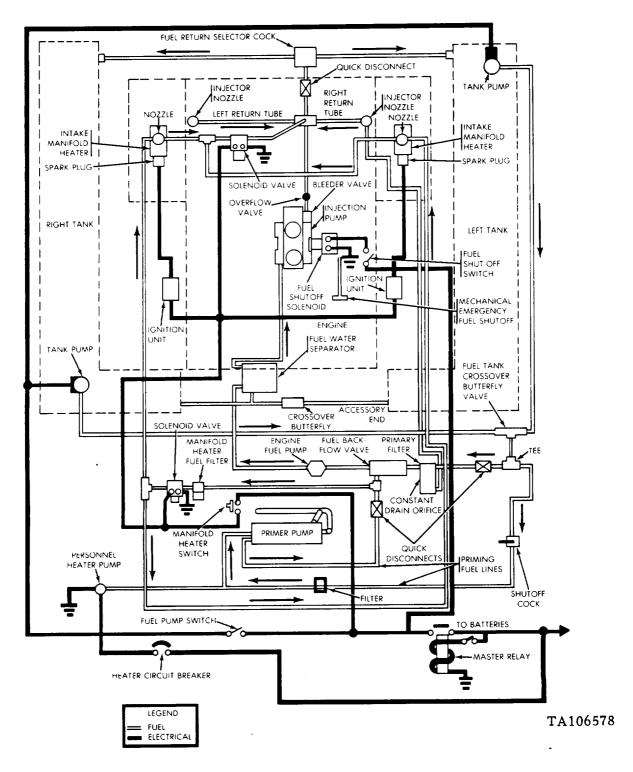

SYSTEMS OPERATION - Continued

ENGINE FUEL SYSTEM. Fuel flows from tanks to primary fuel filter, through main fuel check valve to engine-driven, vane-type fuel pump that increases fuel pressure to fuel injector pump. Fuel from engine fuel pump is filtered through fuel-water separator into fuel injector pump that delivers accurately measured quantities of fuel under high pressure to each cylinder.

- (A) PRIMARY FUEL FILTER
- (B) FUEL BACKFLOW VALVE
- (C) FUEL-WATER SEPARATOR
- (D) FUEL INJECTOR PUMP

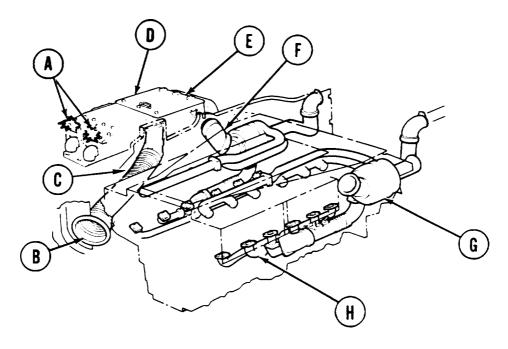

FUEL SYSTEM. Three functions: carrying fuel supply, supplying fuel to engine, supplying fuel to personnel heater and engine air intake manifold heaters. Air intake system consists of air cleaners, fans, turbosuperchargers, hoses, and intake manifolds and heaters. Accelerator controls and linkages are a major part of this system.

TM 5-5420-226-20-1

SYSTEMS OPERATION - Continued

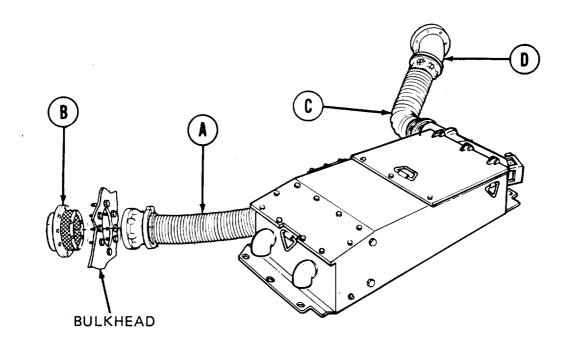

AIR CLEANER ASSEMBLY. Exhaust-driven turbosupercharger draws air from crew or engine compartment to air cleaners where two centrifugal fans clean air in primary separator stage. Air is drawn into dry-type, layer-filtration filters and is drawn through outlet hoses into turbosupercharger and forced into engine air intake manifolds.

AIR INTAKE SYSTEM

- (A) AIR CLEANER BLOWER FANS
- (B) ENGINE AIR INTAKE
- (c) AIR INTAKE HOSE
- (D) AIR CLEANER
- (E) DRY-TYPE FILTER UNIT
- (F) AIR OUTLET HOSE ASSEMBLY
- (G) TURBOSUPERCHARGER
- (H) AIR INTAKE MANIFOLD

AIR CLEANER HOSES AND SCREENS. Air cleaner intake hoses draw air from crew compartment to air cleaner through screen on reversible air intake mounted in bulkhead. Air outlet hoses direct filtered air from air cleaners to turbosuperchargers.

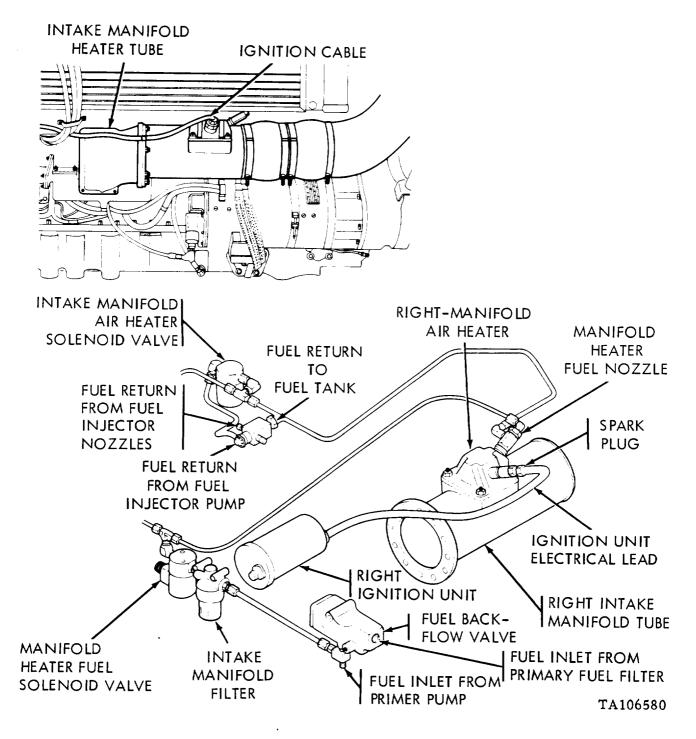

- (A) AIR INTAKE HOSE
- (B) REVERSIBLE AIR INTAKE
- (C) AIR OUTLET HOSE
- (D) AIR CLEANER TO TURBOCHARGER ELBOW

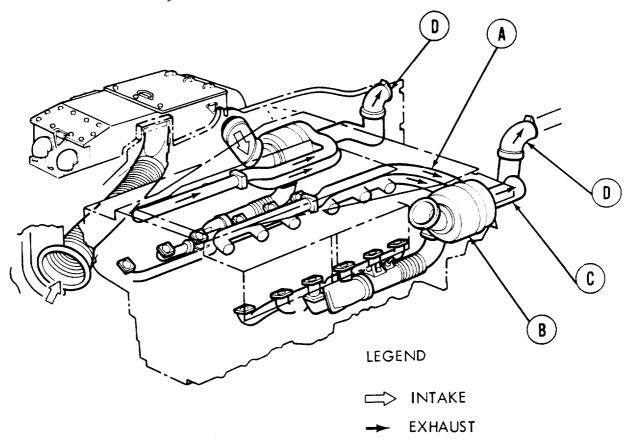

TM 5-5420-226-20-1

SYSTEMS OPERATION - Continued

MANIFOLD HEATER. Manifold heater fuel system uses plastic and steel tubing to supply fuel from the primer pump pressure fuel line through the manifold heater fuel filter and manifold fuel heater solenoid valve to manifold heater nozzles. Excess fuel from nozzles is returned through intake manifold air heater solenoid valve to engine fuel return system. Heaters mounted on intake manifolds use a spark plug to ignite and burn pressurized engine fuel to provide heated air for cold weather starting.

EXHAUST SYSTEM. Exhaust gases from cylinders travel through a pair of exhaust manifolds into exhaust-driven turbosuperchargers and gases are expelled into a pair of exhaust pipe assemblies that conduct gases upward through transmission shroud into outlet elbows, out engine exhaust doors and away from vehicle.

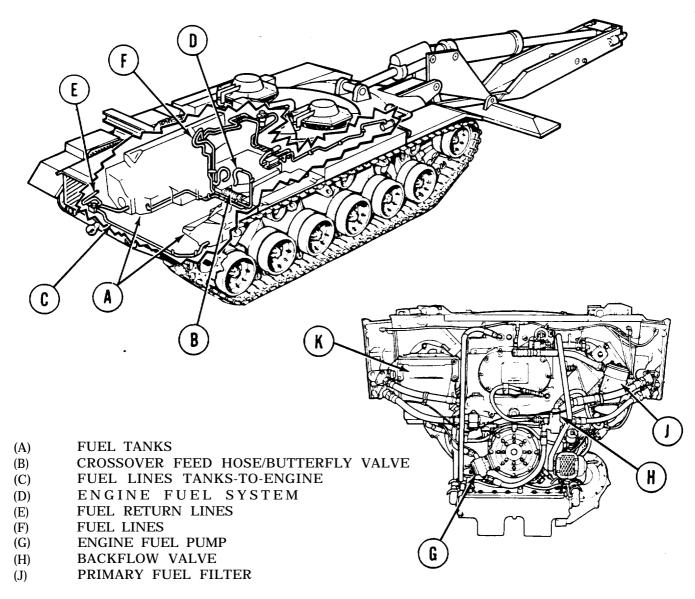

EXHAUST SYSTEM

- (A) EXHAUST MANIFOLD
- (B) TURBOSUPERCHARGER
- (C) EXHAUST PIPE
- (D) EXHAUST OUTLET ELBOW

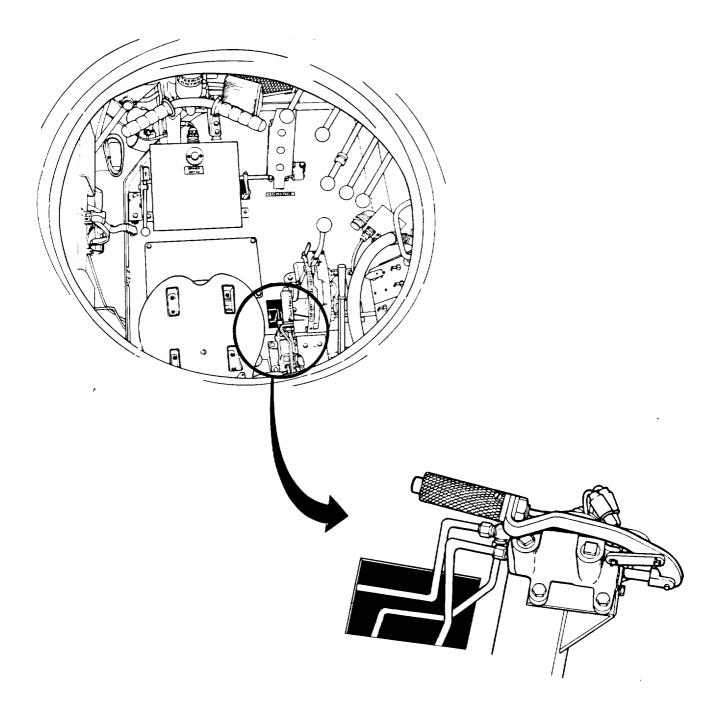

TM 5-5420-226-20-1

SYSTEMS OPERATION - Continued

FUEL TANKS AND DISTRIBUTION SYSTEM. Two alum inure fuel tanks, one on either side of engine compartment, are interconnected by a flexible cross-feed hose fitted with a butterfly valve. Hose and valve are located beneath turret subfloor. Twelve stainless steel fuel lines: carry fuel under pressure from fuel pumps on fuel tanks to fuel injector nozzles in each cylinder head. Fuel leakage from nozzles is carried through fuel return tubes on each cylinder back to fuel return system to fuel tanks. Flexible fuel hoses and tubing are interconnected to carry fuel to powerplant and personnel heater. Electric fuel pumps in each tank force fuel through fuel lines to engine fuel system. Backflow valve between engine fuel pump and primary fuel filter retains fuel in engine fuel lines when engine is shut off.

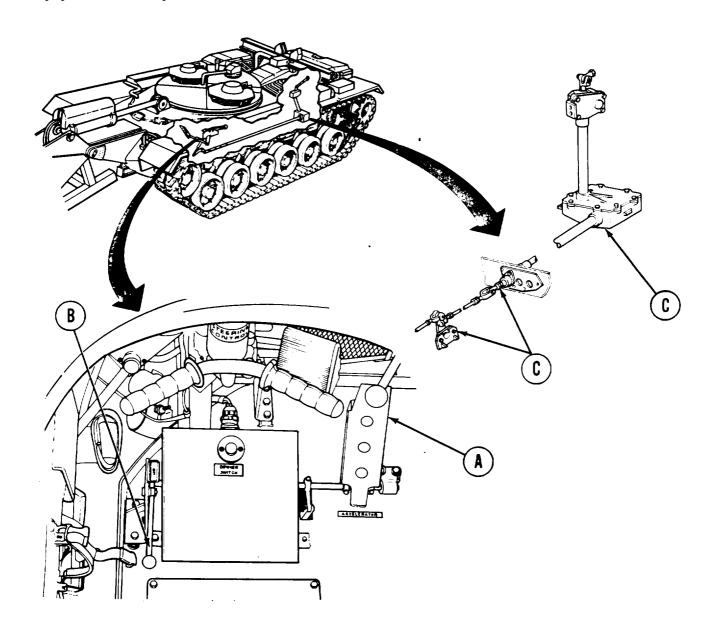

PRIMER PUMP. Provides pressurized fuel into engine fuel lines by driver-operated manual pump. Fuel is forced into manifold heater fuel lines and pump also purges fuel system of air. Air is forced into fuel tanks. Button on pump handle activates spark plugs on manifold heater system.

TM 5-5420-226-20-1

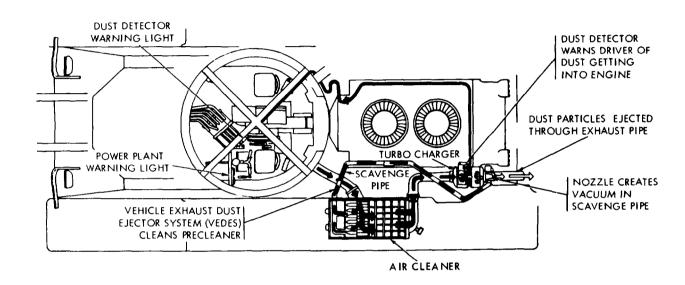

SYSTEMS OPERATION - Continued

ACCELERATOR CONTROLS. Engine speed is controlled by accelerator control pedal and an accelerator lock connected to engine by a series of mechanical linkage. Accelerator linkage passes along hull floor and is connected with a yoke to an eye connection on engine accelerator linkage. Adjustable return spring, mounted on accelerator linkage, returns pedal to up position when pedal or accelerator lock is released.

- (A) ACCELERATOR PEDAL
- (B) ACCELERATOR LOCK LEVER
- (C) ACCELERATOR LINKAGE

VEHICLE EXHAUST DUST EJECTOR SYSTEM (VEDES). The vehicle exhaust dust ejector system (VEDES) replaces the air cleaner centrifugal fans. The air cleaner housing is modified to plug the fan exhaust elbows and to accommodate a tube manifold with its associated hoses, clamps, and mounting bracket installed in place of the fans. A system of dust scavenger tubes, check valves, and exhaust pipes with integral dust ejectors is mounted along each cylinder bank above and parallel to the engine and transmission oil coolers. VEDES scavenges dust from the precleaned section of the air cleaners through suction action of the exhaust ejectors.

DUST DETECTOR SYSTEM. The Dust Detector System is to alert the driver when the air induction system allows dust to bypass the filter.

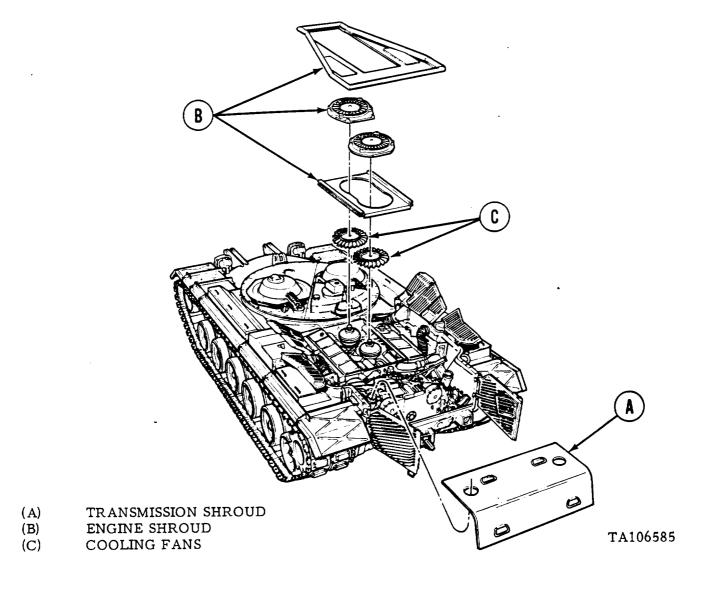

The Dust Detector System uses engine air induction manifold pressure to circulate air through filter strips in the dust detectors mounted in the turbosupercharger compressor housings. When the filter strip(s) become clogged, the resultant change in pressure actuates a pressure switch which illuminates the powerplant warning light and the dust detector warning light in the driver's compartment.

COOLING SYSTEM. Air for cooling is drawn into engine compartment through air intake grille doors by two engine-mounted fans which draw air through engine and transmission oil coolers, over cylinder fins, and discharge air vertically from engine shroud. Baffles and deflectors on cooling fan shroud direct air flow across cylinders.

TRANSMISSION SHROUD. Insulated sheet metal assembly fitting over top and rear portions of transmission.

ENGINE SHROUD. Sheet metal assembly covering top of engine, guides hot air from engine cooling fans toward rear of tank. Removed with powerplant.

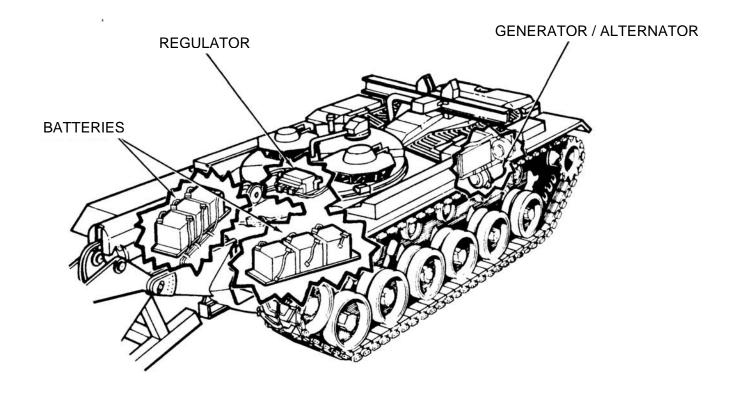

COOLING FANS. Mounted on oil-driven centrifugal clutch and disk towers on engine, fans draw air through engine and transmission oil cooler cores to cool circulated oil. Fans draw air over baffles and deflectors on engine and shroud to direct air flow across cylinders. Fans also force hot air and exhaust gases through exhaust doors.

ELECTRICAL SYSTEM. An interrelated system of electrical components, consisting of starting system; charging system (batteries and generating system); lighting, including infrared lighting; electrical controls and gages; warning lights, switches, and transmitters; and various relays. circuit breakers, switches, and receptacles, all interconnected by wiring harnesses, cables, and leads located throughout tank hull and on engine and transmission. Repair of harnesses and powerplant wiring is limited to replacement of faulty connectors and to substitution of jumper wires for defective harness wires.

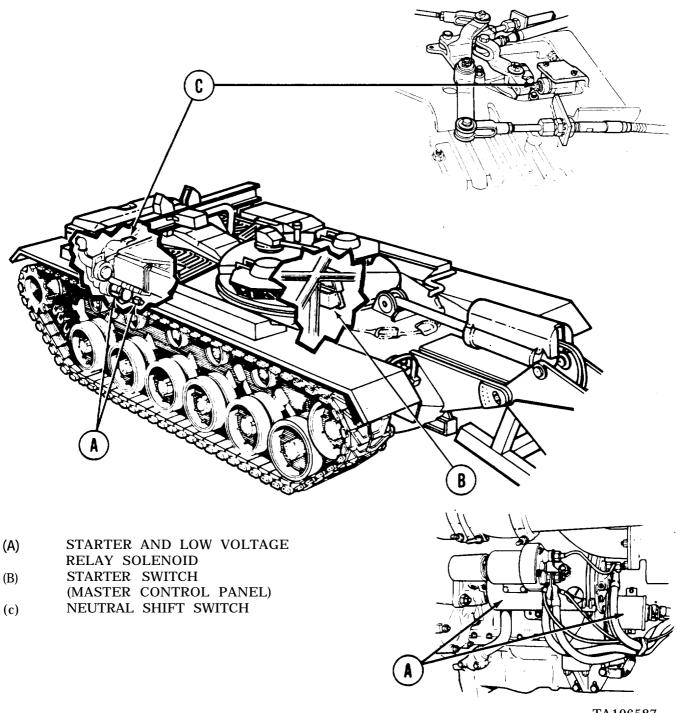

CHARGING SYSTEM. 28-volt, 300-ampere air-cooled generator produces direct current electrical output through voltage regulator to batteries. Regulator acts as reverse current relay preventing current flow back to generator when battery voltage exceeds generator output. Series parallel connected batteries supply direct current electrical power to master relay and starter relay.

CHARGING SYSTEM (HEU Configuration). 28-volt, 650-ampere oil-cooled alternator produces direct current electrical output, regulated by a voltage regulator, to batteries. Series parallel connected batteries supply direct current electrical power to master relay and starter relay.

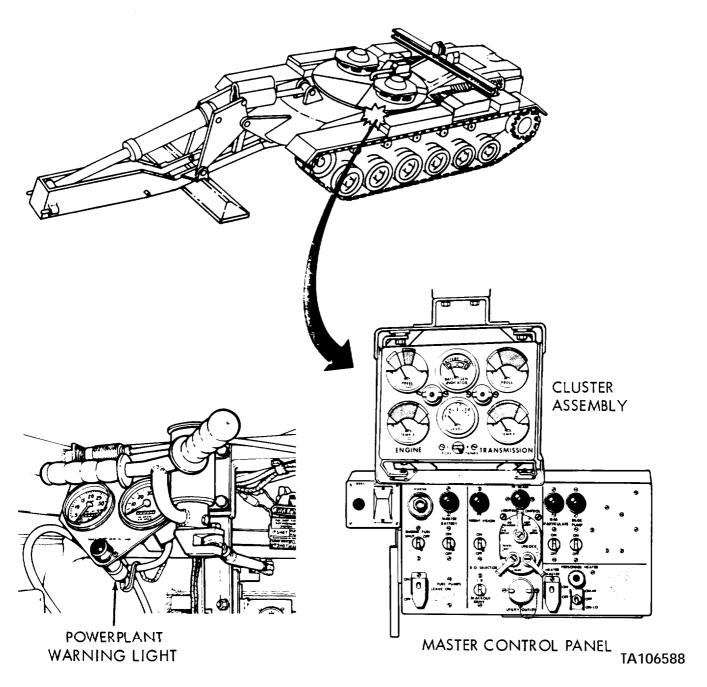

CHARGING SYSTEM

 $STARTING\ SYSTEM.\ Heavy-duty\ solenoid-operated\ starter\ is\ actuated\ by\ \textbf{a}\ starter\ button\ on$ the master control panel. Starter will not activate if neutral shift switch on transmission is not actuated by shifting linkage. Starter low-voltage relay solenoid prevents energizing starter when battery voltage is below 11.75 volts.

INDICATORS, GAGES, AND CONTROLS. Master control panel contains switches, indicator lamps, and automatic-reset circuit breakers to control operation of various systems in hull. Cluster assembly contains engine and transmission oil temperature and pressure indicators, battery-generator indicator, fuel level indicator, fuel tank level switch, and indicator lights. Variable resistance type transmitters in engine and transmission oil systems provide electrical signals to drive oil temperature and pressure indicators. Mechanically actuated rheostats connected to fuel level circuit in fuel tanks vary electrical current to fuel tank indicator. Powerplant warning light is actuated by temperature and pressure-sensitive switches on engine and transmission when oil pressure falls or temperatures are beyond safe limits.

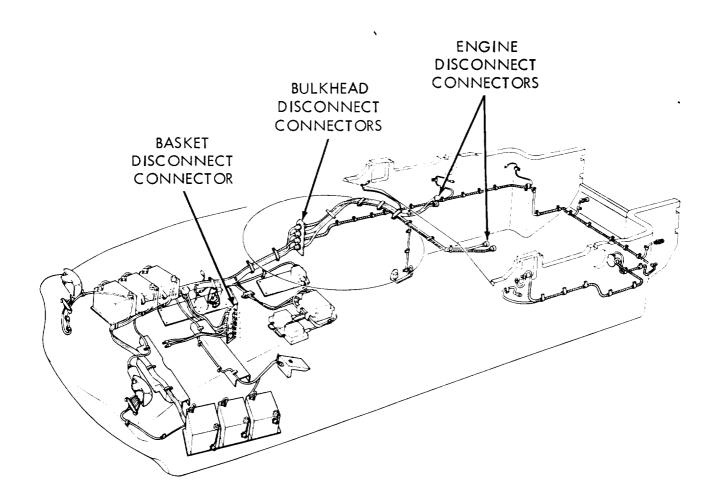

LIGHTING SYSTEM. Vehicle lighting consists of headlights and taillights that are controlled by the LIGHTING CONTROL switch on the MASTER CONTROL PANEL. Headlight assemblies have service drive and infrared-filtered blackout lamps and marker lamps. Service drive and stop lamps are in left taillight and blackout lamps are in both right and left taillights. Domelight is controlled by a three-positionswitch to select white 'or red light and turn domelight off.

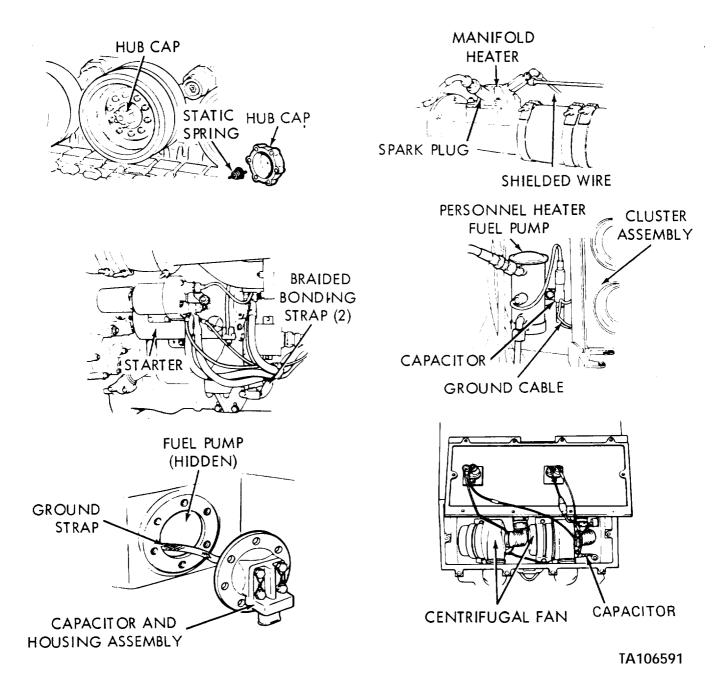

- (A) LIGHTING CONTROL (MASTER CONTROL PANEL)
- (B) TAILLIGHT-STOPLIGHT-BLACKOUT LIGHT ASSEMBLY
- (c) DOMELIGHT
 - 1. THREE-POSITION SWITCH
 - 2. WHITE LIGHT
 - 3. RED LIGHT
 - 4. DOMELIGHT RESISTOR
- (D) HEADLIGHT ASSEMBLY
 - 5. DRIVING LAMP
 - 6. INFRARED LIGHT
 - 7. BLACKOUT LIGHT

HULL WIRING HARNESSES/CONNECTORS. Various electrical components are interconnected by wiring harnesses, cables, and leads terminated in most instances by plug-in connectors and couplings. Wiring harnesses between crew and engine compartments are terminated at connector mounting plate on right side of hull interior and at the basket disconnect. Wiring harness connectors at top of engine permit quick disconnecting of starting and charging systems from powerplant.

TA10659O

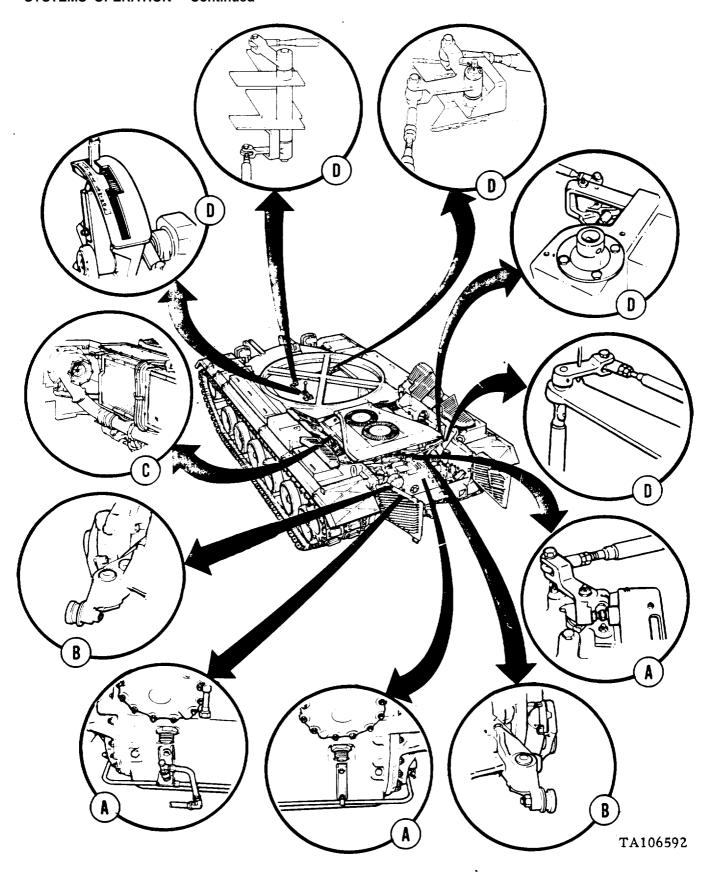

RADIO INTERFERENCE SUPPRESSION. Stray electrical currents must be prevented from building up between components and wiring harnesses to eliminate radio interference. Stray currents, if allowed to build up and spark (arc to a ground), will cause noise in and possibly disrupt, radio communications. Electrical currents can also produce signals that may interfere with vehicle equipment sensitive to small changes in power or, in extreme cases) give off signals strong enough to give away location. Interference is eliminated by providing low resistance paths to ground for stray currents and by using shielded wiring. Low resistance components include capacitors, tooth-type lockwashers, grounding springs, and braided bonding straps (ground straps).

TRANSMISSION. Cross-drive transmission is controlled by driver with steering and shifting controls and brake pedal. Transmission hydraulic torque converter multiplies engine torque providing automatically variable torque output through planetary gear sets and hydraulically operated clutches and bands to final drive units, sprockets, and tracks.

Refer to page 2-21.

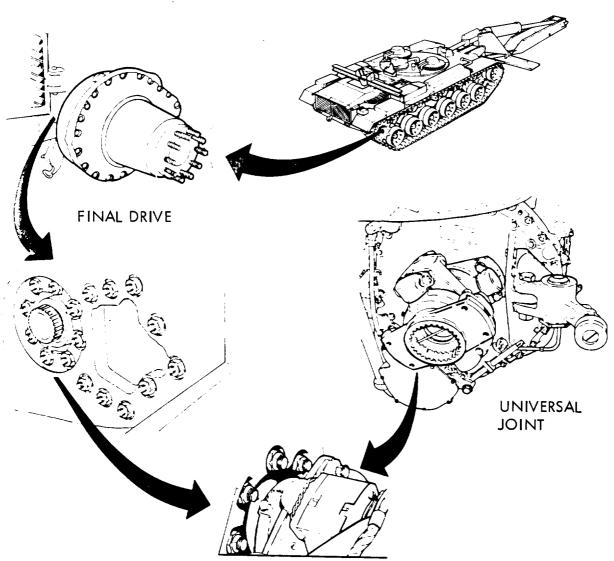

- A. TRANSMISSION ADJUSTMENTS. Adjustments are made to mechanical linkages and valves on exterior of engine.
- B. TRANSMISSION MOUNTS. Located on each side of transmission serve as powerplant installation guides and mounts.
- c. TRANSMISSION COOLING SYSTEM. Cooled oil from transmission air cooler is forced through transmission clutches and bands, through torque converter, acts as driving force in torque converter and lubricates entire transmission. Common oil reservoir supplies all systems.
- D. SHIFTING CONTROLS. Shifting controlled by shift lever through system of mechanical links to transmission shift valve that hydraulically controls transmission driving range servosystems.
- E. TRANSMISSION OIL COOLER. Oil flowing through oil coolers on each side of engine is cooled by air drawn in by engine cooling fans. Cooled oil flows through main oil supply line, and flow control thermostats in coolers stop oil circulation until oil is at operating temperature.

FINAL DRIVE AND COUPLING (UNIVERSAL JOINT). Power from two transmission output flanges is transmitted through universal joints and two final drive units and sprockets. Teeth of drive sprockets mesh with track link end connectors on both sides of track to move vehicle along track.

FINAL DRIVE. Identical single-stage, 5.08:1 gear ratio, speed reduction units. Gears operate in closed housing and are splash lubricated. Input pinion gear shaft is mated to universal joint by removable adapter. External teeth on adapter fit into internal splines in universal, and hollow shaft of adapter is splined to mate with final drive input gear shaft in final drive unit.

UNIVERSAL JOINT. Compensates for up to 7° misalinement of transmission with final drive. Splined flange connects with final drive adapter on transmission. Universal joint is bolted to transmission output flange.

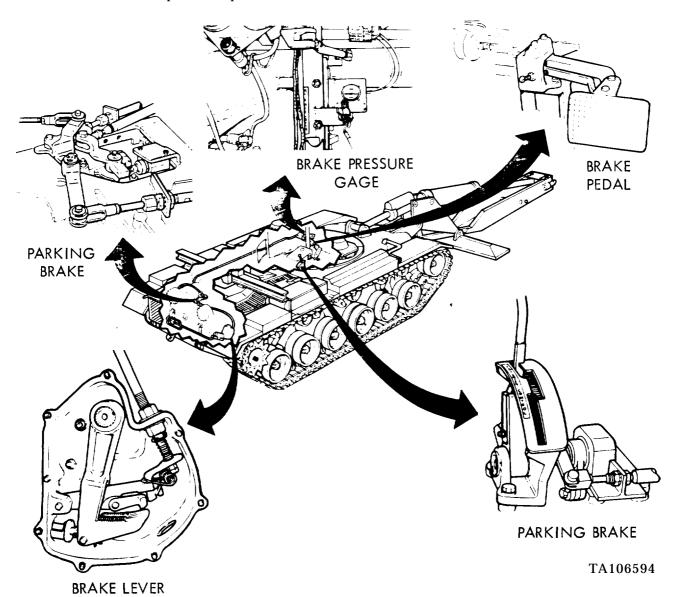

BRAKE SYSTEM. Consists of brake control pedal connected to hydraulic brake and mechanical locking arrangement for parking.

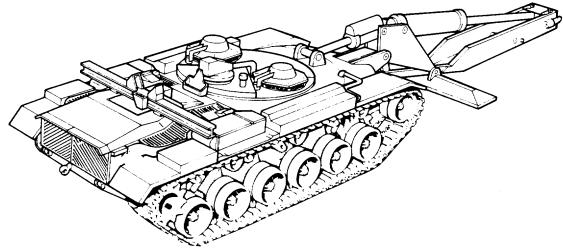

ADJUSTMENT. Brake adjusting worm on transmission end covers is used when linkages have been disturbed. Adjusting brakes is done by bleeding hydraulic system at master cylinders and slave cylinders, or by adjusting braking controls and linkages on transmission.

HYDRAULIC SYSTEM. Brake pedal mechanically linked to master cylinder forces hydraulic fluid through lines to two hydraulic slave cylinders on transmission that apply force to brake levers attached to brake apply shafts on transmission.

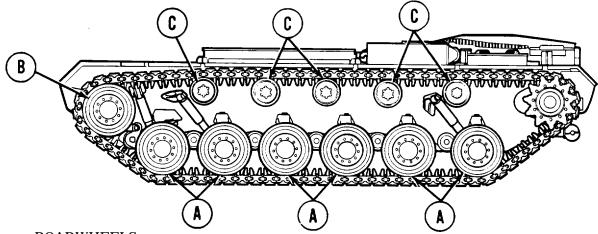

PARKING BRAKE SYSTEM. Lever and cam attached to shifting pedestal actuates cable to transmission fittings which lock brake levers by means of ratchet mechanism when shifting lever is moved into park (P) position.

TRACKS AND SUSPENSION SYSTEM. Major components of the track and suspension system are track, track support rollers, compensating idler wheels, roadwheels, track drives prockets and hub, torsion bars and anchors, compensating idler arms, track adjusting link, direct action shock absorbers, and volute bump springs.

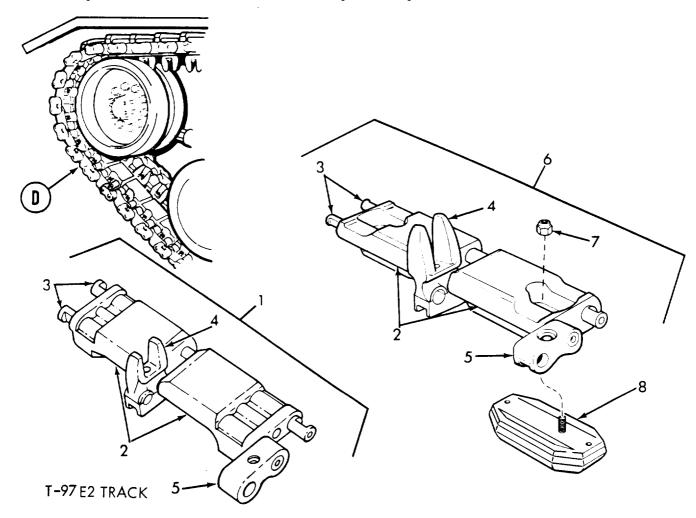

- (A) ROADWHEELS AND SUSPENSION. Twelve roadwheels, dual-mounted on six hubs, carry vehicle weight on upper surface of lower track span. Space between dual-mounted wheels is running channel for track alining centerguides. Roadwheel arms 1, 2, and 6 bear shock absorber mounts. Each arm is sprung with torsion bars.
- (B) COMPENSATING IDLER WHEELS. Identical to and interchangeable with roadwheels, serves as track alining channel for centerguides and maintains track tension by means of track adjusting link connected to roadwheel number one and idler arm which forces idler wheel forward or rearward to maintain constant tension on unloaded free portion of track.
- (C) TRACK SUPPORT ROLLERS. Five dual-mounted track support rollers on each side of vehicle support upper track span between sprockets on drive hub and compensating idler wheels. One track support roller also drives the speedometer.

- (A) ROADWHEELS
- (B) COMPENSATING IDLER WHEELS
- (c) TRACK SUPPORT ROLLERS

(D) TRACK. Composed of 80 track links fastened together with end connectors and steel centeraguides. Each link consists of two grousers, two link pins, and two rubber pads. Alinement maintained by 80 centerguides riding between dual track support rollers, dual-compensating idler wheels, dual roadwheels and through channel in track drive sprocket hub. End connectors on both sides of track form track driving chain as they pass around drive sprocket. The vehicle may be equipped with either (but not both) T-97 E2 track or T-142 track. T-97 E2 track has replaceable links and the T-142 has replaceable pads.

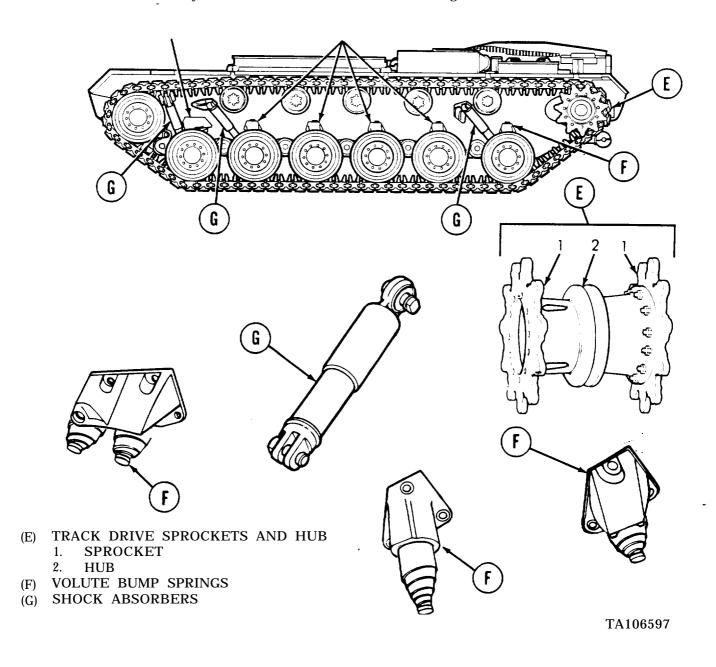

(D) TRACK

- 1. TRACK LINK T97E2
- 2. GROUSER
- 3. LINK PINS
- 4. CENTERGUIDE
- 5. END CONNECTOR
- 6. TRACK LINK T142
- 7. TRACK PAD MOUNTING NUT
- 8. TRACK PAD

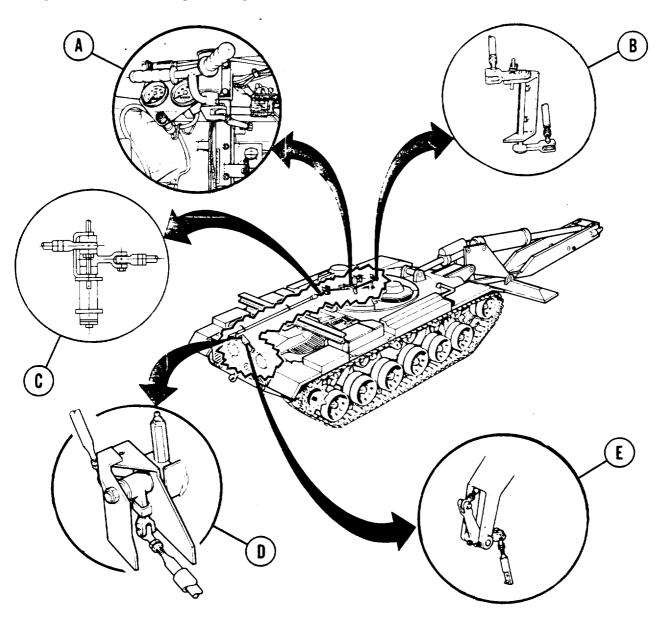

TA106596

T-142 TRACK

- (E) TRACK DRIVE SPROCKETS AND HUB. Hub transmits torque from final drive output shafts on each side of vehicle hull to sprockets bolted to hub. Sprockets mesh with end connectors on inner and outer edges of track to move track forward over track support rollers and roadwheels.
- (F) VOLUTE BUMP SPRINGS. Bump springs mounted at roadwheels 1 thru 6 on both sides of hull cushion roadwheel arms into bump stops welded to hull when arm displaced to full upward travel.
- (G) SHOCK ABSORBERS. Shock absorbers, connected to roadwheel arms 1, 2, and 6, dampen bounce and return cycles of roadwheel arms when driving over uneven surfaces.

STEERING SYSTEM. Steering control is through a T-bar handle connected to transmission by linkage passing down left side of hull interior, connecting steering handle with steer valve shaft assembly. Transmission controls track drive through hydraulic clutches and bands. Adjusting points on steering controls are at steering rod ends, clevises and linkages located in operator's station, engine compartment, and on transmission.

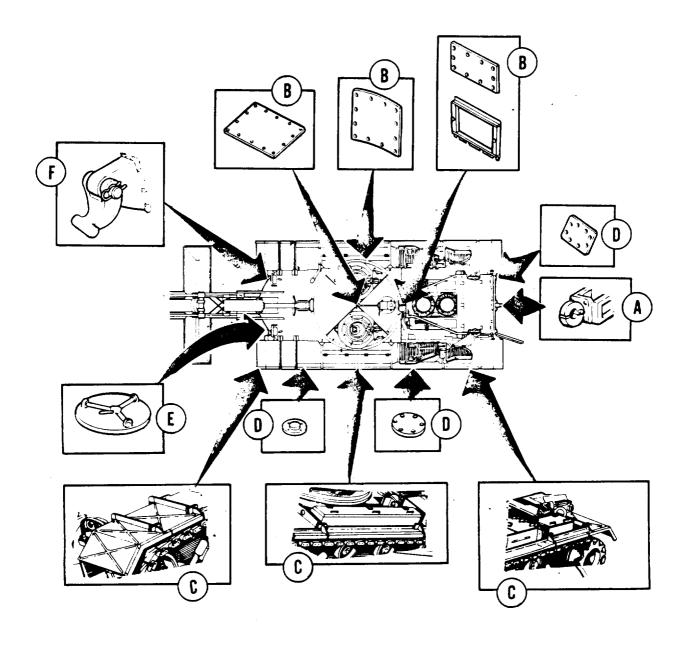

- (A) STEERING HANDLE AND MOUNT ASSEMBLY
- (B) STEERING CONTROL LEVER ASSEMBLY
- (c) STEERING CONTROL LINK ASSEMBLY
- (D) STEERING CONNECTING LINK AND SHIELD ASSEMBLY
- (E) ENGINE COMPARTMENT STEERING CONTROL LINK ASSEMBLY

TA106598

HULL-EXTERIOR. This section describes towing hooks and pintle, hull access covers, fenders and stowage boxes, hull body covers, and driver's hatches.

Refer to page 2-29.

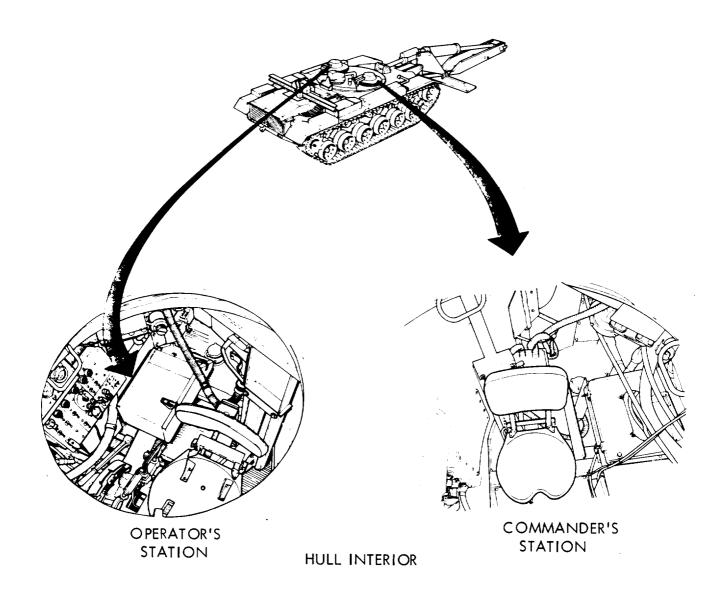

- A. TOWING HOOKS AND PINTLE. Towing cables can be attached to front or rear-mounted hooks so vehicle can be towed or used to tow another vehicle.
- B. HULL ACCESS COVERS. Provide access to various interior hull openings so maintenance work can be done on vehicle parts.
- c. FENDERS AND STOWAGE BOX ES. Stowage boxes are mounted to fenders and provide storage space for vehicle equipment and tools.
- D. HULL BODY COVERS AND HATCHES. Covers and hatches provide openings into hull from outside for maintenance, brake and transmission adjustment, and drainage.
- E. DRIVER'S ESCAPE HATCH. Driver's escape hatch located in front of driver's seat allows for quick exit in emergencies. A single-action dump handle and mechanism dumps the hatch.
- F. TOWING PINTLE MOUNTED ON REAR OF VEHICLE. Used to attach towing bar to tow another vehicle.

- (A) TOWING PINTLE
- (B) HULL ACCESS COVERS
- (c) FENDERS AND STOWAGE BOXES
- (D) HULL BODY COVERS AND HATCHES
- (E) DRIVER'S ESCAPE HATCH
- (F) TOWING HOOKS

TA106599

HULL-INTERIOR. Operator's and commander's seats are mounted on a support column. Seat can be adjusted forward and backward, and up and down, and seat back can be adjusted for comfort. Seat cushion and backrest are padded with foam rubber and covered with coated cloth. Backrest is easily removable. Entire seat assembly, including support column, is easily removable by organizational maintenance personnel. Periscope stowage boxes are mounted next to the operator's and commander's seats.

TA106600

DUCTS AND TUBES

(G)

PERSONNEL HEATER SYSTEM. Provides heater air for vehicle crew. Circulates air through vehicle in air duct system. Air flow speed is constant. Heater switch has two heater selections, low and high.

- (.4) PERSONNEL HEATER. Combustion type heater, burns same fuels as engine in a sealed heat exchanger. Combustion air and air to be heated supplied by two separate blowers on a single blower motor. Combustion air fan flows air into primary and secondary combustion air openings where air flows around circular channel in combustion chamber. Combustion products are exhausted to outside through flexible metal hose coupled through hull to metal exhaust tube mounted on right front fender.
- (B) FUEL SYSTEM. Fuel flows from personnel heater fuel pump forward of driver's station to heater where fuel flow is regulated by solenoid-actuated fuel control valve on top of heater case. Fuel control valve is controlled by personnel heater switch on master control panel.
- (c) IGNITION CONTROL. Fuel enters through two standpipes on heater and is ignited in combustion chamber by glow-plug-type igniter. Electric heating element in fuel control valve preheats fuel for cold weather starts.
- (D) FLAME DETECTOR SWITCH. Shuts off heater motor after flame in heater is established and permits blower to operate.
- (E) OVERHEAT SWITCH. Safety switch to shut off fuel flow when heater temperature exceeds safe maximum limits.
- (F) IGNITOR. A glow-plug-type igniter, ignites fuel in combustion chamber.

(G) DUCTS AND TUBES. Ventilating air blower forces air through slots in heat exchanger and circulates air through a duct and transition box assembly

(A) PERSONNEL HEATER

(B) FUEL PUMP

(c) FUEL CONTROL VALVE

(D) FLAME DETECTOR SWITCH

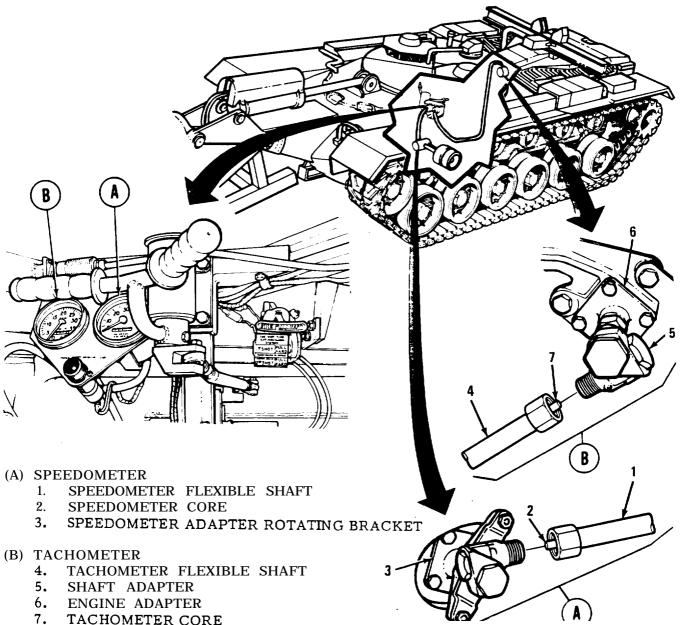

(E) OVERHEAT SWITCH

(F) IGNITER

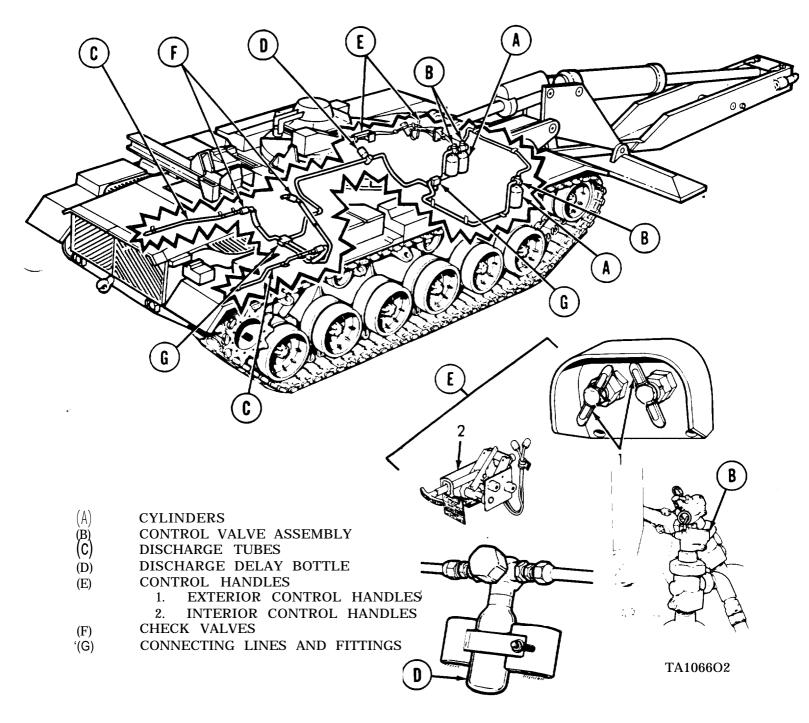

SPEEDOMETER AND TACHOMETER. Speedometer-odometer and tachometer-hours meter mount on hull roof in front of driver. Speedometer-odometer driven by shaft in left front track support roller through right-angle drive adapter driven by shaft rotating with hubcap. Tachometer-hour meter driven through flexible shaft attached to engine adapter on accessory end of engine.

SPEEDOMETER-ODOMETER. Displays speed and mileage driven.

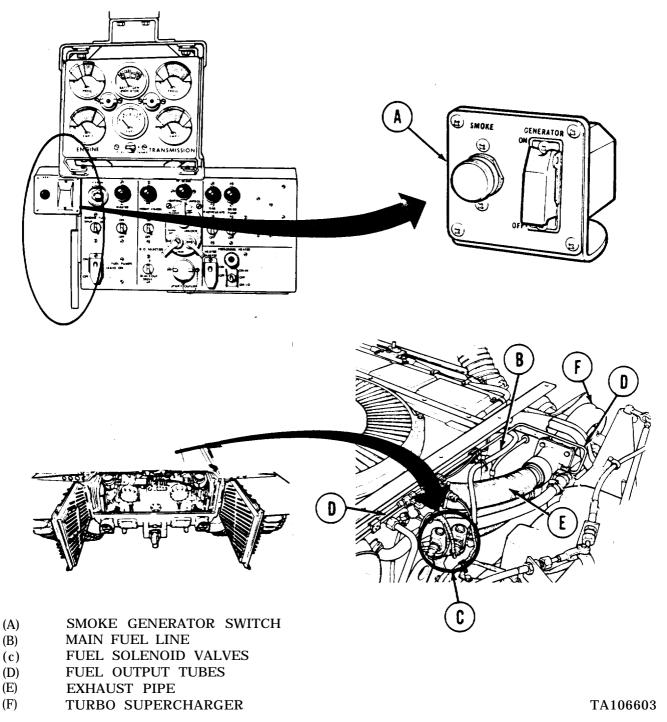

TACHOMETER-HOUR METER. Displays engine speed (RPM) and clock hours on engine based on operation at 2025 RPM.

FIXED FIRE EXTINGUISHER SYSTEM. Mounted forward of driver's station, system is a two-shot system. First shot discharges one CO₂ cylinder; second shot discharges remaining two co cylinders. Discharge tubes permit extinguishing fires in engine compartment. Charge flows through tubes to discharge delay bottle. Predetermined time delay valve opens to allow charge to flow through check valves and out of perforated tubing on fuel tanks and in V of engine. Exterior control handles on left front of hull permit operation from outside tank. Interior handle is located to the right of steering control at eye level.

ENGINE SMOKE GENERATING SYSTEM. Smoke generating system provides a smoke screen capability to improve combat effectiveness. Smoke generating system is controlled by a switch on master control panel, and receives power through air cleaner blower motor relay. Fuel, regulated by two solenoid valves at rear of powerplants provided to system from main fuel lines into right and left bank upper exhaust pipes where fuel passes through turbosupercharge, "and finally exhausted through exhaust tubes as dense, white smoke.

CHAPTER 3

HULL MAINTENANCE

Section I. REPAIR PARTS, SPECIAL TOOLS, TESTING, MEASURING, DIAGNOSTIC EQUIPMENT (TMDE), AND SUPPORT EQUIPMENT

COMMON TOOLS AND EQUIPMENT

6. Deleted

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE) applicable to your unit.

SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT

Special tools for organizational maintenance are listed and illustrated in TM 5-5420-226-24P, which is the authority for requisitioning replacements.

ENGINE

Item	Use
1. Mechanical Puller (5379997)	Remove fan drive oil seal housing
2. Sleeve Spacer (10882651)	Prevent oil leakage from fan rotor hub when performing leak check (two required)
3. Open End Wrench (8761568)	Remove and install starter mounting nuts
4. Box and Open Wrench (10935476)	Remove and install generator mounting nuts
4.1. V-Pack Cleaner (12326132)	Clean air cleaner filter
TRANSMISSION	
Item	Use
5. Socket Wrench Socket (7003946)	Loosen and tighten locknuts on reverse band adjusting screw and low range band adjusting screw

SUSPENSION

	Item	Use
7.	Axle Remover Adapter (12304246)	Remove track support roller axle. (used with slide hammer puller 5573615)
8.	Roadwheel Adapter (7080285)	Remove roadwheel arm and track adjusting link (used with slide hammer puller 5573615)
9.	Track End Connector Wear Gage (10873933)	Check wear of end connectors
10	Track End Connector Puller and Pump (11669394-1)	Remove track end connectors
11.	Bearing Cup Handle (7083883)	Remove and install bearing cups (used with inserter set items 16 and 17 and remover replacer 7082863)
12.	Roadwheel Arm Lifter (7010355)	Remove and install roadwheels
13.	Track Torquing Tool Kit (12326261)	Torque track components
14.	Final Drive Dowel Remover (8390335)	Replace track drive sprocket tapered dowels
15.	Inserter and Remover (12290993)	Remove and install track adjusting link bearing
16.	Bearing Inserter Set (7082834)	Remove and install outer bearing cups from track support roller wheel and compensating idler wheel hub (used with handle, item 11)
17.	Bearing Inserter Set (7082876)	Remove and install inner bearing cups on roadwheel hub and compensating idler hub (used with handle, item 11)
18.	Track Connecting Fixture (12252120)	Connect track
19.	Removal and Replacer (11645917)	Remove and install track adjusting link pin (used with slide hammer puller 5573615)
20.	Seal Inserter (7078977)	Install inner bearing oil seal on compensating arm spindle and roadwheel arm spindle (used with remover and replacer handle 70828811

SUSPENSION (Continued)

Item	Use
21. Seal Inserter (7078973)	Install outer bearing oil seal on roadwheel arm support spindle (used with remover and replacer handle 7082881)
22. Seal Inserter (7082882)	Install inner bearing oil seal on track support roller wheel
23. Seal Inserter (8708188)	Install oil seal and retainer assembly on compensating idler arm
24. Wire Rope Assembly (8366458)	Remove and install final drive hub and sprocket assembly
25. Shock Absorber Bearing Replacer (11654533)	Remove shock absorber bearing
26. Spanner Wrench (12284929)	Remove and install roadwheel and compensating idler arm support spindle retaining nut
27. Socket Wrench Adapter (7078976)	Remove roadwheel arm torsion bar end plug
28. Face Wrench Socket (12257561)	Remove and install bearing adjusting nut on roadwheel track support roller and compensating idler wheel
29. Sprocket Tooth Gage (8708388)	Check wear of final drive sprockets

POWERPLANT

	Item		Use
30.	Ground Hop Kit (Powerplant Tests) (12304135)		Used to ground hop powerplant outside of tank
31.	Engine and Transmission Sling (12257229)		Remove and install powerplant and top deck grille doors
32.	Oil Cooler Cleaning Tool (11641959)		Clean oil coolers with cleaning solution
33.	Resilient Mount Remover (10933782)		Remove resilient mounts from transmission mounting bracket
34.	Torque Wrench Adapter (11663358-2)		Removal/Installation engine guide mount
35.	Tachometer Assembly (Fabricated, Figure 2, Appendix F)		Measure RPM during tests
36.	Deleted		
		MISCELLANEOUS	
	Item		Use
36.1	. Center Punch (Fabricated, Figure 9, Appendix F)		Stake pin in final drive quick- disconnect clamp
37.	"T" Harness (11674369)		Used to troubleshoot 650 amp

alternator / regulator

All data on page 3-5 deleted.

Section II. SERVICE UPON RECEIPT

GENERAL

This section contains information on services to be performed upon receipt of the vehicle from the issuing organization. Where practicable, the crew will assist in the described services. For services to be performed on the launcher components, refer to TM 5-5420-227-24.

INSPECTION AND SERVICING

- a. Inspect vehicle for damage.
- b. Check inventory components (with assistance of issuing organization) against packing list,
- c. Check packing list against basic issue items list (TM 5-5420-226-10) to insure that all indicated items have been received.
- d. Record all missing items.

INSTALLATION AND SETUP

- a. Make sure that grade of engine oil installed, as indicated on processing tag (DD Form 1397), is of the grade specified by LO 5-5420-226-12 for temperatures in your area.
- b. Check oil level in engine and transmission, service as required (LO 5-5420-226-12).
- c. Start engine (TM 5-5420-226-10). Check for fuel and oil leaks. If leaks are observed, shut engine down and correct.
- Perform Preventive Maintenance Checks and Services, Subsection I, weekly (TM 5-5420-22610).

CORROSION INSPECTION

- a. During normal semiannual inspection, check all parts and surrounding areas for corrosion. Corrosion damage is divided into the following stages
 - Stage 1. Red, black, and white corrosion deposits on surface, etching, and pitting. Base metal is sound.
 - Stage 2. Powdered, granular, or scaled condition. Base metal is sound.
 - Stage 3. Surface condition and corrosion deposits are similar to Stage 2, except that metal in the corroded area is unsound and small pin holes may be present.
 - Stage 4. No metal remains at point of severest corrosion. Corrosion holes in the area or metal is completely missing.
 - b. Corrosion areas in Stages 1 and 2 shall be cleaned, primed, and painted with required final top coat in accordance with TM 43-0139. In areas where Stages 3 and 4 corrosion conditions exist, corrosion must be completely removed, repairs made, or parts/assemblies replaced with serviceable parts/assemblies where repair is not economical.

SECTION III. PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS), LUBRICATION INSTRUCTIONS, AND MANDATORY REPLACEMENT PARTS

INTRODUCTION

a. General.

Preventive maintenance is the systematic care, inspection, and service of the M48A5 AVLB to keep it in serviceable condition and to detect faults and failures before extensive and time consuming repairs or replacement are required. Maintenance checks are services performed by organizational maintenance and are described below.

This section contains the procedures and instructions to perform M48A5 AVLB hull organizational preventive maintenance checks and services. These services are performed by organizational maintenance personnel assisted by the vehicle crew. Ensure that all crew level hull PMCS procedures have been completed prior to performing organizational semiannual PMCS. Refer to DA PAM 738-750 for instructions on the use of forms pertaining to PMCS.

Organizational services are defined by, and restricted to, the procedures outlined in this section and Appendix B, Maintenance Allocation Chart, unless approval to perform higher category services has been given by the support maintenance unit. For additional inspection and classification information on track components, see TM 9-2530-200-24.

Knowledge of operating and maintenance procedures outlined in TM 5-5420-226-10 are essential to the performance of organizational PMCS. Organizational mechanics must be familiar with these procedures so that they can apply them in the performance of their duties.

The driver of the vehicle is often unaware of gradually developing defects. Therefore, the vehicle must be road tested by organizational maintenance personnel during semiannual maintenance checks and services. Any repairs or adjustment necessary to ensure safe operation should be made prior to road test. All faults and corrective actions will be noted on DA Form 2404, column "a". The item number recorded in this column must correspond to the PMCS item. After deficiencies have been corrected and the tactical situation permits, an additional road test must be made for a distance of not less than three nor more than five miles.

The preventive maintenance checks and services listed in this section are to be performed at intervals determined by calendar days or vehicle operating hours, whichever comes first:

- (a) bimonthly or after 25 operating hours, (b) semiannually or after 150 operating hours,
- (c) annually or after 300 operating hours (d) biennial (every 2 years).

Hard (fixed) time intervals and the related man-hour times are based on normal operation. The man-hour time specified is the time you need to do all the services prescribed for a particular interval. Change the interval if your lubricants are contaminated or if you are operating the equipment under adverse conditions, including longer-than-usual operating hours. The interval may be extended during periods of low activity. If extended, adequate preservation precautions must be taken.

PMCS items and intervals have been determined by using Reliability Centered Maintenance (RCM) logic.

If anything looks wrong and cannot be fixed, report it on DA Form 2404. If something looks dangerous or may cause equipment damage, report it immediately to your maintenance supervisor.

- b. PMCS Procedures. PMCS column explanations are as follows:
 - Column 1 Item No. The first column contains the item number which shall be used as a source of item numbers for the TM Number Column on DA Form 2404, Equipment Inspection and Maintenance Worksheet, in recording results of PMCS.
 - Column 2 Interval. The second column lists the interval at which the items are to be inspected.
 - Column 3- Location Item to Check/Service. The third column lists the item to be checked or serviced.
 - Column 4- Procedures. The fourth column contains all the information required to accomplish the checks and services.
 - Column 5 Not Fully Mission Capable if. The fifth column contains all the conditions which make the vehicle not fully mission capable.
- c. Special Information.
 - (1) Precautions. The following precautions will help prevent personal injury or damage to equipment:

Do not spill solvent, fuel, or lubricants on rubber parts. Solvent, fuel, and lubricant may damage rubber parts.

Do not use turbine fuel, diesel fuel, gasoline, paint thinner, or benzene (benzol) for cleaning. These liquids may cause personal injury.

Do not clean inside hull with high pressure steam, water, or air. Some parts inside hull may rust or be damaged.

Do not use polishing cloths, liquids, pastes, or other rough cleaners to clean instrument lenses or mirrors. Use lens tissue paper to clean lenses and mirrors. Remove fingerprints, oil, and dirt with lens cleaning compound and lens tissue paper.

(2) Services. Services performed by the organizational maintenance mechanic consist of the following tasks:

Adjusting. Making all necessary adjustments and alinements.

Servicing. Draining and refilling units with oil and changing or cleaning oil filters, fuel filters, and air cleaners.

Tightening. Tightening nuts, bolts, screws, and other types of fasteners with a torque wrench to the value listed in the maintenance manual. Do not overtighten; this may strip threads and break off the part being tightened.

Repairing. Repairing includes inspection, cleaning, preserving, adjusting, replacing, welding, strengthening, and other tasks associated with putting parts in working condition.

(3) General Cleaning Instructions.

If a steam cleaner is available, it may be used to remove any remaining dirt. After water or steam cleaning, lubricate vehicle. Check all lubricant reservoirs for water droplets. If water is found, drain and refill. Clean grease, oil, or dirt from all metal parts with dry cleaning solvent, cleaning compound, or equivalent.

Use mild soap and water to clean or wash parts not made of metal. Rinse thoroughly after cleaning with water and then dry.

Remove rust or dirt from fine-machined surfaces with dry cleaning solvent and crocus cloth, if necessary. Do not use any other material. Be careful not to change the dimensions of parts when rubbing off rust. Coat bare metal surfaces, after cleaning, with lubricating oil.

Nameplates, caution plates, and instruction plates may rust quickly. When they are rusty, clean parts and coat them with lubricating oil.

(4) General Maintenance Instructions.

Put protective caps or plugs on all tubes, hoses, and fittings as soon as you disconnect them. Dirt could get in and ruin the system. Do not remove caps or plugs until you are ready to connect the system.

Replace bent, broken, or stripped bolts, nuts, screws, and washers. Bolts, screws, and nuts may be loose if rust, chipped paint, or bare metal is around them. Tighten loose screws, bolts, and nuts. Replace missing parts.

Inspect electric wires for broken, chafed, cracked, discolored, frayed, loose, melted, or worn insulation, Replace or repair bad parts.

Have another soldier help aline mating ends of connectors, plugs, and receptacles on larger harnesses. Make sure that pins and keyways line up. Tighten twist-snap type connectors, plugs, or receptacles until a click is heard. Tighten screw-on type connectors until a ratchet noise is heard to indicate that connectors, plugs, or receptacles are tight.

Look at hoses, fluid lines, and tubes for bends, wear, cracks, or leaks. Replace bad parts. Make sure all clamps and fittings are tight. If a fitting leaks, tighten it.

Hold fitting adapter with one wrench and tighten nut with another wrench. When tightening fittings, tighten nut snug and then tighten 1/6-turn to 1/8-turn more. If fitting leaks, loosen nut a full turn and then tighten. If still leaking, replace defective parts.

Service, clean, or change oil filters, as applicable, when they are known to be contaminated or clogged; service is recommended by AOAP laboratory analysis; or at prescribed hardtime intervals.

(5) Lubrication.

Use only authorized lubricants.

All lubrication instructions are mandatory.

When checking fluid levels, vehicle must be on level surface.

Oil filters shall be serviced/cleaned/changed when they are known to be contaminated or clogged, service is recommended by AOAP, or hard time service is required.

Dispose of used lubricants in accordance with local Standing Operating Procedures (SOP).

For arctic operation, see FM 9-207.

For desert operation, see FM 90-3.

Clean all grease fittings before attaching grease gun.

When using grease gun, operate until grease appears around seals or out of relief valve and check escaping grease for contamination. If contamination is found, notify support maintenance.

If no other treatment is directed, paint or clean and coat unprotected metal surfaces with cleaner, lubricant, preservative (CLP).

Clean around filler necks/drain plugs/openings before servicing to keep dirt from entering system.

Lubricate oil can points as they become accessible while performing PMCS procedures. Use the applicable lubricant identified and lubricate the following items as a part of PMCS:

Headlight removal nuts
Fender stowage box latches and hinges
Towing hooks (hinge pin)
Brake linkage
Transmission support guide
rails and rollers
Driver's escape hatch late
model (clean and coat pins, plungers,
and all unpainted surfaces)

Grille door hinges
Control rod clevises
Ammunition box latches
Driver's and commander's
seats moving parts
Hatch locks and hinges
Universal joints
Driver's night viewer hatch
door pivot pin and latch

Oil Can Points Lubricants

Temperature Range	Lubricant Mil. Symbol (NATO Code) Specification	Capacity	Interval	Man-hour
Oil Can Points +5°F to +125°F (-15°C to +52°C)	OE/HDO-15/40 (O-1236) MIL-L-2104	AR	AR/S	0.4
+ 5°F to -70°F (-15°C to -57°C)	OEA (0-183) MIL-L-46167			

For arctic operation, see FM 9-207

Do not lubricate the following items:

Starter solenoid
Air cleaner blower motor
Hydraulic powerpack electric
motor
Heater motor

Gas particulate fan motor Tracks Tachometer drive adapter Ventilator blower motor Any item not pointed out.

(6) Leakage Definitions.

Fluid leaks affect vehicle status. Learn the following classes of fluid leaks for organizational PMCS.

Class I Seepage of fluid (as indicated by wetness or discoloration) not great enough to form drops.

Class II Leakage of fluid great enough to form drops but not enough to cause drops

to drip from item being checked.

Class III Leakage of fluid great enough to form drops that fall from the item being

checked.

All Class III leaks and any class fuel leak in the engine compartment or in the personnel heater system must be repaired before operating the vehicle. Vehicle may be operated with Class I or Class II leaks.

- (7) Corrosion. Check for corrosion on entire vehicle. Become familiar with the four stages of corrosion listed below and take the appropriate maintenance action required outlined below.
 - Stage 1- Red, black, or white corrosion deposits on surface with etching or pitting. However, base metal is sound.
 - Stage 2- Powdered granular or scaled condition. Base metal is sound.
 - Stage 3- Surface condition is similar to stage 2 except that metal in the corroded area is unsound and pin holes may be present.
 - Stage 4- No metal remaining at point of severest corrosion. Corrosion holes in the area or metal completely worn away.
 - Stages 1 & 2- Areas are to be cleaned, primed, and painted IAW TB 43-0213.
 - Stages 3 & 4 Try to repair metal. If not economical or reparable, replace with new parts.

INITIAL SETUP

Preventive maintenance includes complete inspection to make sure adjustment, securing, and assembly of all parts of the vehicle are right. All cleaning, replacement, lubrication, and protection of parts or assemblies must be done as stated for trouble-free operation until the next preventive maintenance is performed.

Maintenance Forms and Records. Refer to DA PAM 738-750

Publications. Be sure all needed publications are on hand before starting task.

Special Tools. Be sure all special tools are on hand.

Supplies. Be sure all parts and supplies are on hand.

Tools. Be sure all common tools are on hand.

Modification Work Order (MWO) Application. Check the list of current MWOs in DA PAM 25-30. Do not make any vehicle modifications except as ordered by official Army directive.

Preventive Maintenance Checks and Services for M48A5 AVLB Hull

		Location		
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:
1	Bimonthly	Engine and Transmission	Perform powerplant oil sampling IAW DA PAM 738-750. ARMY OIL ANALYSIS PROGRAM (AOAP). Oil samples from both engine and transmission must be submitted to an assigned AOAP laboratory every 25 hours of operation or 60 days, whichever occurs first, in accordance with DA PAM 738-750. Oil will be analyzed for condition and will be changed only when directed by the AOAP laboratory. In the event AOAP laboratory support is not available, drain oil every 1500 miles or semiannually, whichever occurs first. Semiannual oil changes are to be coordinated with seasonal changes. When using OEA oil, drain every 750 miles or quarterly, which-	AOAP recommends oil change.
_	_		ever occurs first.	

Replace engine oil filters (page 6-76) and drain and fill engine crankcase (page 6-12).

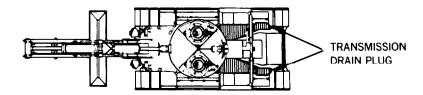

(TM 5-5420-226-10).

	WARNING				
	 Dry Cleaning Solvent P-D-680 is toxic and flammable. To avoid injury, wear protective goggles and gloves and use in a well-ventilated area. Avoid contact with skin, eyes, and clothes, and do not breathe vapors. Do not use near open fire or excessive heat. The flash point for Type I Dry Cleaning Solvent is 100°F (38°C), and for Type II is 140°F (60°C). If you become dizzy while using Dry Cleaning Solvent, get fresh air immediately and get medical aid. If contact with eyes is made, wash your eyes with water and get medical aid immediately. Compressed air for cleaning purposes should not exceed 30 psi. Use only with effective chip guarding and personal protective equipment (goggles/shield, gloves, etc.). 				
			Check compensating idler wheel bearings and roadwheel bearings relief fittings for proper operation. Plunger type fittings are checked by pulling up on plunger. Plunger should move freely. Ball-type fittings should be checked to ensure that the two relief ports are open. If plunger does not move freely or relief ports are not open, remove and thoroughly clean in dry cleaning solvent (P-D-680). Dry with compressed air or lint free cloth. Verify that ball moves and ports are open.		
			Apply lubricant until it appears at lubricant pressure fitting. No lubricant should appear at seal assembly. Wipe off excess lubricant from relief valve.

47	Semiannual	Fixed Fire Extinguisher System - Continued		
			NOTE	
		after system i	ocated by checking for frost on system line s fired. If check is not completed immedi rost within 20-30 seconds and cover frost	ately, all lines
			Person No. 1 and No. 2, immediately after handle has been pulled and before delay valve releases charge (when vapor is seen at left and right spray tube assemblies), check system from cylinders to delay valve for sound of leaks, visible vapor, or frosting around leak.	
			If vapor does not appear from engine compartment within 10 seconds after handle is pulled, proceed to step 13. If vapor is seen from only one spray tube assembly, proceed to step 12.	
			Person No. 2 also check that time interval from firing announcement to exit of vapor from engine spray tubes was 6 to 10 seconds.	
			If time interval is less than 6 seconds or more than 10 seconds, replace defective delay valve (page 20-57).	
		LEFT SPRAY TUBE ASSEMBLY RIGHT SPRAY TUBE ASSEMBLY	DELAY VALVE CYLINDER	CYLINDER

		Location			
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:	
47	Semiannual	Fixed Fire Extinguisher System - Continued	Step 8		
			Person No. 2 check downstream of delay valve for sound of leaks, visible vapor, and frosting around leak.		
			Step 9		
			As firing of extinguisher is announced, person No. 3 check that multimeter immediately shows 18-30 volts.		
			WARNING		
	Handle charged cylinders with care. Do not jar or expose cylinders to temperatures above 140°F (60°C). Accidental discharge could result in injury or death to personnel.				
			NOTE		
	Observation of the CO ₂ discharge should be performed when little or no wind is present. Start timing when CO ₂ cloud spray is first seen. Stop timing when CO ₂ cloud starts to shrink.				
			Step 10		
			Person No. 3 check that time of visible duration of CO ₂ cloud/spray is no more than 8 seconds.		
	4	INTERIO RELEAS MECHAI	E	FIRST SHOT CYLINDER	

_		Location		
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:
47	Semiannual	Fixed Fire Extinguisher System - Continued	Start timing when CO ₂ cloud/spray is first seen. Stop timing when CO ₂ cloud/spray starts to shrink. Check that CO ₂ cloud/spray in hull area is continuous and uniform with no voids in upper and lower rows of spray holes in left and right spray tubes. If cloud spray is not continuous and uniform, check for punctures, leaks, and clogging. Correct defects before continuing with preventive maintenance checks. Check that CO ₂ cloud/spray from left and right tubes are of equal size. If either cloud/spray is 1/3 size of other, check for restricted tubes and valves.	

		Location		
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:
47	Semiannual	Fixed Fire Extinguisher System - Continued	Immediately after timing cloud/spray person No. 3 check that tube assembly and both hull extinguisher lines are frosted their full length.	
			All lines should be frosted their full length. If any line is only partially frosted, check for clogging in spray line. If not frosted at all, check for faulty check valve or clogged supply line. If duration of spray cloud is more than 8 seconds, immediately check to see if No. 2 and 3 cylinders are frosted. If cylinders are frosted (discharging), interior release mechanism is defective. Replace interior release mechanism (page 20-24).	
	RELEAS HANDL	•	FIXED FIRE EXTINGUISHER CYLINDER	

		Location			
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:	
47	Semiannual	Fixed Fire Extinguisher System - Continued	Clocked time for CO ₂ cloud duration is valid only when all other checks (non-electrical) are acceptable. If all checks are met except cloud duration time, No. 1 cylinder was defective. If any defects are found, correct defects, and retest. If no defects are found, continue with step 12.		
			Step 11		
			If retest is needed, reset control handle by positioning pawl into slot, reset No. 1 control valve, and replace cylinder No. 1.		
			Repeat steps 7 through 10 to retest cloud/spray duration time,		
			NOTE		
	If delay valve is still open (from having fired No. 1 shot), there will be no (6 to 10 second) delay of CO ₂ when a subsequent shot is fired. Opened delay valve may take 2 to 4 hours to thermally reseat before it can delay another CO ₂ shot. (Resetting is not necessary to time cloud duration.)				
			Step 12		
			If only one hull spray line discharges, check valve on other line and check for clogged or pinched lines.		
	<u>م</u>	CHECK VALVE	DELAY VALVE CHECK VALVE		

		Lagation		
Item No.	Interval	Location Item to Check/Service	Procedure	Not Fully Mission Capable if:
47	Semiannual	Fixed Fire Extinguisher System - Continued	Step 13 If there is no CO ₂ discharge whatso- ever, check for trapped high pressure gas.	
			WARNING	
		and eye 'prot	n of high (800-1800 psi) pressure gas slowl ection. Avoid breathing vapor. Failure to or death to personnel.	_
			Loosen any fitting between delay valve and check valve. If trapped gas escapes, replace all three check valves and repeat step 7.	
			If no gas escapes, tighten fitting. Loosen any fitting between the CO ₂ cylinder and delay valve. If gas escapes, replace discharge delay bottle assembly (page 20-57). Remove No. 1 CO ₂ cylinder (page 20-53). Tag cylinder and send to support maintenance for recharging. Reset control handle and reset control valve. Replace No. 1 CO ₂ cylinder (page 20-53). Repeat steps 7 through 11.	Fixed fire extinguisher system does not operate properly.
			Remove multimeter from accessory test cable. Remove accessory test cable from engine accessory control harness.	
			Reset control handle, reset control valve and replace No. 1 CO ₂ cylinder.

		Location		
Item No.	Interval	Item to Check/Service	Procedure	Not Fully Mission Capable if:
77	Biennial	Suspension System (Left and Right Sides)	HARD TIME SERVICE	Any worn bear- ings. Damaged or leaking seals.
			Remove six roadwheel arms (page 14-13).	
			Disassemble, clean, and inspect six roadwheel arms (14-19).	
			Disassemble, clean, and inspect six roadwheel hubs (page 14-6).	
			Disconnect track adjusting link at compensating idler wheel (page 14-75)	
			Remove compensating idler arm (page 14-53).	
			Remove track support rollers (page 14-36).	
			Install roadwheel arm (page 14-17).	
			Install track adjusting link at compensating idlerwheel (page 14-78).	
			Install track support rollers (page 14-42).	

PMCS MANDATORY REPLACEMENT PARTS LISTS

The following tables provide a list of all mandatory replacement parts required to perform semiannual, annual, or biennial PMCS. The semiannual/annual PMCS parts list contains the quantity of parts required to perform one semiannual PMCS or one annual PMCS. The biennial PMCS parts list contains the quantity of parts required to perform one annual PMCS and all the additional mandatory replacement parts to complete the required biennial tasks.

SEMIANNUAL/ANNUAL PMCS PARTS LIST

USER GUIDE - NOTE -This troubleshooting USER GUIDE is presented in the same format as the detailed troubleshooting procedures you will be using to identify and correct the trouble in the M48A5 AVLB vehicle. Check the four key steps in logical troubleshooting (Troubleshooting without the SHOTGUN APPROACH). **USER GUIDE** • Identify the trouble. APPROACH . • Find the right troubleshooting procedure. Determine the test equipment, special tools and number of technicians needed to perform the troubleshooting procedure. • Use the Detailed Troubleshooting Procedure to isolate and repair the trouble. How do you "identify" the trouble spot? NOTE -This line indicates the procedure is continued on the next page. SHOTGUN **APPROACH**

NOTE

This line indicates the procedure is continued from the previous page.

To identify the trouble spot, check DA Form 2404 filled out by the crew.

- Check what the crew has entered on DA Form 2404.
- Question the crew to get as much information as possible about the trouble.

Example:

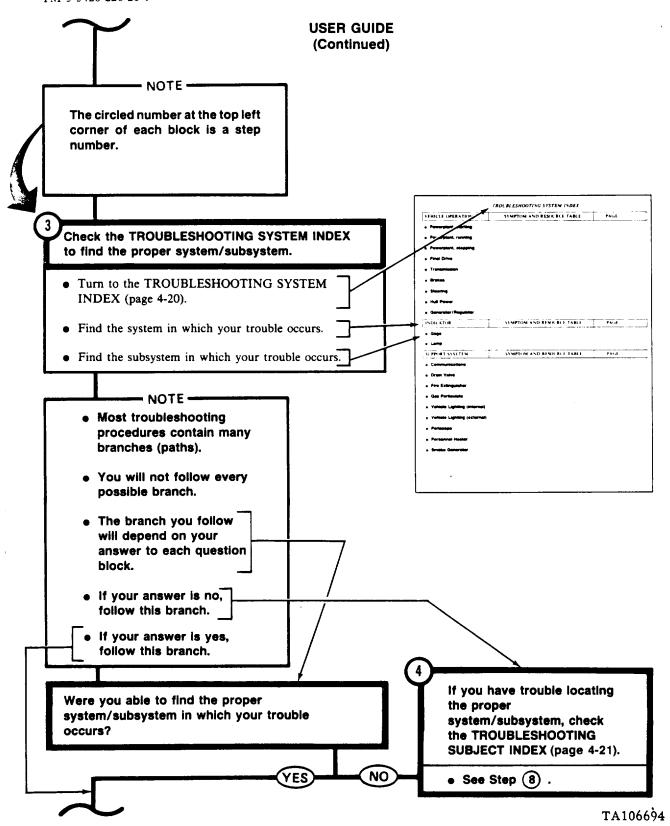

- Are the gages reading normal?
- Has the vehicle been using excessive oil?
- Was the engine running?
- Make sure there was no crew error in following the operator procedure listed in TM 5-5420-226-10.
- If necessary, operate the vehicle to help identify the trouble.

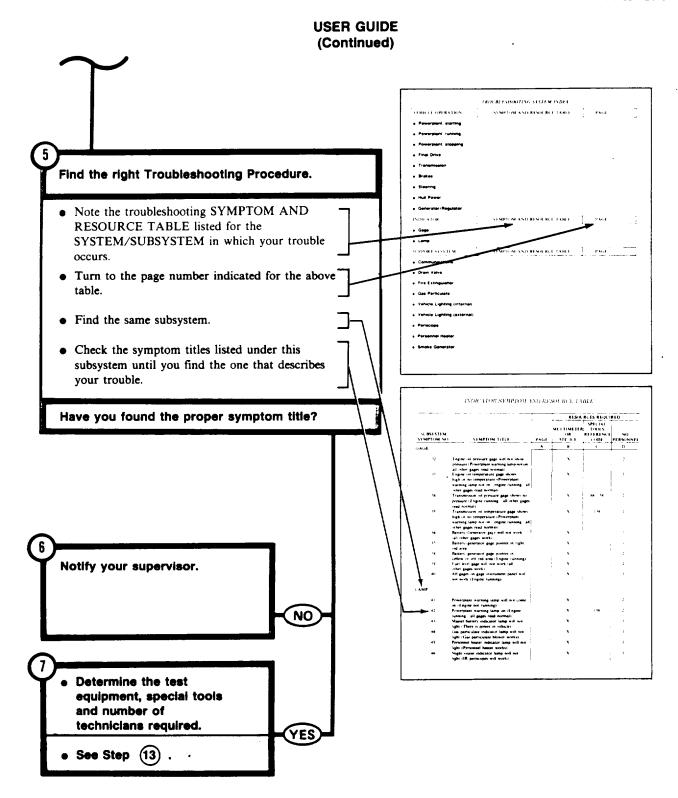

-WARNING -

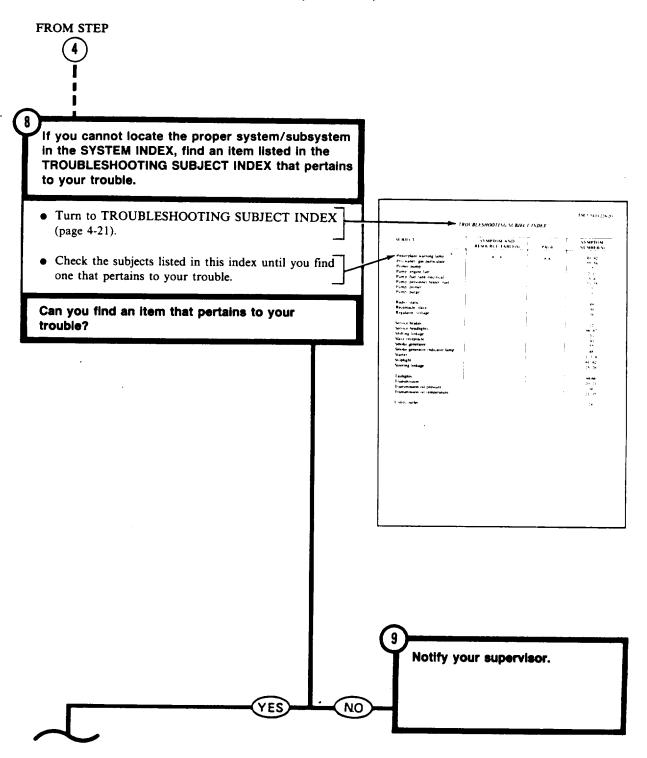

Do not attempt to operate the vehicle if there is any chance the trouble may harm personnel or damage equipment. For example: Brakes don't work.

Now that you have an idea what the trouble is, how do you find the right troubleshooting procedure?

Find the right Troubleshooting Procedure. Check the SYMPTOM and RESOURCE TABLE listed for the subject you have selected. Note the symptom number(s) listed for your subject. Turn to the page number indicated for the SYMPTOM and RESOURCE TABLE.

USER GUIDE

FROM STEP
OR 12

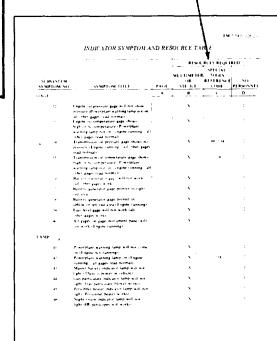

Determine the test equipment, special tools, and number of technicians needed to perform the troubleshooting procedure.

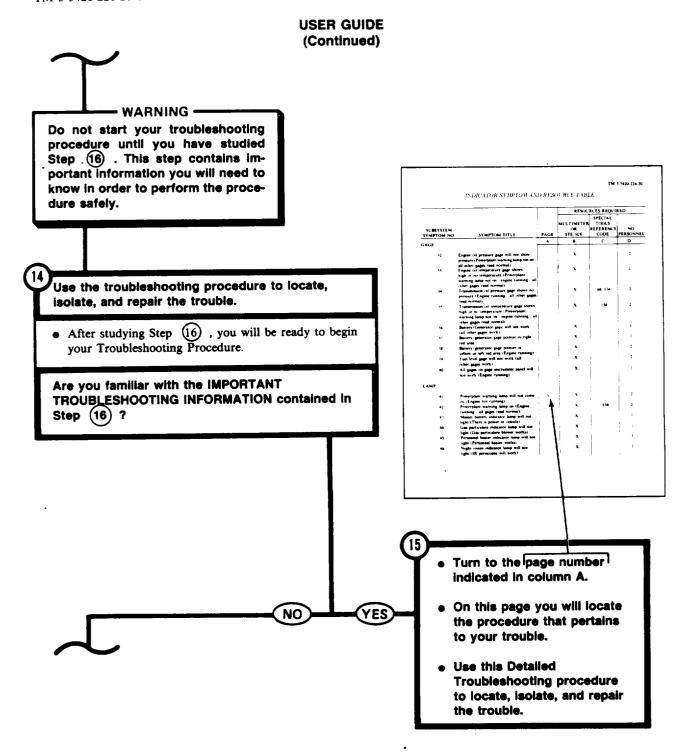

- Locate the RESOURCES REQUIRED columns.
- Check column B to determine if you will need test equipment. Either a multimeter or a STE/ICE set can be used. You do not need both.
- Check column C to determine if you will need special tools.

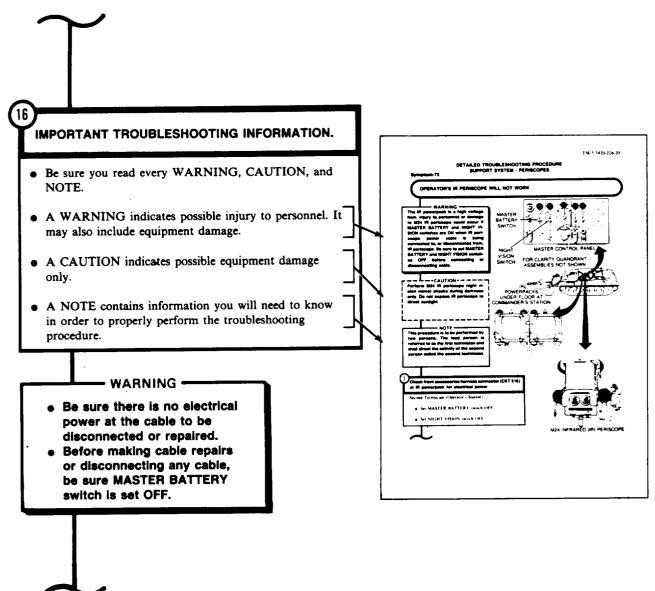

- NOTE -

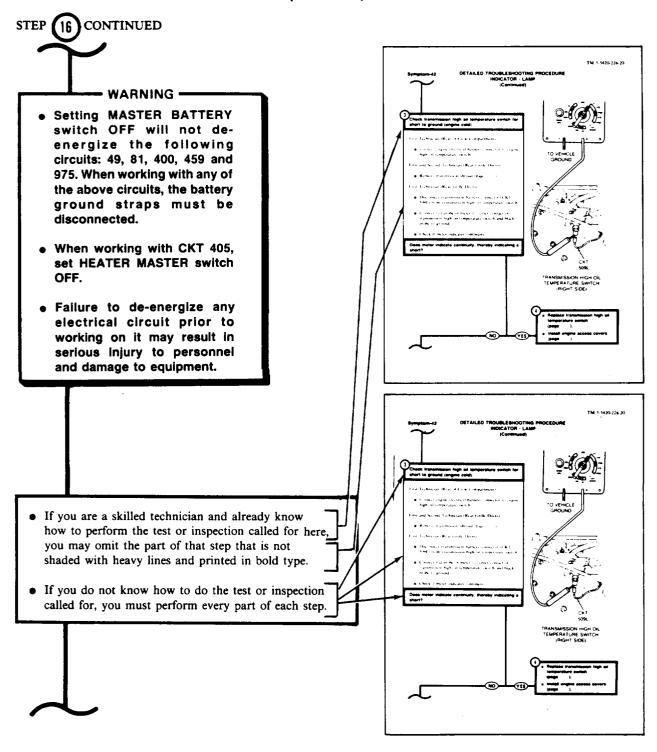

- If Column C indicates that special tools are needed, see Chapter 3, Section 1.
- Locate the same item number in this section. This will tell you which special tool is needed.
- Check column D to determine how many technicians are required to perform the procedure.

Now that you have identified the trouble; found the right troubleshooting procedure; and obtained the test equipment, special tools, and number of technicians required: What is the last step to good troubleshooting?

HARNESS CIRCUIT DIAGRAMS

MOST OF THE VEHICLE HARNESSES ARE BRANCHED

AND HAVE MANY CONNECTORS. ONLY

TM 5-5420-226-20-1

THE CONNECTORS ASSOCIATED WITH THE FAULT ARE SHOWN IN THE HARNESS DIAGRAMS CONTAINED IN

THE DETAILED TROUBLESHOOTING PROCEDURES. EACH DIAGRAM IS ACCOMPANIED BY AN

(FEMALE SOCKET CONNECTOR) OR

(MALE PIN CONNECTOR) TO ASSIST YOU IN

FINDING THE CONTACT ASSOCIATED WITH THE CIRCUIT UNDER TEST. BY NOTING THE LOCATION OF THE

THE CIRCUIT CONTACT UNDER TEST MAY BE EASILY LOCATED.

USE OF DIGITAL MULTIMETER

Multimeters AN/URM-105 or ME-77 C/U pictured throughout this TM are no longer used. Use digital multimeter that is part of your tool set to troubleshoot the M48A5 AVLB vehicle.

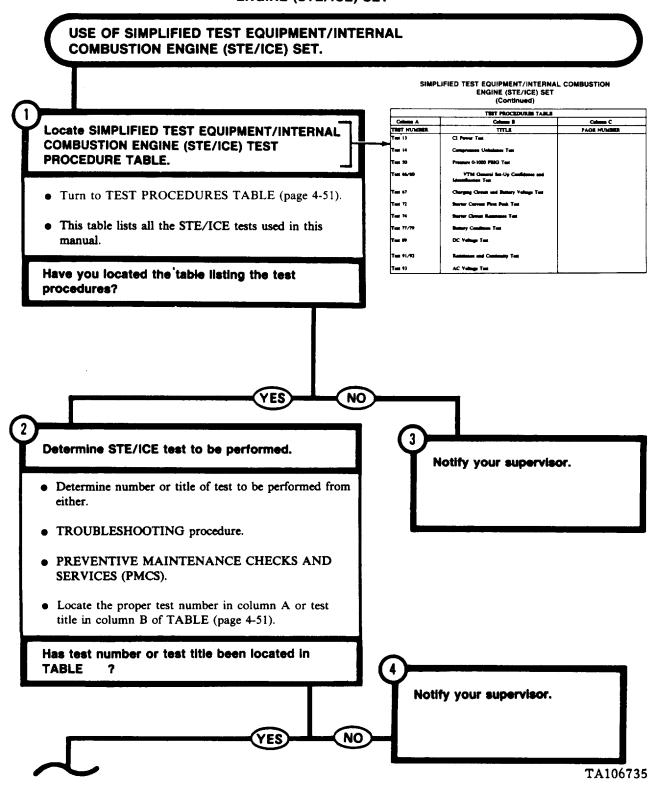

If a troubleshooting procedure reads one of the following instructions, set your multimeter as

- "Check if meter indicates continuity"
 Use the lowest range on the multimeter
- "Check if meter indicates a short"
 Use the lowest range on the multimeter
- "Check if meter indicates infinity"
 Use the highest range on the multimeter
- "Set multimeter to OHMS X! scale and zero meter"

 <u>Use the lowest range on the multimeter</u>

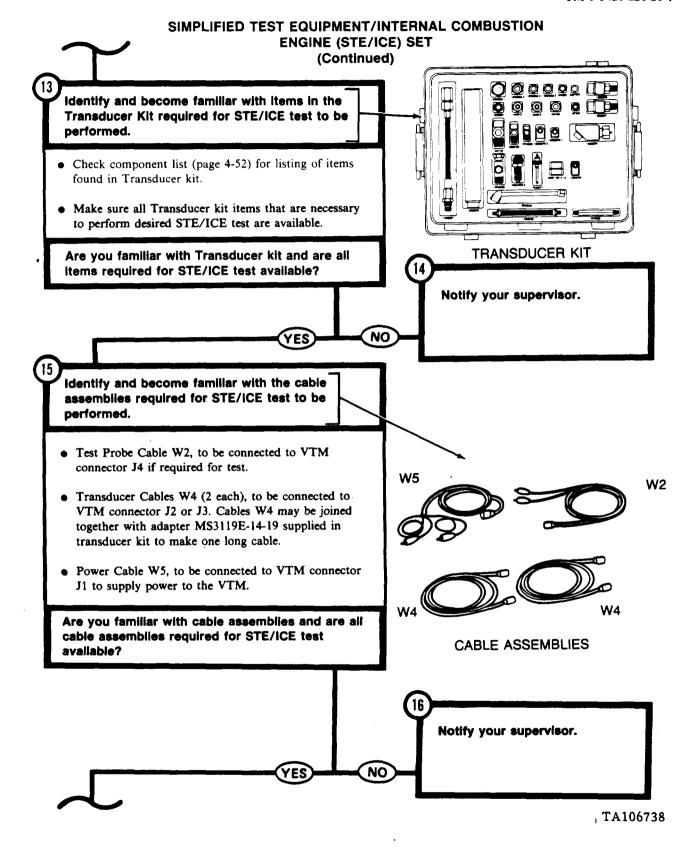

STANDARD TROUBLESHOOTING PRACTICES

- Be sure master power is off before connecting or disconnecting any electrical cable or harness unless otherwise specified.
- Anytime a connector is disconnected it should be checked for cleanliness and broken, bent, or pushed in pins. If you find missing or damaged pins, notify your supervisor.
- When instructed to make a measurement to chassis ground, ensure you make solid contact to metal surface, free of paint, grease and dirt. Connector backshells (not the coupling ring) and braided wire ground straps are reliable chassis connections.
- If testing for an intermittent condition, flex the harness and test for a reading that varies above or below the limits specified in test block.
- Continuity is defined as a 0 to 5 ohms reading on a multimeter. A buzzer or light can give a false continuity or short circuit indication when the circuit resistance is actually greater than 5 ohms. Do not use a buzzer or light without verifying the actual multimeter reading.
- The new cables and harnesses are covered by heat shrink tube so the circuit (CKT) numbers cannot be seen. Cables and harnesses are labeled with part number and the connector ends are labeled with all CKT numbers at that specific connector.

SIMPLIFIED TEST EQUIPMENT/INTERNAL COMBUSTION **ENGINE (STE/ICE) SET** (Continued) Locate page number of STE/ICE test to be THE PROCEDURES TABLE performed. 	OPERATOR'S MESSAGES TABLE
VTM Readout	Readout Explanation
[.8.8.8.8]	A readout of [8.8.8.8] appears for 1 or 2 seconds each time the power is applied to the VTM. It means that there is power to the VTM, and that all elements of the readout display are operative.
	A readout of indicates the following:
	(1) After power turn on it signifies that the VTM is ready for testing.
	(2) During a compression unbalance test it signifies testing is in progress.
	(3) During battery condition test it signifies battery may be in discharged state.
.9.9.9.9	A readout of [.9.9.9.9] indicates that the VTM is reading a test value beyond the range of its measurement capability. Either (1) the wrong test number is selected for the parameter being measured, or (2) there is fault in the vehicle, (3) during battery condition test, it signifies bad connections, discharged, or bad batteries.
PASS FAIL	A PASS or FAIL readout is the result of a test that checks the condition of a component being measured. A PASS/FAIL readout means just that - the component either passes the test or fails the test.
UEH	Signal to technician to enter vehicle type identification number (VID) on the TEST SELECT switches. Vehicle ID numbers are found under TEST DATA on the flip cards, on the vehicle test cards.
GO	Signal to technician to crank engine in compression balance or first peak tests. During battery condition test, indicates weak battery in series pair of batteries being tested.
CIP	Signal to technician to apply full throttle in a CI power test.
OFF	Signal to technician to stop cranking in compression balance test or to release the accelerator in the CI power test.
CAL	Signal to the technician to release the TEST button during an offset test.
66	Numbers are used for prompting messages in several tests. They are as follows: in confidence test 66 signals the technician to dial in "99"; in CI acceleration/deceleration power test No. 12, the first numerical readout signals the technician to shut off fuel.

ERROR MESSAGES TABLE	
VTM Readout	Readout Explanation
E000	Occurs if you request the VTM for information it does not have. For example, if you request the vehicle ID and it has not been entered.
E001	It indicates that a non-existent test number has been dialed into the TEST SELECT switches.
E002	Indicates that the required transducer is not connected.
E004	Indicates that a vehicle identification number or number of cylinders information has not been entered.
E005	Indicates that the transducer offset test was not performed.
E007	Indicates a conflict between the vehicle identification number (VID) dialed in and the number of cylinders dialed in. It may occur in response to either VID entry or number-of-cylinders entry.
E008	Indicates the VTM is not receiving the required voltage signal for the test selected. This error is related only to starter and compression balance tests.
E011	Indicates that the throttle control was operated incorrectly during power test taking too much time to either accelerate or decelerate.
E012	Indicates that the CI plus tachometer is missing.
E013	Indicates bad data were taken for the test in progress. Repeat the test one (1) time.
E018	Indicates that an engine rpm or ac frequency test was terminated automatically to protect the VTM. Termination is only after several minutes of no-signal operation. Most likely the VTM was left on the vehicle and the engine stalled.

STE/ICE TEST PROCEDURES

VTM GENERAL SET UP, CONFIDENCE AND IDENTIFICATION TEST 66/60

Do not connect or disconnect VTM while vehicle engine is running.

--CAUTION--

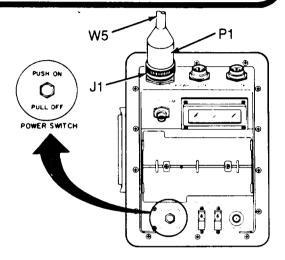

-CAUTION-

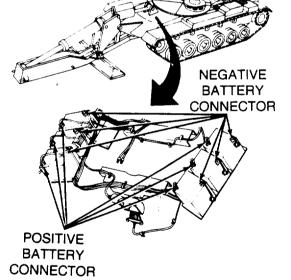

Connect P1 of power cable W5 to J1 of VTM before connecting clip leads to battery cable.

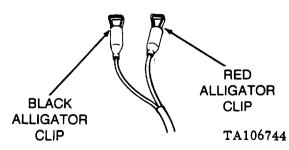

Observe polarity. Make sure red alligator clip of power cable W5 connects to positive (+) connector on battery and black alligator clip of power cable W5 connects to negative (-) on battery.

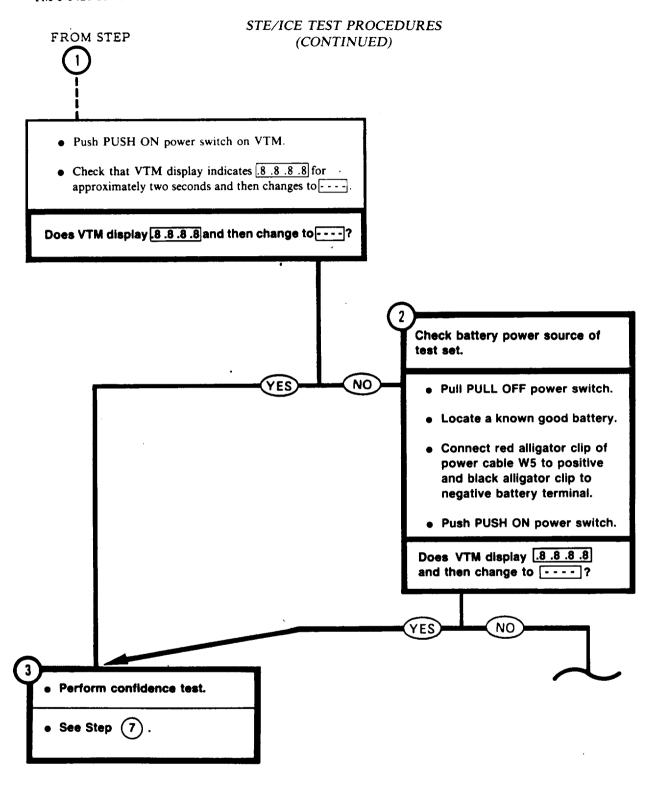

VTM general set up.

- Pull PULL OFF power switch on VTM.
- Connect P1 of power cable W5 to J1 on VTM.
- Connect red alligator clip of power cable W5 to positive (+) connector on battery.
- Connect black alligator clip of power cable W5 to negative (-) connector on battery.

STE/ICE TEST PROCEDURES

COMPRESSION UNBALANCE TEST NO. 14

Do not perform more than 2 compression unbalance tests in a row or tank batteries may become discharged. Engine must be at normal operating temperature before performing compression unbalance test.

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

Perform VTM GENERAL SET UP, CONFIDENCE and IDENTIFICATION TEST NO. 66/60 (page 4-55).

Condition tank-shut-off engine.

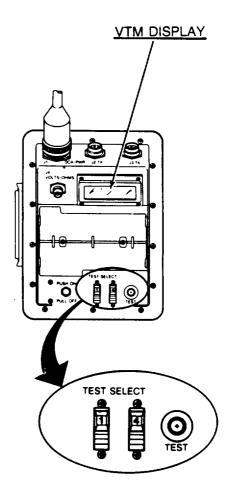

Second Technician (Driver's Compartment)

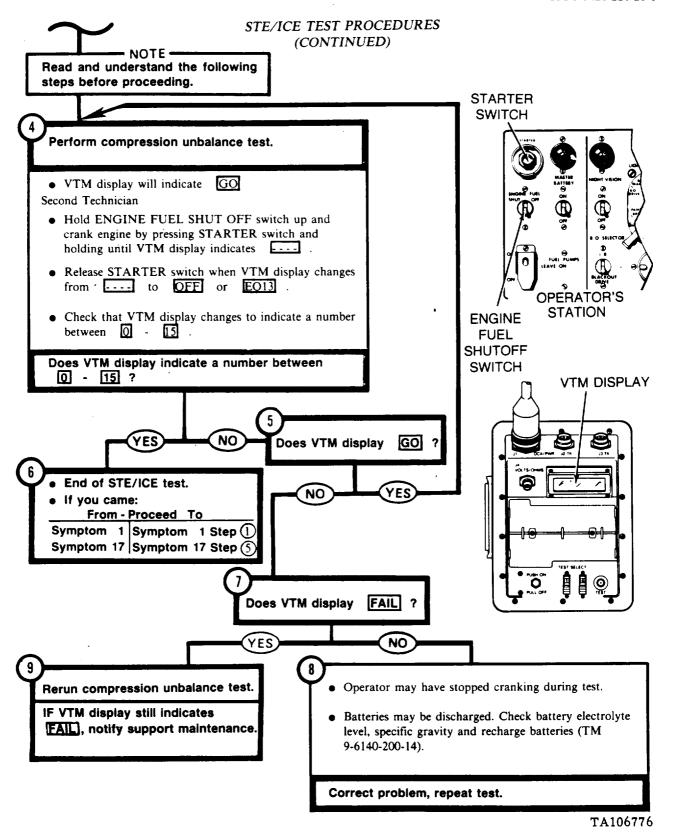

- Make sure engine is running at normal operating temperature.
- Run engine at fast idle (1500 rpm) for 2 minutes.
- Stop engine.

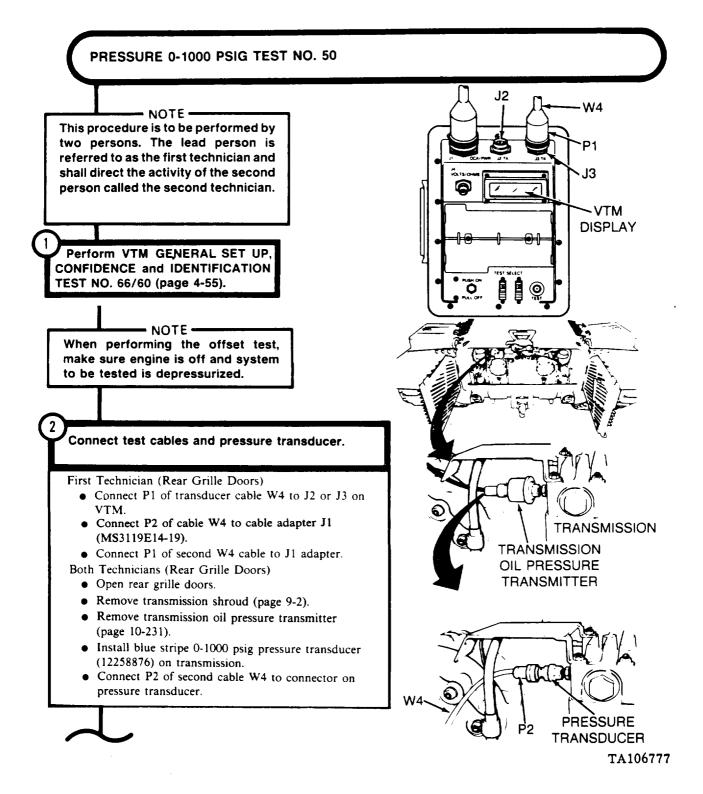

Condition STE/ICE set.

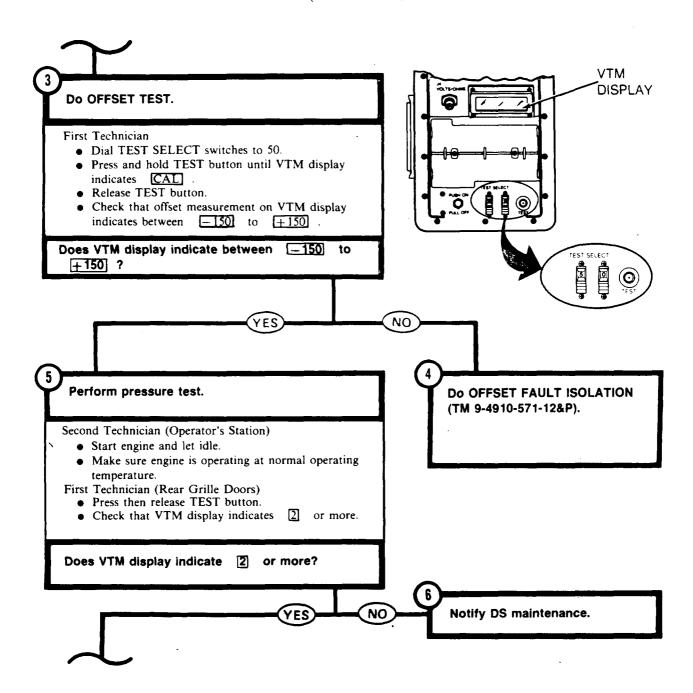

Second Technician

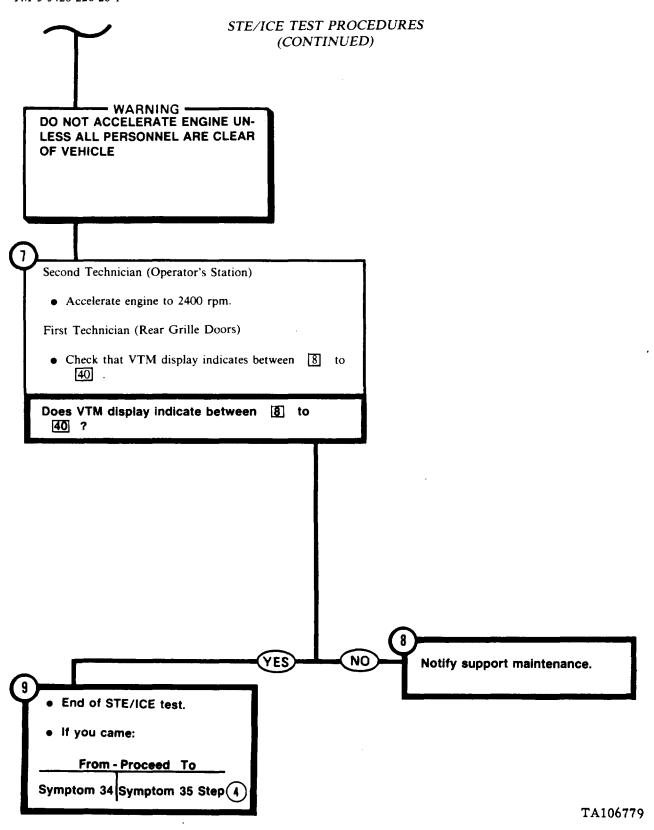

- Make sure MASTER BATTERY switch is ON.
- First Technician (Turret)
 - Dial TEST SELECT switches to 14.
 - Press then release TEST button.
 - Wait for message GO to appear on the VTM display.

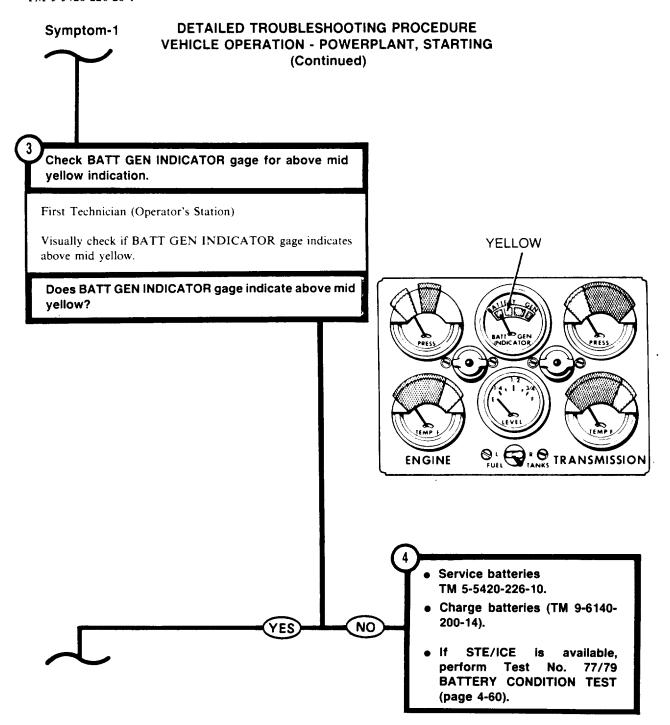

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING

Symptom-1 ENGINE WILL NOT CRANK WHEN STARTER SWITCH IS PRESSED. - NOTE -This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician. **BATT-GEN** Check for electrical power in the vehicle by **INDICATOR** observing BATT GEN INDICATOR for movement. First Technician (Operator's Station) • Observe position of BATT GEN INDICATOR when MASTER BATTERY switch is OFF. • Set MASTER BATTERY switch ON. • Check position of BATT GEN INDICATOR. O TRANSMISSION ENGINE Did the BATT GEN INDICATOR move when MASTER **BATTERY** switch was turned ON? GAGE INSTRUMENT PANEL **Check if MASTER BATTERY** indicator lamp lights. See Step (54). NO

DETAILED TROUBLESHOOTING PROCEDURE Symptom-1 **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) - NOTE -• If STE/ICE is available, perform Test No. 72 STARTER CURRENT FIRST PEAK (page 4-70). • If STE/ICE is not available, go to Step (5). Check for sound of starter solenoid and/or starter engaging. RIGHT TOP DECK GRILLE Second Technician (Top Deck) **DOORS** • Open right top deck grille doors. • Listen for clicks or other noise coming from starter when starter switch is pressed. First Technician (Operator's Station) • Set FUEL PUMPS switch OFF. • Press STARTER switch several times. Is there a clicking sound, or other noise from starter when STARTER switch is pressed?

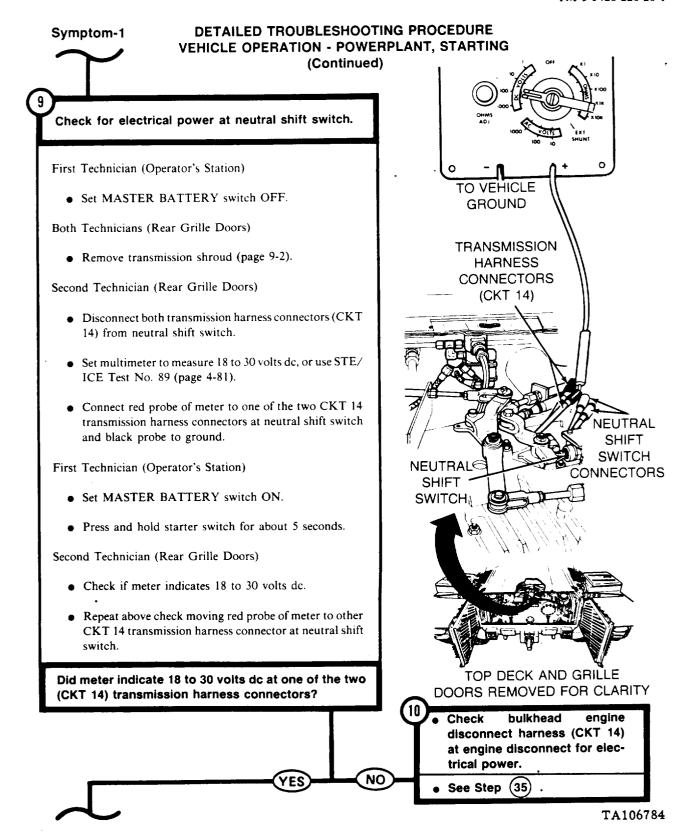

TA106782

• Check for locked engine.

See Step (32) .

Symptom-1 **DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) Check for transmission shift lever to be in P (park) position. First Technician (Operator's Station) • Move transmission shift lever out of "P" into "H", "L", or "R" positions and return lever to "P" position. • Attempt to start engine. Does engine crank? TRANSMISSION SHIFT LEVER Adjust shift control linkage (page 11-53).

TA106783

DETAILED TROUBLESHOOTING PROCEDURE Symptom-1 **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) Check neutral shift switch for continuity. First Technician (Operator's Station) • Set MASTER BATTERY switch OFF. Second Technician (Rear Grille Doors) • Set multimeter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83). • Connect red probe of meter to one of the neutral shift switch connectors. • Connect black probe to the other neutral shift switch connector. First Technician (Operator's Station) • Move shift lever from L to N several times. Second Technician (Rear Grille Doors) • Check if meter indicates continuity each time the shift lever is moved to N. Does meter indicate continuity each time the shift lever is moved to N. **NEUTRAL SWITCH CONNECTORS** (CKT 14) Adjust neutral shift switch (page 11-81). If switch cannot be adjusted, replace neutral shift switch

(page 10-236).

Symptom-1

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

- WARNING -

Use extreme care when working with circuit 81. This circuit carries battery voltage at all times whether MASTER BATTERY switch is ON or OFF.

13)

Check starter feed harness (CKT 81), at engine disconnect, for electrical power.

Second Technician (Rear Grille Doors)

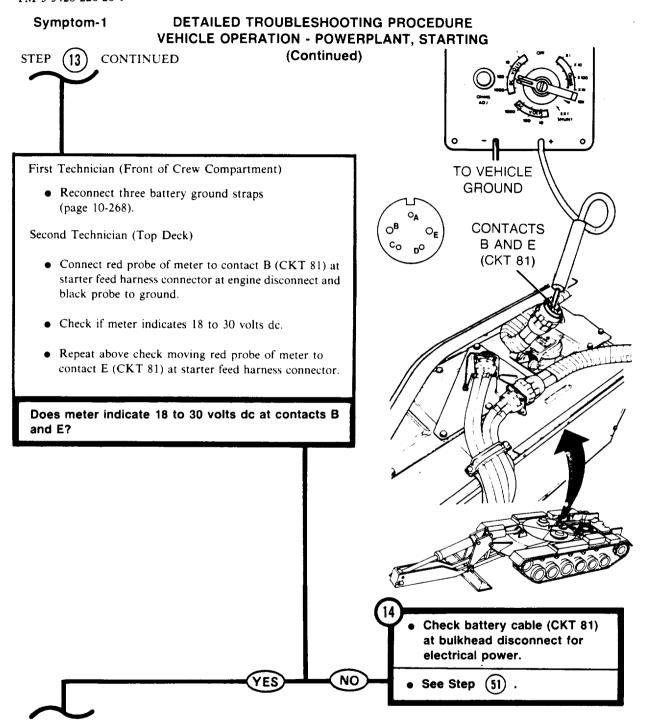

• Reconnect transmission harness connectors (CKT 14) to neutral shift switch connectors.

First Technician (Front of Crew Compartment)

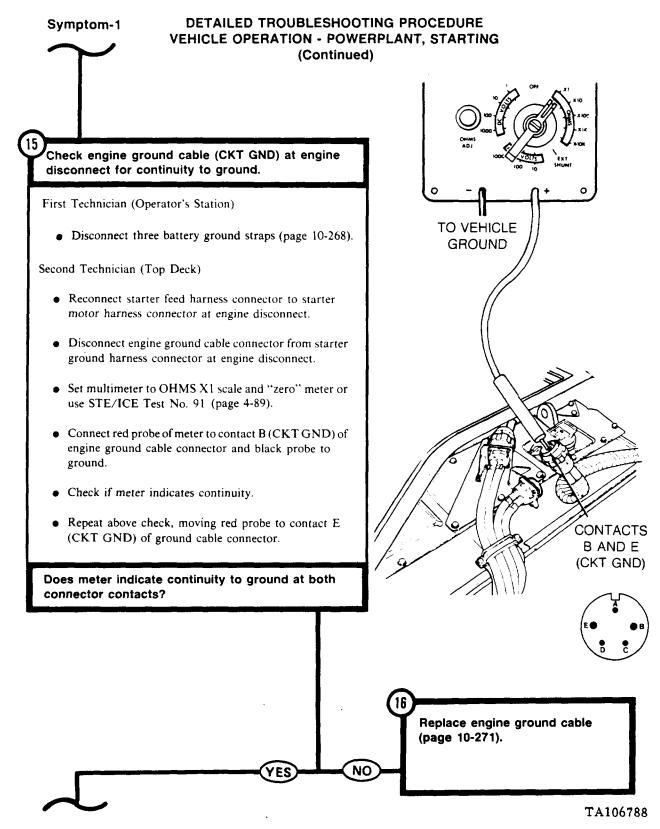

• Disconnect three battery ground straps (page 10-268).

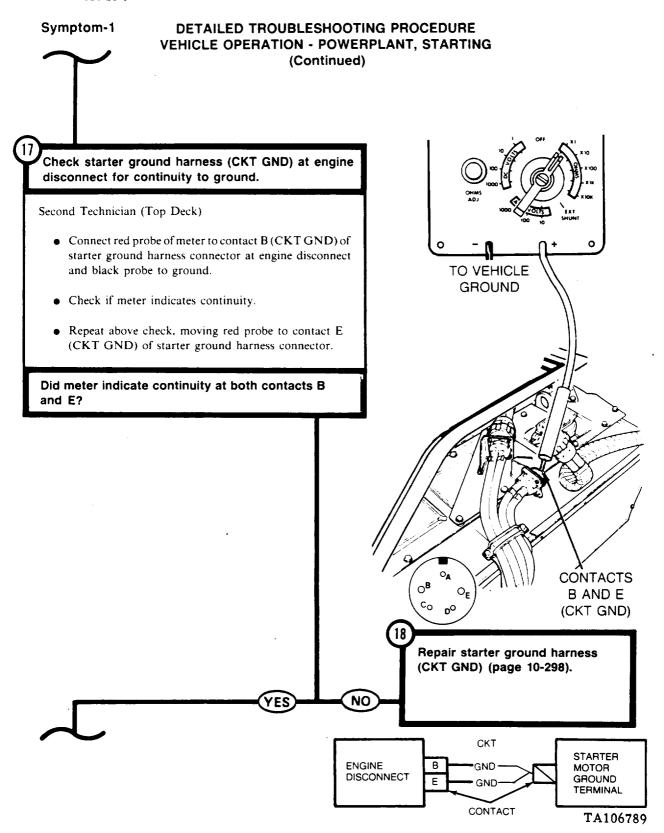

Second Technician (Top Deck)

- Disconnect starter feed harness connector from engine disconnect.
- Set multimeter to measure 18 to 30 volts dc, or use STE/ICE Test No. 89 (page 4-81).

TA106787

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

Check for electrical power at starter solenoid (CKT 81).

First Technician (Rear of Vehicle)

• Have powerplant removed (page 5-2).

Both Technicians (Powerplant)

• Install ground hop kit (page 5-25). Do not start engine.

Second Technician

 Reconnect three battery ground straps (page 10-268).

First Technician (Left Side of Engine)

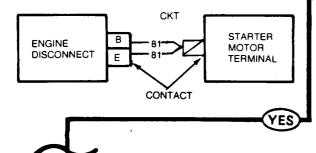

- Set multimeter to measure 18 to 30 volts dc, or use STE/ ICE Test No. 89 (page 4-81).
- Connect red probe of meter to starter solenoid terminal (CKT 81) and black probe to ground.

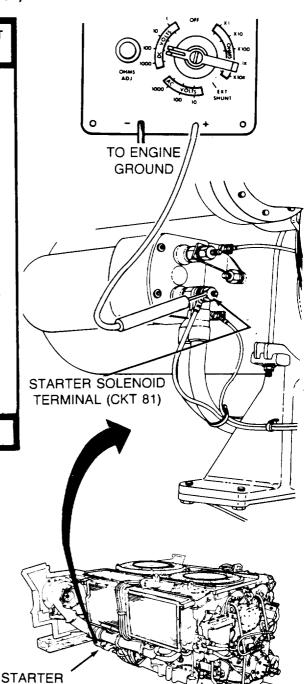

NO

• Check if meter indicates 18 to 30 volts dc.

Does meter indicate 18 to 30 volts dc?

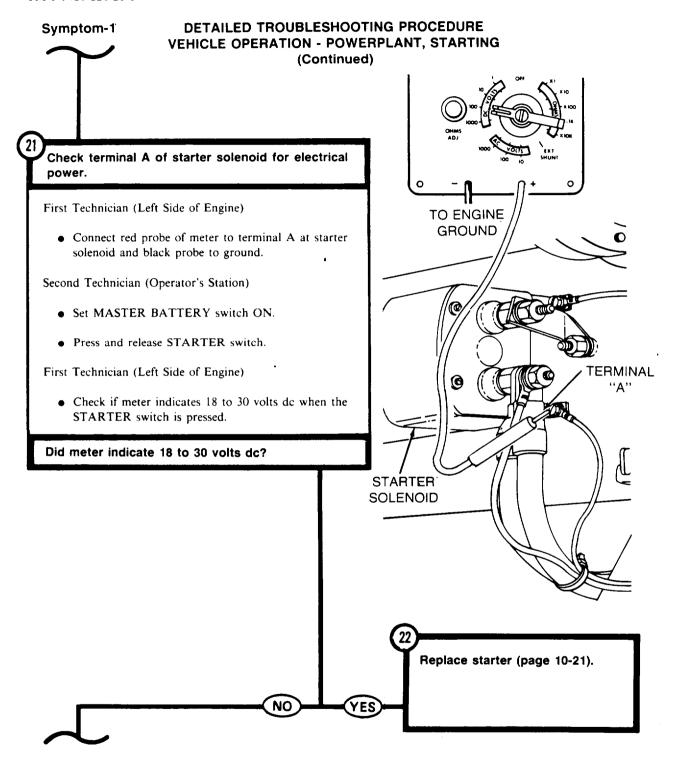

Repair starter motor harness (page 10-298).

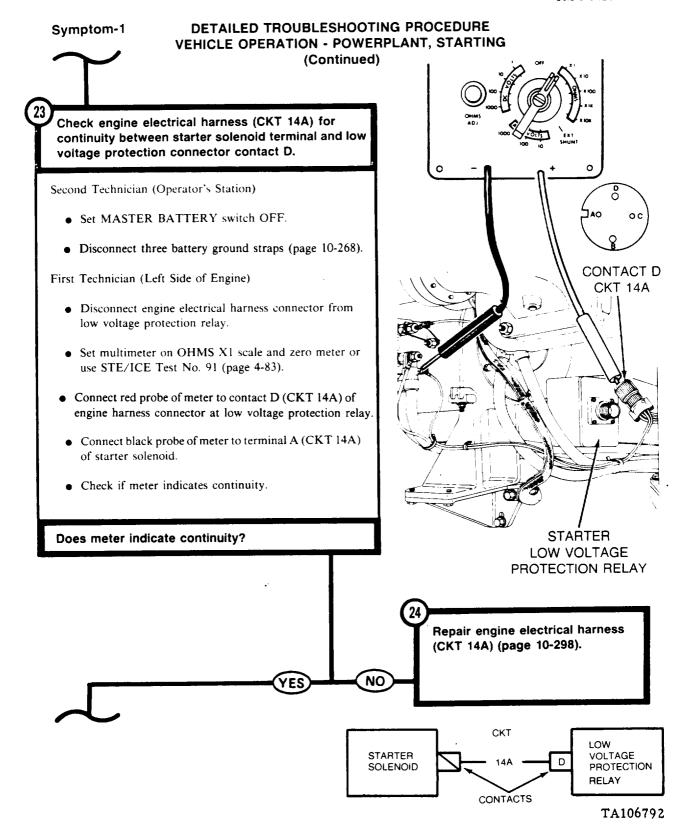

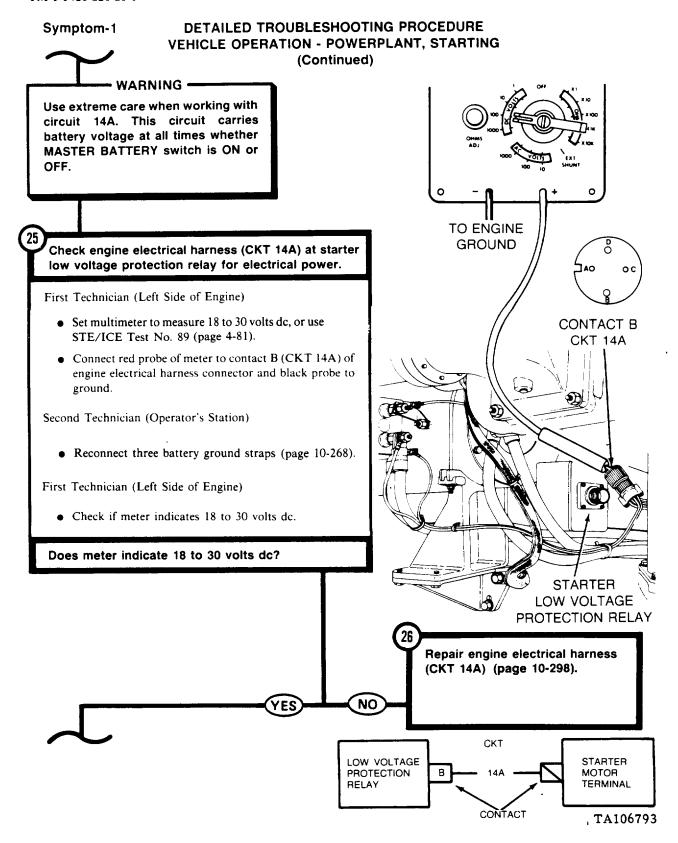

LEFT FRONT VIEW

4-101

Symptom-1

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

Check engine electrical harness (CKT 14) at starter low voltage protection relay for electrical power.

First Technician (Left Side of Engine)

• Connect red probe of meter to contact A (CKT 14) of engine electrical harness connector and black probe to ground.

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Press and release STARTER switch.

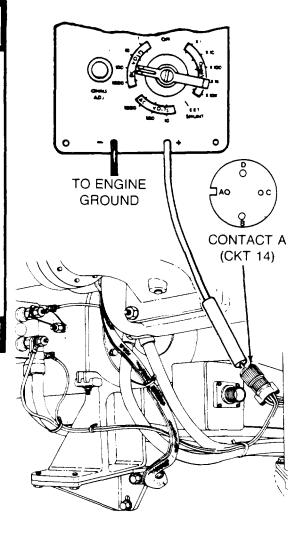

First Technician (Left Side of Engine)

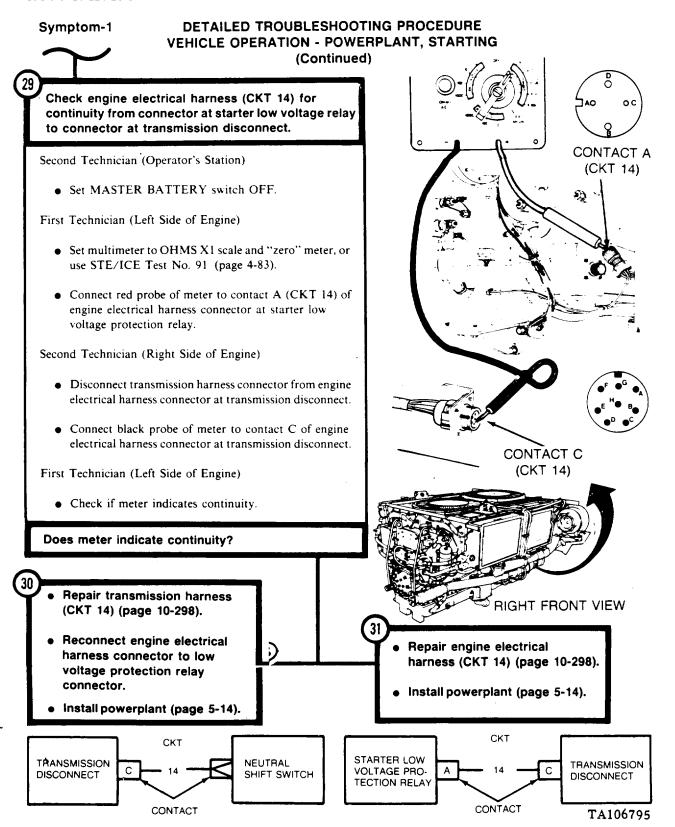

• Check if meter indicates 18 to 30 volts dc when STARTER switch is pressed.

YES

Did meter indicate 18 to 30 volts dc?

Replace low voltage protection relay (page 10-227).

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP

Check for locked engine.

First Technician (Operator's Station)

• Set MASTER BATTERY switch OFF.

Second Technician (Top Deck)

• Have powerplant removed (page 5-2).

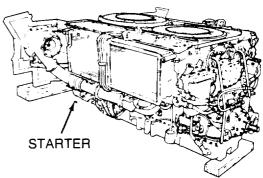

Both Technicians (Powerplant)

- Replace starter (page 10-21).
- Install ground hop kit (page 5-25). Do not start engine.

First Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Press and release STARTER switch.

Does engine crank?

POWERPLANT

Notify support maintenance of locked engine.

YES

NO

- Condition corrected by replacing starter.
- Have powerplant installed (page 5-14).

to connector at transmission

TM 5-5420-226-20-1 Symptom-2 **DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) Check for fuel flow at main fuel return line quick disconnect. Second Technician (Operator's Station) • Set MASTER BATTERY switch OFF. Both Technicians (Rear Grille Doors) • Remove transmission shroud (page 9-2). First Technician (Rear Grille Doors) • Disconnect main fuel return line quick disconnect. • Remove quick disconnect half from fuel line coming

Second Technician (Operator's Station)

from engine.

any fuel.

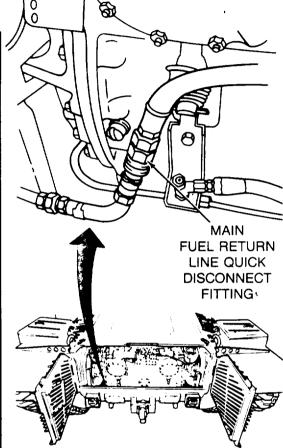

• Set MASTER BATTERY switch ON.

• Place one gallon container under open line to catch

• Set FUEL PUMPS switch ON.

First Technician (Rear Grille Doors)

- Observe return line for free fuel flow.
- Direct second technician to set MASTER BATTERY and FUEL PUMPS switches OFF.

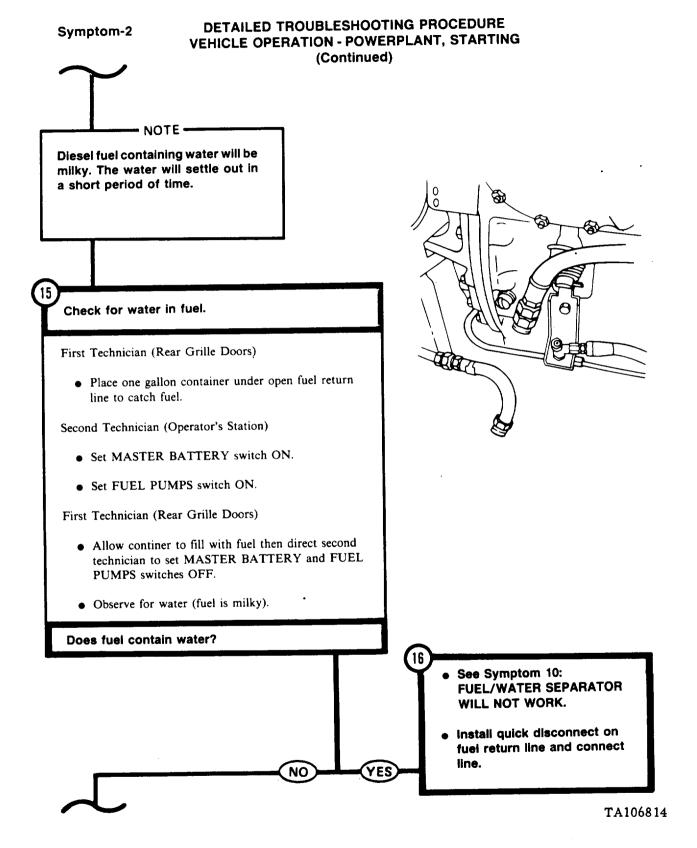

REAR OF ENGINE (TRANSMISSION SHROUD REMOVED)

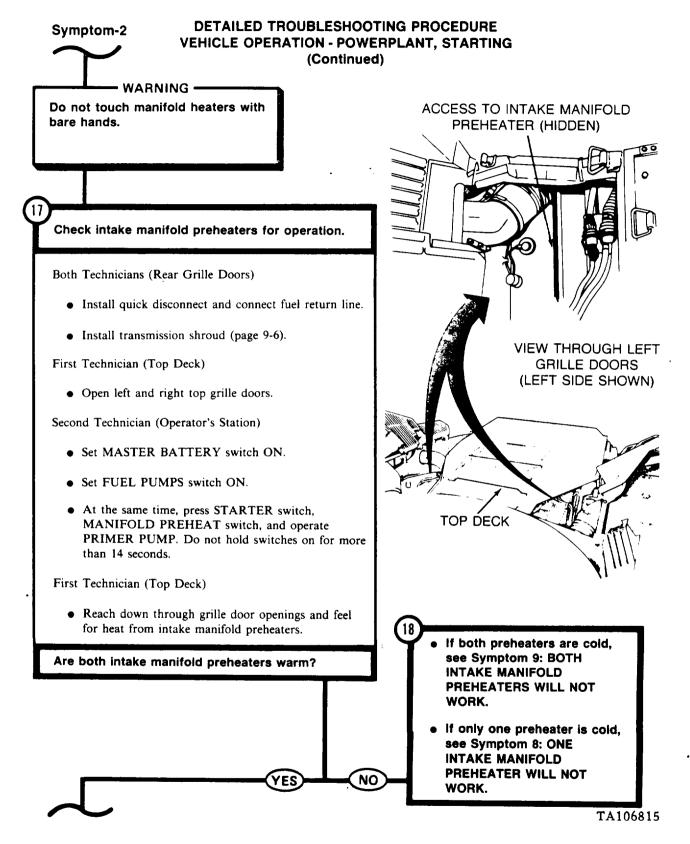

Does fuel flow freely from main fuel return line?

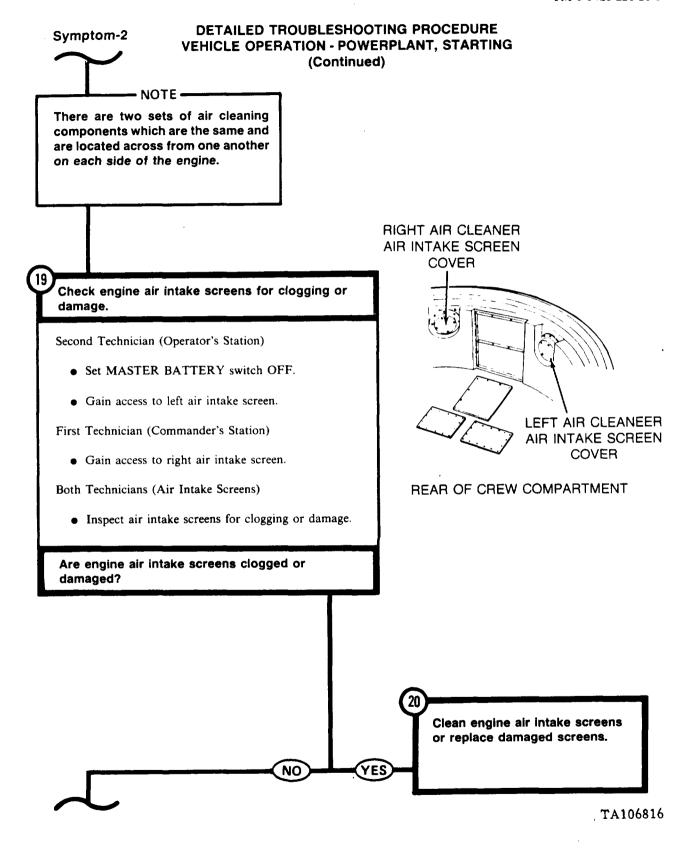

Check for free fuel flow from main fuel supply line quick disconnect (located behind upper engine access panel).

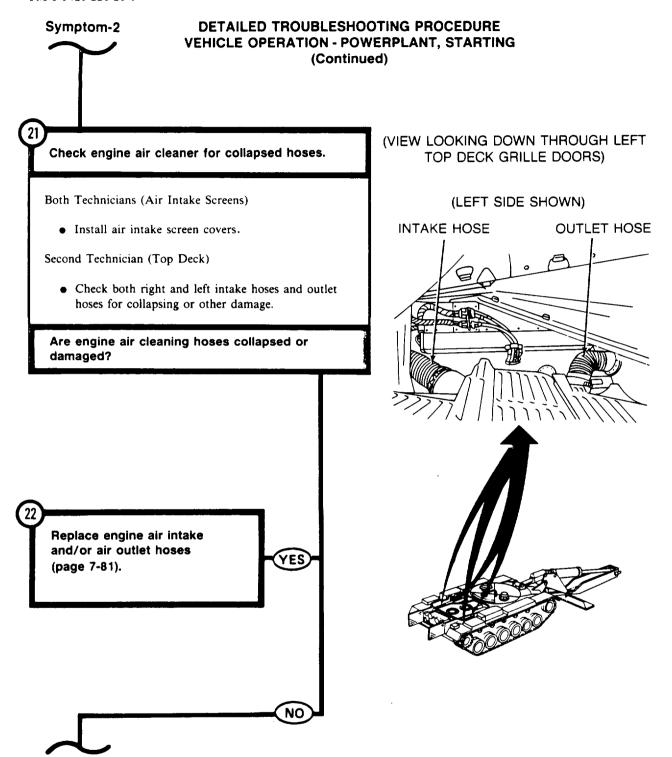

• See Step (26) .

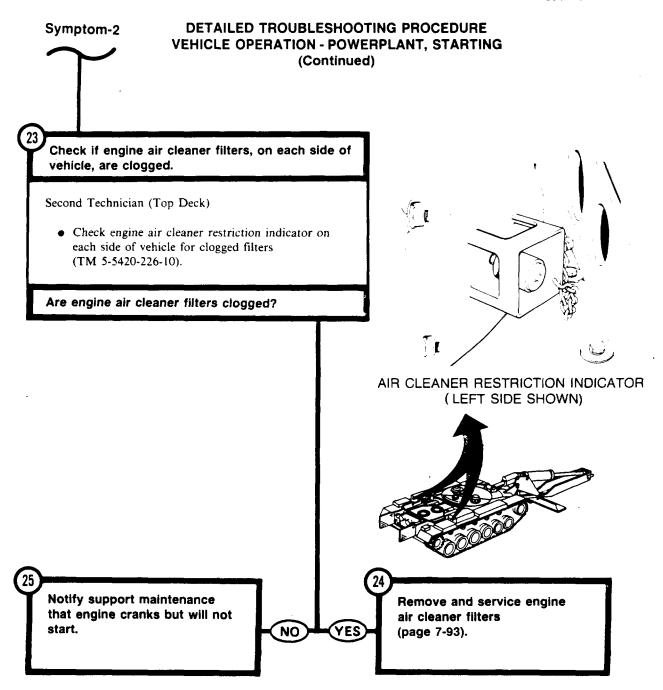

NO

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

Check for free fur quick disconnect access panel).

Check for free fuel flow from main fuel supply line quick disconnect (located behind upper engine access panel).

First Technician (Rear Grille Doors)

• Install quick disconnect and connect fuel return line.

First Technician (Rear of Crew Compartment)

- Disconnect main fuel line quick disconnect.
- Place a suitable container under the line to catch any fuel.
- Push in (and hold) on the center of the female quick disconnect.

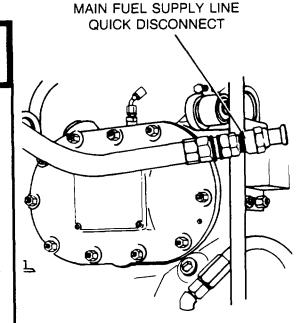

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch on for approximately 10 seconds then set FUEL PUMPS switch OFF.

First Technician (Rear of Crew Compartment)

 Check for free fuel flow from main fuel line quick disconnect.

Did fuel flow freely from main fuel line quick disconnect?

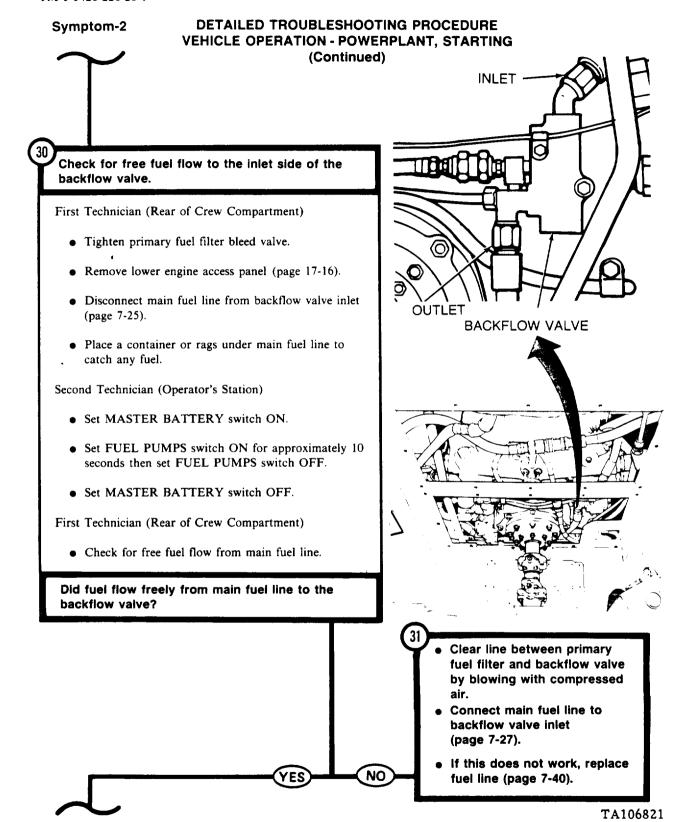

UPPER ENGINE ACCESS PANEL

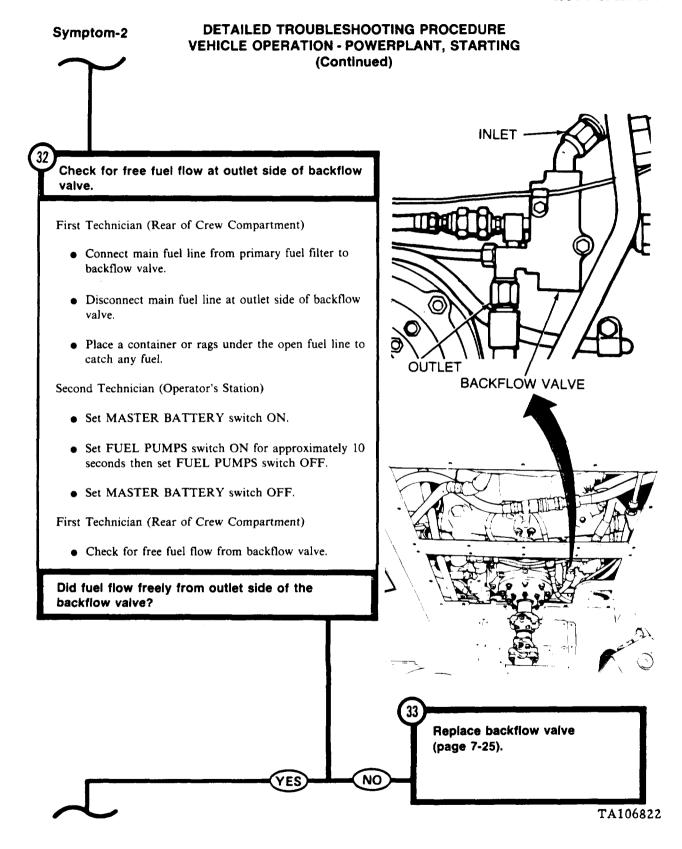

Check for free fuel flow from main fuel supply line between quick disconnect and flexible line.

 See Step 70 .

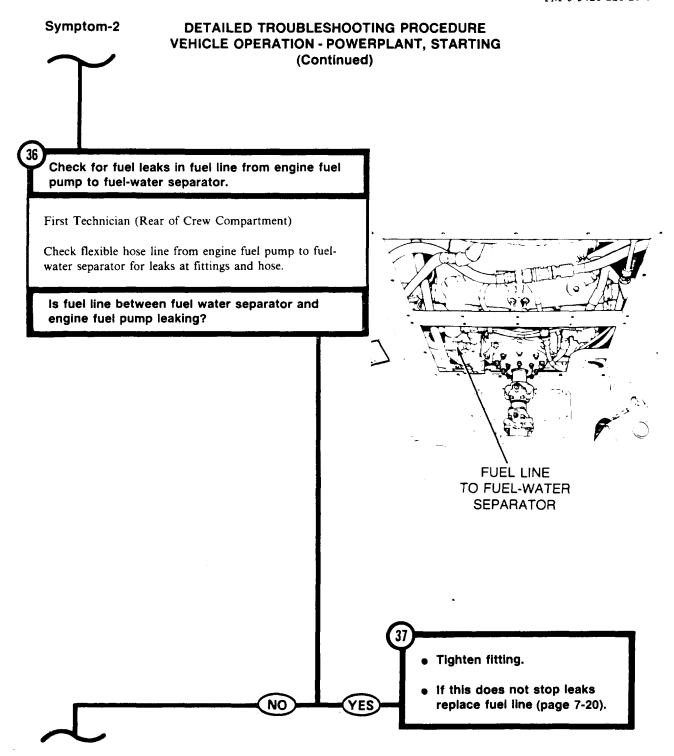

NO

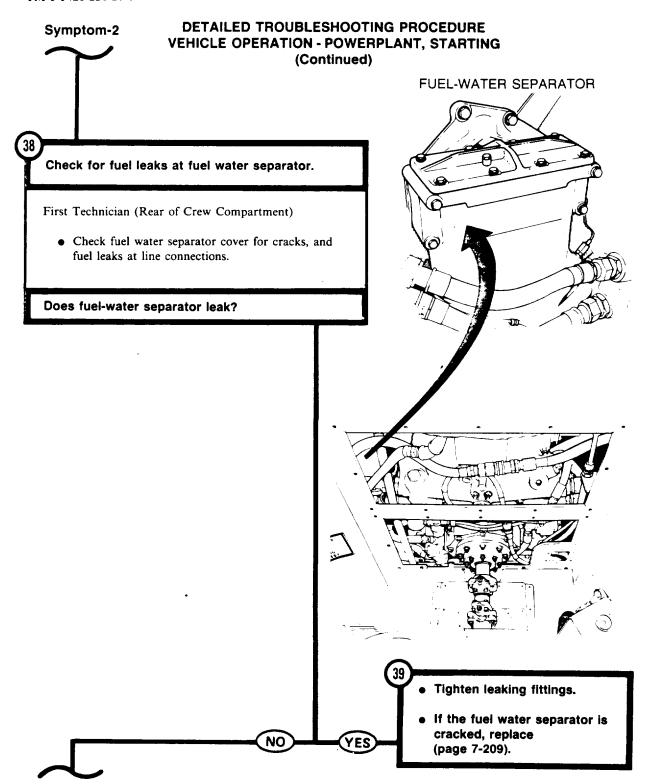

DETAILED TROUBLESHOOTING PROCEDURE Symptom-2 **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) **BLEED** VALVE Check for free fuel flow from primary fuel filter bleed valve. First Technician (Rear of Crew Compartment) • Connect main fuel line quick disconnect. • Loosen bleed valve on primary fuel filter. Second Technician (Operator's Station) • Set MASTER BATTERY switch ON. • Set FUEL PUMPS switch ON for approximately 10 seconds then set FUEL PUMPS switch OFF. • Set MASTER BATTERY switch OFF. First Technician (Rear of Crew Compartment) • Check for free fuel flow from primary fuel filter bleed valve. PRIMARY FUEL FILTER Did fuel flow freely from primary fuel filter bleed valve? UPPER ENGINE ACCESS PANEL • Check for free fuel flow to primary fuel filter. See Step (77) TA106820

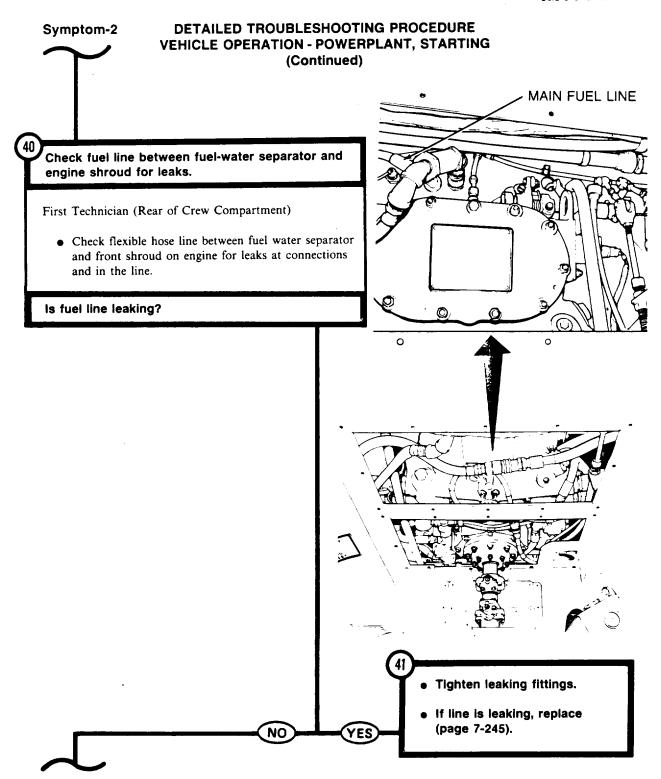

TA106825

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

Check main fuel line from front of engine to fuel injector pump for leaks.

Second Technician (Operator's Station)

- Set MASTER BATTERY switch OFF.
- Set FUEL PUMPS switch OFF.

First Technician (Rear of Vehicle)

• Remove engine cooling fans (page 9-55).

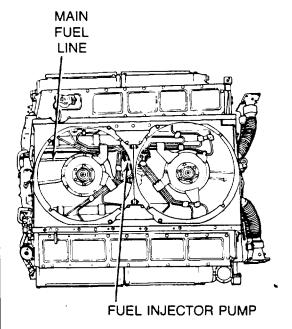

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch ON.

First Technician (Top of Engine)

 Check for leaks in main fuel line from front of engine to fuel injection pump.

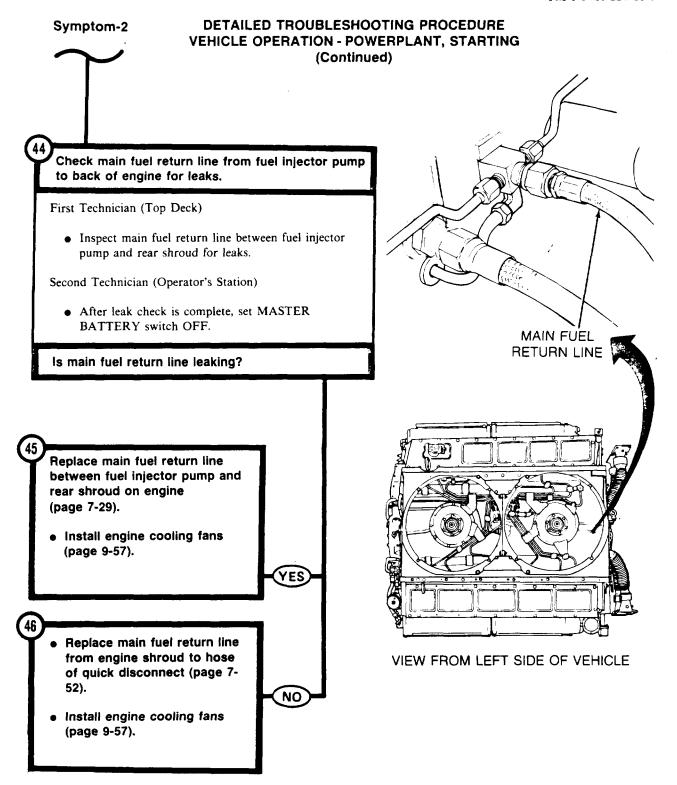

Is main fuel line leaking?

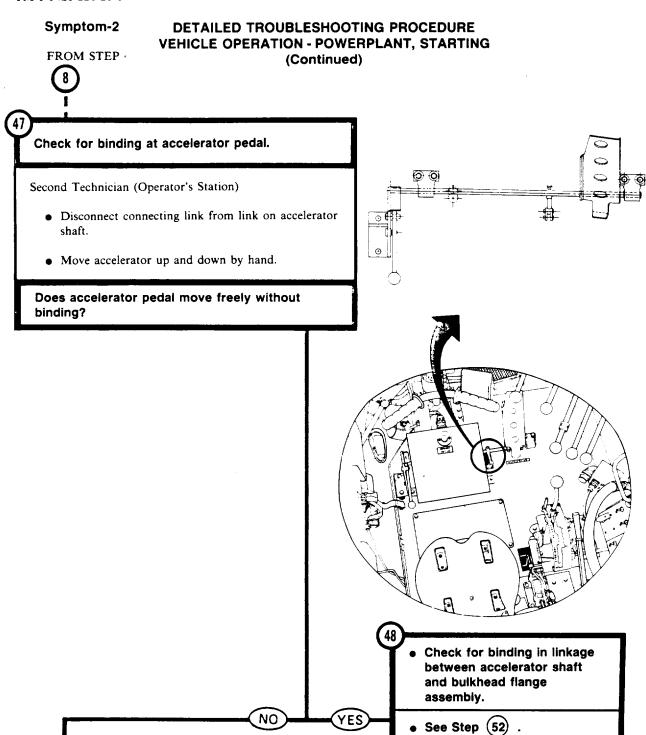

Replace main fuel line from front of engine to fuel injection pump (page 7-29).

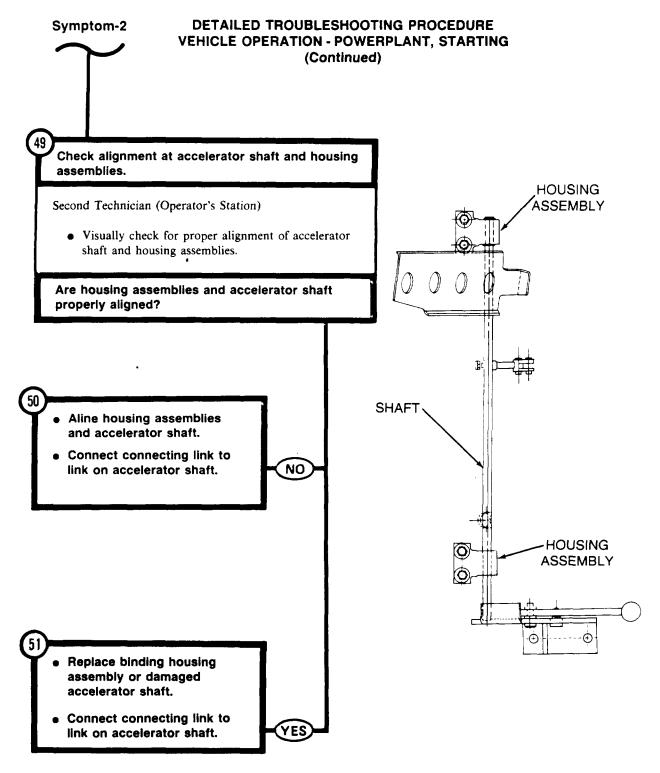

YES

NO

TA106829

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP

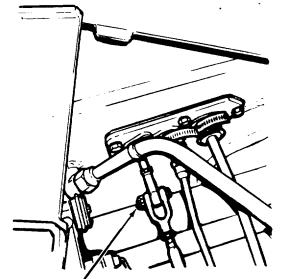

Check for binding in linkage between accelerator shaft and bulkhead flange assembly.

Second Technician (Operator's Station)

- Connect connecting link to link on accelerator shaft.
- Remove left-hand floor access cover (page 17-10).
- Remove pin connecting accelerator tubes at bulkhead.
- Press accelerator pedal down and release.

Does accelerator pedal move freely without binding?

ACCELERATOR TUBE CONNECTING PIN

Replace belicrank assembly (page 7-351).

NO

DETAILED TROUBLESHOOTING PROCEDURE Symptom-2 **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) Check for binding in flange at engine compartment bulkhead. **FLANGE** Second Technician (Operator's Station) • Install pin connecting accelerator tubes at bulkhead. • Lock accelerator pedal in full down position. • Remove nuts holding flange to bulkhead (page 7-363). • Slide flange forward on accelerator tube. Does flange move freely on the tube after it is out of the bulkhead? Repair flange (page 7-363).

Symptom-2 **DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) **ACCELERATOR** LINK ROD Check for binding in accelerator linkage between bulkhead and engine. Second Technician (Operator's Station) • Reinstall flange (page 7-364). First Technician (Rear of Crew Compartment) • Remove engine upper access panel (page 17-14). • Disconnect link rod by removing bolt from clevis. Second Technician (Operator's Station) • Press and release accelerator pedal. Does accelerator pedal move freely without binding? Notify support maintenance of accelerator linkage problem between bulkhead floor and engine. NO Connect accelerator link rod to clevis. • Install engine upper access panel (page 17-15). Notify support maintenance of accelerator linkage problem on engine. Connect accelerator link rod to clevis. YES Install engine upper access panel (page 17-15).

CLEVIS

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP -

Check for movement of throttle stop pin at engine.

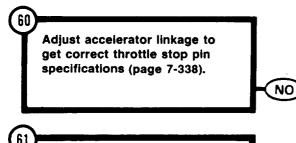

Second Technician (Operator's Station)

 Press accelerator pedal all the way down and release.

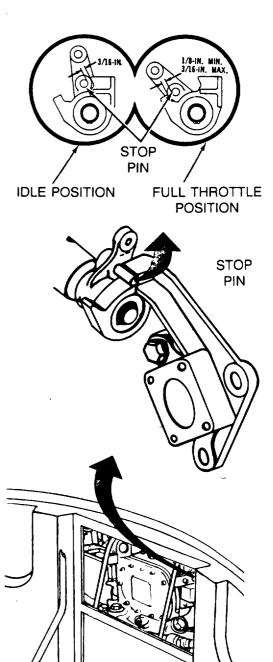

First Technician (Rear of Crew Compartment)

 Check position of stop pin at idle and at full throttle.

Does stop pin move to specified positions?

Notify support maintenance of problem with throttle crossover shaft.

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

Install front accessory Install engine access panel harness connector at (page 17-15). bulkhead disconnect (page 10-270).

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP

Check for free fuel flow from main fuel supply line between quick disconnect and flexible line.

First Technician (Rear of Crew Compartment)

- Remove female quick disconnect half from flexible line.
- Place a suitable container under open line to catch any fuel.

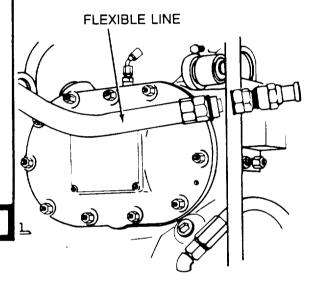

Second Technician (Operator's Station)

• Set FUEL PUMPS switch ON for approximately 10 seconds, then set FUEL PUMPS switch OFF.

NO

• Set MASTER BATTERY switch OFF.

Does fuel flow freely from flexible line?

Replace quick disconnect.

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FRONT OF ENGINE COMPARTMENT

Check for free fuel flow from main fuel line at connection between tubing and flexible hose.

First Technician (Top Deck)

• Have powerplant removed (page 5-2).

First Technician (Engine Compartment)

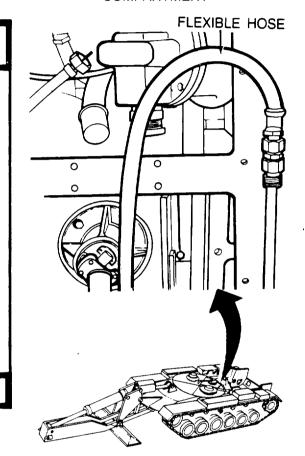

- Disconnect flexible hose from metal fuel supply line.
- Place a suitable container or rags under fuel line to catch any fuel.

Second Technician (Operator's Station)

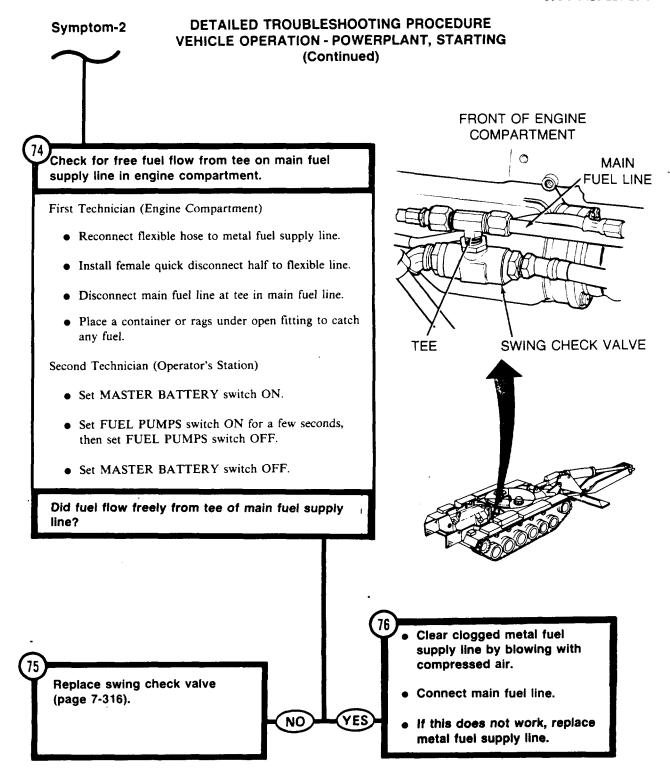

- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch ON for approximately 10 seconds, then set FUEL PUMPS switch OFF.
- Set MASTER BATTERY switch OFF.

Did fuel flow freely from metal fuel supply line?

NO

- Clear clogged flexible hose by blowing with compressed air.
 - Install female quick disconnect half to flexible hose.
 - Connect flexible hose to metal fuel supply line.
 - If this does not work, replace flexible hose.

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP

Check for free fuel flow to primary fuel filter.

First Technician (Rear of Crew Compartment)

• Remove primary fuel filter element (page 7-194).

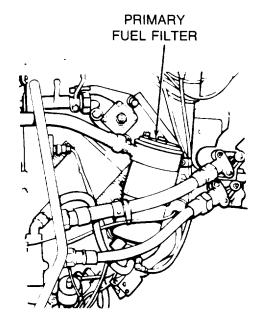

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch ON for approximately 10 seconds, then set FUEL PUMPS switch OFF.

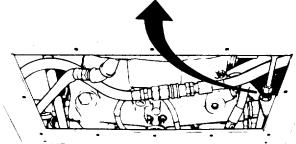

First Technician (Rear of Crew Compartment)

• Check for fuel flowing into primary fuel filter.

Did fuel flow into primary fuel filter with element removed?

- **(78)**
- Clear flexible line to primary fuel filter by blowing with compressed air.
- If this does not work, replace flexible line (page 7-180).
- Tighten primary fuel filter bleed valve.
- Replace primary fuel filter element (page 7-194).
 - Tighten primary fuel filter bleed valve.

(VIEWED FROM OPERATOR'S STATION) • Place a container under line to catch any fuel. • Operate primer pump. Does fuel flow freely from primer pump pressure line at bulkhead? Clear clogged line between primer pump and fitting at left hull bulkhead by blowing with compressed air. If this does not NO YES work, replace line (page 7-327).

(Continued) PRIMER PUMP Symptom-7 PRESSURE LINE Check for free fuel flow from primer pump pressure line at backflow valve. First Technician (Rear of Crew Compartment) • Connect primer pump pressure line quick disconnect. • Remove lower engine access cover (page 17-16). • Disconnect primer pump pressure line at backflow valve (page 7-25). • Place a container under line to catch any fuel. Second Technician (Operator's Station) **BACKFLOW** • Operate primer pump. VALVE Does fuel flow freely from line at backflow valve? Clear clogged line between quick disconnect and the backflow valve by blowing with compressed air. If this does not work, replace line NO (page 7-40).

Symptom-7

Check for free fuel flow between engine fuel pump and backflow valve.

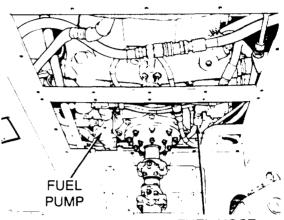

First Technician (Rear of Crew Compartment)

- Connect primer pump pressure line at backflow valve.
- Disconnect hose between backflow valve and engine fuel pump at backflow valve.
- Place a container under hose to catch any fuel.

Second Technician (Operator's Station)

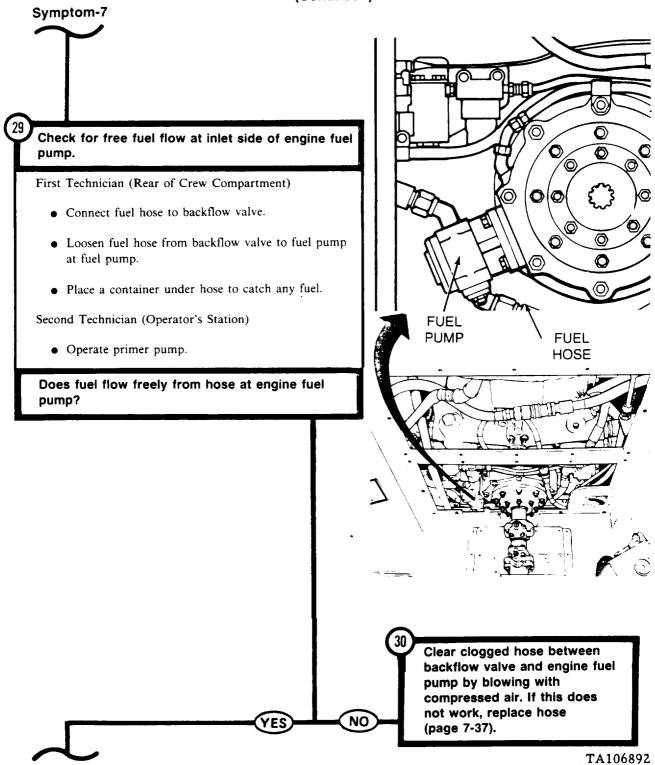

• Operate primer pump.

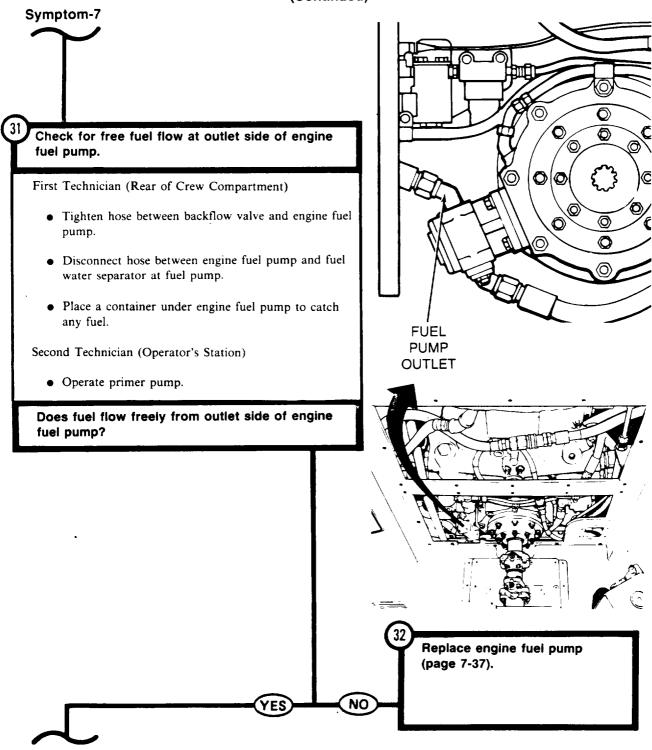

Does fuel flow freely from backflow valve?

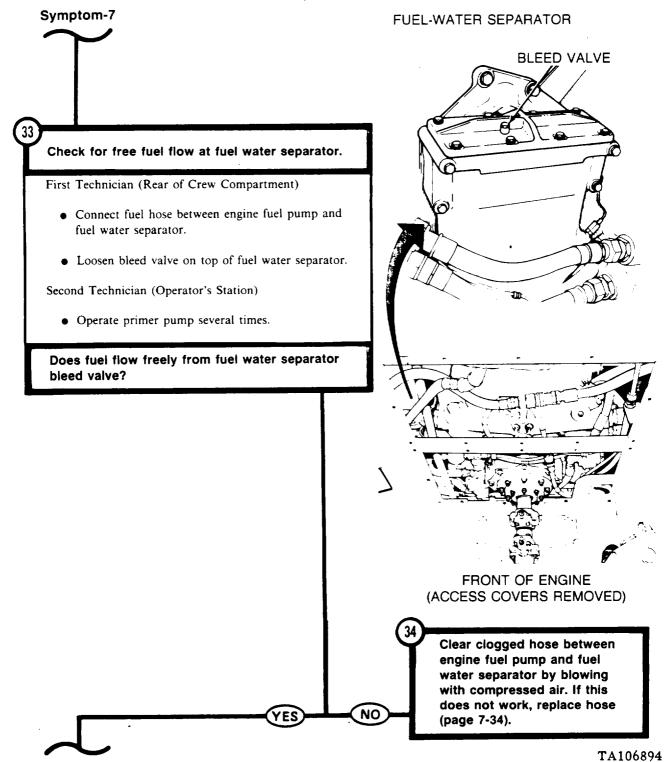

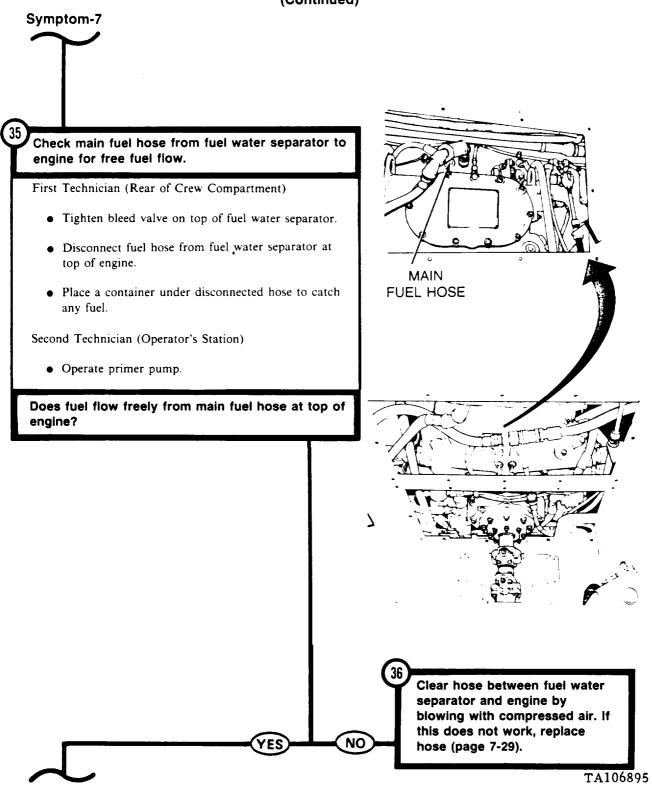

FUEL HOSE (BACKFLOW VALVE TO FUEL PUMP)

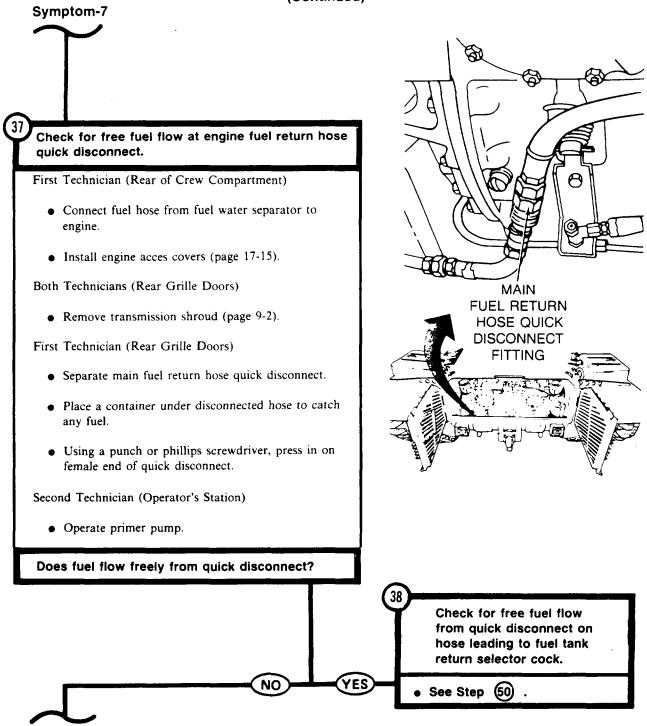

Replace backflow valve (page 7-25).

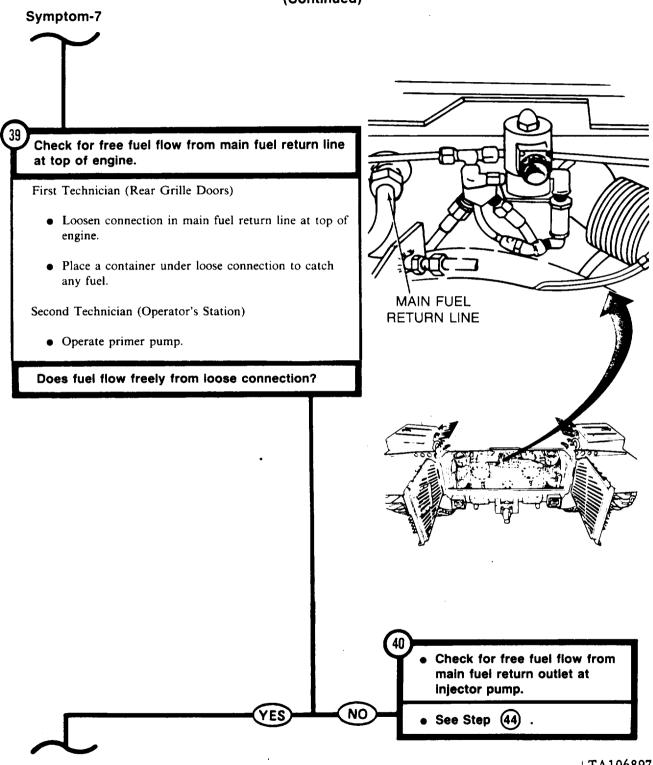

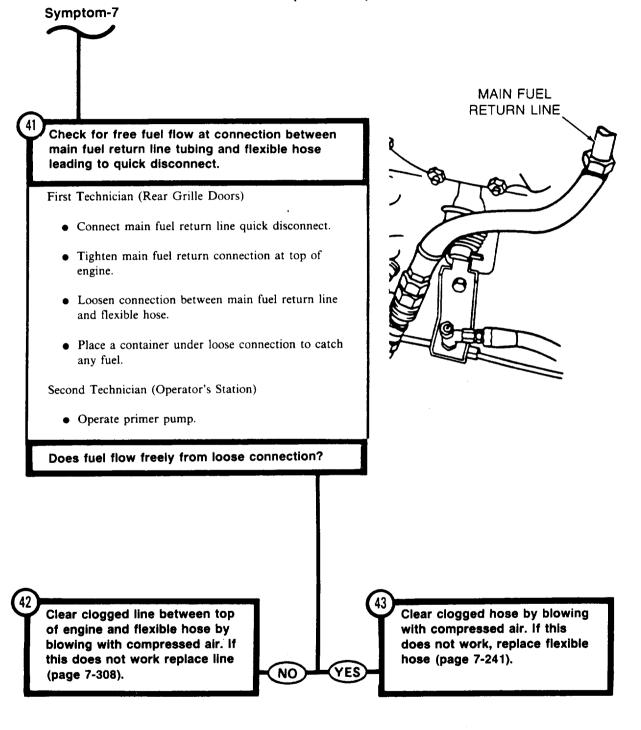

Symptom-7

VEHICLE OPERATION - POWERPLANT, STARTING FROM STEP (Continued) MAIN FUEL RETURN LINE Check for free fuel flow from main fuel return outlet at injector pump. First Technician (Rear Grille Doors) • Connect main fuel return line quick disconnect. Both Technicians (Top Deck) • Remove engine cooling fans (page 9-55). • Disconnect main fuel return line at injector pump. Second Technician (Operator's Station) Operate primer pump. **FUEL** INJECTOR Does fuel flow freely from injector pump return **PUMP** outlet? Clear cloqqed fuel supply line between front of engine and inlet side of fuel injector pump by blowing with compressed air. If this does NO not work, replace line (page 7-29). Tighten connection in main fuel return line at top of engine. Clear clogged fuel return line between injector pump and the rear of engine by blowing with compressed air. If this does not work, replace line YES

DETAILED TROUBLESHOOTING PROCEDURE

Symptom-7

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP

Check for free fuel flow from primer pump supply line in engine compartment.

Second Technician (Operator's Station)

• Connect fuel supply line to bulkhead fitting.

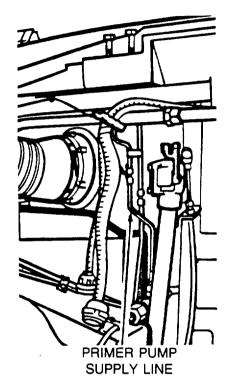

Both Technicians (Top Deck)

- Have powerplant removed (page 5-2).
- Disconnect primer pump supply line at inline connection.

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch ON then OFF.

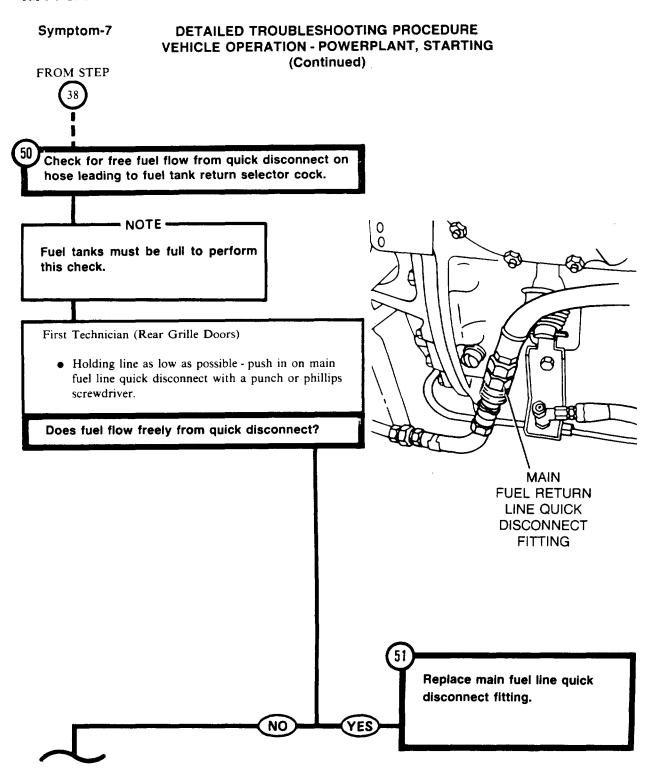

Does fuel flow freely from primer pump supply line in engine compartment?

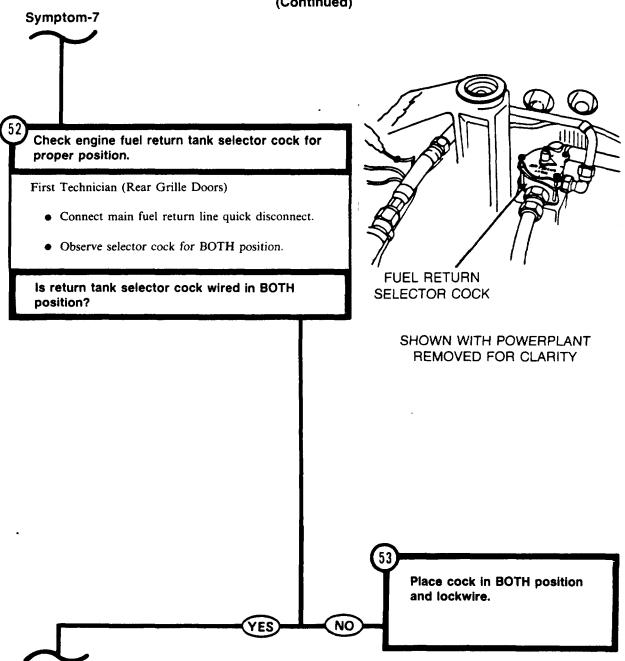

Clear line between inline connector and main fuel supply by blowing with compressed air. If this does not work, replace line.

NO

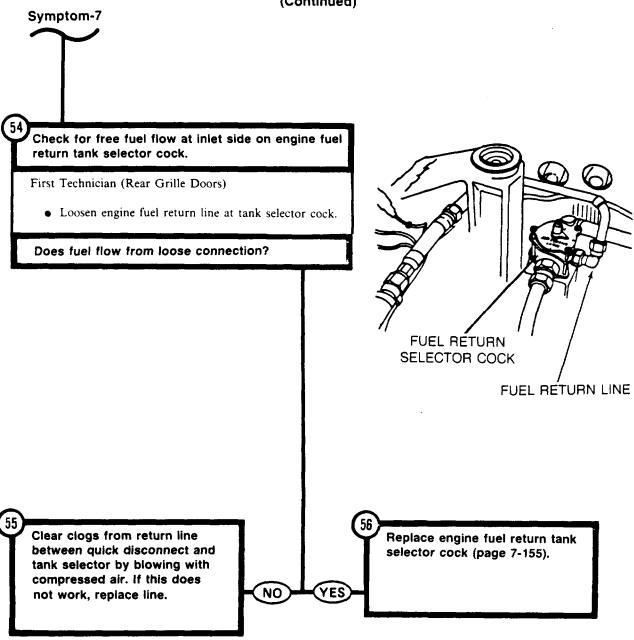

Clear line between inline connector in engine compartment and left hull bulkhead by blowing with compressed air. If this does not work, notify support maintenance.

Symptom-8

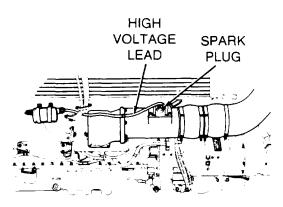

ONE INTAKE MANIFOLD PREHEATER WILL NOT WORK.

WARNING -

When power is on, keep hands away from high voltage ignition lead. Contact with high voltage output can cause injury or death.

- NOTE -

This procedure is to be performed by two persons. The lead person shall be referred to as the first technician and shall direct the activity of the second person called the second technician.

(RIGHT SIDE OF ENGINE SHOWN)

Check for electrical power to manifold preheater spark plug.

Second Technician (Operator's Station)

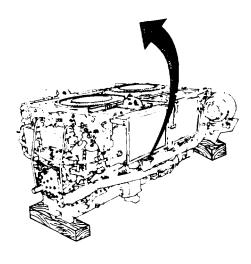

• Set MASTER BATTERY switch OFF.

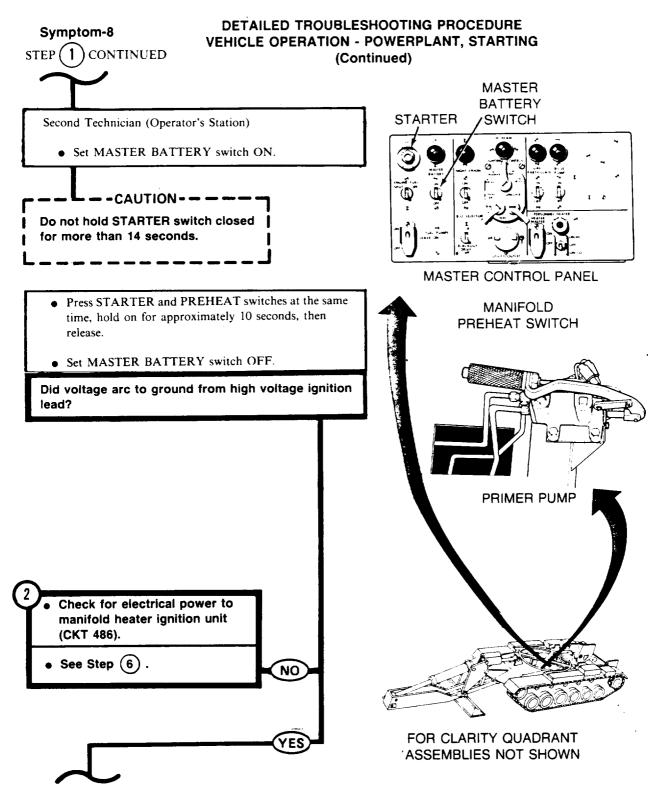

First Technician (Top Deck)

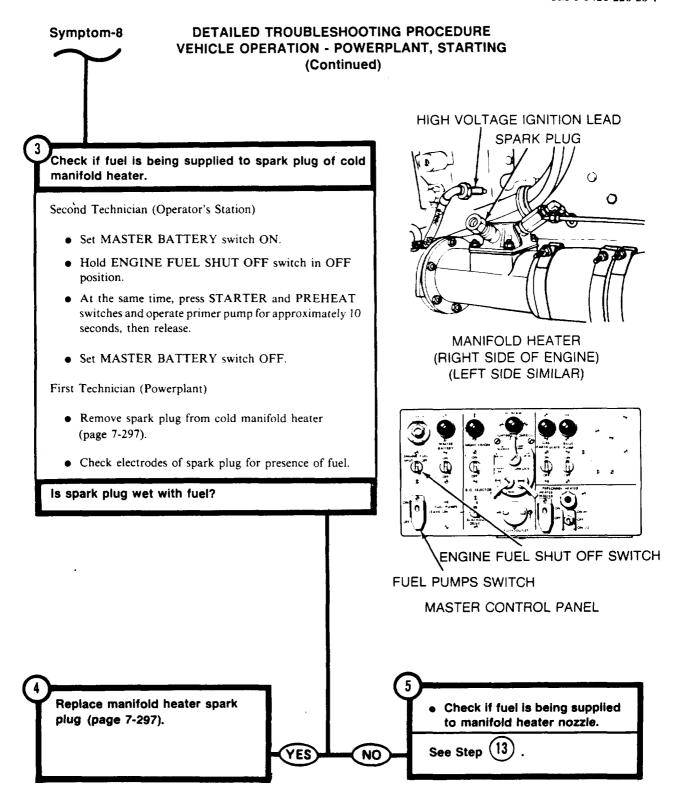

• Have powerplant removed (page 5-2).

First Technician (Powerplant)

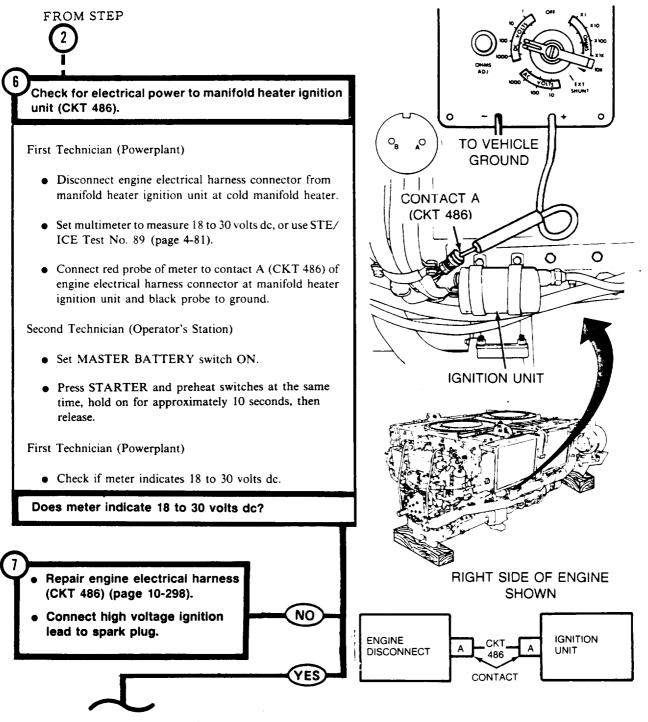

- Ground hop powerplant (page 5-25). Do not start engine.
- Disconnect high voltage ignition lead from spark plug of cold manifold preheater.
- Place disconnected end of high voltage ignition lead 1/4 inch from engine ground.
- Check if disconnected end of high voltage ignition lead arcs to ground when STARTER and manifold preheater switches are pressed.

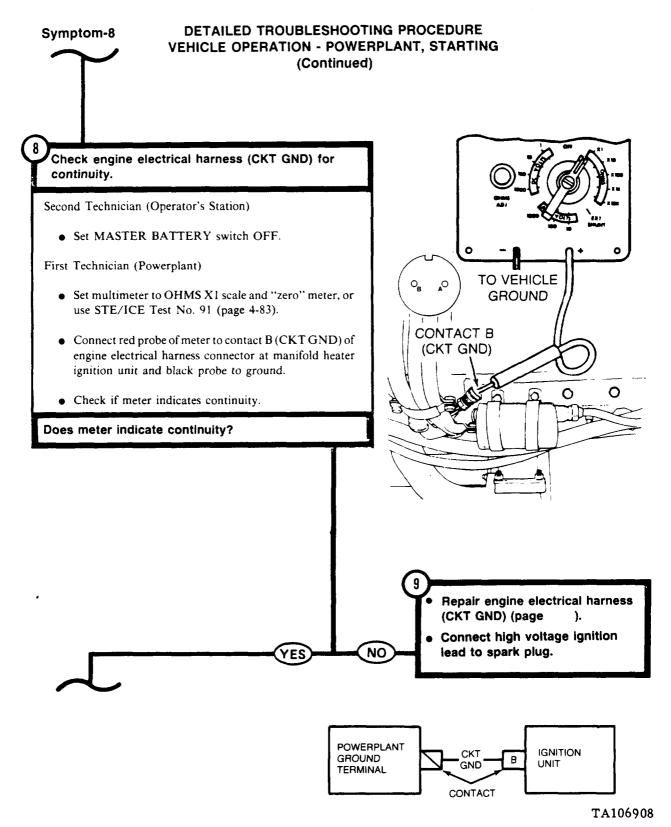

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

TM 5-5420-226-20-1 Symptom-8 DETAILED TROUBLESHOOTING PROCEDURE **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) 10 Check high voltage ignition lead for short to ground. First Technician (Powerplant) • Connect engine electrical harness connector to manifold heater ignition unit at cold manifold heater. Disconnect high voltage ignition lead from manifold heater ignition unit at cold manifold heater (keep this lead). **IGNITION** Disconnect high voltage ignition lead from manifold heater ignition unit and spark plug at manifold heater on UNIT opposite side of engine and connect it to ignition unit and spark plug of cold manifold heater. Second Technician (Operator's Station) • Set MASTER BATTERY switch ON. • Press STARTER and preheat switches at the same time, hold on for approximately 10 seconds, then release.

(RIGHT SIDE OF ENGINE SHOWN)

HIGH

VOLTAGE

LEAD

Did manifold heater get hot?

• Check if heat can be felt from manifold heater.

First Technician (Powerplant)

Replace high voltage ignition lead (page 7-289).

YES

NO

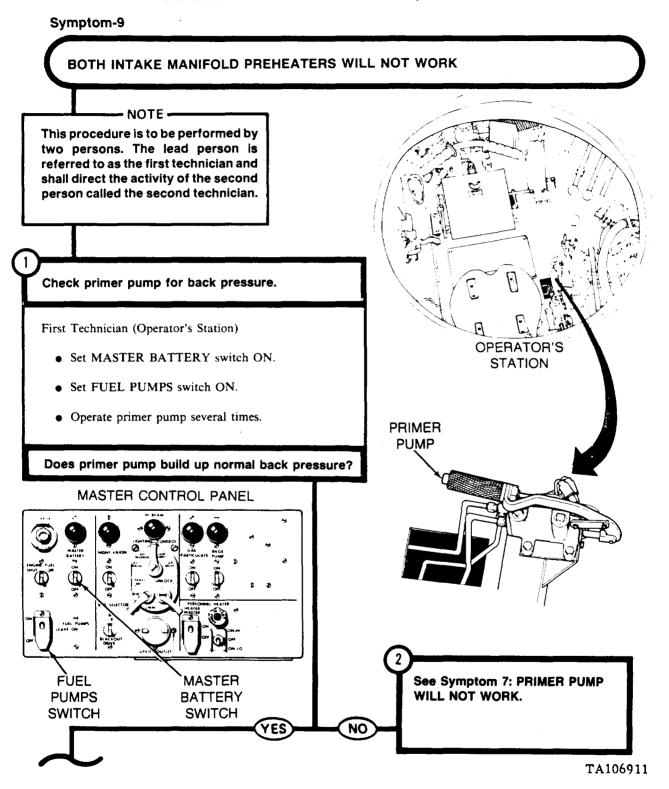

Replace manifold heater ignition unit (page 7-289).

Install high voltage ignition lead to manifold heater without a lead.

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

FROM STEP 5 Check if fuel is being supplied to manifold heater nozzle. First Technician (Powerplant) **MANIFOLD ELBOW FUEL INLET** • Connect high voltage ignition lead to spark plug of cold manifold preheater. LINE • Disconnect manifold heater fuel inlet line at manifold heater which is not working. 0 Second Technician (Operator's Station) • Set MASTER BATTERY switch ON. • At the same time, press STARTER and preheat switches and operate primer pump for approximately 10 seconds, then release. First Technician (Powerplant) • Check for free fuel flow, at disconnected inlet line, while FUEL NOZZLE **FUEL RETURN** primer pump is being operated. **ASSEMBLY** LINE Is fuel being supplied to manifold heater nozzle? MANIFOLD HEATER (RIGHT SIDE OF ENGINE SHOWN) Replace fuel line from solenoid Replace manifold heater nozzle valve to manifold heater nozzle (page 7-283). (page 7-263). NO YES

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING

(Continued)

Do not press STARTER button for more than 14 seconds.

-CAUTION---

Check basket-control panel starting harness (CKT 486) at manifold preheat switch connector for electrical power.

First Technician (Operator's Station)

- Set MASTER BATTERY switch OFF.
- Place manual fuel shutoff handle in OFF (out) position.
- Disconnect both harness connectors (CKT 486) from preheat switch at primer pump.
- Set multimeter to measure 18 to 30 volts dc, or use STE/ICE Test No. 89 (page 4-81).
- Connect red probe of meter to one of the connectors (CKT 486) at manifold preheat switch and black probe to ground.
- Set MASTER BATTERY switch ON.
- Press STARTER button for about 10 seconds, then release.
- Check if meter indicates 10 to 30 volts dc.
- Repeat above check moving red probe of meter to other connector (CKT 486) at manifold preheat switch.
- Place manual fuel shutoff handle in ON (down) position.

TO VEHICLE GROUND

CKT 486

Did meter indicate 18 to 30 volts dc at one of the connectors?

 Check manifold preheat switch for continuity.

See Step (12) .

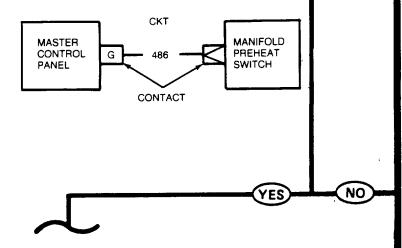

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

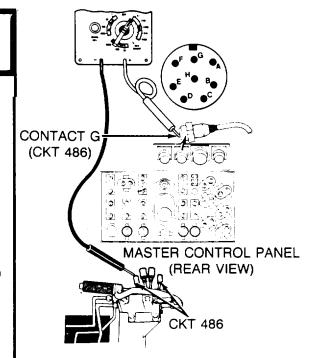

Check basket-control panel starting harness (CKT 486) from master control panel to primer pump for continuity.

First Technician (Operator's Station)

- Set MASTER BATTERY switch OFF.
- Displace master control panel (page 10-33).
- Disconnect basket-control panel starting harness connector from master control panel.
- Set mulitmeter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83).
- Connect red probe of meter to contact G (CKT 486) of basket-control panel starting harness connector at master control panel.
- Connect black probe of meter to first one (CKT 486) lead at primer pump and then to other lead.
- Check if meter indicates continuity at one of leads (CKT 486) at primer pump.

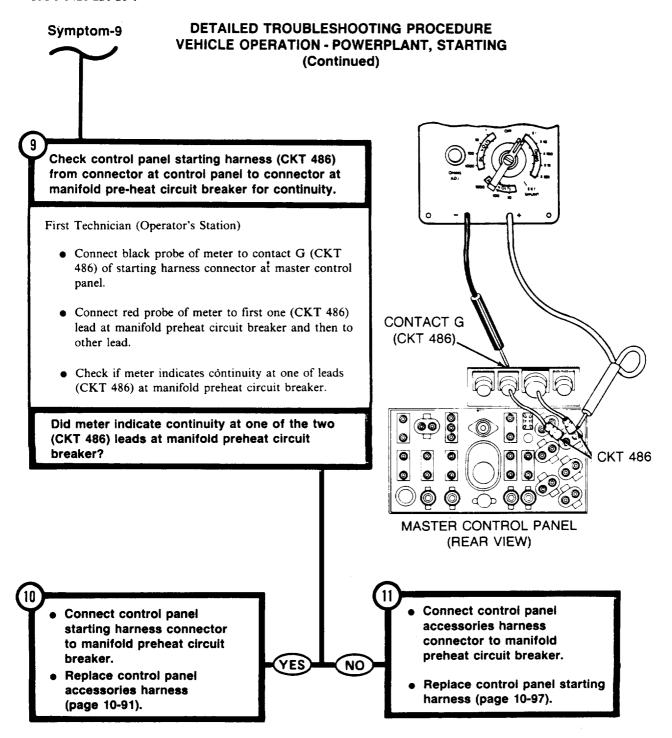

Did multimeter indicate continuity at one of the two (CKT 486) leads at the primer pump?

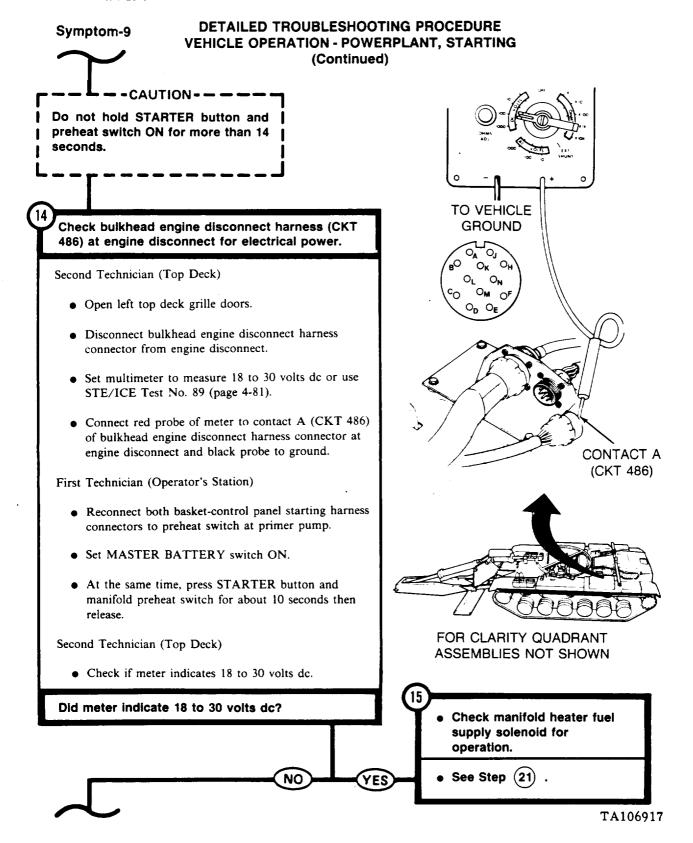

- Inspect basket-control panel starting harness for bent/broken connector contacts or loose (CKT 486) wire at rear of connectors.
- Repair connectors if defective (page 10-298).
- If connectors are not defective, notify support maintenance of a defective basket-control panel starting harness.
- Connect basket-control panel starting harness connectors to primer pump and master control panel.
- Install master control panel (page 10-33).

DETAILED TROUBLESHOOTING PROCEDURE Symptom-9 **VEHICLE OPERATION - POWERPLANT, STARTING** (Continued) Check manifold preheat circuit breaker (CKT 486) for continuity. First Technician (Operator's Station) • Connect basket-control panel starting harness connectors to preheat switch at primer pump. • Disconnect electrical lead connectors (CKT 486) from manifold preheat circuit breaker on master control panel. • Connect red probe of meter to one circuit breaker contact and black probe to other circuit breaker contact. • Check if meter indicates continuity. Did meter indicate continuity? Connect basket-control panel starting harness connector to master control panel. NO • Replace manifold preheat circuit breaker (page 10-70).

DETAILED TROUBLESHOOTING PROCEDURE Symptom-9 **VEHICLE OPERATION - POWERPLANT, STARTING** FROM STEP (Continued) Check manifold preheat switch for continuity. First Technician (Operator's Station) • Set MASTER BATTERY switch OFF. • Set multimeter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83). • Connect red probe of meter to one manifold preheat switch connector and black probe to other manifold preheat switch connector. • Press and hold manifold preheat switch. • Check if meter indicates continuity. Does meter indicate continuity? MANIFOLD: **PREHEAT SWITCH** Replace primer pump (page 7-304). NO

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, STARTING (Continued)

(16)

Check front accessory harness (CKT 486) at bulkhead disconnect for electrical power.

First Technician (Operator's Station)

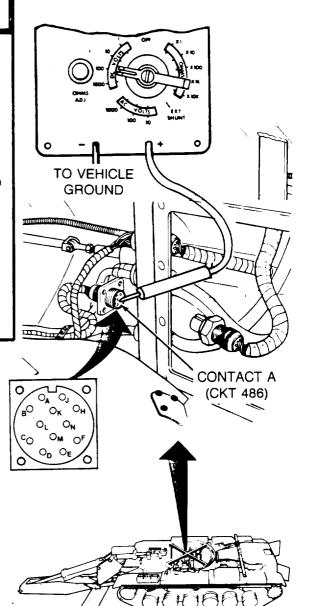

• Set MASTER BATTERY switch OFF.

Second Technician (Commander's Station)

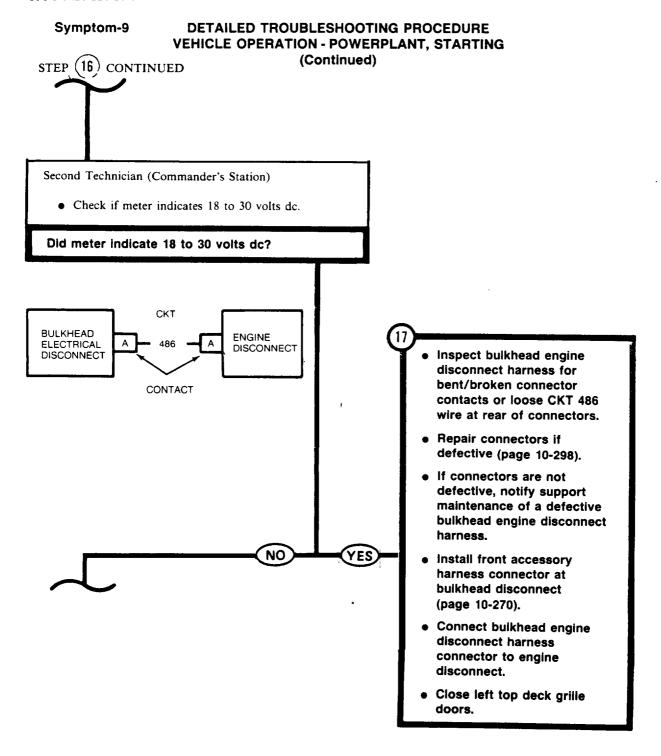

- Displace front accessory harness connector at bulkhead disconnect (page 10-269).
- Connect red probe of meter to contact A (CKT 486) of front accessory harness connector and black probe to ground.

First Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- At the same time, press STARTER button and manifold preheat switch and hold for about 10 seconds, then release.

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING

(Continued)

Check front accessory harness (CKT 415B) at bulkhead disconnect for electrical power.

Second Technician (Operator's Station)

• Stop engine.

First Technician (Top Deck)

- Reconnect rear accessory harness connector (CKT 415B) at inoperative air cleaner.
- Close top deck grille doors.

First Technician (Commander's Station)

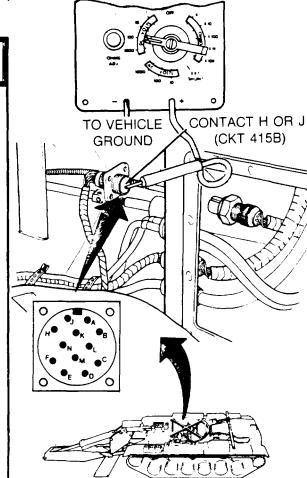

- Displace front accessory harness connector (CKT 415B) at bulkhead disconnect (page 10-269).
- If right air cleaner is inoperative, connect red probe of meter to contact H (CKT 415B) of front accessory harness connector at bulkhead disconnect and black probe to ground.
- If left air cleaner is inoperative, connect red probe of meter to contact J (CKT 415B) of front accessory harness connector at bulkhead disconnect and black probe to ground.

Second Technician (Operator's Station)

• Start engine.

First Technician (Commander's Station)

• Check if meter indicates 18 to 30 volts dc.

FOR CLARITY QUADRANT ASSEMBLIES NOT SHOWN

Symptom-13 DETAILED TROUBLESHOOTING PROCEDURE **VEHICLE OPERATION - POWERPLANT, RUNNING** (6) STEP CONTINUED (Continued) Second Technician (Operator's Station) • Stop engine. Did meter indicate 18 to 30 volts dc? Inspect front accessory Inspect rear accessory harness for bent/broken harness for bent/broken connector contacts or loose connector contacts or loose CKT 415B wires at rear of CKT 415B wires at rear of NO YES connectors. connectors. Repair connectors if Repair connectors if defective (page 10-298). defective (page 10-298). • If connectors are not If connectors are not defective, notify support defective, notify support maintenance of defective maintenance of defective rear front accessory harness. accessory harness. TM 5-5420-226-20-1 DETAILED TROUBLESHOOTING PROCEDURE Symptom-14 **VEHICLE OPERATION - POWERPLANT, RUNNING** (Continued) NOTE -If your vehicle does not have a smoke generator, go to Step (5). Check air cleaner fan motors without smoke generator switch harness installed. Second Technician (Operator's Station) • Set MASTER BATTERY switch OFF. First Technician (Commander's Station) • Remove right-hand floor access cover (page 17-9). • Disconnect smoke generator switch harness from air cleaner blower relay and front accessory harness. FLOOR ACCESS HOLE • Connect front accessory harness (CKT 415A) to air (COMMANDER'S STATION) cleaner blower relay.

Second Technician (Operator's Station)

• Start engine.

First Technician (Air Cleaner)

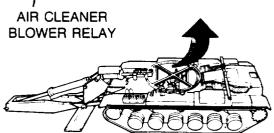

• Check air cleaner fan motors for operation.

Second Technician (Operator's Station)

• Stop engine.

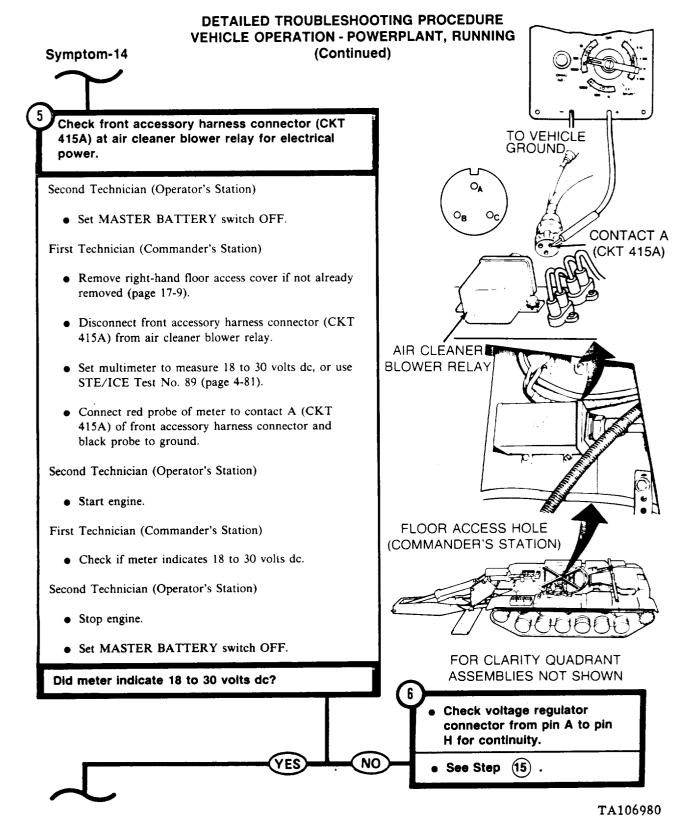

Are air cleaner fan motors operating?

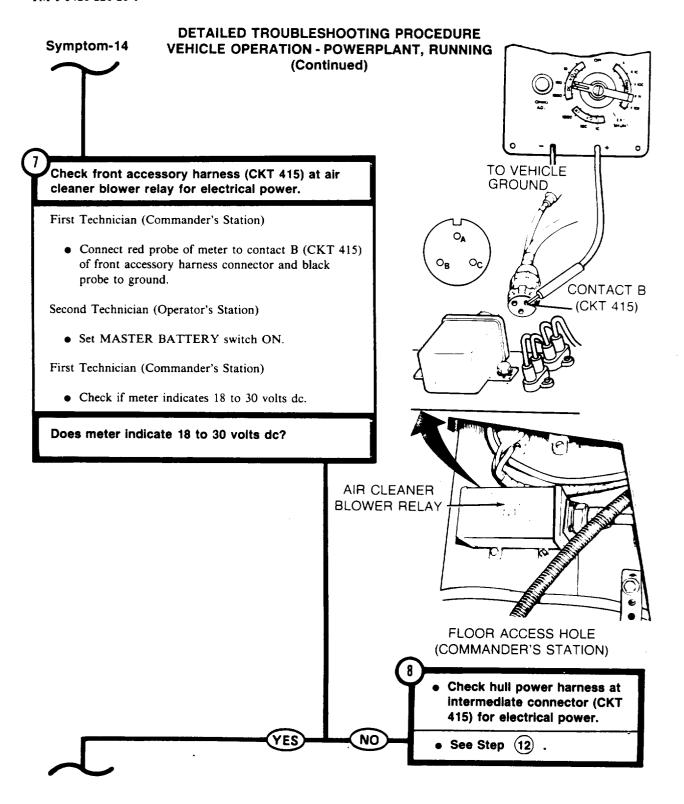

NO

FOR CLARITY QUADRANT ASSEMBLIES NOT SHOWN

Replace smoke generator switch harness (page 21-16).

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING (Continued)

Symptom-14

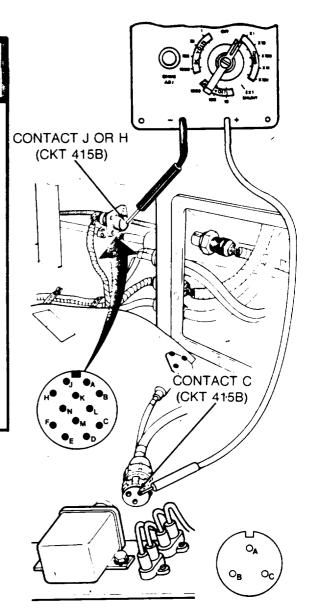

Check front accessory harness (CKT 415B) from air cleaner blower relay to bulkhead disconnect for continuity.

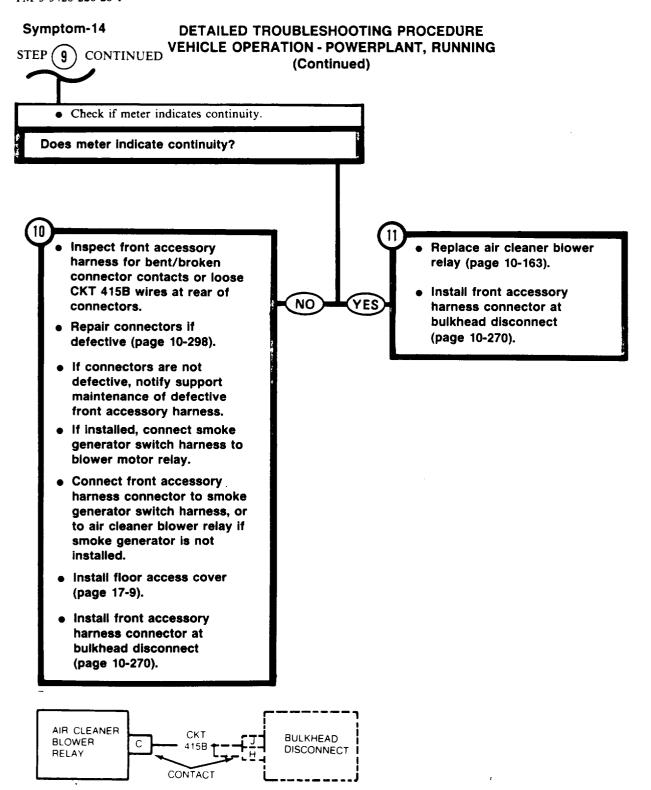

Second Technician (Operator's Station)

• Set MASTER BATTERY switch OFF.

First Technician (Commander's Station)

- Displace front accessory harness connector (CKT 415B) from bulkhead disconnect (page 10-269).
- Set multimeter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83).
- Connect red probe of meter to front accessory harness connector contact C (CKT 415B) at air cleaner blower relay.
- Connect black probe of meter to front accessory harness connector contact J or H (CKT 415B) at bulkhead disconnect.

Symptom-14 FROM STEP

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING (Continued)

Check hull power harness at intermediate connector (CKT 415) for electrical power.

Second Technician (Operator's Station)

• Set MASTER BATTERY switch OFF.

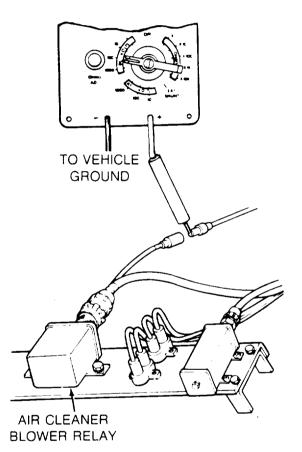

First Technician (Commander's Station)

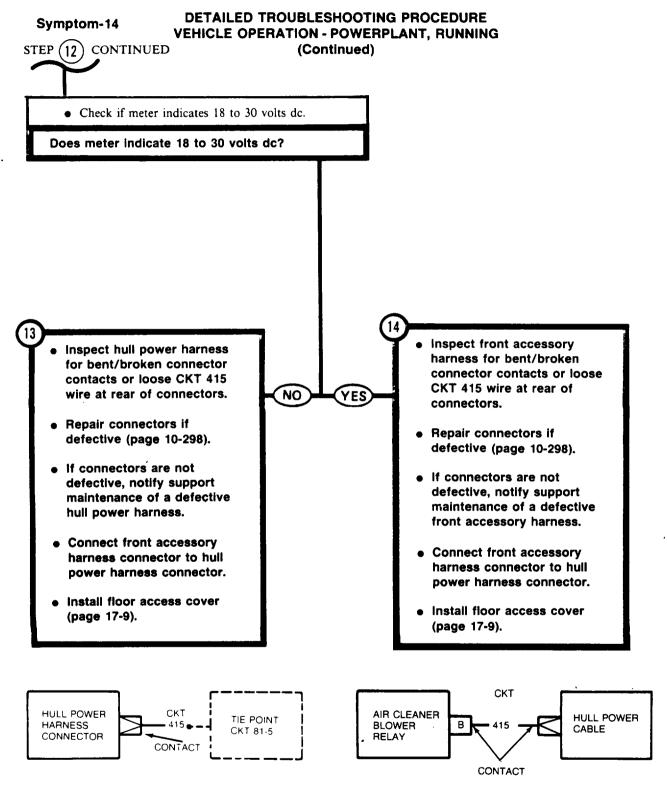

- If installed, connect smoke generator switch harness to air cleaner blower relay.
- Connect front accessory harness connector to smoke generator switch harness, or to air cleaner blower relay if smoke generator is not installed.
- Disconnect hull power harness (CKT 415) from front accessory harness at intermediate connector.
- Connect red probe of meter to hull power harness connector and black probe to ground.

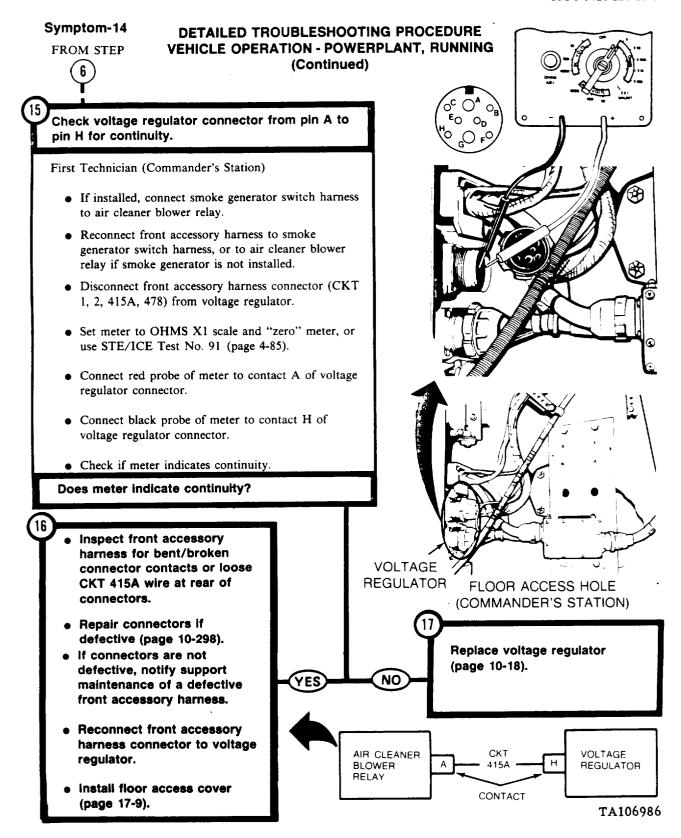

Second Technician (Operator's Station)

• Set MASTER BATTERY switch ON.

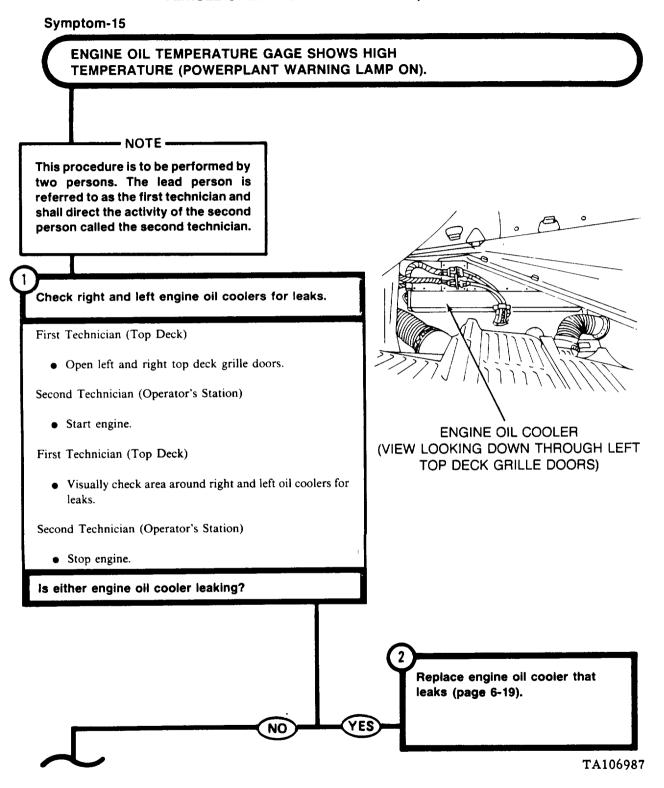

First Technician (Commander's Station)

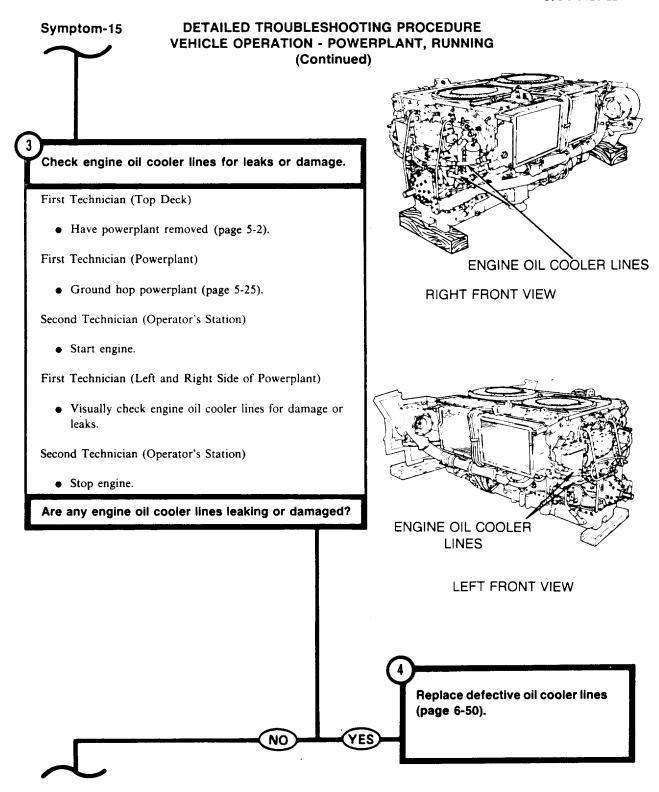

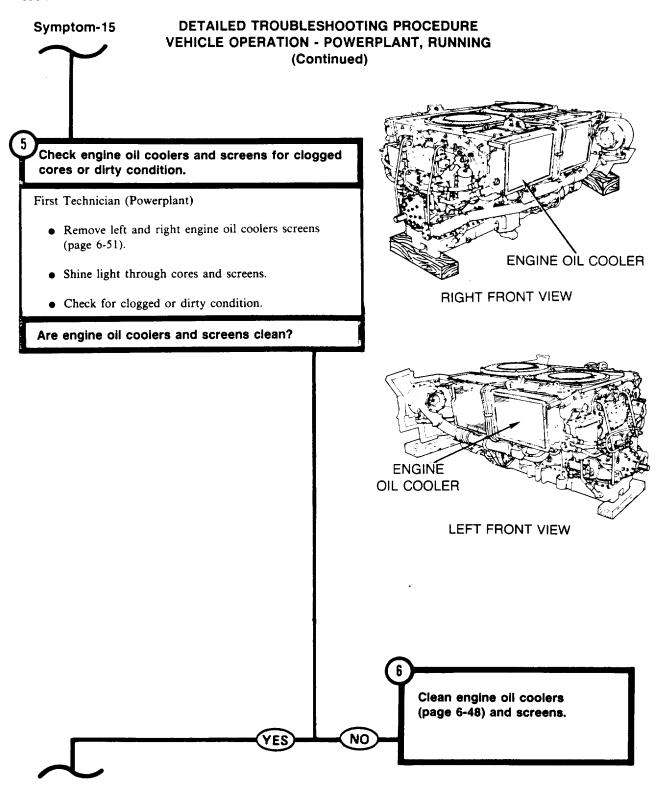

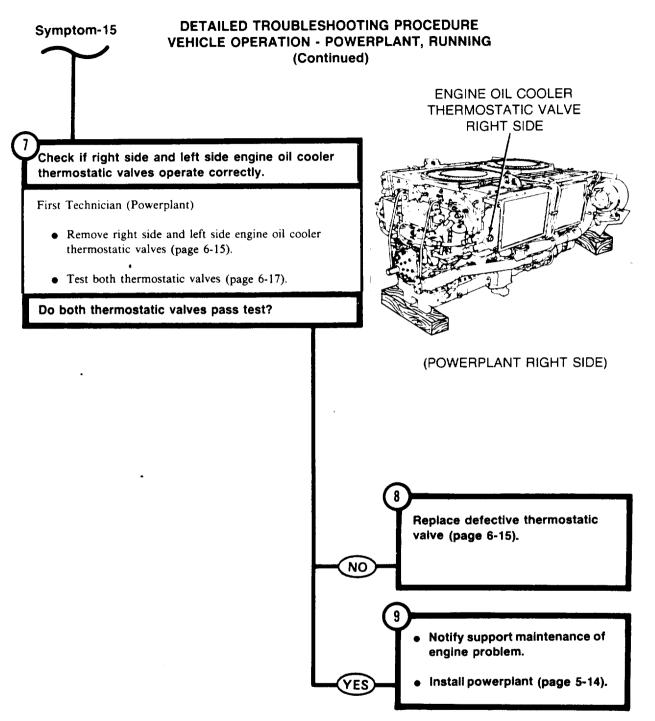

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING

Symptom-16

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING

ENGINE OIL LEVEL TOO LOW (EXCEEDS 3.5 QUARTS PER HOUR WHILE RUNNING).

- NOTE -

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

Check right and left engine oil coolers for leaks.

First Technician (Top Deck)

• Open left and right top deck grille doors.

Second Technician (Operator's Station)

• Start engine.

First Technician (Top Deck)

 Visually check area around right and left oil coolers for leaks.

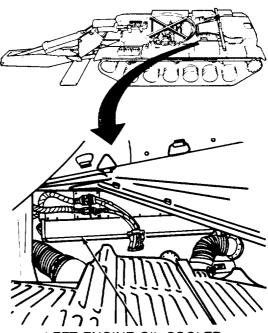

NO

Second Technician (Operator's Station)

• Stop engine.

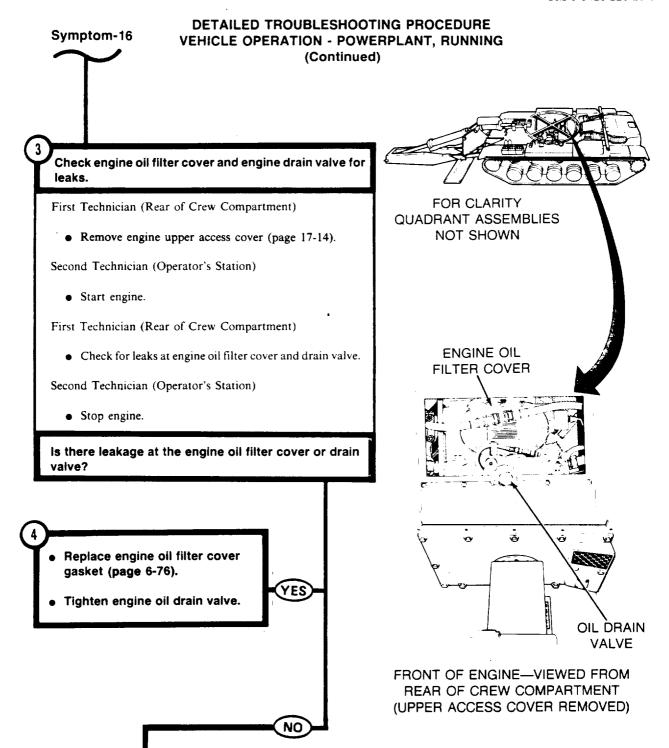

Is either engine oil cooler leaking?

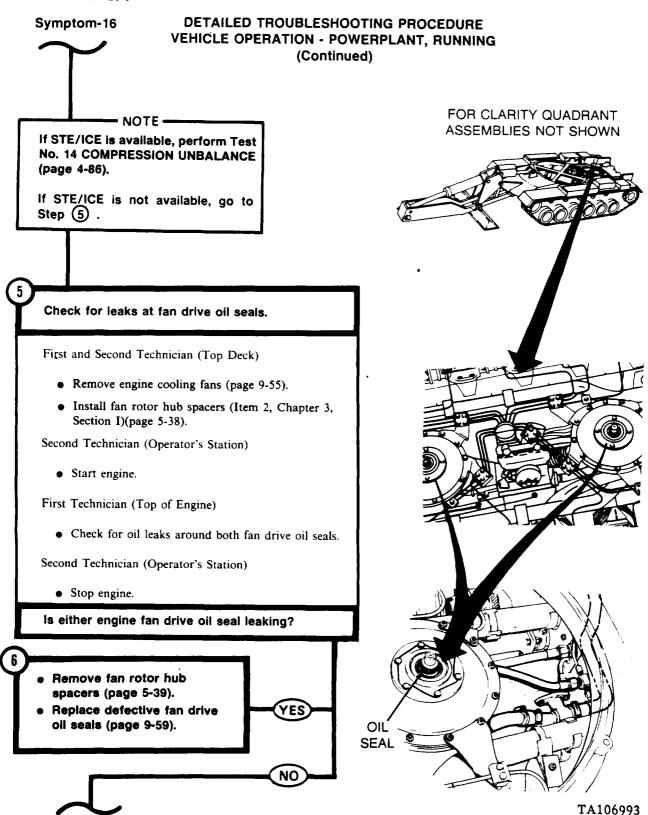

FOR CLARITY QUADRANT ASSEMBLIES NOT SHOWN

LEFT ENGINE OIL COOLER (VIEW LOOKING DOWN THROUGH LEFT TOP DECK GRILLE DOORS)

Replace engine oil cooler that leaks (page 6-19).

Symptom-16

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - POWERPLANT, RUNNING (Continued)

- NOTE -

Locator views continued on next page.

Check oil lines, tubes, plugs and thermostatic valves for leaks or damage.

First Technician (Top Deck)

- Have powerplant removed (page 5-2).
- Ground hop powerplant (page 5-25).

Second Technician (Operator's Station)

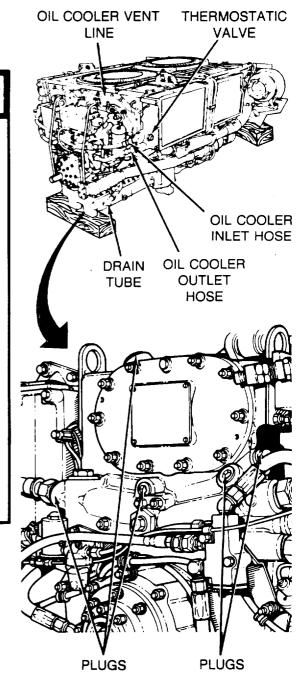

• Start engine.

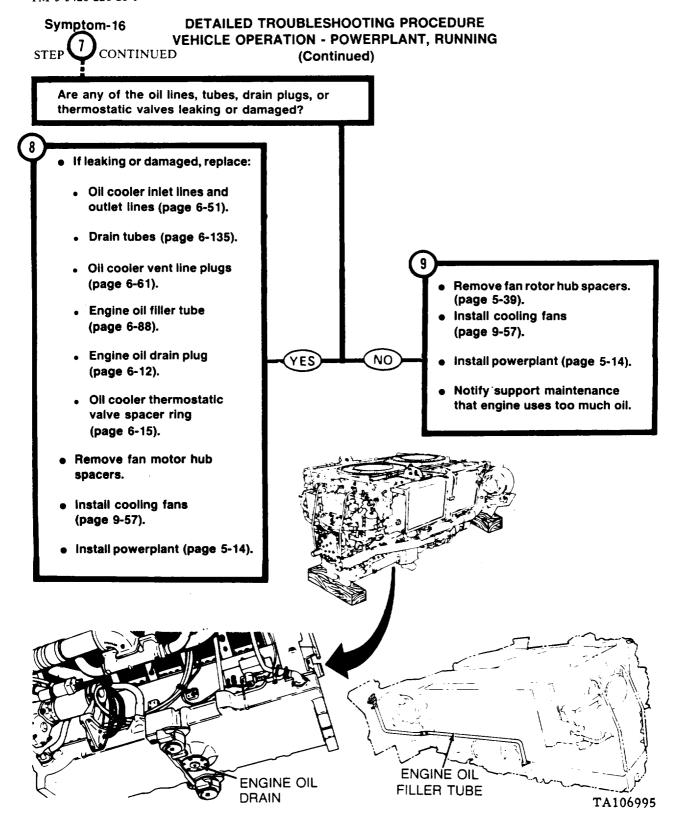

First Technician (Powerplant)

- With engine idling, visually check the following for leaks and damage:
 - Left and right oil cooler inlet and outlet lines.
 - Left and right drain tubes.
 - Oil cooler vent line.
 - Plugs.
 - Engine oil filler tube.
 - · Oil cooler thermostatic valves.
 - Engine oil drain plug.

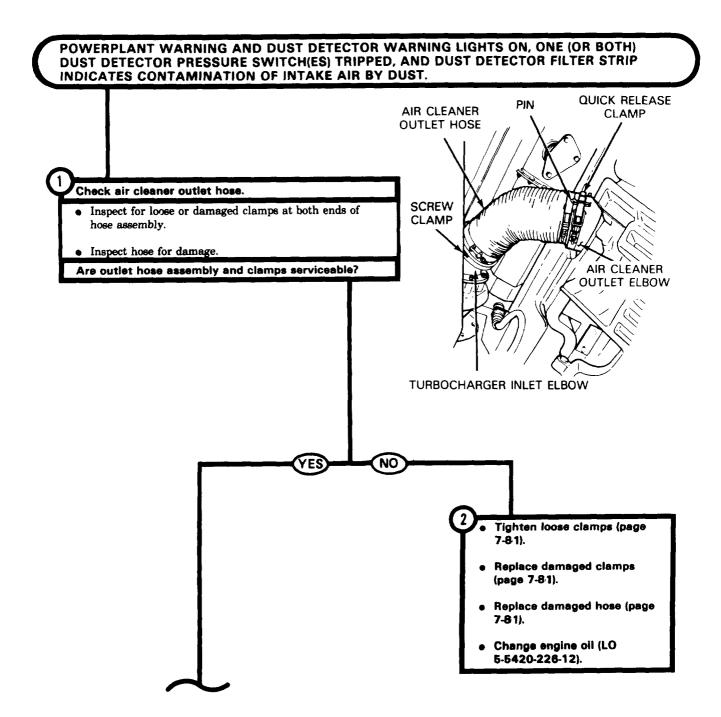

Second Technician (Operator's Station)

• Stop engine.

TRANSMISSION OIL TEMPERATURE GAGE SHOWS RED (POWERPLANT WARNING LAMP ON).

- NOTE -

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

Check right and left outer and inner transmission oil lines for leaks.

First and Second Technicians (Rear Grille Doors)

• Remove transmission shroud (page 9-2).

Second Technician (Operator's Station)

• Start engine.

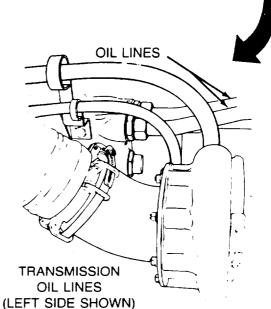

First Technician (Rear Grille Doors)

• Visually check right and left outer and inner oil lines for leaks or damage.

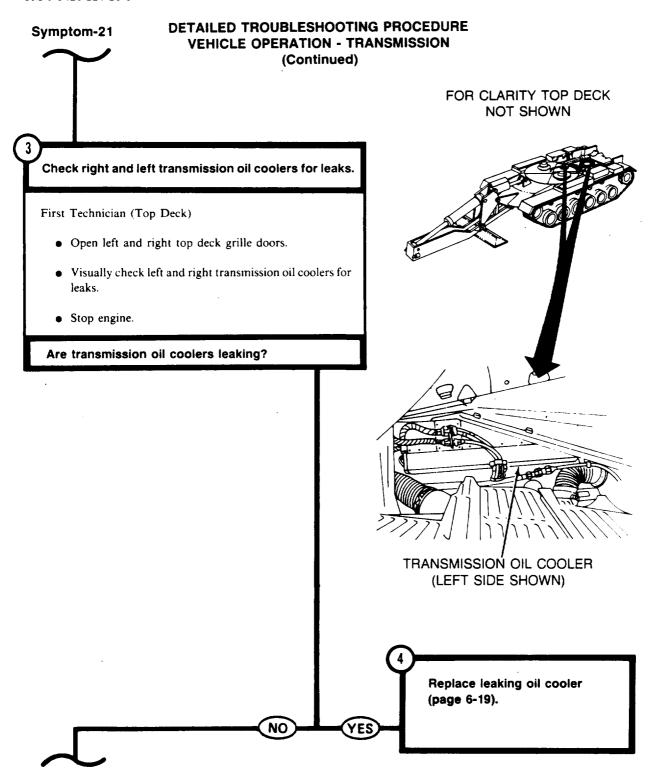

NO

YES

Are transmission oil lines leaking or damaged?

- Tighten leaking oil lines
 - Replace damaged oil lines
 - Install transmission shroud (page 9-6).

Symptom-21

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - TRANSMISSION (Continued)

Check service brakes for proper adjustment.

Both Technicians (Rear Grille Doors)

• Remove plugs from both left and right brake inspection

Second Technician (Operator's Station)

• Press brake pedal and hold when pressure of 750 to 900 psi is reached.

First Technician (Rear Grille Doors)

• Check if index line marked A (Applied) aligns within 1/ 64 inch of chiseled line located on edge of brake anchor.

Second Technician (Operator's Station)

• Release brakes.

First Technician (Rear Grille Doors)

• Check if index line marked R (Released) aligns within 1/64 inch of chiseled line located on edge of brake anchor.

Are service brakes properly adjusted?

- Adjust service brakes (page 13-78).
 - Close left and right top deck grille doors.

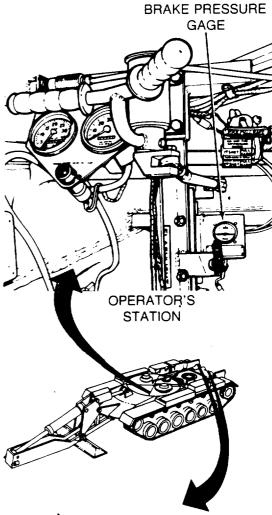

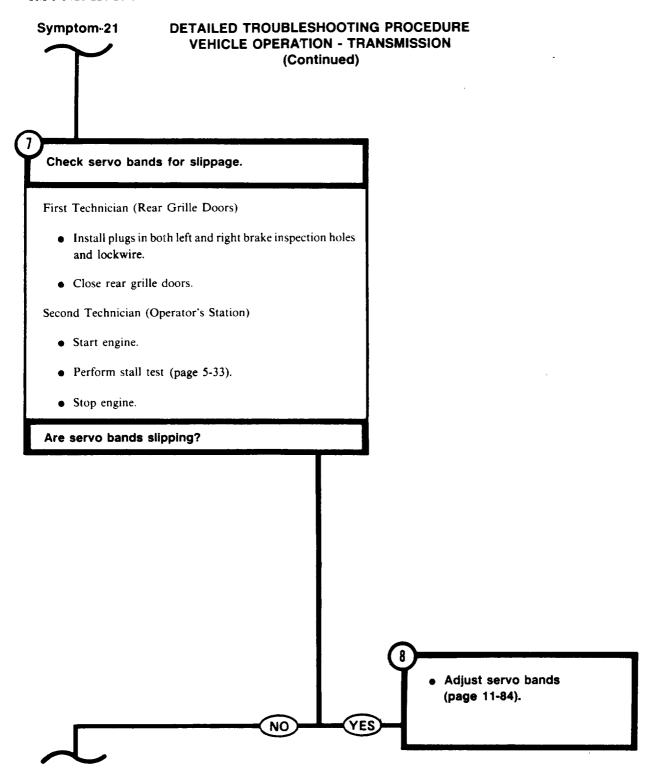

BRAKE INSPECTION HOLE (RIGHT SIDE SHOWN)

GAGE-

Check service brake for adjustment,

Both Technicians (Left and Right Side of Vehicle)

• Block tracks to prevent movement of vehicle.

First Technician (Rear Grille Doors)

 Remove lockwires and plugs (one located on each side of transmission rear housing) from brake inspection holes.

Second Technician (Operator's Station)

• Press brake pedal and hold when pressure of 750 to 900 psi is reached.

First Technician (Rear Grille Doors)

 Check if index line marked "A" (Applied) aligns within 1/64 inch of chiseled line located on edge of brake anchor.

Second Technician (Operator's Station)

• Release brakes.

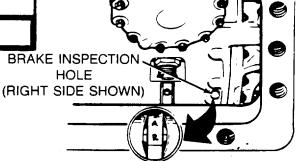

First Technician (Rear Grille Doors)

 Check if index line marked "R" (Released) alines within 1/64 inch of chiseled line located on edge of brake anchor.

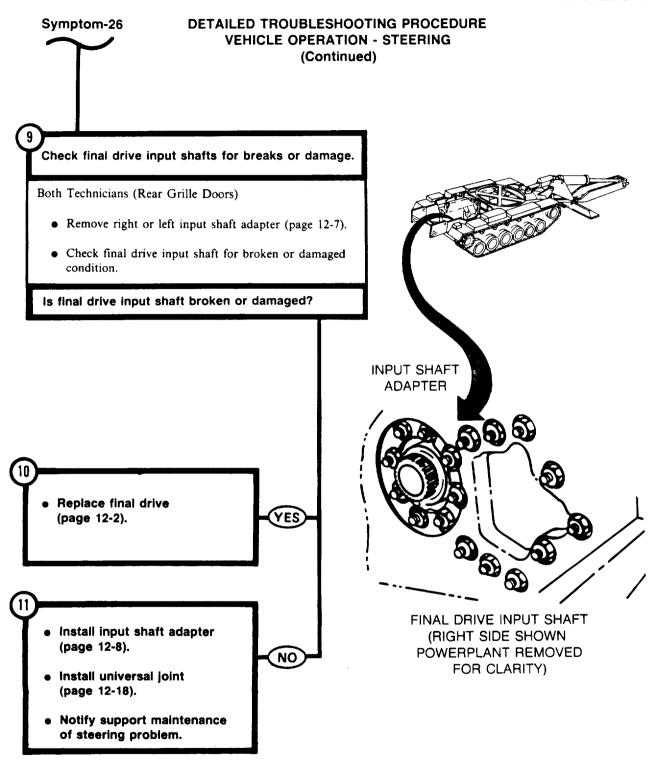

NO

Are service brakes properly adjusted?

Adjust service brakes (page 13-78).

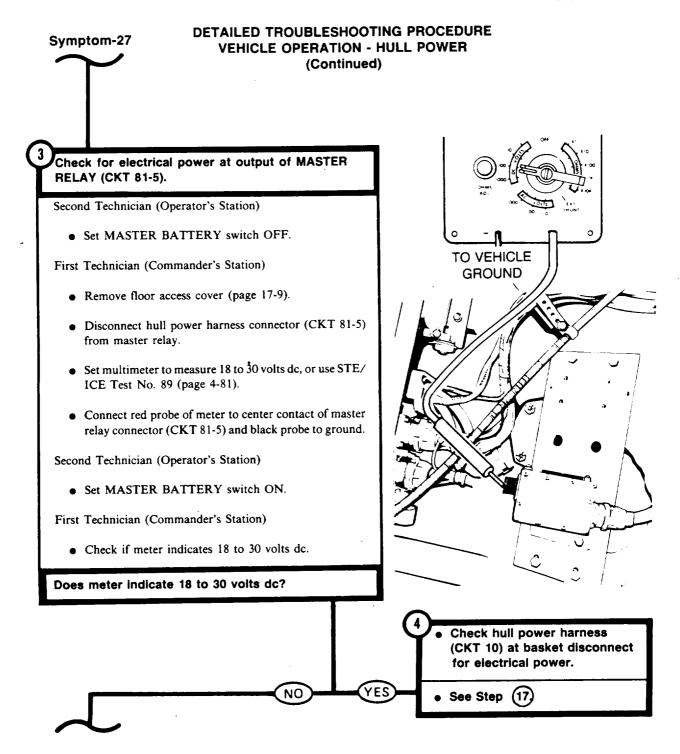

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION-HULL POWER Symptom-27 NO POWER DISTRIBUTION FROM MASTER RELAY (MASTER BATTERY INDICATOR LAMP WILL LIGHT). - WARNING -FOR CLARITY QUADRANT Use extreme care when working with ASSEMBLIES NOT SHOWN circuit 81. This circuit carries battery voltage at all times, whether MASTER BATTERY switch is ON or OFF. - NOTE -MASTER RELAY This procedure is to be performed by (UNDER FLOOR ACCESS COVER) two persons. The lead person is 0... referred to as the first technician and shall direct the activity of the second person called the second technician. Listen for clicking sound from MASTER RELAY when MASTER BATTERY switch is set ON. Second Technician (Operator's Station) • Set MASTER BATTERY switch ON. • If master relay is working, a click should be heard from master relay. • Set MASTER BATTERY switch OFF and ON several times, listening for clicking sound. MASTER RELAY FOR CLARITY ACCESS COVER REMOVED Can clicking sound be heard?

TA107061

Check for electrical power to coil of master relay (CKT

459A).

See Step (8).

Symptom-27

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - HULL POWER (Continued)

Check for electrical power at input to MASTER RELAY (CKT 81).

Second Technician (Operator's Station)

• Set MASTER BATTERY switch OFF.

After disconnecting ground straps, do not allow them to contact any metal surface.

Second Technician (Front of Crew Compartment)

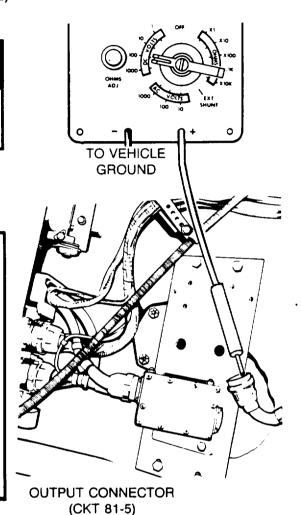

• Disconnect three battery ground straps (page 10-268).

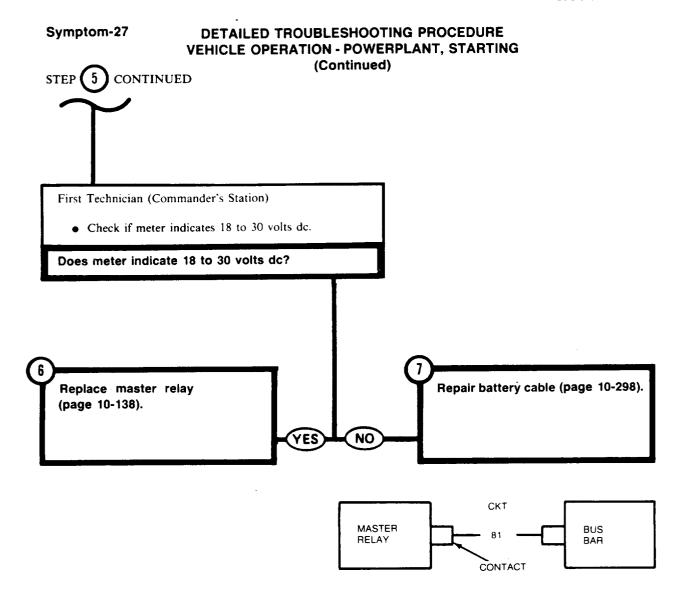

First Technician (Commander's Station)

- Connect hull power harness connector to master relay.
- Disconnect battery cable connector (CKT 81) from master relay.
- Connect red probe of meter to center contact of battery cable connector (CKT 81) and black probe to ground.

Second Technician (Front of Crew Compartment)

• Connect three battery ground straps (page 10-268).

Symptom-27 FROM STEP 2 8 Check for election (CKT 459A). Second Technician • Set MAST First Technician • Remove flot • Disconnect (CKT 459A) • Set meter to

DETAILED TROUBLESHOOTING PROCEDURE VEHICLE OPERATION - HULL POWER (Continued)

Check for electrical power to coil of master relay (CKT 459A).

Second Technician (Operator's Station)

• Set MASTER BATTERY switch OFF.

First Technician (Commander's Station)

- Remove floor access cover (page 17-9).
- Disconnect reverse polarity protection device connector (CKT 459A) from master relay.
- Set meter to measure 18 to 30 volts dc, or use STE/ICE Test No. 89 (page 4-81).
- Connect red probe of meter to center contact of reverse polarity protection device connector (CKT 459A) and black probe to ground.

NO

YES

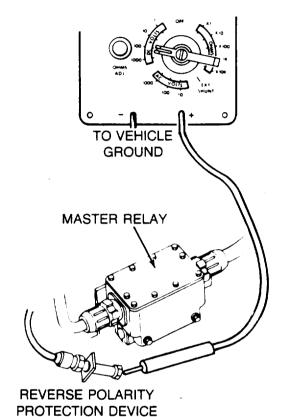

Second Technician (Operator's Station)

• Set MASTER BATTERY switch ON.

First Technician (Commander's Station)

• Check if meter indicates 18 to 30 volts dc.

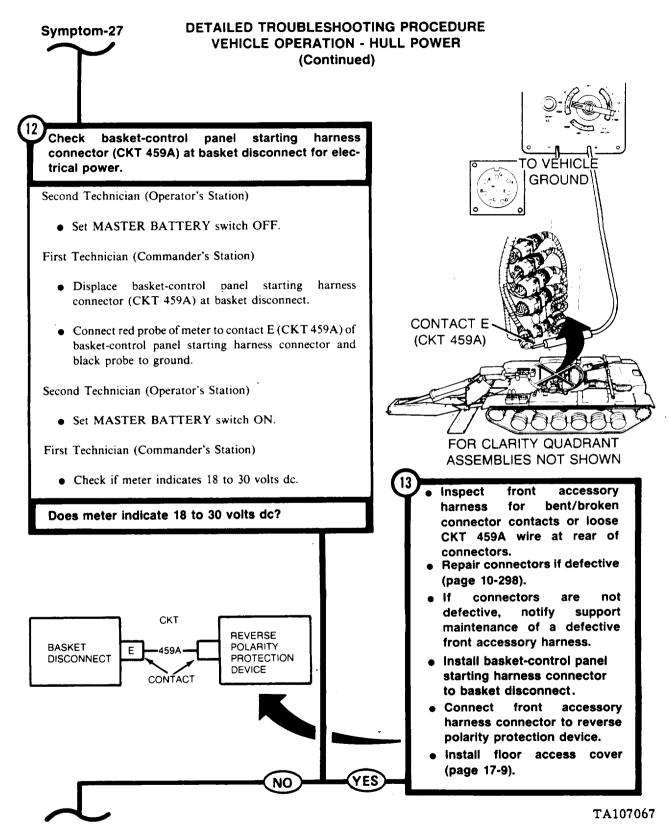

Does meter indicate 18 to 30 volts dc?

Replace master relay (page 10-138).

(CKT 459A)

Symptom-31.1

650 AMP ALTERNATOR/REGULATOR IS NOT WORKING - Continued

CAUTION - - -

With engine running, do not disconnect generator harness at engine disconnect or bulkhead.

NOTE -

This procedure is to be performed by two persons. The lead is referred to as the first technician and shall direct the activity of the second person called the second technician.

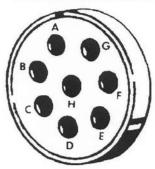

Second Technician (Operator's Station)

- Stop engine.
- Set MASTER BATTERY switch OFF.

First Technician (Commander's Station)

- Remove commander's floor plate (page 17-9).
- Disconnect harness 12326717 connector (1, 1A, 532, 533, 534) from voltage regulator.
- Connect "T" harness (page 3-4, Item 37) to harness 12326717 connector (1, 1A, 532, 533, 534) removed from voltage regulator.

AT VOLTAGE REGULATOR

12326717 (1,1A, 532, 533, 534)

Symptom-31.1

NOTE -

To ensure overvoltage protection circuit breaker on voltage regulator is in the ON (UP) position, turn the overvoltage circuit breaker to the OFF (DOWN) position, then to the ON (UP) position.

Check continuity from socket C of the test harness to vehicle chassis (GROUND).

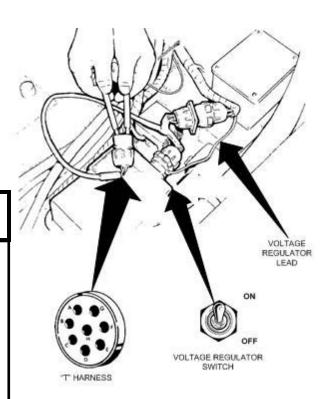

First Technician (Commander's Station)

- Set multimeter to lowest range.
- Set circuit breaker on voltage regulator to ON.
- Connect "T" harness to voltage regulator.
- Connect red probe of meter to "T" harness socket C and black probe to ground.
- · Check if meter indicates continuity.

Does meter indicate continuity?

- Clean and tighten loose voltage regulator lead connections.
 - If connections are not loose, replace harness 12326717 (page 10-1).

Symptom-31.1

Check CKT 1A at voltage regulator for electrical power.

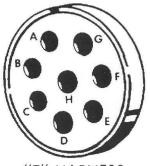

Second Technician (Operator's Station)

- Set MASTER BATTERY switch ON.
- Set FUEL PUMP switch ON.

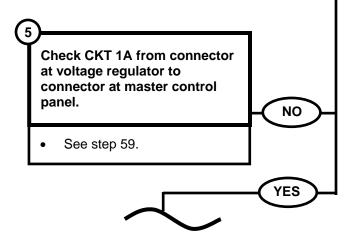

First Technician (Commander's Station)

- Connect red probe of meter to "T" harness socket A (+) and black probe to socket C (-).
- Check if meter indicates 18 to 30 volts dc.

Does meter indicate 18 to 30 volts dc?

Symptom-31.1

Check CKT 532 from voltage regulator to engine accessory relay for 100 to 200 ohms.

Second Technician (Operator's Station)

- Set MASTER BATTERY switch OFF.
- Set FUEL PUMPS switch OFF.

First Technician (Commander's Station)

- Disconnect "T" harness from voltage regulator.
- Connect red probe of meter to "T" harness socket F and black probe to socket C.
- Check if meter indicates 100 to 200 ohms.

Does meter show 100 to 200 ohms?

Check CKT 532 from voltage regulator to engine accessory relay in harness 12326717 for continuity.

See step 54.

Symptom-31.1

Check for electrical power at pin B of bulkhead connector.

Second Technician (Operator's Station)

 Disconnect three battery ground cable assemblies located behind driver's seat bolted to the torsion bar cover (page 10-268).

First Technician (Commander's Station)

 Displace front accessory harness 12326716 connector (CKT 2) at bulkhead disconnect (page 10-269).

Second Technician (Operator's Station)

- Connect three battery ground cables assemblies (page 10-268).
- Connect red probe of meter to socket B on bulkhead disconnect harness 12326718 and black probe to ground.
- Check if meter indicates 18 to 30 volts dc.

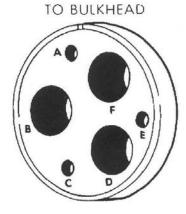

Does meter indicate 18 to 30 volts dc?

- Repair/replace harness 12326716 (page 10-1).
 Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
 Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
 - Replace commander's floor plate (page 17-9).

Check CKT 534 for continuity in harnesses 12326717, 12326715 NO and 12468994. See step 35. **YES**

Symptom-31.1

Symptom-31.1

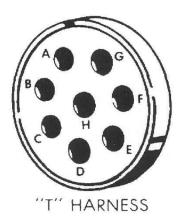

Check for shorted diodes in alternator.

First Technician (Commander's Station)

- Set multimeter to resistance scale.
- Connect black probe of meter to "T" harness socket D and red probe to ground.
- Check if meter indicates infinite resistance.

Does meter indicate infinite resistance?

25)

- Replace alternator (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269)
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

Symptom-31.1

Check CKT 1 at voltage regulator for 18 to 26 volts dc.

Second Technician (Operator's Station)

• Disconnect three battery ground cable assemblies (page 10-268).

First Technician (Commander's Station)

 Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).

Second Technician (Operator's Station)

 Connect three battery ground cables assemblies (page 10-268).

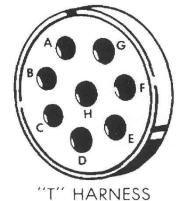

First Technician (Commander's Station)

- Connect "T" harness to voltage regulator.
- Set MASTER BATTERY switch ON.
- Set FUEL PUMPS switch ON.
- Connect red probe of meter to "T" harness socket E and black probe to socket C.
- Check if meter indicates 18 to 26 volt dc.

Does meter indicate 18 to 26 volt dc?

- Set FUEL PUMPS switch OFF.
- Set MASTER BATTERY switch OFF.
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Disconnect "T" harness from voltage regulator.
- Replace voltage regulator (page 10-1).

Symptom-31.1

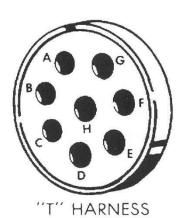

Check CKT 1A at voltage regulator for 25 to 30 volts dc.

Second Technician (Operator's Station)

- Start Engine.
- Set Idle speed to 750 RPM.
- Turn OFF all lights, ventilator blowers and radio equipment.
- Connect red probe of meter to "T" harness socket A and black probe socket C.
- Check if meter indicates 25 to 30 volt dc.

Does meter indicate 25 to 30 volts dc?

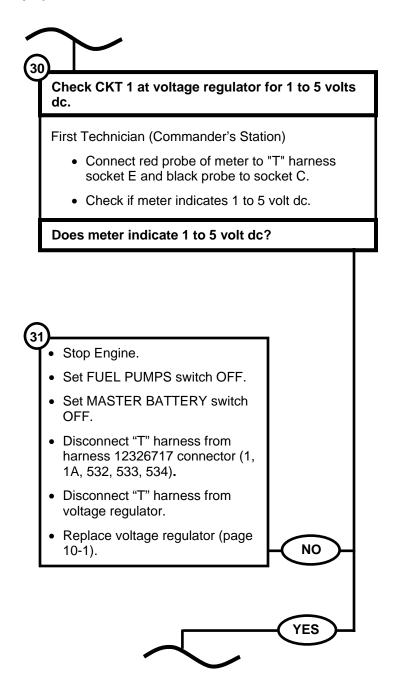

29

- Stop Engine.
- Set FUEL PUMPS switch OFF.
- Set MASTER BATTERY switch OFF.
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Disconnect "T" harness from voltage regulator.
- Replace voltage regulator (page 10-1).

Symptom-31.1

Symptom-31.1

Check CKT 532 at voltage regulator for 24 to 29 volts dc.

First Technician (Commander's Station)

- Connect red probe of meter to "T" harness socket F and black probe to socket C.
- Check if meter indicates 24 to 29 volt dc.

Does meter indicate 24 to 29 volts dc?

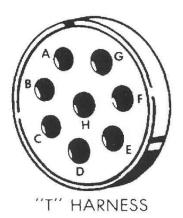

- Stop Engine.
- Set FUEL PUMPS switch OFF.
- Set MASTER BATTERY switch OFF.
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Disconnect "T" harness from voltage regulator.
- Replace voltage regulator (page 10-1).

NO

YES

- Stop Engine.
- Set FUEL PUMPS switch OFF.
- Set MASTER BATTERY switch OFF.
- Replace alternator (page 10-1).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

Change 8

Symptom-31.1

FROM STEPS 21 & 23

Check CKTs 533 and 534 for continuity in harnesses 12326717 and 12326715.

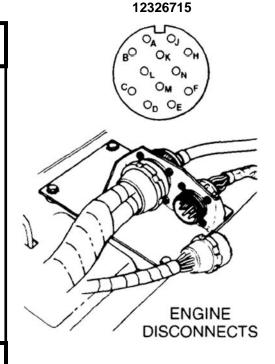

Second Technician (Left Top Deck Grille Doors)

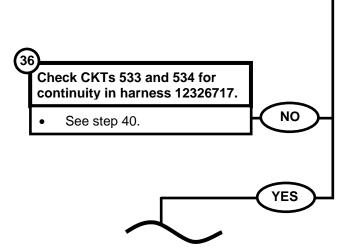

- Open left top deck grille doors to gain access to engine disconnects.
- Disconnect bulkhead engine disconnect harness 12326715 connector from engine disconnect harness 12468994.
- Connect jumper wire from contact C (CKT 533) of bulkhead engine disconnect harness 12326715 connector to contact L (CKT 534).

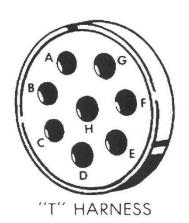

First Technician (Commander's Station)

- Connect red probe of meter to "T" harness socket B and black probe to socket D.
- · Check if meter indicates continuity.

Does meter indicate continuity?

Symptom-31.1

Check engine electrical harness (CKTs 533 and 534) from connector at engine disconnect to J1 on alternator.

First Technician (Top Deck)

• Have powerplant removed (page 5-2).

First Technician (Powerplant)

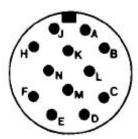

- Disconnect harness 12468994 from J1 of alternator.
- Connect jumper wire from contact A (CKT 533) of harness 12468994 to contact B (CKT 534).
- Connect red probe of meter to socket C of engine disconnect harness 12468994 connector and black probe to socket L.
- Check if meter indicates continuity.

Does meter indicate continuity?

- Replace engine electrical harness 12468994 (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

12468994

12468994

- Replace alternator (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

NO LYES

Symptom-31.1

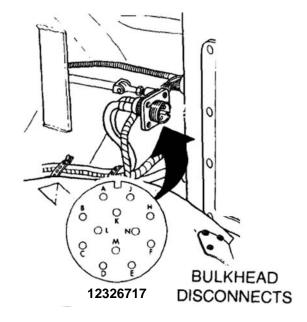

Check CKTs 533 and 534 for continuity in harness 12326717. First Technician (Commander's Station)

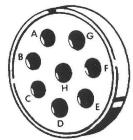

- Displace front accessory harness 12326715 connector at bulkhead disconnect (page 10-269).
- Connect jumper wire from contact C (CKT 534) of harness 12326717 to contact L (CKT 533).
- Connect red probe of meter to "T" harness socket B and black probe to socket D.
- Check if meter indicates continuity.

Does meter indicate continuity?

41

- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Replace harness 12326717 (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).

"T" HARNESS

NO YES

- Replace harness 12326715 (page 10-1).

- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

Symptom-31.1

FROM STEP 19

Check CKT 1 for continuity in harnesses 12326717 and 12326715.

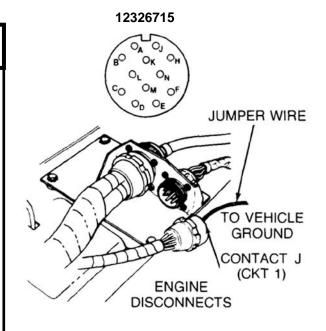

Second Technician (Left Top Deck Grille Doors)

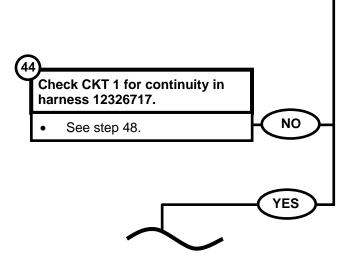

- Open left top deck grille doors to gain access to engine disconnects.
- Disconnect bulkhead engine disconnect harness 12326715 connector from engine disconnect.
- Connect jumper wire from contact J (CKT 1) of bulkhead engine disconnect harness 12326715 connector to ground.

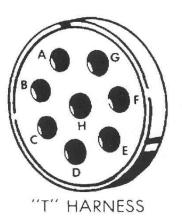

First Technician (Commander's Station)

- Connect red probe of meter to "T" harness socket E and black probe to ground.
- · Check if meter indicates continuity.

Does meter indicate continuity?

Symptom-31.1

Check engine electrical harness (CKT 1) from connector at engine disconnect to J2 on alternator.

First Technician (Top Deck)

Have powerplant removed (page 5-2).

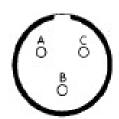

First Technician (Powerplant)

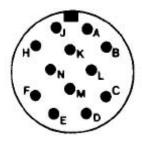

- Disconnect harness 12468994 from J2 of alternator.
- Connect jumper wire from contact C (CKT 1) of harness 12468994 to ground.
- Connect red probe of meter to socket J of engine disconnect harness 12468994 and black probe to ground.
- · Check if meter indicates continuity.

Does meter indicate continuity?

- Replace engine electrical harness 12468994 (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

12468994

12468994

- Replace alternator (page 10-1).
 - Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
 - Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
 - Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
 - Replace commander's floor plate (page 17-9).

Symptom-31.1

FROM STEP 44

(48)

Check CKT 1 for continuity in harness 12326717.

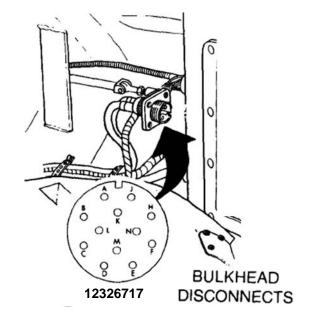

First Technician (Commander's Station)

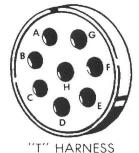

- Displace front accessory harness connector (12326715) at bulkhead disconnect (page 10-269).
- Connect jumper wire from contact J (CKT 1) of harness 12326717 to ground.
- Connect red probe of meter to "T" harness socket E and black probe to ground.
- Check if meter indicates continuity.

Does meter indicate continuity?

- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Replace harness 12326717 (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Connect bulkhead engine disconnect harness 12326715 connector to engine disconnect.
- Close left top deck grille doors.

(50)-

 Replace harness 12326715 (page 10-1).

- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

NO YES

Symptom-31.1

FROM STEP 13

Check CKT 2 for continuity to alternator in harness 12468996.

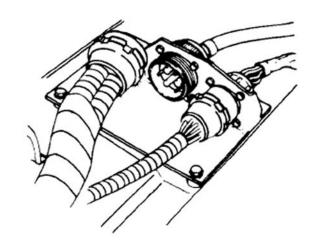

First Technician (Commander's Station)

- Open left top deck grille doors to gain access to engine disconnects.
- Disconnect bulkhead engine disconnect harness 12326716 connector from engine disconnect.
- Connect red probe of meter to socket B on engine disconnect and black probe to socket F.
- · Check if meter indicates continuity.

Does meter indicate continuity?

(52)

- Replace harness 12468996 (page 10-1).
- Connect front accessory harness 12326716 connector (CKT 2) to bulkhead disconnect (page 10-269).
- Disconnect "T" harness from harness 12326717 connector (1, 1A, 532, 533, 534).
- Connect harness 12326717 connector (1, 1A, 532, 533, 534) to voltage regulator.
- Replace commander's floor plate (page 17-9).

DETAILED TROUBLESHOOTING PROCEDURE INDICATOR - LAMP

SMOKE GENERATOR INDICATOR LAMP WILL NOT LIGHT (SMOKE GENERATOR WILL MAKE SMOKE).

Check smoke generator switch assembly for continuity.

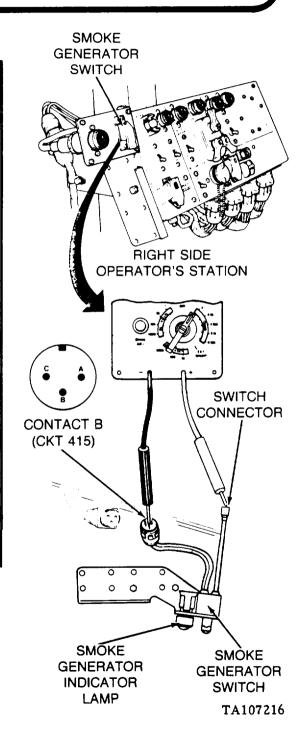

Technician (Operator's Station)

- Set MASTER BATTERY switch OFF.
- Set SMOKE GENERATOR switch OFF.
- Disconnect SMOKE GENERATOR switch connector from SMOKE GENERATOR indicator lamp.
- Disconnect SMOKE GENERATOR switch assembly connector from SMOKE GENERATOR switch harness connector.
- Set SMOKE GENERATOR switch ON.
- Set multimeter to OHMS X1 scale and zero meter or use STE/ICE Test No. 91 (page 4-83).
- Connect red probe of meter to SMOKE GENERATOR switch connector.
- Connect black probe of meter to contact B (CKT 415) of SMOKE GENERATOR switch assembly connector.
- Check if meter indicates continuity.

Does meter indicate continuity?

Replace smoke generator switch (page 21-2).

YES

INDICATOR - LAMP Symptom-48 (Continued) Check smoke generator switch harness (CKT 415) for electrical power. Technician (Operator's Station) • Set multimeter to measure 18 to 30 volts dc or use TO VEHICLE STE/ICE Test No. 89 (page 4-81). **GROUND** • Connect red probe of meter to contact B (CKT 415) of smoke generator switch harness connector and black probe to ground. SMOKE GENERATOR SWITCH HARNESS • Set MASTER BATTERY switch ON. CONNECTOR • Check if meter indicates 18 to 30 volts dc. **CKT 415** Does meter indicate 18 to 30 volts dc? CONTACT B O 0 0 0 0 0 0 Repair smoke generator switch harness (page 10-298). Replace indicator lamp socket Connect SMOKE (page 21-5). **GENERATOR** switch connector to SMOKE NO **GENERATOR** indicator lamp.

DETAILED TROUBLESHOOTING PROCEDURE

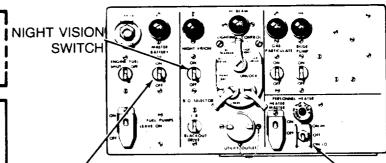

DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - COMMUNICATIONS

STATIC OR WHINING NOISE IN RADIO. (ELECTROMAGNETIC INTERFERENCE - EMI)

Turn off radio set (TM 5-5420-226-10) before starting engine to prevent possible damage to communications equipment.

- NOTE -

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

MASTER BATTERY SWITCH

NO

MASTER CONTROL PANEL PERSONNEL HEATER HI-LO SWITCH

Check if static is caused by vehicle electrical equipment (vehicle not moving).

Second Technician (Operator's Station)

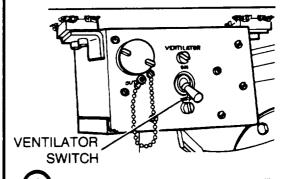

- Start engine.
- Set PERSONNEL HEATER HI/LO switch ON LO.
- Check that LIGHTING CONTROL switch is OFF.
- Set NIGHT VISION switch ON.
- Set VENTILATOR switch ON.

First Technician (Commander's Station)

- Turn on radio set (TM 5-5420-226-10).
- Listen for static in radio helmet.

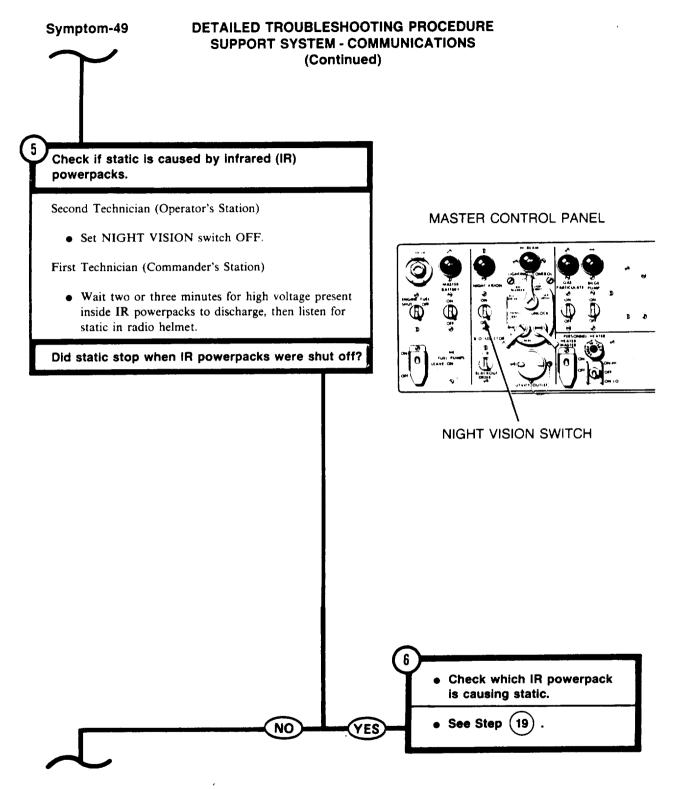

Can static be heard when vehicle electrical equipment is operating - vehicle not moving?

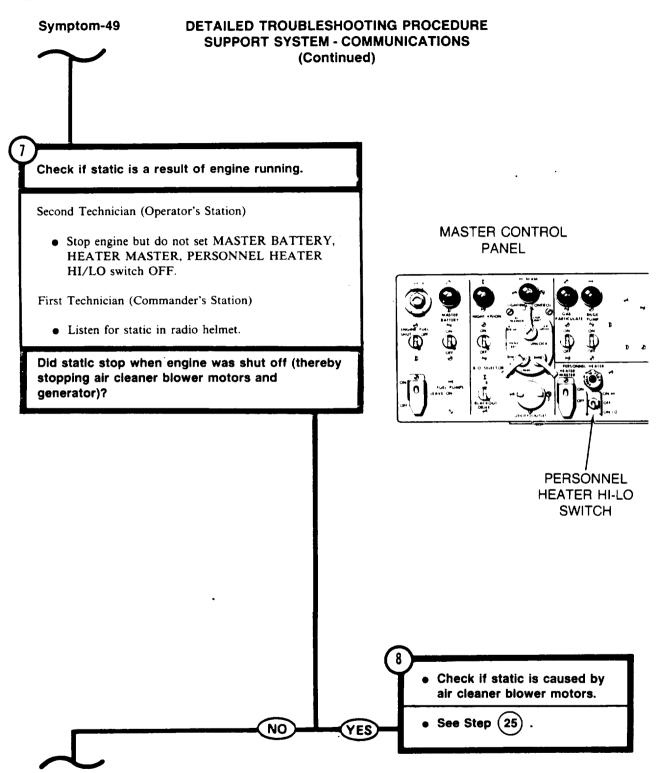

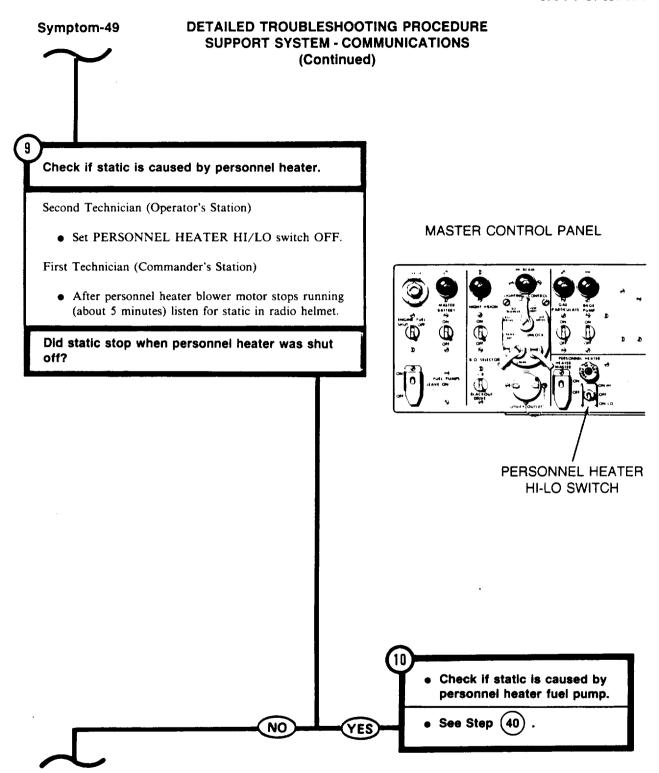

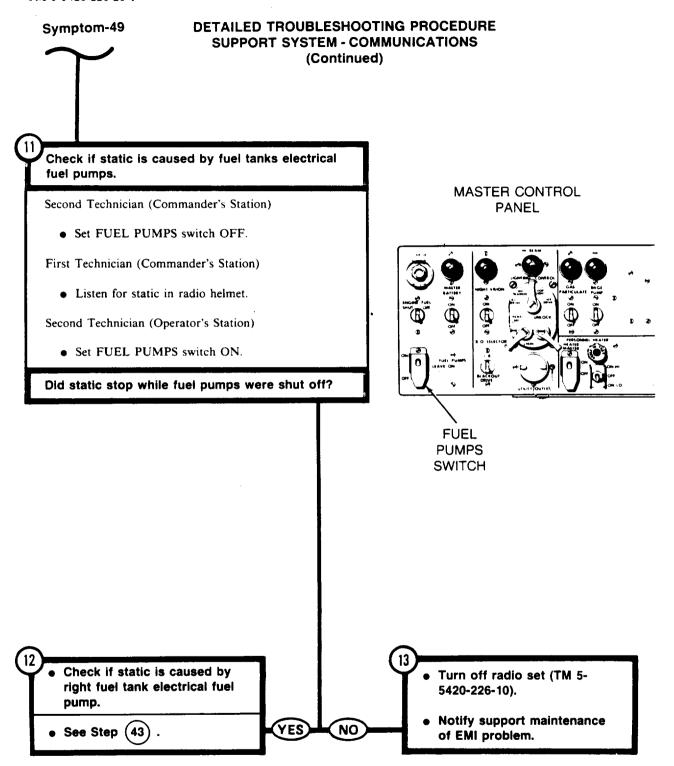

- EMI is a result of vehicle movement - check if static is caused by broken or missing static springs in support rollers.
 - See Step (14)

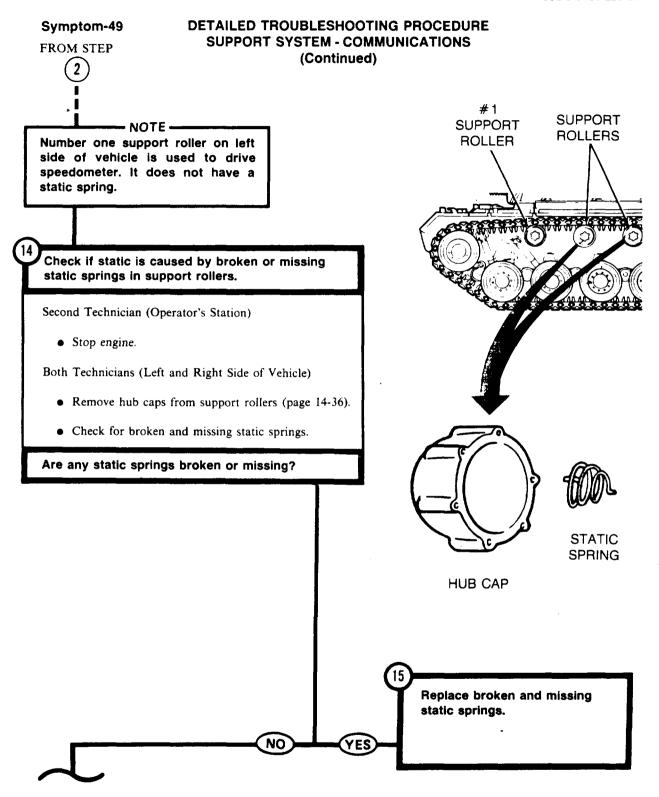

DETAILED TROUBLESHOOTING PROCEDURE Symptom-49 **SUPPORT SYSTEM - COMMUNICATIONS** (Continued) Check if static is caused by ventilating blower motor. Second Technician (Operator's Station) • Set VENTILATOR switch OFF (TM 5-5420-226-10). First Technician (Commander's Station) • Listen for static in radio helmet. Did static stop when VENTILATOR switch was shut off? • Stop engine. • Turn off radio set (TM 5-5420-226-10). • Set PERSONNEL HEATER HI/LO switch OFF. Set NIGHT VISION switch OFF. • Replace ventilating blower NO assembly (TM 5-5420-227-24).

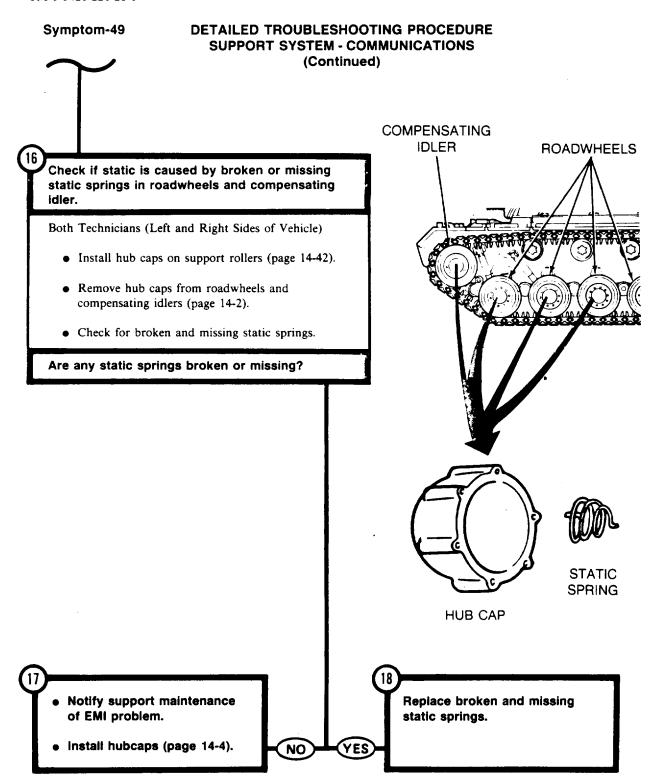

DETAILED TROUBLESHOOTING PROCEDURE Symptom-49 **SUPPORT SYSTEM - COMMUNICATIONS** (Continued) FROM STEP 6 **CKT 516** Check which IR powerpack is causing static. Second Technician (Operator's Station) • Stop engine. • Set PERSONNEL HEATER HI/LO switch OFF. First Technician (Commander's Station) • Turn off radio set (TM 5-5420-226-20). • Remove right hand floor access cover (page 17-9). • Disconnect front accessory harness connector (CKT 516) from one of the IR power packs. Second Technician (Operator's Station) • Set NIGHT VISION switch ON. First Technician (Commander's Station) • Turn on radio set (TM 5-5420-226-10). • Listen for static in radio helmet. IR POWERPACKS Did static stop when first IR powerpack was disconnected? DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - FIRE EXTINGUISHER (Continued)

Check fire extinguisher fuel shut off switch for continuity.

Second Technician (Front of Crew Compartment)

- WARNING -

When disconnected, do not allow battery ground straps to come into contact with any metal surface.

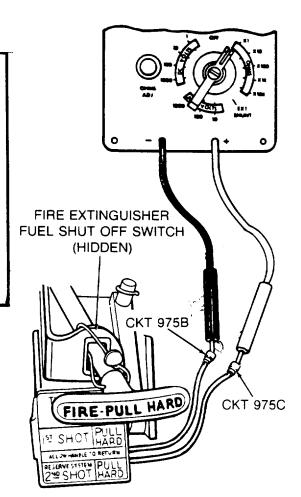

• Disconnect three battery ground straps (page 10-268).

First Technician (Commander's Station)

 Connect front accessory harness connector to fire extinguisher relay.

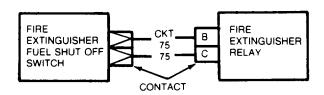

Second Technician (Operator's Station)

- Disconnect two connectors (CKT 975) from fire extinguisher fuel shut off switch leads.
- Set meter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83).
- Connect probes of meter to contacts of switch leads.

DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - FIRE EXTINGUISHER (Continued)

DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - FIRE EXTINGUISHER (Continued)

FROM STEP

Check front accessory harness (CKT 975A, 54A) for continuity from bulkhead connector to connector at fire extinguisher relay.

- WARNING -

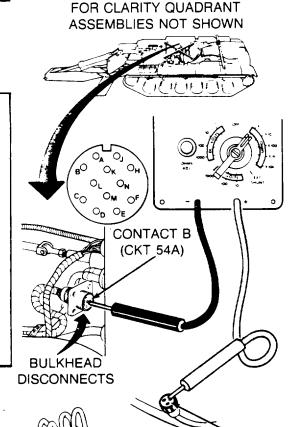

When disconnected, do not allow battery ground straps to come into contact with any metal surface.

Second Technician (Front of Crew Compartment)

• Disconnect three battery ground straps (page 10-268).

First Technician (Commander's Station)

- Set multimeter to OHMS X1 scale and "zero" meter, or use STE/ICE Test No. 91 (page 4-83).
- Displace front accessory harness connector (CKT 54A) from bulkhead disconnect (page 10-269).
- Disconnect front accessory harness connector from fire extinguisher relay.
- Connect black probe of meter to contact B (CKT 54A) of front accessory harness connector at bulkhead disconnect.

FOR CLARITY QUADRANT ASSEMBLIES NOT SHOWN Second Technician (At Personnel Heater) • Check personnel heater air intake grille for obstructions.

DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - PERSONNEL HEATER

EXHAUST FUMES FROM PERSONNEL HEATER INSIDE VEHICLE.

- WARNING -

Exposure to exhaust fumes in an enclosed area can be dangerous to your health.

NOTE

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

Check external exhaust tube for damage or obstructions.

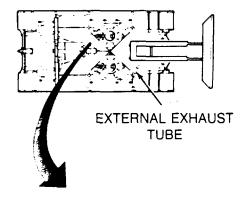

First Technician (Operator's Station)

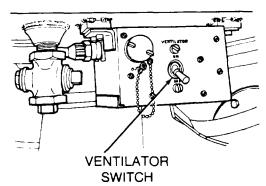

- Set PERSONNEL HEATER HI/LO switch OFF.
- Set MASTER BATTERY switch ON.
- Set VENTILATOR switch ON (TM 5-5420-226-10) and allow blower motor to run until exhaust fumes are cleared from vehicle.
- Set VENTILATOR switch OFF.
- Set MASTER BATTERY switch OFF.

Second Technician (Right Front Fender)

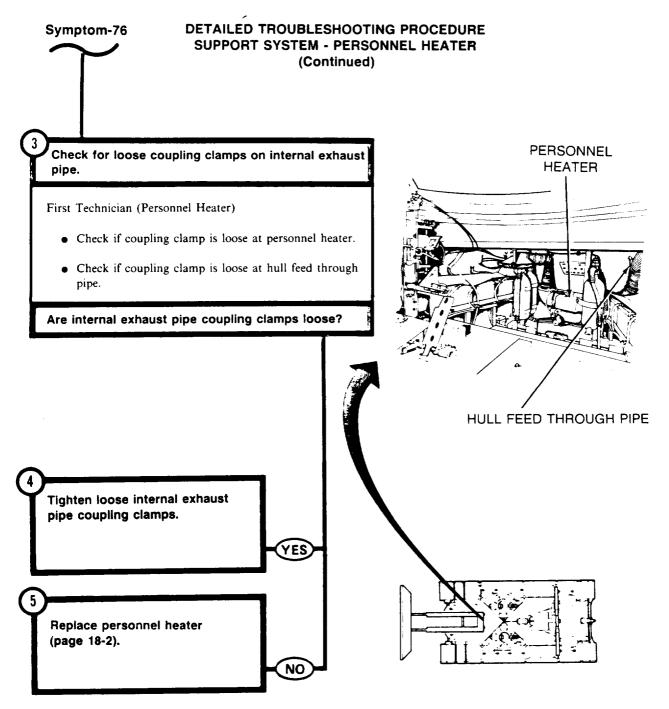

- Look into opening of external exhaust tube and check for obstructions.
- Check external exhaust tube for damage.

is external exhaust tube obstructed or damaged?

- Remove obstructions from external exhaust tube.
- If exhaust tube is not obstructed, replace damaged external exhaust tube (page 18-22).

DETAILED TROUBLESHOOTING PROCEDURE SUPPORT SYSTEM - SMOKE GENERATOR

Symptom-77

SMOKE GENERATOR WILL NOT WORK (NO SMOKE OR QUANTITY OF SMOKE IS NOT NORMAL).

- WARNING -

Never activate smoke generator in a building, closed area, or with personnel nearby.

- NOTE -

This procedure is to be performed by two persons. The lead person is referred to as the first technician and shall direct the activity of the second person called the second technician.

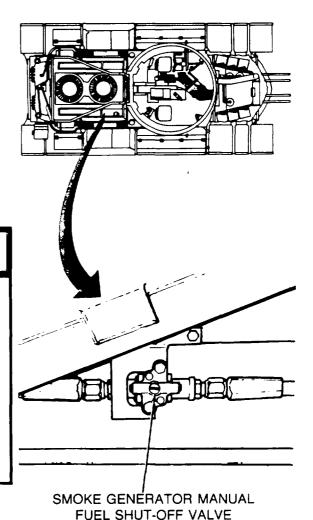

Check if smoke generator makes white smoke.

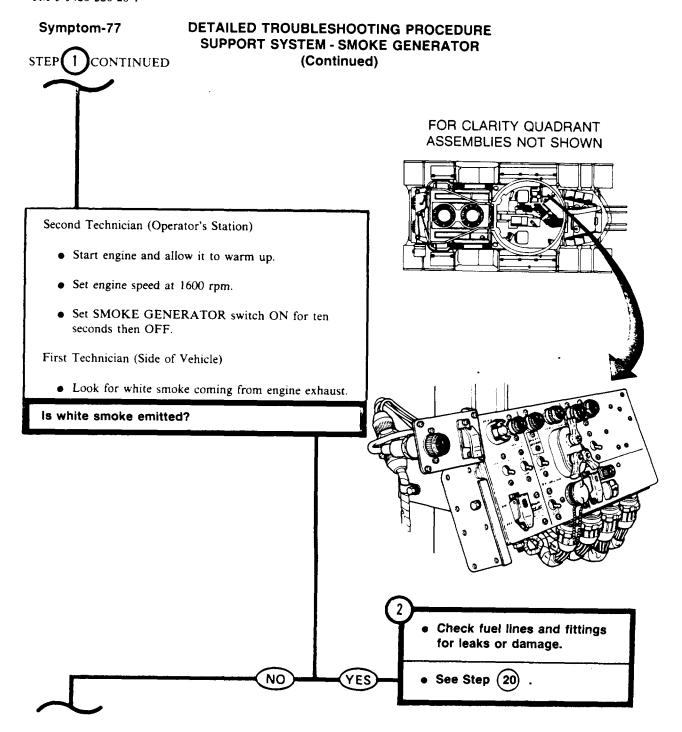

First Technician (Top Deck)

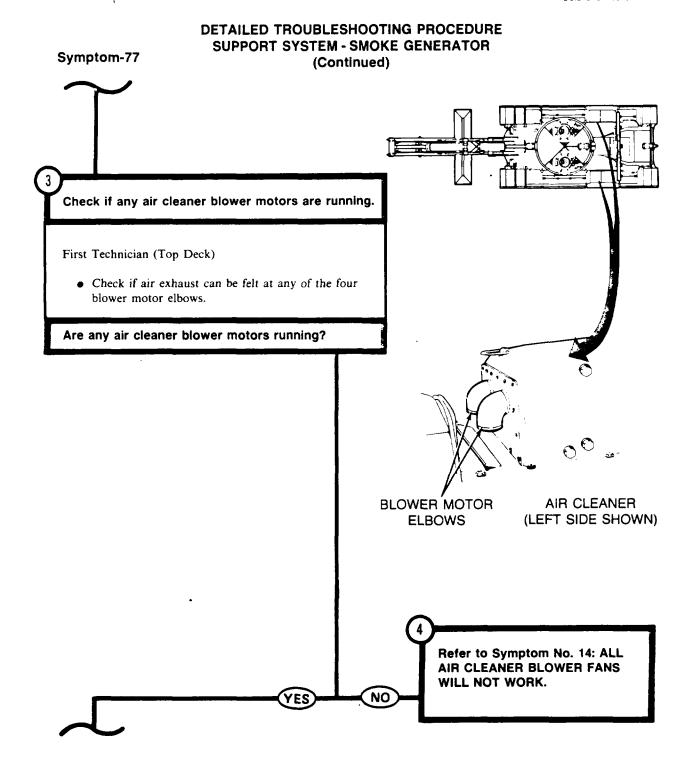

- Open right top deck grille doors.
- Make sure smoke generator manual fuel shut-off valve is in open position (screw slot in line with fuel line).

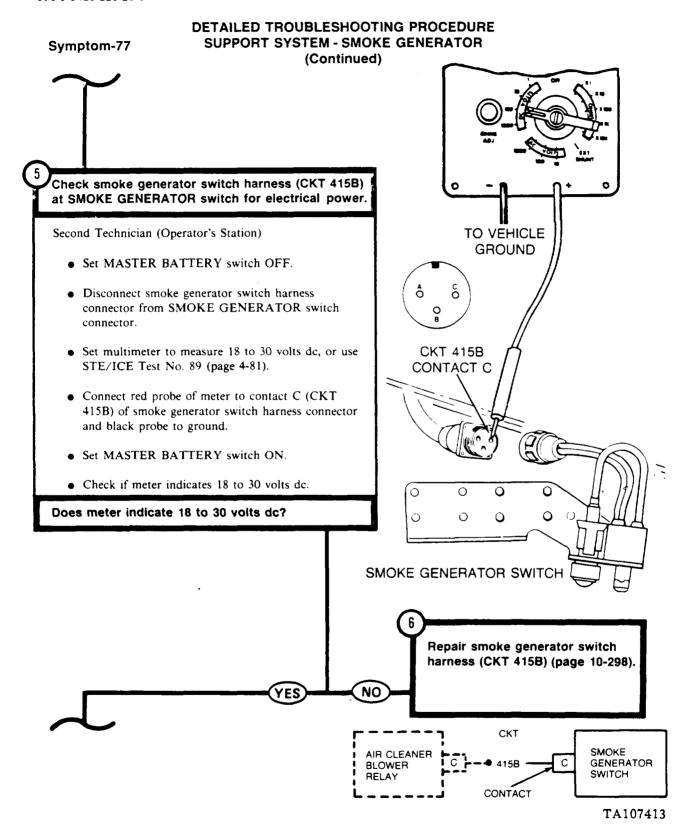

First Technician (Side of Vehicle)

- Note wind direction.
- Move vehicle to a safe position.

SUPPORT SYSTEM - SMOKE GENERATOR Symptom-77 (Continued) Check SMOKE GENERATOR switch assembly connector for continuity from contact A to contact Second Technician (Operator's Station) • Stop engine. • Set multimeter to OHMS X1 scale and "zero". meter, or use STE/ICE Test No. 91 (page 4-83). CONTACT C • Set SMOKE GENERATOR switch ON. (CKT 415B) • Connect red probe of meter to contact A of switch assembly connector. CONTACT A (CKT 920A) • Connect black probe of meter to contact C of switch assembly connector. • Check if meter indicates continuity. Does multimeter indicate continuity? O 0 0 0 0 0 Replace SMOKE GENERATOR switch assembly (page 21-2). TA107414

DETAILED TROUBLESHOOTING PROCEDURE

THE METRIC SYSTEM AND EQUIVALENTS

LINEAR MEASURE

1 Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches 1 Meter = 100 Centimeters = 1000 Millimeters = 39.37 Inches

1 Kilometer = 1000 Meters = 0.621 Miles

WEIGHTS

1 Gram = 0.001 Kilograms = 1000 Milligrams = 0.035 Ounces 1 Kilogram = 1000 Grams = $2.2 \, \text{Lb}$. 1 Metric Ton = 1000 Kilograms = 1 Megagram = 1.1 Short Tons

TO CUANCE

LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces 1 Liter = 1000 Milliliters = 33.82 Fluid Ounces

SQUARE MEASURE

1 Sq. Centimeter = 100 Sq. Millimeters = 0.155 Sq. Inches 1 Sq. Meter = 10,000 Sq. Centimeters = 10.76 Sq. Feet 1 Sq. Kilometer = 1,000,000 Sq. Meters = 0.386 Sq. Miles

1 Cu. Centimeter = 1000 Cu. Millimeters = 0.06 Cu. Inches 1 Cu. Meter = 1,000,000 Cu. Centimeters = 35.31 Cu. Feet

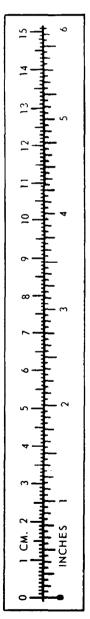

MILITIDIV OV

TEMPERATURE

 $\%(^{\circ}F - 32) = ^{\circ}C$ 212° Fahrenheit is equivalent to 100° Celsius 90° Fahrenheit is equivalent to 32.2° Celsius 32° Fahrenheit is equivalent to 0° Celsius % °C + 32 = °F
