FOR BRIDGE,
ARMORED-VEHICLE-LAUNCHED
SCISSORING TYPE, CLASS 60
[NSN 5420-01-076-6096]

WARNING

CARBON MONOXIDE POISONING CAN BE DEADLY

Carbon monoxide is a colorless, odorless, deadly poisonous gas, which when breathed deprives the body of oxygen and causes suffocation. Exposure to air contaminated with carbon monoxide produces symptoms of headache, dizziness, loss of muscular control, apparent drowsiness, and/or coma. Permanent brain damage or death can result from severe exposure. Carbon monoxide occurs in the exhaust fumes of fuel-burning **heaters** and internal-combustion engines and becomes dangerously concentrated under conditions of inadequate ventilation. The following precautions must be observed to make sure **of the safety of personnel whenever** the personnel heater, main or auxiliary engine of any vehicle is operated for maintenance purposes or tactical use.

1. DO NOT operate heater or engine of vehicle in an enclosed area unless the area is ADEQUATELY VENTILATED.
2. DO NOT idle engine for long periods without maintaining ADEQUATE VENTILATION in personnel compartments.
3. DO NOT drive **any** vehicle with inspection plates, cover plates, or engine compartment doors removed unless necessary for maintenance purposes.
4. BE ALERT at all times during vehicle operation for exhaust odors and exposure symptoms. If either are present, IMMEDIATELY VENTILATE personnel compartments. If symptoms persist, remove affected personnel from vehicle **and treat as follows: expose to fresh air; keep warm; DO NOT PERMIT PHYSICAL EXERCISE.**

THE BEST DEFENSE AGAINST CARBON MONOXIDE POISONING IS ADEQUATE VENTILATION.

For artificial respiration, refer to FM 21-11.

WARNING

WARNING

HIGH VOLTAGE

Used in the operation of this equipment

DEATH ON CONTACT

May result if personnel fail to observe safety precautions.

Never work on electronic equipment unless there is another person nearby who is familiar with the operation and hazards of the equipment and who is competent in administering first aid. When a technician is aided by operators, he must warn them about dangerous areas.

Whenever possible, the master battery switch and battery ground straps should be either turned off or disconnected before beginning work on the equipment.

Whenever the nature of the operation permits, keep one hand away from the equipment to reduce the hazard of current flowing through vital organs of the body.

Before you work around tracked vehicles, remove rings, bracelets, and wristwatches. These items may be caught on projections and cause injury or may be shorted across an electrical circuit and cause severe burns and electrical shock.

For artificial respiration, refer to FM 21-11.

WARNING

HAZARDOUS NOISE

1. Hearing protection (helmet) required.
2. Double hearing protection (helmet and ear plugs) required on road marches at speeds over 15 mph.

WARNING

The following summary list is adapted from the warnings within this volume. However, all warnings should be observed as noted in the text.

Hold up rear drain valve seat when removing last screw attaching valve seat to hull floor. Valve seat is heavy and can cause injury if it falls.

Hold up front drain valve cage assembly when removing last screw attaching cage to hull. Valve assembly may fall and cause injury if cage is not held up.

Handle charged fire extinguisher cylinders with care. Do not jar or subject cylinders to temperature **above** 140 degrees F (60 degrees C).

Driver's hatch weighs approximately 130 pounds. Do not try to lift it alone.

The unit commander or senior officer in charge of maintenance personnel assigned to remove and dispose of contaminated gas filters must prescribe necessary protective clothing to be worn when replacing gas particulate filters. He must also prescribe necessary safety measures to be performed before new gas filters are installed,

Contaminated gas particulate filters must be handled in accordance with FM 3-5 and must be disposed of by trained personnel.

Compressed air used for general cleaning purposes will not exceed 30 psi Use only with effective chip guarding and personal protective equipment (goggles, face shield, gloves, long sleeves, etc.).

Compressed air for general cleaning purposes will not exceed 30 psi. Use only with effective chip guarding and personal protective equipment (goggles/shield, gloves, etc).

Dry Cleaning Solvent P-D-680 is toxic and flammable. To avoid injury, wear protective goggles and gloves and use in a well-ventilated area. Avoid contact with skin, eyes, and clothes, and do not breathe vapors. Do not use near open fire or excessive heat. The flash point for Type I Dry Cleaning Solvent is 100°F (38C), and for Type II is 138°F (50°C). If you become dizzy while using Dry Cleaning Solvent, get fresh air immediately and get medical aid. If contact with eyes is made, wash your eyes with water and get medical aid immediately.

WARNING

If NBC exposure is suspected, all air filter media should be handled by personnel wearing protective equipment. Consult your unit NBC Officer or NBC NCO for appropriate handling or disposal instructions.

REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this manual. If you find any mistakes or if you know of a way to improve the procedures, please let us know. Mail your letter, DA Form 2028 (Recommended Changes to Publications and Blank Forms), or DA Form 2028-2, located in the back of this manual, directly to: Commander, U.S. Army Tank-Automotive Command, ATTN: AMSTA-MB, Warren, MI 48397-5000. A reply will be furnished to you.

NOTE

- Chapters 1 thru 4 are contained in Volume 1.
- Chapters 5 thru 9 are contained in this Volume.
- Chapters 10 thru 16 are contained in Volume 3.
- Chapters 17 thru 21, Appendixes, and Indexes are contained in Volume 4.

POWERPLANT REPLACEMENT (Sheet 1 of 21)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	5-2
Installation	5-14

- TOOLS:**
- 9/16 in. socket with 1/2 in. drive
 - 7/16 in. socket with 1/2 in. drive
 - Ratchet with 1/2 in. drive
 - Flat-tip screwdriver
 - Long round nose pliers
 - 7/16 in. combination box and open end wrench
 - 11/16 in. combination box and open end wrench
 - 7/8 in. combination box and open end wrench
 - 7/8 in. crowfoot with 3/8 in drive
 - Diagonal cutting pliers
 - 3/4 in. socket with 1/2 in. drive
 - Spanner wrench
 - Pinch bar
 - 5 in. extension with 1/2 in. drive
 - 1-1/2 in. socket with 3/4 in. drive
 - Ratchet with 3/4 in. drive
 - Universal joint with 1/2 in. drive
 - Hammer
 - Torque wrench with 3/8 in. drive (0-600 lb-in) (0-68 N-m)
 - Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-237 N-m)
 - Torque wrench with 3/4 in. drive (0-600 lb-ft) (0-813 N-m)
 - Adjustable wrench
 - 5 ton hoist capable of lifting powerplant 12 ft. high

- SPECIAL TOOLS:**
- Final drive guide shields (Fig. F-1, Appendix F) (2 required)
 - Final drive adapter hook-up tool (Fig. F-4, Appendix F)
 - Engine and transmission sling (Item 31, Chapter 3, Section I)

- SUPPLIES:**
- Covers for fire extinguisher flexible tubing
 - Covers for hydraulic brake line openings
 - Covers for fuel lines openings
 - Covers for air cleaner hoses and outlets
 - Grease (Item 37, Appendix D)
 - Lockwire (Item 61, Appendix D)
 - Light rope (or heavy masking tape)
 - Cotter pins
 - Wooden blocks 12 in. x 12 in.
 - Lock washers

PERSONNEL: Three

REFERENCE: TM 5-5420-226-10

. NOTE

Use suitable container to catch fuel whenever any fuel line or connection is loosened or disconnected. Use cloth to wipe any spillage. Discard cloth and drained fuel in accordance with local procedures,

Go on to Sheet 2

POWERPLANT REPLACEMENT (Sheet 2 of 21)

PRELIMINARY PROCEDURES:

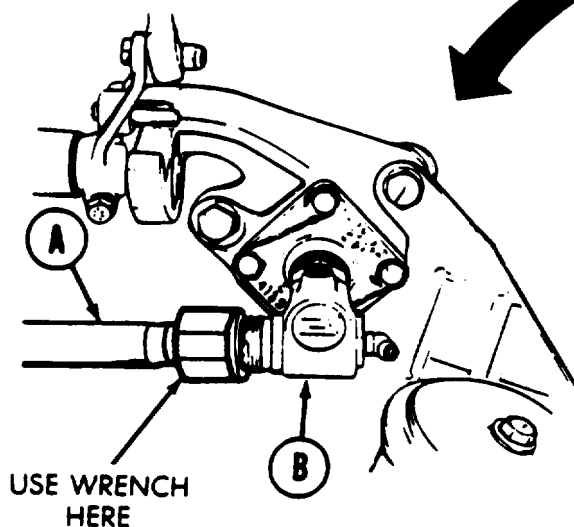

- Park vehicle on level ground, block both tracks at front and rear (TM 5-5420-226-10)**
- Release parking brake (TM 5-5420-226-10)**
- Place shifting lever in P (park) (TM 5-5420-226-10)**
- Place MASTER BATTERY switch OFF (TM 5-5420-226-10)**
- Disconnect battery ground straps (page 10-268)**
- Remove top deck (page 16-21)**
- Remove transmission shroud (page 9-2)**
- Remove engine upper access cover (page 17-14)**
- Disconnect power take-off (page 5-23)**

NOTE

Procedures for the removal and installation of the powerplant equipped with an AVDS 1790-2D or AVDS 1790-2DA are similar. Differences are noted in the procedure.

REMOVAL:

1. Reach through engine access cover Opening and, using adjustable wrench, unscrew tachometer cable (A) at adapter (B).
2. Using light rope or heavy masking tape, tie free end of tachometer cable to bulkhead support.

3. Using 7/16 inch wrench, remove six screws (C) securing generator air duct
4. Using light rope or heavy masking tape, fasten generator air duct (D) to engine.

Go on to Sheet 3

POWERPLANT REPLACEMENT (Sheet 3 of 21)

5. Using 7/16 inch box end of **wrench**, remove two bolts (E) securing manual fuel shutoff clevis (F) and accelerator linkage lever (G) to rod ends (H).
6. Separate accelerator linkage lever (G) and fuel shutoff clevis (F) from two rod ends (H).

7. Reach through engine access cover opening and disconnect fire extinguisher flexible tubing (J) at quick-disconnect.
8. Tie free end of fuel shutoff clevis (F) and fire extinguisher flexible tubing (J) out of way.

CAUTION

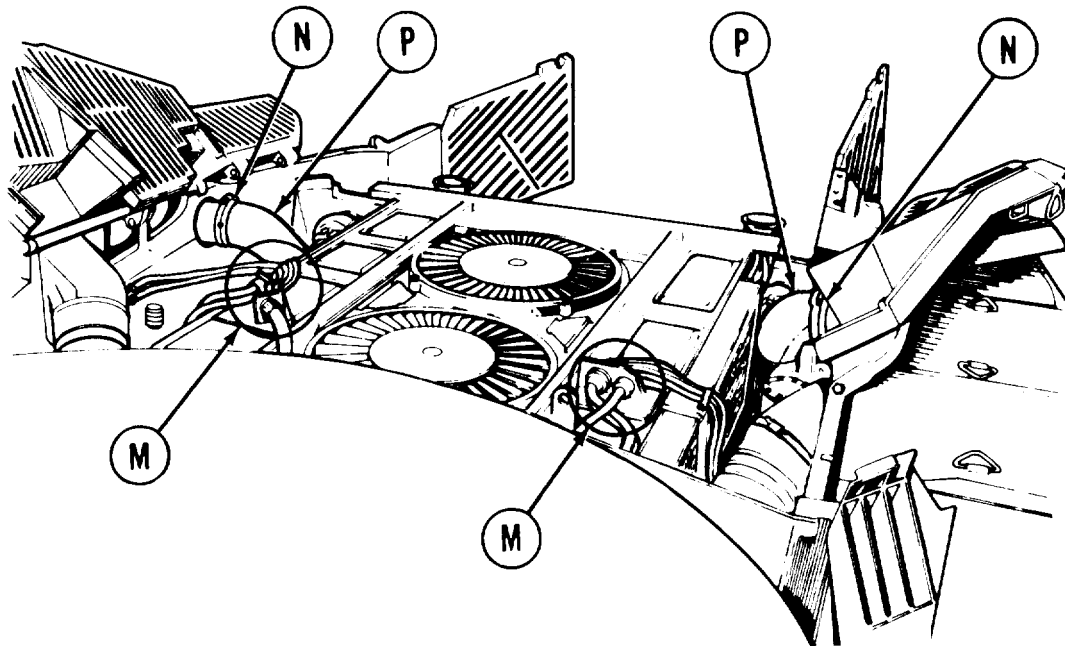

Put protective coverings over fire extinguisher openings.

9. Disconnect main fuel line at quick-disconnect fitting (K).
10. Disconnect purge line at quick-disconnect fitting (L).
11. Tie both fuel line and purge hoses out of way at top of powerplant.

Go on to Sheet 4

POWERPLANT REPLACEMENT (Sheet 4 of 21)

12. Using spanner wrench, disconnect four electrical harness connectors (M) at both sides of powerplant.
13. Using screwdriver) loosen two clamps (N) which hold air cleaner outlet hose (P) at each side of powerplant.
14. Disconnect air cleaner outlet hoses (P). Make sure you cover air cleaner outlet hose openings.

NOTE

If your vehicle is equipped with a 2DA engine, do steps 14.1 and 14.2. If not, proceed to step 15.

- 14.1 Using screwdriver, loosen two clamps (P.1).
- 14.2. Slide hose (P.2) off manifold (P.3) and back onto tube (P.4).

Go on to Sheet 5

POWERPLANT REPLACEMENT (Sheet 5 of 21)

- Using 9/16 inch socket with ratchet and extension, remove six screws (Q), lockwashers (R), and washers (S) securing two angle brackets (T).

NOTE

One angle bracket is located on each side at rear of vehicle.

REAR OF VEHICLE

- Lift up** on rear *corners* of both brackets (T) to remove **them**.

NOTE

Parking brake cable in engine compartment may be one piece or two piece with quick disconnect. If two piece cable is in your vehicle skip steps 18 through 22. If one piece cable is used skip step 17 and proceed with step 18.

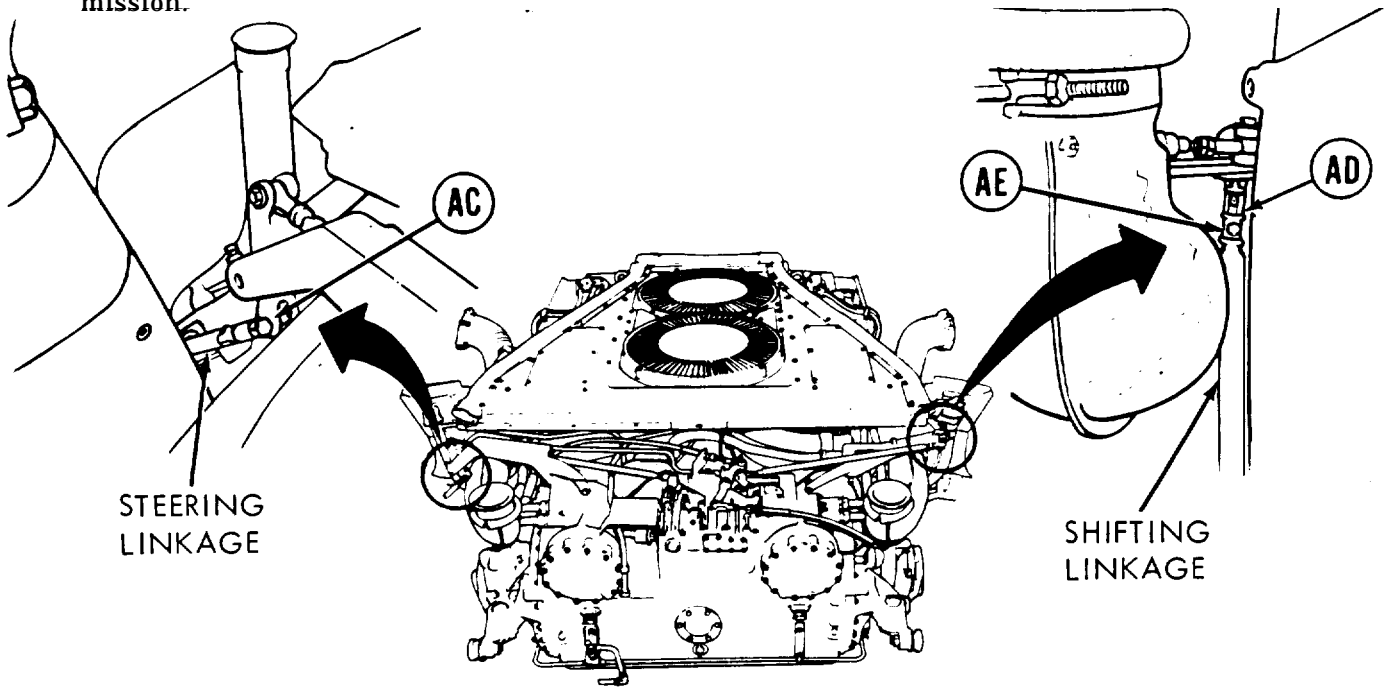

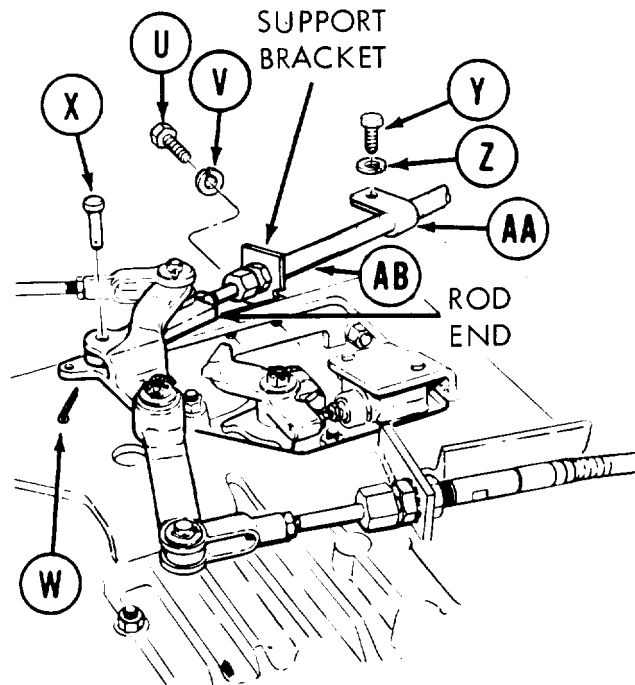

QUICK DISCONNECT

- Manually turn hex portion of quick disconnect counterclockwise till loose, then displace rear portion of cable.

Go on to Sheet 6

POWERPLANT REPLACEMENT (Sheet 6 of 21)

17. Go to top of transmission at rear of vehicle.
18. Using 9/16 inch socket, remove two screws (U) and lockwashers (V) securing parking brake support bracket.
19. Using pliers, pull cotter pin (W).
20. Remove straight pin (X). Separate rod end of parking brake control from bell-crank.
21. Using 7/16 inch wrench, remove screw (Y) and lockwasher (Z) attaching clamp (AA) that secures parking brake control.
22. Move parking brake control (AB) out of way.
23. Using 7/16 inch wrench, remove bolt (AC) securing steering linkage. Displace linkage at left side of transmission.
24. Using cutting pliers, remove lockwire (AD) at right side of transmission.
25. Using 7/16 inch wrench, remove screw (AE) and shifting linkage at right side of transmission.

REAR TOP VIEW OF POWERPLANT

Go on to Sheet 7

TA107437

POWERPLANT REPLACEMENT (Sheet 7 of 21)

26. Pull back on quick-disconnect to separate fuel return line at fitting. Cover openings.

27. Disconnect hydraulic brake line at quick-disconnect fitting. Cap line openings.

28. Cover brake line opening so dirt cannot enter.

29. Pull lockring out to unlock powerplant guide. Swing guide backward. Do this at both sides.

Go on to Sheet 8

TA107438

POWERPLANT REPLACEMENT (Sheet 8 of 21)

- 30. Make sure powerplant guide lock **engages** when guide is all the way back.
- 31. Using wire cutters, cut lockwire (AF) at final drive on both sides of transmission.

- 32. Using 3/4 inch socket with universal joint, remove screw (AG) securing quick-disconnect ring (AH) from both sides of transmission.
- 33. Remove ring (AH) from both sides of transmission.

Go on to Sheet 9

TA107439

POWERPLANT REPLACEMENT (Sheet 9 of 21)

34. Using hammer on pinch bar, tap final drive adapter (AJ) toward final drive (both sides) far enough to free adapter from universal joint.

35. Hang fabricated tools (one on each side) at final drive universal joints so there are no hangups when powerplant is lifted from compartment.

POWERPLANT REPLACEMENT (Sheet 10 of 21)

36. Using 1-1 /2 inch socket, loosen two screws (AK) at transmission mounts (both sides).

37. Remove two screws (AK), lockwashers (AL), recessed washers (AM), and washers (AN) securing two mounting brackets to transmission mounts.
38. Check all disconnected rod and line ends to make sure they are out of way during powerplant removal.
39. Connect hoist hook to sling. Make sure hoist hook is put through hole for powerplant.

Go on to Sheet 11

TA107441

POWERPLANT REPLACEMENT (Sheet 11 of 21)

40. Using hoist with sling, position sling over powerplant so "T" end is to front of vehicle.

41. Attach four chain hooks of sling to four lifting eyes on powerplant. Make sure hook ends are toward outside of powerplant.

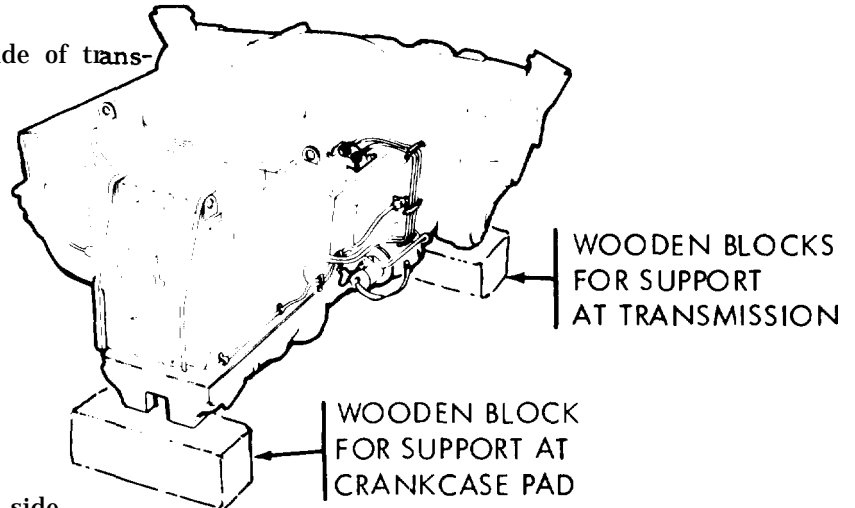

42. Have persons station themselves to help guide powerplant as it is hoisted out of vehicle.
43. Lift powerplant in short, even lifts.
44. Move hoist rearward between lifts. Rear of powerplant comes out first.

Go on to Sheet 12

TA107442

POWERPLANT REPLACEMENT (Sheet 12 of 21)

- 45. Remove powerplant. Move it away from vehicle. Lower it to a few feet above ground level.
- 46. Position three wooden blocks under powerplant for support.
- 47. One block goes under left side of transmission.

- 48. Other block goes under right side of transmission.
- 49. Third block goes under crankcase pad at front of engine.

- 50. Lower powerplant carefully onto supporting blocks.

- 51. Remove six spring washers (AP) (three each side) from transmission mounts.
- 52. Detach four chain hooks of sling from lifing eyes of powerplant, if required.

POWERPLANT REPLACEMENT (Sheet 13 of 21)

INSTALLATION:

1. Install six spring washers (A) (three each side) on transmission mounts.
2. Make sure all surfaces in compartment are clean. If not, clean engine compartment.
- 2.1 Install final drive adapter hook-up tool in final drive adapter splines with opening pointed up and slightly back (1 or 2 teeth from level position).

3. Apply light coat of grease to contact surfaces of engine and transmission mounts.

NOTE

"T" end of sling should be toward front (engine end of powerplant).

4. Make sure hoist hook is in powerplant hole of sling.
5. Using hoist, pick up sling and install, four chain hooks through four lifting eyes on powerplant.
6. Ends of chain hooks should point toward outer side of powerplant.

Go on to Sheet 14

POWERPLANT REPLACEMENT (Sheet 14 of 21)

WARNING

Be careful when lifting powerplant. Serious injury to personnel can result from careless handling. Also, powerplant can be damaged if bumped against hull.

7. Using hoist with sling, lift powerplant over open grille doors into position over engine compartment.
8. Position final drive guide shields on both sides of engine compartment so they cover the final drive mounting adapters.

FINAL DRIVE
GUIDE SHIELD
(BOTH SIDES)

FINAL DRIVE
UNIVERSAL JOINT

9. Use persons as shown in picture to guide powerplant.
10. Lower powerplant slowly with frequent stops.

11. Guide mounts of engine to engine guides hull floor.
12. Make sure transmission rollers fit into both powerplant guides and lower powerplant into position.

Go on to Sheet 15

POWERPLANT REPLACEMENT (Sheet 15 of 21)

NOTE

When powerplant is in place, the universal joint and final drive adapter will be axially alined.

- 12.1. While slowly lowering powerplant, aline universal joint so lip enters tool guides.

WARNING

Do not place your hands inside the engine compartment. Serious injury may result if powerplant shifts unexpectedly.

- 12.2 Using pry bar or rope, rotate universal joint to aline splines with final drive adapter splines.
13. When powerplant is seated, remove final drive guide shields, and retrieve final drive adapter hook-up tool.

■ Go on to Sheet 15.1

POWERPLANT REPLACEMENT (Sheet 15.1 of 21)

14. Check that powerplant is correctly seated. Check all clearances around powerplant.
15. Remove four sling chain hooks from four lifting eyes of powerplant.
16. Install washer (A), recessed washer (B), lockwasher (C), and bolt (D) (both sides).
17. Using 1-1/2 inch socket and torque wrench, tight-en bolt (D) securing transmission mounting bracket to 370-375 lb-ft (501-508 Nom).

18. Have second technician hold universal joint with final drive guide adapter.
19. Using pinch bar, pry final drive adapter away from final drive into universal joint (each side).

20. Fit quick-disconnect ring (E) around final drive adapter.

Go on to Sheet 16

POWERPLANT REPLACEMENT (Sheet 16 of 21)

21. Install screw (F). Using 3/4 inch socket, tighten screw on each side.
22. String lockwire (G) through screw (F) and opening in ring (H) on each side.
23. Raise guide lock latch.

24. Push powerplant guide forward until lockring snaps into place.
25. Lay parking brake cable on top of transmission. Position angle bracket (J) to rear side wall (by powerplant guide). Hang tab of bracket onto tab on compartment side wall on each side.

26. Install all three screws (K), lockwashers (L), and washers (M) to secure angle bracket (J) to side wall (both sides).
27. Using 9/16 inch socket with ratchet and 5 inch extension, tighten three screws (K) (both sides) to secure bracket (J) to side wall.

Go on to Sheet 17

TA107447

POWERPLANT REPLACEMENT (Sheet 17 of 21)

28. Remove protective coverings from openings on hydraulic brake lines and fittings.
29. Using 11/16 inch wrench, connect hydraulic brake line.
30. Connect hydraulic brake line at quick-disconnect.
31. Check brake pedal travel. If pedal travel seems too much or brakes feel "spongy", bleed brakes (page 13-86).
32. Remove protective coverings from openings and connect fuel return line at quick-disconnect fitting.

REAR TOP VIEW OF POWERPLANT

33. Install shifting linkage (page 11-40).
34. Put two flat sides of shifting linkage together.
35. - Install screw (N), using 7/16 inch socket, tighten screw (N).
36. Using pliers, install lockwire (P) through screw (N) and around shifting linkage.

Go on to Sheet 18

TA107448

POWERPLANT REPLACEMENT (Sheet 18 of 21)

NOTE

If two piece parking brake cable is used skip steps 39 through 46. If one piece cable is used skip step 38 and proceed with step 39.

CAUTION

To prevent bending of control rod, tighten hex of quick disconnect only slightly more than finger tight.

36. On right side of powerplant, position steering linkage into connecting link (Q).
37. **Install screw (R) and tighten, using 7/16 inch wrench.**
38. **Carefully position (don't twist) rear cable, Using 7/8 inch wrench, connect quick-disconnect.**
39. Position parking brake control rod end into bellcrank clevis.
40. **Push straight pin (S) into holes to secure rod end to clevis.**
41. Using pliers, install cotter pin (T) into pin (s).
42. position control rod support bracket (U) to brake control bracket.
43. **Install two lockwashers (V) and screws (W) to secure support bracket (U).**

45. Install clamp (X), lockwaaher (Y), and screw (Z) to secure control rod cable to powerplant.
46. Using 7/16 inch socket, tighten screw (Z).

Go on to Sheet 19

POWERPLANT REPLACEMENT (Sheet 19 of 21)

47. Remove coverings from air cleaner outlet hose openings, one on each side.
48. Position two air cleaner hoses (AA) (one each side) over air cleaner outlet openings.
49. Using screwdriver, tighten two hose clamps (AB) (one at each side).

50. Connect four electrical connectors (AC) (two each side at top of powerplant).

NOTE

If your vehicle is equipped with a 2DA engine do steps 50.1 and 50.2. If not, proceed to step 51.

- 50.1. Slide hose (AC.1) and clamp (AC.2) up over manifold tube (AC.3).

- 50.2. Using screwdriver, tighten clamps (AC.2).

Go on to Sheet 19.1

POWERPLANT REPLACEMENT (Sheet 19.1 of 21)

51. Go inside crew compartment to gain access to engine.
52. Remove protective coverings from openings on fuel lines.
53. **Connect primary fuel hose (AD) to quick-disconnect fitting.**
54. **Connect purge line hose (AE) to quick-disconnect fitting.**

Go on to Sheet 20

POWERPLANT REPLACEMENT (Sheet 20 of 21)

- 56. Reach through upper access cover opening. Connect fire extinguisher flexible tubing quick-disconnect (AC) to self-sealing socket (AD).
- 57. Mount rod ends (AE) to accelerator linkage lever (AF) and fuel shutoff clevis (AG).

- 58. Install **two self-locking bolts (AH)**. Using 7/16 inch wrench, tighten both bolts (AH) .
- 59. Install tachometer cable (AJ) onto adapter (AK).
- 60. Using adjustable wrench, tighten cable (AJ) onto adapter (AK).
- 61. Position generator air duct (AL) to bulkhead.
- 62. Using 7/16 inch wrench, install six screws (AM) to secure generator air duct (AL) to bulkhead.

Go on to Sheet 2.1

TA107451

POWERPLANT REPLACEMENT (Sheet 21 of 21)

63. Install transmission shroud (page 9-6).
64. Install top deck (page 16-23).
65. Remove blocks from front and rear of vehicle.
66. Install engine upper access cover (page 17-15).
67. Install engine lower access cover (page 17-17).
68. Connect three battery ground straps (page 10-268).

End of Task

POWER TAKE-OFF DISCONNECT (Sheet 1 of 2)

TOOL: 7/16 in. combination box and open end wrench

PRELIMINARY PROCEDURE: Remove universal joint cover (TM 5-5420-227-24).

REMOVAL:

1. Using wrench, remove eight bolts (A).
2. Remove tube (B) from two spiders (C).

Go on to Sheet 2

TA107452

POWER TAKE-OFF DISCONNECT (Sheet 2 of 2)

INSTALLATION:

1. Install tube (A) between two spiders (B).
2. Using wrench, install eight bolts (C) to tube (A). Make sure bolts (C) are secured tightly.
3. Install universal joint cover (TM 5-5420-227-24).

End of Task

TA107453

POWERPLANT TESTS (GROUND HOP) (Sheet 1 of 16)

NOTE

If you have and choose to use STE/ICE, there are two tests which you can perform.

Test No. 13 (Page 4-76)
 14 (Page 4-86)

PROCEDURE INDEX

PROCEDURE	PAGE
Test Hookup	5-27
Idle Test	5-30
Governed No-Load Test	5-31
Stall Test	5-33
Engine Fuel Leak Checks	5-38
After Test Disconnect	5-40

Go on to Sheet 2

POWERPLANT TESTS (GROUNDHOG) (Sheet 2 of 16)

TOOLS: 1/2 in. combination box and open end wrench
9/16 in. combination box and open end wrench
3/4 in. combination box and open end wrench
Flat-tip screwdriver
Ratchet with 1/2 in. drive
Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-237 N. m)
1-1/4 in. socket with 1/2 in. drive
7/16 in. deepwell socket with 1/2 in. drive

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)
Sleeve spacer (Item 2, Chapter 3, Section I)

FABRICATED TOOLS: Tachometer assembly (Fig. F-2, Appendix F)
Throttle linkage adjusting go/no-go gage (Fig. F-3, Appendix F)

PERSONNEL: Three

REFERENCES: TM 5-5420-226-10
LO 5-5420-226-12

PRELIMINARY PROCEDURE: Remove **powerplant (page 5-2)**

NOTE

Any one complete powerplant that can be performed separate from the other tests. Powerplant tests need not be performed in specific order. If more than one test is to be performed, do not disconnect that hookup,

Disconnect test hookup only when test or tests are complete.

Go on to Sheet 3

POWERPLANT TESTS (GROUND HOP) (Sheet 3 of 16)

Test Hookup (Sheet 1 of 3)

1. Position and support powerplant so that there is free air circulation and access to all sides of powerplant.
2. Position powerplant close to hull to permit connection of electrical cable assemblies and fuel hose assemblies.
3. Connect cable assemblies and hose assemblies to powerplant as shown.

Go on to Sheet 4

POWERPLANT TESTS (GROUND HOP) (Sheet 4 of 16)
Test Hookup (Sheet 2 of 3)

4. Connect cable assemblies and hose assemblies to hull as shown

Using 7/16-inch socket and ratchet, loosen clamp nut securing clamp.

Remove air cleaner hose assembly from turbosupercharger elbow.

Go on to Sheet 5

POWERPLANT TESTS (GROUND HOP) (Sheet 5 of 16)
 Test Hookup (Sheet 3 of 3)

7. Position ground hop hose assembly with clamp and filter to right turbosupercharger elbow.
8. Using 7/16-inch socket and ratchet, tighten clamp nut to secure hose assembly to turbosupercharger elbow.
- 8.1. Repeat steps 7 and 8 on left side.

WARNING

Assign one crewmember with a fire extinguisher as a fire guard during all powerplant tests.

NOTE

During these tests, the electrical instruments, switches and warning lights in the vehicle will be operative. All mechanical and hydraulic controls and vehicle tachometer will be inoperative. It will be necessary to manually position or actuate the throttle or shifting control and fuel shut off.

9. Install fabricated tachometer assembly.
10. Connect battery ground straps (page 10-268).

Go on to Sheet 6

TA247986

POWERPLANT TESTS (GROUND HOP) (Sheet 6 of 16)
 Idle Test (Sheet 1 of 1)

WARNING

Take all necessary safety precautions to eliminate possible injury to personnel or damage to equipment, Stand clear of transmission output flanges whenever the engine is running.

1. Start and **operate** engine until normal operating temperatures are reached (TM 5-5420-226-10).
2. Check tachometer for indication of 700-750 rpm. If indication is not within range, adjust idle adjusting screw according to steps 3 through 6.
3. Using 1/2 inch wrench, loosen jamnut on idle adjusting screw.
4. Using 1/2 inch wrench, adjust idle adjusting screw until 700-750 rpm shows on tachometer.
5. Using 1/2 inch wrench, tighten jamnut.
6. **Install 3/16 inch** end of throttle linkage adjusting gage between stop pin and bracket shoulder. If distance is not a minimum of 3/16 inch, notify support maintenance.
7. Check tachometer. If indication is not between 700-750 rpm, notify maintenance supervisor.

Go on to Sheet 7

TA247987

POWERPLANT TESTS (GROUNDHOG) (Sheet 7 of 16)

Governed No-Load Test (Sheet 1 of 2)

1. Start and operate engine until normal operating temperatures are reached (TM 5-5420-226-10).

WARNING

Take all necessary safety precautions to eliminate possible injury to personnel or damage to equipment. Stand clear of transmission output flanges whenever the engine is running.

NOTE

An indicator on the linkage shaft and four dots on the body transmission valve casting indicate shift position.

2. **Be sure** transmission is in neutral position by checking shifting position indicator. If not in neutral position, grasp shift lever and pull or push lever to set indicator to desired position.

Go on to Sheet 8

TA107459

POWERPLANT TESTS (GROUNDHOG) (Sheet 8 of 16)
Governed No-Load Test (Sheet 2 of 2)

3. Manually and gradually actuate throttle by pulling forward on throttle lever to full open Position.

4. Watch tachometer. In most cases, engine speed will surge over 2600 rpm and then stabilize within 30 seconds between 2550 and 2640 rpm. If rpm does not fall within this range, or keeps changing, notify support maintenance.

5. Gradually release throttle lever allowing engine to return to idle speed (700-750 rpm).

Go on to Sheet 9

TA107460

POWERPLANT TESTS (GROUND HOP) (sheet 9 of 16)
Stall Test (Sheet 1 of 5)

NOTE

Before performing stall test, check brake adjustment (page 13-78)

1. Remove right brake slave cylinder (page 13-58).
2. Remove left brake slave cylinder (page 13-54).
3. Position brake applicator tool over rod sticking out of brake housing (where slave cylinder was).
4. Engage catch on tool into notch in brake housing.

5. Using 9/16 inch wrench, tighten nut to secure brake applicator tool to brake housing.
6. Using 3/4 inch wrench, tighten nut to secure brake applicator tool to brake housing.
7. Using 3/4 inch wrench, set brake by rotating hex head bolt until bottom of bolt is approximately 1 inch from top of tube.

Go on to Sheet 10

TA107461

POWERPLANT TESTS (GROUND HOP) (Sheet 10 of 16)
Stall Test (Sheet 2 of 5)

8. Check oil levels in engine and transmission (LO 5-5420-226-12). Make sure levels are up to full range on level gages.

WARNING

Take all necessary safety precautions to eliminate possible injury to personnel or damage to equipment. Stand clear of transmission output flanges whenever the engine is running. Personnel must wear hearing protection.

9. Start and operate engine until normal operating temperatures are reached (TM 5-5420-226-10).

NOTE

An indicator on the shaft and four dots on the body transmission valve casting indicate shift position.

10. Set transmission in high range by grasping shift lever and pull or push lever to set indicator to high range.

Go on to Sheet 11

TA107462

POWERPLANT TESTS (GROUND HOP) (Sheet 11 of 16)
Stall Test (Sheet 3 of 5)

11. Manually and gradually actuate throttle by pulling forward on throttle lever to full open position.

CAUTION

Do not stall test for more than 30 seconds at full throttle or allow transmission oil temperature to go into red area on transmission oil temperature indicator.

12. Watch tachometer and operate engine at full throttle for no more than 30 seconds, three times.
13. If engine speed is below 1800 rpm, engine is not operating properly, notify support maintenance.

Go on to Sheet 12

TA107463

POWERPLANT TESTS (GROUND HOP) (Sheet 12 of 16)
Stall Test (Sheet 4 of 5)

14. If engine speed is over 2050 rpm, there is clutch slippage in transmission. Verify that shift control lever is in high (check control indicator position). Notify support maintenance.

NOTE

This test may also be used to determine if the low-range or reverse-range transmission servobands are dipping.

15. Set transmission in low or reverse range by grasping shift control lever and pull or push lever to set indicator to selected range.

CAUTION

Do not stall test for more than 30 seconds at full throttle or allow transmission oil temperature to go into red area on transmission oil temperature indicator.

16. Watch tachometer and operate engine at full throttle for no more than 30 seconds, three times.
17. If engine speed is below 1800 rpm after three checks, engine is not operating properly. Notify support maintenance.
18. If engine speed exceeds 2050 rpm, servobands are slipping. Verify that shift control lever is in selected range (check position of control indicator) and adjust forward or reverse servobands (page 11-84).

Go on to Sheet 13

POWERPLANT TESTS (GROUNDHOG) (Sheet 13 of 16)**Stall Test (Sheet 5 of 5)**

19. After adjusting servobands, repeat steps 15 through 18. If slippage still exists, notify support maintenance.
20. When tests are completed, shut down engine (TM 5-5420-226-10).
21. Using 3/4 inch wrench, back off hex head bolt to release brake.

22. Using 9/16 inch wrench, back off nut to release brake applicator tool from brake housing.
23. Remove brake applicator tool from brake housing.
24. Install right brake slave cylinder (page 13-61).
25. Install left brake slave cylinder (page 13-56).

Go on to Sheet 14

TA107464

POWERPLANT TESTS (GROUNDHOG) (Sheet 14 of 16)
Engine Fuel Leak Checks (Sheet 1 of 2)

1. Remove engine shroud (page 9-30).
2. Remove right bank engine access covers (page 6-107).
3. Remove left bank engine access covers (page 6-112).
4. Remove cooling fans (page 9-55).
5. Install one spacer onto each of two fan drive shafts.
6. Using socket, install cooling fan nut.
7. Using torque wrench and 1-1/4 inch socket, tighten cooling fan nut to 50 lb-ft (68 N^om).

Go on to Sheet 15

TA107465

POWERPLANT TESTS (GROUNDHOG) (Sheet 15 of 16)
Engine Fuel Leak Checks (Sheet 2 of 2)

WARNING

Observe for leakage from a safe distance. Fuel is delivered under high pressure from fuel pump to injector nozzles. Injury to personnel could result if contacted by spray from loose or defective fuel line.

CAUTION

DO NOT run engine for more than 10 minutes and do not exceed 700-750 rpm.

8. Start engine and run engine at idle speed (700-750 rpm) (TM 5-5420-226-10).
9. Check for leakage at all fuel line connections.
10. If leak is observed, shut down engine (TM 5-5420-226-10) and make necessary repairs.
11. When no leaks are observed, shut down engine (TM 5-5420-226-10).
12. Using socket, remove cooling fan nut.
13. Remove spacers from fan drive shafts.
14. Install cooling fans (page 9-57).
15. Install left bank engine access covers (page 6-115).
16. Install right bank engine access covers (page 6-110).
17. Install engine shroud (page 9-31).

Go on to Sheet 16

POWERPLANT TESTS (GROUND HOP) (Sheet 16 of 16)

After Test Disconnect (Sheet 1 of 1)

1. Disconnect three battery ground straps (page 10-268).
2. Disconnect four electrical cable assemblies and three hose assemblies from powerplant and hull (page 5-27).
3. Remove fabricated tachometer assembly,
4. Using 7/16-inch socket with ratchet, loosen clamp nut that secures right ground hop hose assembly clamp.
5. Remove ground hop hose assembly with clamp and filter from turbosupercharger elbow.

6. Position air cleaner hose assembly with clamp to right turbosupercharger elbow.
7. Using 7/16-inch socket with ratchet, tighten clamp nut to secure air cleaner hose assembly to turbosupercharger elbow.
8. Repeat steps 4 through 7 on left side.
9. Install powerplant (page 5-14).

End of Task

Powerplant Left Bank Oil Cooler Frame and Brackets Replacement	6-126
Cylinder Head and Oil Pan Drain Tubes (Left and Right) Replacement	6-135

LEFT OR RIGHT REAR POWERPLANT GUIDE REPLACEMENT (Sheet 1 of 2)

TOOLS: 9/16 in. combination box and open end wrench
1/2 in. drive hinged handle (breaker bar)
Ball peen hammer
Long round nose pliers
Slip joint pliers
Chisel
Chisel
Brass drift

SUPPLIES: Connecting ring 8744683
Sleeve bearing 5160090
Wood block, 4 x 6 (approximately)

REFERENCE: TM 9-237

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

1. Using wrench, remove screw (A), lockwasher (B), and flat washer (C) securing rear powerplant guide (D) to support (E).
2. Using hammer, tap guide (D) from mounting place. Remove guide from vehicle.

3. Using brass drift, drive bearing (F) from support.
4. Using long nose pliers, remove cotter pin (G) and latch (H).
5. Using chisel, cut ring (J).
6. Using slip joint pliers, separate ring (J) and remove ring (J), spring (K), and pin (L).

Go on to Sheet 2

TA107472

REAR POWERPLANT GUIDE (LEFT OR RIGHT) REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Place pin (A) and spring (B) in position.
2. Using slip joint pliers, install new ring (C).
3. Place latch (D) on guide (E).
4. Using long nose pliers, install cotter pin (F).
5. Using hammer and wood block, install new bearing (G) in mounting hole (H).
6. Mount guide (E) with arm (J) through support mounting hole (H).

7. Using wrench install screw (K), lockwasher (L), and flat washer (M).
8. Have ring (C) brazed at ring opening. (TM 9-237)
9. Install powerplant (page 5-14).

End of Task

TA247997

FRONT POWERPLANT GUIDE (LEFT OR RIGHT) REPLACEMENT (Sheet 1 of 1)

TOOLS: 15/16 in. combination box and open end wrench
15/16 in. socket with 3/4 in. drive
Hinged handle with 3/4 in. drive
Torque wrench with 3/4 in. drive (0-600 ft-lb) (0-813 N. m)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

■ SPECIAL TOOLS: Torque wrench adapter (Item 34, Chapter 3, Section I)

REMOVAL:

NOTE

Three screws on right guide and two screws on left guide are inaccessible and cannot be loosened or removed using socket. Use wrench to remove screws that cannot be removed using socket.

1. Using socket with hinged handle or wrench, loosen and remove six screws and lockwashers (A).

2. Remove inner support (B) and front guide (C).

INSTALLATION:

1. Mount inner support (B) and front guide (C).
2. Install six screws and lockwashers (A).

NOTE

Three screws on right guide and two screws on left guide cannot be torqued. Use wrench to tighten screws that cannot be torqued.

3. Using socket or torque wrench adapter, tighten screws (A) to 155-215 lb-ft (212-286 N^om).
4. Install powerplant (page 5-14)

End of Task

ENGINE MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 1 of 3)

TOOLS: T-slide handle with 3/4 in. drive (2 required)
 36 in. extension (cheater bar)
 1-1/8 in. socket with 3/4 in. drive
 Ratchet with 3/4 in. drive
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1-1/8 in. open end wrench

SUPPLIES: Drycleaning solvent (Item 55, Appendix D)
 Rags (Item 12, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2).

NOTE

Removal and installation of left and right engine mounts are the same.

REMOVAL:

1. Using 1/2 inch socket, remove two screws (A) and washers (B) from bracket (c).

ENGINE MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 2 of 3)

2. Using 1-1/8 inch open end wrench to hold nut (D) and 1-1/8 inch socket on bolt (E), remove nut (D) and bolt (E) from, bracket (F).
3. Using 1-1/8 inch socket, remove bolt (G) and washer (H) from bracket (F) while holding bushing (J) with 3/4 inch drive T-slide and 36 inch extension bar.
4. Remove bushing (J), mount (K), mounting (L), and mount (M) from engine assembly.

CLEANING AND INSPECTION:

1. Clean all parts with drycleaning solvent and wipe dry with clean rag.
2. Inspect bushing, mounts, and mountings for nicks and burrs. Replace damaged parts.

ENGINE MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position bolt (A) through bracket (B) and install nut (C). Using 1-1/8 inch open end wrench to hold nut (C) and 1-1/8 inch socket with 3/4 inch drive ratchet, tighten bolt (A).
2. Install bolt (D) through washer (E), bracket (B), mount (F), mounting (G), mount (H), and into bushing (J). Use 1-1/8 inch socket and 3/4 inch drive ratchet and tighten bolt (D), while holding bushing (J) with 3/4 inch T-slide and 36 inch bar extension.
3. Using 1/2 inch socket and 1/2 inch drive ratchet, install two screws (K) through washers (L) and bracket (M) into mounting (G).
4. Install powerplant (page 5-14).

End of Task

TRANSMISSION MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-8
Cleaning and Inspection	6-10
Installation	6-10

Hammer

- TOOLS:
- 3-1/8 in. socket with 3/4 in. drive
 - T-slide handle with 3/4 in. drive
 - Diagonal cutting pliers
 - 3 1/4 in. extension with 3/4 in. drive
 - Slip joint pliers
 - 1-1/2 in. open end wrench
 - 1-1/2 in. socket with 3/4 in. drive
 - Ratchet with 3/4 in. drive
 - 3/4 in. socket with 1/2 in. drive
 - Ratchet with 1/2 in. drive
 - 1 1/4 in. open end wrench
 - Bench vise
 - Torque wrench with 3/4 in. drive (0-600 lb-ft) (0-813 N·m)
 - 1/2 in. square drive bit screwdriver
 - Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-237 N·m)

SPECIAL TOOLS: Resilient mount mechanical puller (Item 33, Chapter 3, Section 1)

SUPPLIES: Drycleaning solvent (Item 55, Appendix D)
 Lockwire (Item 61, Appendix D)
 Rags (Item 12, Appendix D)

PERSONNEL: Two

PRELIMINARY PROCEDURE Remove powerplant (page 5-2).

NOTE

The procedure described below applies to both the right and left transmission mounts.

TRANSMISSION MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 2 of 4)**REMOVAL:**

1. Using diagonal cutting pliers, cut safety wire (A) and remove it from bushing (B) and bracket (c).
2. Using 3-1/8 inch socket and T-slide wrench, remove bushing (B) from bracket (C).

3. Using resilient mount tool assembly, remove two mounts (D) from bracket (c).
4. Using 1/2 inch square drive bit screwdriver and 1/2 inch drive ratchet to hold screw (E), use 1 1/4 inch open end wrench to remove nut (F) from screw (E).
5. Remove screw (E) and roller (G) from bracket (C).
6. With second man using 1-1/2 inch open end wrench to hold bolt (H), use 1-1/2 inch socket, ratchet, and extension to remove nut (J) from bolt (H).

7. Remove washer (K) and bolt (H) from bracket (C).

Go on to Sheet 3

TA107479

TRANSMISSION MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 3 of 4)

NOTE

It may be necessary to turn universal to gain access to screw (L).

8. Using 3/4 inch socket and ratchet, remove three screws (L) and washers (M) from bracket (c).
9. Remove bracket (C) from transmission.
10. Using hammer, remove spacer (N) from bracket (c).

CLEANING AND INSPECTION:

1. Inspect bushing, mounts, and roller for damages. If any parts are nicked, burred, or out of round, replace damaged part.
2. Clean all parts with drycleaning solvent and wipe dry with rags.

INSTALLATION:

1. Position bracket (A) in vise and using resilient mount tool assembly, install two mounts (B) into bracket (A).
2. Using 3-1/8 inch socket and T-slide wrench, install bushing (C) into bracket (A).

TRANSMISSION MOUNTS (LEFT AND RIGHT) REPLACEMENT (Sheet 4 of 4)

3. Using pliers, install safety wire (D) between bushing (C) and bracket (A).
4. Remove from vise and position bracket (A) onto transmission and using 3/4 inch socket and ratchet, install three screws (E) and washers (F) through mount on transmission into bracket (A). Leave screws loose.

5. Position spacer (G) into bracket (A) and install bolt (H), through spacer (G), mount (A), and washer (J).
6. With second man using 1-1/2 inch open end wrench to hold bolt (H), use 1-1/2 inch socket and torque wrench to tighten nut (K) to 380 to 415 lb-ft (515-562 N·m).
7. Position roller (L) onto screw (M) and install screw (M) through bracket (A).
8. Using 1/2 inch square drive bit screwdriver and 1/2 inch drive ratchet to hold screw (M), use 1 1/4 inch open end wrench to install nut (N) onto screw (M).

NOTE

It may be necessary to turn universal to gain access to screw (E).

9. Using torque wrench and 3/4 inch socket, tighten screws (E) to 70-75 lb-ft (95-101 N·m).
10. Install powerplant (page 5-14).

End of Task

TA107481

DRAIN ENGINE OIL (Sheet 1 of 3)

TOOLS: 3/4 in. socket with 3/8 in. drive
10 in. extension with 1/2 in. drive
Torque wrench with 3/8 in. drive (0-200 lb-in) (0-23 N-m)
Ratchet with 1/2 in. drive
Flat-tip screwdriver
Putty knife
9/16 in. socket with 1/2 in. drive
3/4 in. socket with 1/2 in. drive

SUPPLIES: Container to catch oil (minimum 20 gal. capacity)
Gasket 8734774
Sealing washer NAS1598-6V
Rags (Item 12, Appendix D)

REFERENCE: LO 5-5420-226-12
TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove upper engine access cover (page 17-14)

WARNING

Hold up valve seat (A) when removing last screw (B) attaching valve seat (A) to hull floor (C). Valve seat (A) is heavy and can cause injury if it falls.

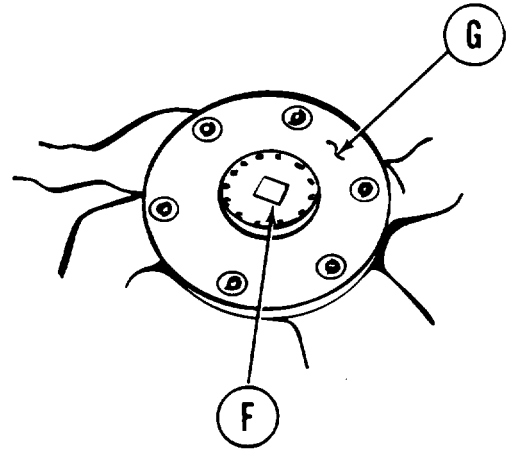

1. Using 3/4 inch socket, remove four screws (B) and lockwashers (D) holding valve seat (A) and gasket (E) to hull floor (C).
2. While holding valve seat (A), use screwdriver and pry valve seat (A) from hull floor (C).
3. Using putty knife, scrape gasket (E) from hull floor (C) and valve seat (A).

Go on to Sheet 2

TA107482

DRAIN ENGINE OIL (Sheet 2 of 3)

4. Position container under drain valve opening.
5. "Using ratchet and extension, remove oil drain plug (F) from engine oil pan (G).
6. Using 9/16 inch socket with extension, remove vent bolt (H) and sealing washer (J). Throw washer away.

7. Using 3/4 inch socket, loosen oil drain valve (K) six complete turns.
8. Allow engine oil to drain into container.
9. After draining, clean area around drain plug (F) opening and, using ratchet and extension, install drain plug (F) into engine oil pan (G).

TA107483

DRAIN ENGINE OIL (Sheet 3 of 3)

10. Using 3/4 inch socket, tighten oil drain valve (K).
11. Using torque wrench, tighten oil drain valve (K) to 150 lb-in (17 N-m).
12. Using 9/16 inch socket with extension and torque wrench, install and torque vent bolt (H) and new sealing washer (J) to no more than 150 lb-in (17 N-m).
13. Refill crank case (TM 5-5420-226-10).

14. Install upper engine access cover (page 17-1 5).
15. Line up four holes in valve seat (A), gasket (E), and hull floor (C).
16. Using 3/4 inch socket, install four screws (B) and lockwashers (D) holding valve seat (A) and gasket (E) to hull floor (C).
17. Operate rear drain valve (TM 5-5420-226-10) to make sure valve opens and closes smoothly. If valve does not open or close properly, remove, inspect, and install valve assembly again.

End of Task

TA107484

**THERMOSTATIC ENGINE OIL COOLER VALVE ASSEMBLY (LEFT AND RIGHT)
REPLACEMENT (Sheet 1 of 4)**

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-15
Inspection	6-16
Test	6-17
Installation	6-18

TOOLS: 1-3/4 in. open end wrench
Ruler
Low-pressure compressed air facility

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Cooking stove (stored in vehicle) Drip pan
12 in. length of scrap wire Spacer ring 7403580
Pencil
Paper

REFERENCE: LO 5-5420-226-12

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain engine oil (page 6-12)
Remove left side engine oil cooler when left
thermostat is to be replaced (page 6-19)

Go on to Sheet 2

TA107485

**THERMOSTATIC ENGINE OIL COOLER VALVE ASSEMBLY (LEFT AND RIGHT)
REPLACEMENT (Sheet 2 of 4)**

REMOVAL:

1. Place drip pan on flat surface under valve and valve socket.
2. Using wrench, loosen valve (A).
3. Remove valve (A) from engine oil cooler.
4. Throw away spacer ring (B).

INSPECTION:

1. Inspect valve for stripped or damaged threads.
2. Throw away and replace valve if threads are stripped or damaged.

Go on to Sheet 3

TA107486

THERMOSTATIC ENGINE OIL COOLER VALVE ASSEMBLY (LEFT AND RIGHT) REPLACEMENT (Sheet 3 of 4)

TEST:

1. Using ruler, measure overall length of valve (A) at room temperature.
2. Write down overall length of valve (A).
3. Using wire (B), wrap one end tightly around threads of valve (A).

4. Place valve (A) in water (C) just so it is covered. Let free end of wire (B) hang over edge of container.
5. Slowly increase temperature of water.
6. Using free end of wire (B), take valve out of water when water begins to boil.
7. Using ruler, immediately measure overall length of valve (A).
8. Write down overall length of valve (A).
9. Compare measurements written down when cool to the touch and at heated temperatures.

NOTE

After heating, valve length must have increased by 1/4 inch minimum. If valve length increased less than 1/4 inch, throw valve away. Obtain new valve and repeat test. If new valve passes test, install it.

Go on to Sheet 4

TA107487

**THERMOSTATIC ENGINE OIL COOLER VALVE ASSEMBLY (LEFT AND RIGHT)
REPLACEMENT (Sheet 4 of 4)**

INSTALLATION:

NOTE

If replacing valve assembly, the engine oil cooler bypass valve also has to be replaced. Go to page 6-13 for replacement.

1. Using low-pressure compressed air, dry valve.
2. Install new spacer ring (A) on valve (B).
3. Seat threads of valve (A) in engine oil cooler socket (C) by hand.
4. Using wrench, tighten valve (B).
5. Replace left engine cooler (if required) (page 6-19).

6. Replenish lubricating oil lost during valve assembly replacement (LO 5-5420-226-12)
7. Check engine oil level indicator gage rod (TM 5-5420-226-10).
8. Perform ground hop (page 5-25).
9. Disconnect ground hop equipment (page 5-30).
10. Install powerplant (page 5-14).

End of Task

TA107488

ENGINE OIL COOLER REPLACEMENT (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-19
Installation	6-22

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 9/16 in. combination box and open end wrench
 3/4 in. combination box and open end wrench
 1-1/2 in. combination box and open end wrench
 Torque wrench with 1/2 in. drive, 0-200 lb-in (0-23 Nom) cap
 3/4 in. socket with 3/8 in. drive

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)

SUPPLIES: Washer NAS1598-6V
 Drip pan
 1/2 inch masking tape
 (Item 58, Appendix D)
 Plastic barrier material
 (Item 42, Appendix D)
 Lubricating oil (Item 44, Appendix D)
 Gaskets (2 required) 8682679

 TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)

REMOVAL:

Using 1/2 inch socket, remove screw and washer (A). Throw washer away.

Using 3/4 inch wrench, loosen valve (B) six complete turns.

TA107489

ENGINE OIL COOLER REPLACEMENT (Sheet 2 of 6)

3. Put drip pan on flat surface under oil cooler connectors (C).
4. Using 1-1/2 inch wrench, remove hose (D) at oil cooler connectors (C).
5. Using 1-1/2 inch wrench, remove hose (E) at oil cooler connectors (C).
6. Using 1/2 inch socket, remove six nuts (F) securing two oil cooler connectors (C).
7. Remove two oil cooler connectors and gaskets (c).

8. Using plastic material and masking tape, wrap ends of hose (D and E) and oil cooler connectors (C) to keep them clean and from dripping.
9. Using 9/16 inch wrench, remove oil cooler vent hose (G) at top of cooler.

10. Using 1/2 inch wrench, remove four screws and lockwashers (H).

Go on to Sheet 3

TA107490

ENGINE OIL COOLER REPLACEMENT (Sheet 3 of 6)

11. Using 1/2 inch socket with extension through harness and into bracket, remove two screws and lockwashers (J).
12. Lower harness away from coolers with bracket attached.

13. Using 1/2 inch socket, remove four screws and lockwashers (K) holding oil cooler screen to cooler.
14. Lift away oil cooler screen.

CAUTION

Support oil cooler to keep it from falling while doing step 13.

15. Using 3/4 inch wrench, remove four screws and lockwashers (L) holding oil cooler frame.
16. Lift away oil cooler and mounting brackets.

Go on to Sheet 4

TA107491

ENGINE OIL COOLER REPLACEMENT (Sheet 4 of 6)

INSTALLATION:

1. Place oil cooler and oil cooler screen mounting bracket into place on oil cooler frame.
2. Start threads of four screws with lockwashers (A) by hand to hold oil cooler in place.
3. Using 3/4 inch wrench, tighten screws (A).
4. Lift screen into place onto oil cooler.
5. Start threads of four screws with lockwashers (B) by hand to hold oil cooler screen in place.
6. Using 1/2 inch socket, tighten screws and lockwashers (B).

7. Lift starter cable mounting bracket (C) into place at top of oil cooler.
8. Start threads of four screws with lockwashers (D) by hand.
9. Using 1/2 inch wrench, tighten screws and lockwashers (D).

Go on to Sheet 5

TA107492

ENGINE OIL COOLER REPLACEMENT (Sheet 5 of 6)

(HOLES UNDER HARNESS) (E)

10. Using 1/2 inch socket with extension through harness and into bracket, install two lockwashers and screws (E).

11. Using 1/2 inch wrench, install oil cooler vent hose (F) at top of cooler.
12. Remove plastic material and masking tape from ends of hose (G) and oil cooler connector (H).
13. Using 1/2 inch socket, install three screws (J) securing gasket and oil cooler connector (H) to oil cooler.
14. Using 1-1/2 inch wrench, install hose (G) at oil cooler connector (H).
15. Remove plastic material and masking tape from ends of hose (K) and oil cooler connector (L).
16. Using 1/2 inch socket, install three screws (M) securing gasket and oil cooler connector (L) to oil cooler.
17. Using 1-1/2 inch wrench, install hose (K) to oil cooler connector (L).

Go on to Sheet 6

ENGINE OIL COOLER REPLACEMENT (Sheet 6 of 6)

- 18. Using 3/4 inch socket and torque wrench tighten valve (M) to no more than 150 lb-in. (17 N-m).
- 19. Install new washer on screw (N).
- 20. Using 1/2 inch socket, install screw (N).
- 21. Check engine oil level indicator gage rod. (TM 5-5420-226-10)
- 22. Replenish lubricating oil lost during oil cooler replacement. (LO 5-5420-226-12)
- 23. Connect engine for powerplant ground hop (page 5-25).
- 24. Start and run engine. Check for oil leaks at oil cooler and line connections.
- 25. Shut down engine. Disconnect engine from powerplant ground hop (page 5-25).
- 26. Install engine shroud (page 9-31).
- 27. Install powerplant (page 5-14).

End of Task

**THERMOSTATIC TRANSMISSION OIL COOLER VALVE ASSEMBLY (LEFT SIDE)
TEST AND REPLACEMENT (Sheet 1 of 7)**

TEST AND REPLACEMENT (Sheet 2 of 7)**

Go on to Sheet 3

TA107496

**THERMOSTATIC TRANSMISSION OIL COOLER VALVE ASSEMBLY (LEFT SIDE)
TEST AND REPLACEMENT (Sheet 3 of 7)**

REMOVAL:

1. Place rags under tube end fittings (A and B) on transmission.

NOTE

It may be necessary to hold adapters (C and D) with 1-5/8 inch wrench while removing tube end fittings (A and B).

2. Using 1-1/2 inch wrench, remove tube end fitting (A) from adapter (C).

3. Place rags under tube end fittings (E and F) at oil cooler.

NOTE

It may be necessary to hold adapters (G and H) with 1-5/8 inch wrench while removing tube end fittings (E and F).

4. Using 1-1/2 inch wrench, remove outside tube end fitting (E) from adapter (G).
5. Displace tube (J).
6. Using 1-5/8 inch wrench, remove adapter (G).
7. Using 1-1/2 inch wrench, remove tube end fitting (F) from adapter (H).

Go on to Sheet 4

TA107497

**THERMOSTATIC TRANSMISSION OIL COOLER VALVE ASSEMBLY (LEFT SIDE)
TEST AND REPLACEMENT (Sheet 4 of 7)**

- Using 1-1/2 inch wrench, remove tube end fitting (B) from adapter (D).
- Displace tube (K).

- Using 1-5/8 inch wrench, remove adapter (H).
- Using automotive wrench, remove valve assembly and spacer ring (L). Throw spacer ring away.

TEST:

- Using heat source (A), heat container (B) of clean water to boiling.
- Using ruler, measure overall length of valve at room temperature. Record length.
- Using wire, wrap one end tightly around threads (C) on valve.

Go on to Sheet 5

TA107498

**THERMOSTATIC TRANSMISSION OIL COOLER VALVE ASSEMBLY (LEFT SIDE)
TEST AND REPLACEMENT (Sheet 5 of 7)**

4. Place valve in boiling water. Let free end of wire hang over edge of container.
5. After about 30 seconds, use free end of wire to take valve out of water.
6. Using ruler, measure overall length of valve. Record length.
7. Compare length of valve before and after heating. If valve length increased less than 1/4 inch, throw valve away. Get new valve and repeat test. If new valve passes test, install it.
8. Using low-pressure compressed air, dry good valve.

INSTALLATION:

1. Install new spacer ring (A) on valve (B).
- 2* Using hands, install valve (B) to transmission oil cooler.
3. Using automotive wrench, tighten valve (B).

4. Using 1-5/8 inch wrench, install inside adapter (C).
5. Using hands, install tube end fitting (D) on adapter (C).
6. Go to other end of tube (E).

Go on to Sheet 6

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)

NOTE

Right side shown, left side similar.

Go on to Sheet 2

TA107508

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 2 of 10)

NOTE

Removal procedures are the same for the right and left coolers except that the upper rear mount bolt on the right cooler additionally secures support bracket (A).

REMOVAL:

1. Using screwdriver, loosen clamp (B) to remove air inlet hose (C). Remove air inlet hose (C).
2. Place cover over air inlet port to keep out dirt.
3. Place drip pan or rags under transmission connectors (D).

4. Using 1-5/8 inch wrench, remove hose (E) at transmission connectors (D).
5. Using 1-5/8 inch wrench, remove hose (F) at transmission connectors (D).

Go on to Sheet 3

TA107509

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 3 of 10)

6. Using plastic barrier material and masking tape, wrap ends of hoses (E and F) and transmission connectors (D) to keep out dirt.
7. Place drip pan or rags under cooler connectors (G).

8. Using 1-5/8 inch wrench, remove hose (H) at cooler connectors (G).
9. Using 1-5/8 inch wrench, remove hose (J) at cooler connector (G).

10. Using plastic barrier material and masking tape, wrap ends of hoses (H and J) and cooler connectors (G) to keep out dirt.
11. Move hoses out of the way toward rear of powerplant.

Go on to Sheet 4

TA107510

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 4 of 10)

12. Using 1/2 inch wrench, remove four screws and lockwashers (K).

13. Using 1/2 inch socket and extension through harness and into bracket, remove two screws and lockwashers (L).

14. Lower harness away from coolers with brackets attached.

Go on to Sheet 5

TA107511

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 5 of 10)

15. Using 1/2 inch socket, remove two screws and lockwashers (M) holding oil cooler screen to oil cooler.
16. Lift away oil cooler screen.

CAUTION

Two persons are required to support oil cooler to keep it from falling while doing steps 17 thru 19.

17. Using 3/4 inch wrench, remove two screws and lockwashers (N) holding oil cooler screen mounting bracket (P) to oil cooler and oil cooler to oil cooler frame.
18. Remove oil cooler screen mounting bracket (P).
19. Using 3/4 inch wrench, remove two screws and lockwashers (Q) holding oil cooler to oil cooler frame.
20. Lift away oil cooler.

Go on to Sheet 6

TA107512

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 6 of 10)

INSTALLATION:

NOTE

Installation procedures are the same for the right and left coolers except that the upper rear mount bolt on the right cooler additionally secures support bracket (A).

CAUTION

Two persons are required to support oil cooler to keep it from falling while doing steps 1 thru 3.

1. Position oil cooler and oil cooler screen mounting bracket (B) into place on oil cooler frame.
2. Start threads of four screws with lockwashers (C) by hand to hold oil cooler and oil cooler screen mounting bracket in place.

3. Using 3/4 inch wrench, tighten screws and lockwashers (C).
4. Position oil cooler screen into place on an oil cooler.
5. Start threads of two screws and lockwashers (D) by hand to hold screen in place.

Go on to Sheet 7

TA107513

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 7 of 10)

6. Using 1/2 inch socket, tighten screws and lockwashers (D).

7. Lift starter cable mounting bracket (E) into place at top of oil cooler.

8. Start threads of four screws with lockwashers (F) by hand.

- 9* Using 1/2 inch wrench, tighten four screws and lockwashers (F).

Go on to Sheet 8

TA107514

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 8 of 10)

10. Using 1/2 inch socket with extension through harness, install screws and lockwashers (G).

11. Remove plastic barrier material and masking tape from end of hose (H) and cooler connector (J).

12. Using 1-5/8 inch wrench, install hose (H) to cooler connector (J).
13. Remove plastic barrier material and masking tape from ends of hose (K) and cooler connector (L).
14. Using 1-5/8 inch wrench, install hose (K) to cooler connector (L).

Go on to Sheet 9

TA107515

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 9 of 10)

15. Remove drip pan or rags from under cooler connectors.
16. Remove plastic barrier material and masking tape from ends of hose (M) and transmission connector (N).
17. Using 1-5/8 inch wrench, install hose (M) to transmission connector (N).

18. Remove plastic barrier material and masking tape from ends of hose (P) and transmission connector (Q).
19. Using 1-5/8 inch wrench, install hose (P) to transmission connector (Q).

20. Using rags, wipe up oil which may have dripped or leaked during oil cooler replacement.
21. Remove cover from turbosupercharger air inlet port.
22. Position clamp and air inlet hose onto elbow (R).
23. Using screwdriver, tighten screw (s).

Go on to Sheet 10

TA107516

TRANSMISSION OIL COOLER REPLACEMENT (Sheet 10 of 10)

24. Replenish oil lost during oil cooler replacement. (LO 5-5420-226-12)
25. Connect engine for powerplant ground hop (page 5-25).
26. Start and run engine. Check for oil leaks at oil cooler and line connectors.
27. Shut down engine. Disconnect engine from powerplant ground hop (page 5-25).
28. Install engine shroud (page 9-31).
29. Install powerplant (page 5-14).

End of Task

OIL COOLERS- CLEANING (Sheet 1 of 3)

TOOLS: Low-pressure compressed air facility

SUPPLIES: Detergent (Item 33, Appendix D)
Water

SPECIAL TOOLS: Oil Cooler Cleaner
(Item 32, Chapter 3, Section 1)

REFERENCES: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove top deck frames (page 16-21)
Remove engine shroud (page 9-30)
Remove upper covers (page 17-14)
Remove screens (page 6-53)
Open hull drains (TM 5-5420-226-10)

CLEANING:

NOTE

The oil cooler cleaning tool will clean the two engine oil coolers as well as the two transmission oil coolers with the powerplant in or out of the vehicle.

If oil coolers are to be cleaned with powerplant removed, oil cooler screens must be removed as part of preliminary procedures (pages 6-51 and 6-53).

WARNING

Always wear safety glasses or goggles when cleaning oil coolers to prevent dirt particles and cleaning agent from splashing in eyes.

OIL COOLERS- CLEANING (Sheet 2 of 3)

NOTE

If powerplant is installed in vehicle, all preliminary procedures must be accomplished prior to cleaning. For cleaning coolers in-or-out of vehicle, make sure oil filler and indicator covers are tightly closed. Cover all exposed engine openings.

1. Mix one part detergent to approximately five parts of water as cleaning solution. Insert siphon hose (A) into cleaning solution container (B).
2. Connect cleaner air inlet (C) to a 50 to 90 psi air supply.
3. Position cleaner head (D) behind oil engine cooler fins (E) with spray holes toward fins.

Go on to Sheet 3

TA107518

OIL COOLERS- CLEANING (Sheet 3 of 3)

4. Squeeze lever (F) to obtain an air-liquid mixture and saturate fins (E) with cleaning solution. Allow time for solution to soak between oil cooler fins.
5. Clean oil coolers by alternately moving cleaner head (D) from front to back until cleaning solution flows freely through entire oil cooler area.
6. When oil cooler fins (E) are clean, flush with water.
7. Dry all parts with air by removing end of siphon hose (A) from cleaning solution container (B) and squeezing lever (F).

Remove engine opening protective coverings.

Close hull drains (TM 5-5420-226-10).

10. Replace screens if removed (pages 6-52 and 6-54).
11. Replace upper covers (page 17-15).
12. Replace engine shroud (page 9-31).
13. Replace top deck frames (page 16-21).

End of Task

TA107519

ENGINE OIL COOLER SCREEN REPLACEMENT (Sheet 1 of 2)

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 5 in. extension with 1/2 in. drive

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)

REMOVAL:

1. Using socket with extension through harness and into bracket (A), remove two screws and lockwashers (B).
2. Pull harness and bracket (A) to right side of oil cooler screen for access to screws (c).
3. Using socket, remove four screws and lockwashers (C).
4. Lift away cooler screen.

**INSPECTION:**

1. Check screen and brackets for cracks, tears, bending, and dents.
2. Replace bad parts.

Go on to Sheet 2

TA107520

ENGINE OIL COOLER SCREEN REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Place cooler screen on oil cooler.
2. Start threads of four screws with lockwashers (A) by hand to hold screen in place.
3. Using socket, tighten screws and lockwashers (A).
4. Using socket with extension through harness and into bracket (B), install and tighten two screws and lockwashers (C).
5. Install powerplant (page 5-14).

LEFT COOLER SCREEN SIMILAR
(RIGHT COOLER SCREEN SHOWN)

End of Task

TA107521

TRANSMISSION OIL COOLER SCREEN REPLACEMENT (Sheet 1 of 2)

TOOLS 1/2 in. socket with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench
 3/4 in. combination box and open end wrench

PRELIMINARY PROCEDURES: Remove both air cleaner outlet hose assemblies (Page 7-81)
 Remove powerplant (page 5-2)

NOTE

Left aide shown, right aide similar.

REMOVAL:**NOTE**

If removing 2D engine screen go to step 6.

- Using socket, extension, and ratchet through harness and into bracket, remove two assembled washer screws (A).

NOTE

You will have bracket (B) and tube (C) only if yuur vehicle is equipped with a 2DA engine.

- Using socket and 1/2 inch wrench, remove screw (D) and locknut (E) securing clamp (F) and tube (C) to bracket (B).
- Using 3/4 inch wrench, remove bolt (G).
- Using socket, remove assembled washer screw (H), screw (J), and washer (K) securing bracket (B) and oil cooler screen (L).
- Remove bracket (B) and oil cooler screen (L).
- For 2A engine; using socket, remove four screws (J) and four washers (K) securing oil cooler screen (L). Remove oil cooler screen (L).

Go on to Sheet 2

TRANSMISSION OIL COOLER SCREEN REPLACEMENT (sheet 2 of 2)

INSTALLATION

NOTE

For 2D engine screen, do steps 1, 2, 10, and 11.

1. Position oil cooler screen (A) into place on oil cooler.
2. For 2D engine, install screw (B) and washer (C). For 2D engine, use socket to install and tighten four screws (B) and washers (C).

3. Position harness and bracket (D) into place on oil cooler.
4. Using socket, extension, and ratchet through harness and into bracket, install two assembled washer screws (E).

NOTE

You will have bracket (F) and tube (G) only if your vehicle is equipped with a 2DA engine.

5. Position bracket (F) to oil cooler.
6. Install assembled washer screw (H).
7. Using socket, tighten screws (B) and (H).
8. Using 3/4 inch wrench, install bolt (J).
9. Using socket, extension, ratchet, and 1/2 inch wrench, install screw (K) and locknut (L) to secure clamp (M) and tube (G) to bracket (F).
10. Install powerplant (page 5-14).
11. Install both air cleaner outlet hose assemblies (page 7-83).

End of Task

ENGINE OIL COOLER BYPASS VALVE ASSEMBLY REPLACEMENT (Sheet 1 of 2)

TOOLS: 1-1/8 in. open end wrench

SUPPLIES: Gasket MS35769-47

REFERENCES: LO 5-5420-226-12

PRELIMINARY PROCEDURE Drain engine oil (page 6-1 2).

REMOVAL:

1. Using wrench, remove plug (A).
2. Pull gasket (B) from plug (A). Throw gasket (B) away”
3. Lift spring (C) and plunger (D) from holes.

Go on to Sheet 2

TA107524

ENGINE OIL COOLER BYPASS VALVE ASSEMBLY REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Put plunger (A) into hole (B).
2. Put spring (C) onto plunger (A). Make plunger shank align with inside of spring.

3. Put new gasket (D) on plug (E).
4. Start threads of plug (E) into hole (B) by hand.
5. Using wrench, tighten plug (E).

6. Install engine upper access cover (page 17-15).
7. Replenish engine with new oil (LO 5-5420-226-12).

End of Task

TA107525

ENGINE OIL COOLER FLUID PUMP CONNECTOR REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-57
Cleaning and Inspection	6-59
Installation	6-59

TOOLS: 9/16 in. combination box and open end wrench
 1/2 in. combination box and open end wrench
 3/8 in. combination box and open end wrench
 1-1/2 in. combination box and open end wrench
 3/4 in. combination box and open end wrench
 Flat-tip screwdriver
 Torque wrench with 1/2 in. drive, 0-200 lb-in cap.
 3/4 in. socket with 1/2 in. drive

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)

SUPPLIES: Dry cleaning solvent
 Rags (Item 12, Appendix D)
 Gasket 8682679
 Washer NAS1598-6V
 Nuts MS21044N5 (3 required)
 Lubricating oil (Item 44, Appendix D)

 TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

ENGINE OIL COOLER FLUID PUMP CONNECTOR REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using 9/16 inch wrench, remove vent bolt (A) and sealing washer (B).
2. Throw away washer (B).
3. Using 3/4 inch wrench loosen oil drain valve (C) six complete turns.

4. Using screwdriver and 3/8 inch wrench, remove clamp (D) on hose (E) if clamp is attached to hose. If clamp (D) is not attached to hose (E), go to step 5.
5. Using 1-1/2 inch wrench remove fitting (F) from connector (G).
6. Using 1-1/2 inch wrench on hose (E) and fitting (H) remove hose (E).
7. Using 1/2 inch wrench, remove three nuts (J) from connector (G).
8. Discard three nuts (J)
9. Remove connector (G).

Go on to Sheet 3

TA107527

ENGINE OIL COOLER FLUID PUMP CONNECTOR REPLACEMENT (Sheet 3 of 4)

10. Remove and discard gasket (K) under connector (G).

CLEANING AND INSPECTION:

1. Using solvent clean hose (E) and connector (G).
2. Replace connector (G) if cracked or broken.
3. Inspect threads on hose (E) and connector (G). Replace as required.
4. Replace hose (E) if woven shielding is worn or broken.

INSTALLATION:

1. Position new gasket (A) on oil cooler (B).
2. Position connector (C) over gasket (A).
3. Using 1/2 inch wrench, install three new nuts (D).
4. Using 1-1/2 inch wrench install hose (E) to connector (C).

Go on to Sheet 4

TA107528

ENGINE OIL COOLER FLUID PUMP CONNECTOR REPLACEMENT (Sheet 4 of 4)

5. Using 1-1/2 inch wrench, install hose (E) to fitting (F).
6. Using screwdriver and 3/8 inch wrench, install clamp (G) on hose (E) if removed during disassembly.
7. Position new sealing washer (H) over vent hole.
8. Using 9/16 inch wrench install vent bolt (J) through washer (H).

9. Using socket and torque wrench, tighten drain valve (K) to a minimum of 150 lb-in. (17 N•m). Do not overtighten.

10. Perform ground hop (page 5-25). Run engine at idle until oil temperature is in normal operating range (TM 5-5420-226-10).
11. Check oil level, add oil as required (LO 5-5420-226-12).

12. Disconnect ground hop kit (page 5-25).
13. Install powerplant (page 5-14).

End of Task

TA107529

OIL COOLER VENT HOSES AND FITTINGS REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
9/16 in. combination box and open end wrench
11/16 in. combination box and open end wrench
7/16 in. combination box and open end wrench

SUPPLIES: Packing (M83248-1-012) (two required)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2).

Go on to Sheet 2

TA107530

OIL COOLER VENT HOSES AND FITTINGS REPLACEMENT (Sheet 2 of 3)

1. Using socket, remove four screws (A) holding loop clamps. Remove clamps.
2. Using 9/16 inch wrench, remove hose assembly (B) from adapter (C).
3. Using 9/16 inch wrench, remove hose assembly (B) from tee tube (D).
4. Holding tee tube (D) with 7/16 inch wrench and using 9/16 inch wrench, remove two hose assemblies (E) from tee tube (D).
5. Using 9/16 inch wrench, remove two hose assemblies (E) from two adapters (F).
6. Using 11/16 inch wrench, remove two adapters (F) from oil coolers.
7. Using 9/16 inch wrench, remove adapter (C).
8. Remove packing from two adapters (F). Discard packings.

Go on to Sheet 3

TA107531

OIL COOLER VENT HOSES AND FITTINGS REPLACEMENT (Sheet 3 of 3)

**INSPECTION:**

1. Check two hoses (B) for frayed covering and damaged threads. Replace damaged hoses.
2. Check fittings for cracks and thread damage. Replace damaged fittings.

INSTALLATION:

1. Install new packing into two adapters (A).
2. Using 11/16 inch wrench, install two adapters (A) into oil coolers.
3. Using 9/16 inch wrench, install adapter (E).
4. Using 9/16 inch wrench, install two hose assemblies (B) to two adapters (A).
5. Holding tee tube (C) with 7/16 inch open end wrench and using 9/16 inch wrench, install two hose assemblies (B) to tee tube (C).
6. Using 9/16 inch wrench, install hose assembly (D) to tee tube (C).
7. Using 9/16 inch wrench, install hose assembly (D) to adapter (E).
8. Using hands, install four clamps on hose assemblies (B).
9. Using socket, install four screws (F) holding loop clamps.
10. Install powerplant (page 5-14).

End of Task

(5120-00-203-4802)

Torque wrench with 1/2 in. drive (0-175 lb-ft)
(0-237 NŽ m)
Adapter 1/2 in. to 3/4 in.

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)

SUPPLIES: Drip pan
Masking tape 1/2 in. (Item 58, Appendix D)
Plastic barrier material (Item 42, Appendix D)
Rags (Item 65, Appendix D)
Lubricating oil (Item 44, Appendix D)
Gaskets (4 required)

REFERENCe: LO 5-5420-226-12

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2).
Remove engine shroud (page 9-30)
Remove rear engine shroud support (page 9-39)

Go on to Sheet 2

**RIGHT OUTER AND INNER ENGINE TO TRANSMISSION OIL LINE TUBE ASSEMBLIES
REPLACEMENT (Sheet 2 of 4)**

NOTE

Place rags or drip pan under transmission and oil cooler adapters. Before removing tubes and fittings, seal powerplant openings with plastic barrier material and masking tape to prevent unnecessary exposure to moisture and contamination. Remove plastic barrier material and masking tape when installing tubes and fittings.

REMOVAL:

1. Using 1-5/8 inch wrench to hold adapter (A), use 1-1/2 inch wrench and loosen connector (B).
2. Using 1-5/8 inch wrench to hold adapter (C), use 1-1/2 inch wrench and loosen connector (D).
3. Using hands, disconnect and remove tube (E) from powerplant.

4. Using 1-5/8 inch wrench, remove adapters (A and C) and gaskets (F and G). Throw gaskets away.
5. Using 1-5/8 inch wrench to hold adapter (H), use 1-1/2 inch wrench and loosen connector (J).
6. Using 1-5/8 inch wrench to hold adapter (K), use 1-1/2 inch wrench and loosen connector (L).
7. Using hands disconnect and remove tube (M) from powerplant.
8. Using 1-5/8 inch wrench, remove adapters (H and K) and gaskets (N and P). Throw gaskets away.

Go on to Sheet 3

TA248057

RIGHT OUTER AND INNER ENGINE TO TRANSMISSION OIL LINE TUBE ASSEMBLIES REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position new gaskets (A and B) on adapters (C and D).
2. Using hands, install adapters (C and D) in oil cooler (E).
3. Position new gaskets (F and G) on adapters (H and J).
4. Using hands, install adapters (H and J) in transmission mount (K).
5. Using torque wrench, adapter, and socket, tighten adapters (C, D, H, and J) to 50 ft-lb (68 N•m).

6. Position tube (L) through engine shroud, Using hands, install tube nut (M) to adapter (C) and tube nut (N) to adapter (H).
7. Using 1-5/8 in. wrench to hold adapter (C), tighten tube nut (M) using 1-1/2 in. wrench. Repeat to tighten tube nut (N) to adapter (H).
8. Position tube (P) through engine shroud. Using hands, install tube nut (Q) to adapter (D) and tube nut (R) to adapter (J).
9. Using 1-5/8 in. wrench to hold adapter (D), tighten tube nut (Q) to adapter (D). Repeat to tighten tube nut (R) to adapter (J).

Go on to Sheet 4

**RIGHT OUTER AND INNER ENGINE TO TRANSMISSION OIL LINE TUBE ASSEMBLIES
REPLACEMENT (Sheet 4 of 4)**

11. Remove rags placed under transmission connectors (N and D) and oil cooler connectors (H and Q).
12. Replenish oil lost during oil line tube assembly's removal. (LO 5-5420-226-12).
13. Connect powerplant for powerplant ground hop (page 5-25).
14. Start and run engine. Check for oil leaks at oil cooler and transmission oil line tube assembly connections.
15. Shut down engine. Disconnect powerplant from ground hop (page 5-25).
16. Install engine shroud (page 9-31).
17. Install rear engine shroud support (page 9-40).
18. Install powerplant (page 5-14).

End of Task

 Remove engine upper access cover (page 17-14)

Go on to Sheet 2

TA107541

OIL DAMPER HOUSING STRAIGHT TUBE HOSE ADAPTER REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using 9/16 inch socket, remove screw (A) and washer. Discard washer.
2. Using 3/4 inch wrench, loosen valve (B) six complete turns.

3. Place rags under coupling (C) to catch dripping oil.
4. Holding adapter (D) with 1-9/16 inch wrench and using 1-1/2 inch wrench, remove hose coupling (C).

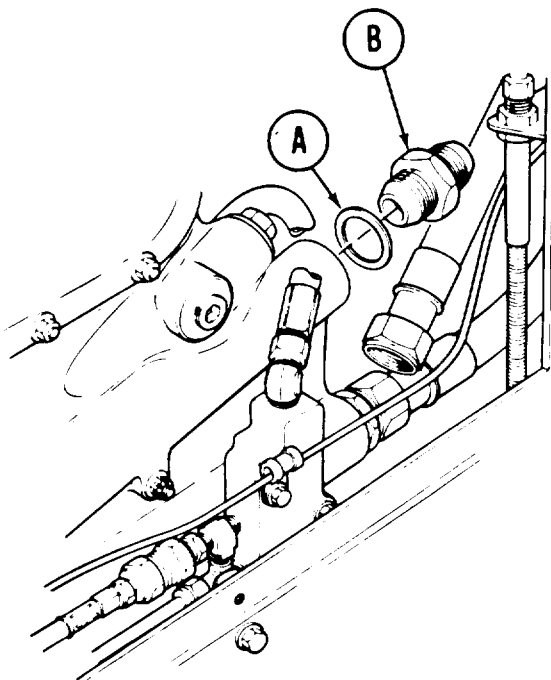

Go on to Sheet 3

TA107542

OIL DAMPER HOUSING STRAIGHT TUBE HOSE ADAPTER REPLACEMENT (Sheet 3 of 4)

5. Using 1-9/16 inch wrench, remove adapter (D) and spacer ring (E). Discard spacer ring.
6. Check adapter for cracks and thread damage. Replace dam aged adapter.

INSTALLATION:

1. Install new spacer ring (A) on adapter (B).
2. Using 1-9/16 inch wrench, install adapter (B) and new spacer ring (A).

3. Using 1-1/2 inch wrench, install hose coupling (C).
4. Remove rags placed under coupling (C) to catch dripping oil. Discard rags.

Go on to Sheet 4

TAI07543

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. combination box and open end wrench
1/2 in. socket with 1/2 in. drive
10 in. extension with 1/2 in. drive
Ratchet with 1/2 in. drive
Flat-tip screwdriver

SUPPLIES: Gasket
Lockwashers (8 required)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top grille doors (TM 5-5420-226-10)

NOTE

Removal of left or right turbo-charger elbow is the same. Left side shown.

Go on to Sheet 2

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 2 of 3)

REMOVAL :

1. Pull pin (A) and release quick release clamp (B)
2. Remove quick release clamp (B) from hose and elbow.
3. Using socket, loosen nut (C) securing clamp (D).
4. Remove hose assembly (E).
5. Remove clamp (D).
6. Cover air cleaner outlet elbow (F) and turbosupercharger inlet elbow (G) with rags to prevent entrance of foreign matter.

7. Using socket with extension and wrench, remove eight nuts, lockwashers, and flat washers (H) securing elbow (G) to turbocharger,
8. Remove elbow (G) and gasket (J). Throw gasket (J) away.
9. Make sure turbocharger inlet mating surface is not nicked, burred, or damaged. If turbocharger inlet mating surface is damaged, notify support maintenance. Make sure eight nuts and studs are not stripped or damaged. Repair as necessary.

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position new gasket (A) onto studs of turbocharger.
2. Position elbow (B) onto studs of turbocharger.
3. Install eight flat washers, lock-washers, and nuts (C) onto studs to secure elbow.
4. Using socket with extension and wrench, tighten nuts (C).

5. Put clamp (D) on turbosupercharger elbow flange.
6. Position hose assembly (E) between air cleaner outlet elbow and turbosupercharger inlet elbow.
7. Aline hose flange to turbosupercharger elbow flange. Position clamp (D) on hose assembly (E) and hand tighten clamp nut.
8. Aline hose flange to air cleaner outlet elbow (F) and install clamp (G).
9. Engage "T" bolts to hasp on clamp (G) and close clamp handle.
10. Install pin (H) to secure clamp handle.
11. Using socket, tighten nuts on clamps (D), (G), and (H).
12. Close top deck door assemblies (TM 5-5420-226-10).

End of Task

AIR CLEANER BLOWER FAN POWER LEAD REPLACEMENT (Sheet 1 of 3)

TOOLS: Slip joint pliers

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open top grille doors (TM 5-5420-226-10)
Remove blower fan hose (page 7-103)

NOTE

Removal of left or right blower fan power lead is the same. Left side shown.

REMOVAL:

1. Disconnect electrical connector (A).
2. Push shell (B) back away from contact (C).
3. Using slip joint pliers, remove washer (D) from contact (C).
4. Remove shell (B).

Go on to Sheet 2

U.S. PRINTING OFFICE: 1993-746-01780035

ENGINE OIL FILTER ELEMENT REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Using handles (A) install replacement filter elements (B).

2. Install replacement gasket (C).

Go on to Sheet 5

TA107548

ENGINE OIL FILTER ELEMENT REPLACEMENT (Sheet 5 of 5)

3. Install filter cover (D), making sure hole (E) is at the top.
4. Using 9/16 inch socket, remove screws from hole (F).
5. Using 9/16 inch socket, install ten self-locking nuts (G) and washers to secure cover. Do not overtighten as stripping may result.

6. Install screw and new sealing washer in cover at hole (E) and using socket, torque to not more than 150 lb-in (17 N*m).
7. Using wrench, turn screw (H) to right until tight.
8. Connect fire extinguisher line (page 5-21, step 56).
9. Check for leaks.
10. Install upper engine access cover (page 17-15).
11. Replace engine oil (LO 5-5420-226-12).

End of Task

TA107549

ENGINE OIL FILLER CAP REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive

SUPPLIES: Gasket 10935621
 Preformed Packings (87 17 158) (2 required)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)

REMOVAL:

1. Using socket, remove four screws and washers (A) securing plate with electrical connectors (B).
2. Position plate with electrical connector (B) aside.

Go on to Sheet 2

TA107550

ENGINE OIL FILLER CAP REPLACEMENT (Sheet 2 of 3)

3. Using socket, remove eight screws and washers (C).

4. Open filler cap (D), remove gage (E) from inside of cap.

5. Remove front engine access plate (F) and cap assembly (G) by pulling up on cap (D).

6. Using socket, remove two screws (H) and washers (J).

7. Remove cap assembly (G) and gasket (K) from access plate (F). Throw gasket (K) away.

8. Remove two preformed packings (L). Throw preformed packings (L) away.

Go on to Sheet 3

TA107551

ENGINE OIL FILLER CAP REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Place new gasket (A) on cap assembly (B).
2. Place two preformed packings (C) on cap assembly (B).
3. Place cap assembly (B) in position on engine access plate (D).
4. Using socket, install two screws (E) and washers (F).
5. Place engine access plate (D) in position on powerplant and push down until seated
6. Using socket, install eight screws and washers (G).
7. Place plate with electrical connectors (H) in position.
8. Using socket, install four screws and washers (J).
9. Open filler cap (B), insert gage (K) and close filler cap (B).
10. Install engine shroud (page 9-31).
11. Install powerplant (page 5-14).

End of Task

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2).

REMOVAL:

1. Using 1/2 inch wrench, 1/2 inch socket, and 5 inch extension, remove two screws (A), locknuts (B), and connecting bracket (C).
2. Remove bracket (C).

Go on to Sheet 2

TA107553

UPPER OIL FILLER TUBE REPLACEMENT (Sheet 2 of 4)

3. Using 1/2 inch socket, remove two screws (D) and lockwashers (E).
4. Using 5/16 inch wrench on nut of clamp (F) loosen clamp.
5. Slip clamp (F) off hose (G).
6. Pull tube assembly (H) loose from hose (G) and remove tube assembly.
7. Using screwdriver, release spring (J) from cap assembly (K). Remove spring.

NOTE

If screws (L) cannot be loosened using a screwdriver, clamp screw with vise grips and loosen screw with vise grips and screwdriver.

8. Using screwdriver, remove two screws (L) and remove cap assembly (K).
9. Remove packing (M) from under lip of cap assembly (K).
10. Using putty knife under plate (N) remove two drive screws (P), flat washers (Q), and plate (N).

Go on to Sheet 3

TA107554

UPPER OIL FILLER TUBE REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position plate (A) on cap assembly (B).
2. Place two flat washers (C) on two drive screws (D).
3. Using hammer, carefully tap two drive screws through holes in plate (A) into cap assembly (B).

4. Press new packing (E) under lip of cap assembly (B).
5. Position cap assembly (B) on tube assembly (F).
6. Using screwdriver, install two screws (G).
7. Place tube assembly (F) in a vise, place rounded end of spring (H) in notch of cap assembly (B), and using a screwdriver, work end of spring in notch of tube assembly (F).

Go on to Sheet 4

TA107555

UPPER OIL FILLER TUBE REPLACEMENT (Sheet 4 of 4)

8. Place clamp (J) on hose (K) with nut facing you.
9. Position tube assembly (F) with its assembled parts on powerplant.
10. Push tube assembly (F) into hose (K).
11. Position clamp (J) over end of hose (K).

12. Place two lockwashers (L) on two screws (M).
13. **Start** two screws (M) through clamps of tube assembly (F).
14. Using 1/2 inch socket, tighten two screws (M).
15. With clamp (J) positioned over end of hose, use 5/16 inch wrench and tighten nut of clamp (J).
16. Position bracket (N), clamp (P), and two screws (Q).
17. Start nuts (R) on screws (Q).
18. Using 1/2 inch socket and 1/2 inch wrench, tighten nuts (R).
19. Install powerplant (page 5-14).

End of Task

TA107556

LOWER OIL FILLER TUBE AND HOSE REPLACEMENT (Sheet 1 of 2)

TOOLS: 5/16 in. socket with 1/2 in. drive
5 in. extension with 1/2 in. drive
1/2 in. open end wrench
Putty knife
Ratchet with 1/2 in. drive

SUPPLIES: Gasket 8682523
Drycleaning solvent (Item 55, Appendix D)
Rags (Item 12, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

NOTE

Clean all parts and general area prior to removal.

1. Using 5/16 inch socket, loosen two clamps (A) from hose (B).
2. Using 1/2 inch wrench, remove three screws (C) and lockwashers (D) from tube assembly (E).
3. Pull tube assembly (E) and hose (B) loose and slip off two clamps (A).
4. Using putty knife, remove gasket (F) and throw away.

Go on to Sheet 2

TA107557

LOWER OIL FILLER TUBE AND HOSE REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Push hose (A) over tube assembly (B).
2. Position clamp (C) over tube assembly (B) end of hose (A).
3. Using 5/16 inch socket, tighten nut of clamp (c).
4. Place clamp (D) loosely over hose (A) with clamp nut facing you.
5. Place assembled parts (A through D) in position on powerplant.
6. Push end of hose (A) over upper tube end (E).
7. Position new gasket (F) and tube assembly (B) on powerplant port.
8. Place lockwashers (G) on three screws (H).
9. Insert three screws (H) in flange of tube assembly (B) and tighten finger tight.
10. Using 1/2 inch wrench, tighten screws (H).
11. Position clamp (D) on hose (A) over end of upper tube end (E).
12. Using 5/16 inch socket, tighten nut of clamp (D).
13. Install powerplant (page 5-14).

End of Task

TURBOSUPERCHARGER OIL DRAIN TUBE (RIGHT BANK) REPLACEMENT
 (sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-90
Inspection	6-91
Installation	6-92

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 Flat-tip screwdriver

SPECIAL TOOLS: Ground hop kit

SUPPLIES: Hose
 Lubricating oil (MIL-L-2104)
 Gasket

REFERENCES: LO 5-5420-226-12

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Drain engine oil (page 6-12)
 Remove generator (page 10-6)

REMOVAL:

NOTE

If clamp (A) cannot be loosened with screwdriver, use 5/1 6-inch combination box and open end wrench.

1. Using screwdriver, loosen six clamps (A) on three hoses (B) on each end of upper drain tube.

Go on to Sheet 2

TA107559

TURBOSUPERCHARGER OIL DRAIN TUBE (RIGHT BANK) REPLACEMENT

(Sheet 2 of 4)

2. Using 1/2 inch socket, remove two bolts and washers(C) securing tube (D) to engine.
3. Remove oil drain tube assembly (D) from engine.

4. Remove gasket (E) and throw away.
5. Separate three hoses (B) and clamps (A) from tubes (D) and (F).

INSPECTION:

1. Inspect hose clamps for general serviceability.
2. Replace defective parts as required.

Go on to Sheet 3

TA107560

TURBOSUPERCHARGER OIL DRAIN TUBE (RIGHT BANK) REPLACEMENT
(Sheet 3 of 4)

INSTALLATION:

1. Install two clamps (A) on hose (B).
2. Install hose (B) to tube (C) and tube (D).
3. Install two clamps (E) on hose (F).
4. Install hose (F) to tube (D) and tube (G).
5. Install two clamps (H) on hose (J).
6. Install hose (J) to tube (G) and tube (K).
7. Install new gasket (L), two bolts (M) and washers (N) to secure tube (D) to engine.
8. Using 1/2 inch socket, tighten two bolts (M).
9. Using screwdriver, tighten clamps (A), (E) and (H).

Go on to Sheet 4

TA107561

**TURBOSUPERCHARGER OIL DRAIN TUBE (RIGHT BANK) REPLACEMENT
(Sheet 4 of 4)**

10. Replenish engine oil (L0 5-5420-226-12).
11. Install generator (page 10-10).
12. Connect powerplant test (groundhog) equipment (page 5-25).
13. Start engine and check for leaks.
14. Disconnect powerplant test (ground hop) equipment (page 5-25).
15. Install powerplant (page 5-14).

End of Task

TURBOSUPERCHARGER OIL DRAINTUBE (LEFT BANK) REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. socket with 1/2 in. drive Flat-tip screwdriver
 Ratchet with 1/2 in. drive
 5/16 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)

SUPPLIES: Gasket 8761087

REFERENCES: LO 5-5420-226-12

PRELIMINARY PROCEDURES:

Remove powerplant (page 5-2)
Drain engine oil (page 6-12)

REMOVAL:

1. Using 1/2 inch socket, remove two bolts (A) and two washers (B).
2. Remove gasket (C).
3. Throw gasket (C) away.

NOTE

If clamps (D) cannot be loosened using screwdriver, use 5/16 inch wrench.

4. Using screwdriver, loosen six clamps (D) on hose (E).
5. Remove tube assembly oil drain from engine.
6. Remove six clamps (D) and three hoses (E) from tubes (F).

INSPECTION:

1. Inspect bolts (A) for stripped threads.
2. Inspect hoses and hose clamps for general serviceability.
3. Replace defective parts as required.

Go on to Sheet 2

TURBOSUPERCHARGER OIL DRAIN TUBE (LEFT BANK) REPLACEMENT (Sheet 2 of 3)

INSTALLATION:

1. Cut (3) hoses to prescribed length (approximately 3 inches if required).
2. Install two hoses (A) on tube (B).
3. Install four clamps (C) on tube (B).

4. Install hose (A) on tube (D).
5. Connect tube (B) to tube (E).

6. Install two clamps (C) on tube (F).
7. Install tube (F) between tube (B) and tube (D).

8. Position six clamps (C) on three hoses-

Go on to Sheet 3

TA107563

TURBOSUPERCHARGER OIL DRAIN TUBE (LEFT BANK) REPLACEMENT (Sheet 3 of 3)

9. Position gasket (G) on flange (H).
10. Using socket, install two bolts (J) and two washers (K) to secure tube cylinder head oil drain assembly.
11. Using screwdriver, tighten six clamps (C) to secure hoses (A).
12. Replenish engine's oil (LO 5-5420-226-12).
13. Connect powerplant test (ground hop) equipment (page 5-25).
14. Start engine and check oil drain line assembly for leaks.
15. Disconnect powerplant test (ground hop) equipment (page 5-25).
16. Install powerplant (page 5-14).

End of Task

TA107564

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-97
Installation	6-99

TOOLS: 1/2 in. combination box and open end wrench (2 required)
 Flat-tip screwdriver with 1/4 in. blade

SUPPLIES: Gasket (two required)
 Lockwasher (two required)
 Hose (four required)
 Self-locking nut

PRELIMINARY PROCEDURES: Remove top deck (page 16-21)
 Remove transmission shroud (page 9-2)
 Remove rear engine cooling fan (page 9-55)

Go on to Sheet 2

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 2 of 6)

REMOVAL:

1. Using screwdriver, loosen two clamps (A) holding breather tube (B) to exhaust tube (C) and breather tee (D).
2. Remove breather tube (B) from tank.
3. Using screwdriver, loosen clamp (E).
4. Using 1/2 inch wrench, remove two screws and washers (F) holding breather tee (D) to engine.

Remove breather tee (D), spacer (G) and two gaskets (H) from engine. Throw gaskets away.

Using screwdriver, loosen clamp (J).

Remove clamps (E), (J), and hose (K) from breather tee (D). Throw hose (K) away.

Go on to Sheet 3

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 3 of 6)

8. Using screwdriver, loosen two clamps (L).
9. Remove clamps (A) and (L) and two hoses (M) from breather tube (B). Throw hoses (M) away.

NOTE

Perform steps 10 through 13 only if your vehicle is equipped with a 2DA engine.

10. Using screwdriver, loosen two clamps (N).
11. Using one wrench to hold nut (P), use another wrench and remove screw (Q) securing clamp (R) to bracket on left ejector tube (S). Throw nut away.
12. Remove clamp (R) from engine breather tube extension (T).
13. Remove engine breather tube extension (T), hose (U), and clamps (N). Throw hose away.

Go on to Sheet 4

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 4 of 6)

INSTALLATION:

1. Install new hose (A) on breather tube (B). Place two clamps (C) on hose (A).

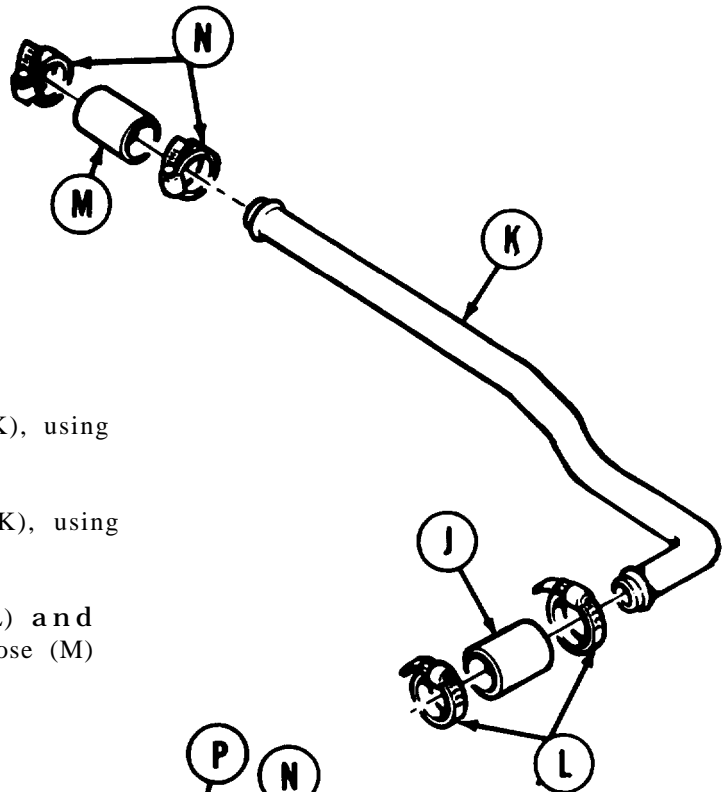

2. Connect breather tee (D) to hose (A).
3. Install breather tee (D) with two new gaskets (E) and spacer (F) to engine, using two screws (G) and new lockwashers (H).
4. Using screwdriver, tighten two clamps (C).
5. Using wrench, tighten two screws (G).

Go on to Sheet 5

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 5 of 6)

6. Install new hose (J) to breather tube (K), using two clamps (L).
7. Install new hose (M) to breather tube (K), using two clamps (N).
8. Using screwdriver, tighten one clamp (L) and one clamp (N) to secure hose (J) and hose (M) to breather tube (K).

NOTE

If your vehicle is equipped with a 2DA engine, install breather tube (K) to breather tee (D) only.

9. Install breather tube (K) to breather tee (D) and exhaust tube (P).

NOTE

Do not tighten clamps (N) if vehicle is equipped with a 2DA engine.

10. Using screwdriver, tighten clamps (N) and (L).

Go on to Sheet 6

CRANKCASE BREATHER TEE AND REAR TUBE REPLACEMENT (Sheet 6 of 6)

NOTE

Perform steps 11 through 15 only if your vehicle is equipped with a 2DA engine.

11. Install new hose (Q) and clamps (R) onto engine breather tube extension (S).
12. Install end of engine breather tube extension (S) into hose (M). Install hose end of breather tube extension (S) onto left ejector tube (T).
13. Slide clamps (R) and (N) over hoses (M) and (Q). Using screwdriver, tighten clamps (R) and (N).
14. Install clamp (U) onto engine breather tube extension (S).
15. Using two wrenches, install screw (V) and new self-locking nut (W) to secure clamp (U) to bracket on left ejector tube (T).
16. Install rear engine cooling fan (page 9-57).
17. Install transmission shroud (page 9-6).
18. Install top deck (page 16-23).

End of Task

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-101
Inspection	6-103
Installation	6-103

TOOLS: 1-1/8 in. deep well socket with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 11/16 in. combination box and open end wrench
 1 in. combination box and open end wrench
 1-1/8 in. combination box and open end wrench
 Flat-tip screwdriver
 Ratchet with 1/2 in. drive

SPECIAL TOOLS Ground hop kit (Item 30, Chapter 3, Section 1)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove rear engine cooling fan (page 9-55)

REMOVAL:

1. Using 11/16 inch wrench, disconnect hoses (A) and (B) from connector (C).

Go on to Sheet 2

TA107569

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 2 of 6)

2. Using 1 inch wrench, loosen hose connector (D) while holding retaining nut (E) with 1-1/8 inch open end wrench.
3. Remove hose (F) from connector (G).
4. Using 1-1/8 inch deep well socket wrench, remove retaining nut (E) and washer from connector (G).

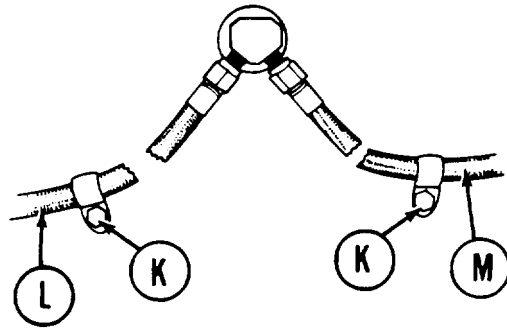

6. Using 11/16 inch wrench, loosen hose (H) and remove from elbow (J) on the right turbosupercharger.
7. Repeat step 6 on left turbosupercharger to remove other hose.

Go on to Sheet 3

TA107570

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 3 of 6)

8. Using 1/2 inch socket, remove loop clamp (K) that secures left hose (L) to engine shroud.
9. Using 1/2 inch socket, remove loop clamp (K) that secures right hose (M) to engine shroud.
10. Remove hose grommets from left and right side engine shrouds.
11. Remove hoses (M) and (L) to inside.

INSPECTION:

1. Check hoses for cracks, holes and leaks.
2. Check hose connectors for stripped threads and wear.
3. Check loop clamps for serviceability.
4. **Replace parts as needed.**

INSTALLATION:

1. Position connector (A) in engine shroud (B).
2. Using 1-1/8 inch deep well socket, secure connector (A) with flat washer and retaining nut (C).

Go on to Sheet 4

TA107571

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 4 of 6)

3. **Connect hose (D) to connector (A).**
4. Using 1 inch wrench, tighten hose connector (D). Make sure connector (A) is installed with hose fittings pointed down.

5. **Connect hoses (E) and (F) to connector (A).**
6. Using 11/16 inch wrench, tighten connectors (E) and (F).

7. Position hose (F) so that free end passes through right engine shroud. Using fingers and flat-tip screwdriver position grommet (G) over hose and into shroud.

Go on to Sheet 5

TA107572

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 5 of 6)

8. Position hose (E) so that free end passes through left engine shroud. Using fingers and flat-tip screwdriver, position grommet (H) over hose and into shroud.
9. Using 1/2 inch wrench and 1/2 inch socket, secure each hose with loop clamp.

LEFT ENGINE SHROUD

10. Using 11/16 inch wrench, connect hose connector (K) to elbow (J) on right turbosupercharger.
11. Repeat step 10 on left turbosupercharger to connect hose (E).

Go on to Sheet 6

TA107573

MULTIPLE FLUID PRESSURE LINE CONNECTOR REPLACEMENT (Sheet 6 of 6)

CAUTION

Do not operate powerplant longer than ten minutes with cooling fans removed. Engine speed should not exceed 750 RPM.

12. Ground hop powerplant (page 5-25).
13. Check all connections for leaks.
14. Turn engine off.
15. Disconnect ground hop equipment (page 5-25).
16. Install rear engine cooling fan (page 9-57).
17. Install powerplant (page 5-14).

End of Task

ENGINE ACCESS COVERS (RIGHT BANK) REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-107
Installation	6-110

TOOLS: 1/2 in. socket with 1/2 in. drive
 4 in. extension with 1/2 in. drive
 Ratchet with 1/2 in. drive
 9/16 in. combination box and open end wrench
 11/16 in. open end wrench

SUPPLIES: Rags (Item 12, Appendix D)
 Drain pan

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)

REMOVAL:

1. Using socket, remove four screws and washers (A) securing plate with electrical connectors (B) to front engine access cover.
2. Place plate with electrical connectors (B) aside.

Go on to Sheet 2

TA107574

ENGINE ACCESS COVERS (RIGHT BANK) REPLACEMENT (Sheet 2 Of 5)

3. Using socket, remove remaining six screws and washers (C) securing front engine access cover (D).
4. Remove front engine access cover (D).

5. Using socket, remove remaining 12 screws and washers (E) securing rear engine access cover (F).
6. Remove rear engine access cover (F).

Go on to Sheet 3

TA107575

ENGINE ACCESS COVERS (RIGHT BANK) REPLACEMENT (Sheet 3 of 5)

7. Using socket, remove three screws, washers and clamp (G) securing timing access cover (H) to engine.
8. Remove timing access cover (H).

NOTE

Use a suitable container or rags to catch fuel leakage when any fuel line or fitting is loosened or disconnected.

9. Using 9/16 inch wrench, disconnect fuel return hose fitting (J) from union (K).
10. Using 11/16 inch wrench, remove nut (L) securing union (K) to access cover (M).
11. Pull union (K) with hose attached out of access cover. (Pull union and hose toward rear of engine.)
12. Using socket and extension, remove three screws and washers (N).
13. Remove access cover (M).

Go on to Sheet 4

TA107576

ENGINE ACCESS COVERS (RIGHT BANK) REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Position access cover (A) in place on engine.
2. Install three screws and washers (B) to secure access cover.
3. Using socket and extension, tighten three screws (B).
4. Install union (C) with hose attached in access cover (A).
5. Install nut (D) onto union (C). Using 11/16 inch open end wrench, tighten nut (D).
6. Connect fuel return hose fitting (E) to union (C). Using 9/16 inch open end wrench, tighten hose fitting (E).

7. Position timing access cover (F) in place on engine.
8. Install three screws and washers (G) to secure timing access cover (F) and hose clamp on engine. Using socket, tighten three screws (G).

Go on to Sheet 5

TA107577

ENGINE ACCESS COVERS (RIGHT BANK) REPLACEMENT (Sheet 5 of 5)

9. Position rear engine access cover (H) in place on engine.
10. Install 12 screws and washers (J). Do not install screws in last holes toward front of engine. Using socket, tighten 12 screws (J).

11. Position front engine access cover (K) in place on engine.
12. Install six screws and washers (L). Do not install screw in the four holes (M). Using socket, tighten six screws (L).
13. Position date with electrical connector (N) on front engine access cover (K). Align screw holes in plate (N) with those in front engine access plate (K).
14. Install four screws and washers (P) to secure plate to shroud. Using socket, tighten four screws (P).
15. Install engine shroud (page 9-31).
16. Install powerplant (page 5-14).

End of Task

TA107578

ENGINE ACCESS COVERS (LEFT BANK) REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-112
Installation	6-115

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet 1/2 in. drive
 3" extension, 1/2 in. drive
 1/2 in. combination wrench

SUPPLIES: Gasket 8682523

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2).
 Remove engine shroud (page 9-30)

REMOVAL:

1. Using socket, remove four screws and washers (A) securing plate with electrical connectors (B).
2. Position plate with electrical connectors (B) aside.

Go on to Sheet 2

TA107579

ENGINE ACCESS COVERS (LEFT BANK) REPLACEMENT (Sheet 2 of 5)

3. Using socket, remove nine screws and washers (C).
4. Remove front engine access plate (D) with cap assembly (G).
5. Using socket, remove two screws (E) and washers (F).
6. Remove cap assembly (G) and gasket (H) from access plate (D). Throw gasket (H) away.

Go on to Sheet 3

TA107580

ENGINE ACCESS COVERS (LEFT BANK) REPLACEMENT (Sheet 3 of 5)

8. Using socket, remove ten screws and washers (J).
9. Remove rear engine access cover (K).

10. Using wrench or socket, remove seven screws and washers (L).
11. Remove access cover (M).
12. Using wrench, remove three screws and washers (N).
13. Remove timing access cover (P).

Go on to Sheet 4

TA107581

ENGINE ACCESS COVERS (LEFT BANK) REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Position timing access cover (A) to engine.
2. Install three screws and washers (B) to secure timing cover (A) to engine. Using wrench, tighten screws.
3. Position access cover (C) in place on engine.
4. Install six screws and washers (D) to secure access cover (C). Using wrench or socket, tighten screws.

5. Position rear engine access cover (E) to engine.
6. Install ten screws and washers (F) to secure rear engine access cover (E). Do not install screws in last two holes toward front of engine.
7. Using socket, tighten screws (F).

Go on to Sheet 5

TA107582

ENGINE ACCESS COVERS (LEFT BANK) REPLACEMENT (Sheet 5 of 5)

8. Position new gasket (G) and cap assembly (H) to front engine access cover(J).
9. Install two screws (K) and washers (L) to secure cap assembly (H) to front engine access cover (J).
10. Using socket, tighten screws (K).
11. Position front engine access cover (J) and cap assembly (H) in place on engine.

12. Install eight screws and washers (M) to secure front engine access cover.
13. Using socket, tighten screws (M).
14. Position plate with electrical connectors (N) on engine.

15. Install four screws and washers (P) to secure plate with electrical connectors (N).
16. Using socket, tighten screws (P).
17. Install engine shroud (page 9-31).
18. Install powerplant (page 5-14).

End of Task

TA107583

POWER PLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 1 of 9)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-117
Installation	6-121

TOOLS: Ratchet with 1/2 in. drive
 6 in. extension with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 Alining punch

1/2 in. combination box and open end wrench
 9/16 in. combination box and open end wrench
 11/16 in. socket with 1/2 in. drive

PERSONNEL: Two

PRELIMINARY PROCEDURES:

- Remove powerplant (page 5-2)
- Remove engine shroud (page 9-30)
- Remove engine right oil cooler (page 6-19)
- Remove transmission right oil cooler (page 6-38)
- Remove engine cooling fan shroud (page 9-47)
- Remove engine cooling fans (page 9-55)
- Remove centrifugal fan housings (page 9-64)
- Remove engine access covers (right bank)
 (page 6-107)
- Remove generator air exhaust pipe and
 hose (page 10-6)

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 2 of 9)

NOTE

Because of space limitations, it may be necessary to interchange like-size sockets and wrenches to get at a particular screw.

REMOVAL:

1. Using 1/2 inch socket and extension, remove two assembled washerbolts and cushioned clamps (A).
2. Using 1/2 inch socket and extension, remove washerbolt (B).
3. While supporting ignition unit (C), and using a 1/2 inch wrench, remove two capscrews (D).
4. Remove ignition unit (C) with clamps and leads from frame.

5. Using 1/2 inch socket, remove two capscrews (E) and self-locking nuts from bracket. Use 1/2 inch wrench to keep nuts from turning.

Go on to Sheet 3

TA107585

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 3 of 9)

6. Using 9/16 inch socket, remove six cap screws (G) and self-locking nuts. Use 9/16 inch wrench to keep nuts from turning.
7. Using 1/2 inch socket, remove three screws (H) and cushioned clamp holding timing access cover to support frame.
8. Using 9/16 inch socket, remove cap screw, flatwasher and self-locking nut (J). Use 9/16 inch wrench to keep nut from turning.
- 9* Using 1/2 inch socket with extension or 1/2 inch wrench, remove five screws" (K).

Go on to Sheet 4

TA107586

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 4 of 9)

NOTE

It may be necessary to depress three flanges (L) on frame bottom during removal to clear protruding obstacles on the engine.

10. Remove oil cooler support frame (M).

NOTE

Five of the six cooler frame upper brackets are identical and are mounted the same way. The sixth bracket (N) is located closest to the engine flywheel end and requires three shims (P) and an additional screw with self-locking nut (Q) or proper installation.

11. Using 9/16 inch socket with extension, remove nut (Q) securing shims (P). Hold screw head below shims with 9/16 inch wrench to keep screw from turning.

Go on to Sheet 5

TA107587

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 5 of 9)

12. Using 1/2 inch socket with extension or 1/2 inch wrench, remove six brackets (R).
13. Using 11/16 inch socket, remove two locknuts, washers, and spacers (S) from three frame support brackets (T). Remove frame support brackets (T).

14. Check oil cooler support frame (M) for dents and breaks. Repair if possible or replace if necessary.
15. Check timing access cover (U) for breaks. Replace if necessary.
16. Check rubber strips (V) for tears and breaks. Replace if necessary.
17. Check brackets (R and T) for cracks and breaks. Replace if necessary.

INSTALLATION:

1. Position each frame support bracket (A) for mounting.
2. Using 11/16 inch socket, install two washers, spacers, and locknut assemblies (B) to secure each bracket (A).

Go on to Sheet 6

TA107588

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 6 of 9)

NOTE

Five of the six cooler frame upper brackets are identical and are mounted the same way. The sixth bracket (C) is located closest to the engine flywheel end and requires shims and an additional screw and self-locking nut for proper installation.

3. Using 9/16 inch socket with extension, install shims (C). Hold screw head below shims with 9/16 inch wrench to keep screw from turning.

4. Using 1/2 inch socket with extension, install six brackets (D).

NOTE

It may be necessary to depress three flanges (E) on frame bottom during installation to clear protruding obstacles on the engine.

5. Install oil cooler and support frame.

Go on to Sheet 7

TA107589

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 7 of 9)

6. Using alining punch, line up holes for screws (F).
7. Using 1/2 inch socket with extension or 1/2 inch wrench, install five screws (F).

8. Using 9/16 inch socket, install capscrew, flatwasher and self-locking nut (G). Use 9/16 inch wrench to keep nut from turning.
9. Using 1/2 inch socket, install three screws (H) and cushioned clamp holding timing access cover to frame.

10. Using alining punch, line up holes for capscrews and self-locking nuts (J).
11. Using 9/16 inch socket, install six capscrews and self-locking nuts (J). Use 9/16 inch wrench to keep nuts from turning.

Go to Sheet 8

TA107590

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 8 of 9)

- 12. Using 9/16 inch wrench, install screw with cushioned clamp (K) to hold cable assembly against frame. Use 9/16 inch wrench to keep nuts from turning.
- 13. Position bracket (L) to frame with hoses (M) behind bracket (L).

- 14. Using 1/2 inch socket, install two capscrews (N) and self-locking nuts. Use 1/2 inch wrench to keep nuts from turning.

- 15. Position ignition unit (P) with clamps and leads to frame.
- 16. Using 1/2 inch wrench, install two capscrews (Q).

Go on to Sheet 9

TA107591

POWERPLANT RIGHT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 9 of 9)

17. Using alining punch, line up hole for washer bolt (R).

18. Using 1/2 inch socket and extension, install washerbolt (R).

19. Using 1/2 inch socket and extension, install two assembled washerbolts and cushioned clamps (s).

20. Install generator air exhaust pipe and hose (page 10-10).

21. Install engine access covers (right bank) (page 6-110).

22. Install centrifugal fan housings (page 9-65).

23. Install engine cooling fans (page 9-57).

24. Install engine cooling fan shroud (page 9-51).

25. Install transmission right oil cooler (page 6-43).

26. Install engine right oil cooler (page 6-22).

27. Install engine shroud (page 9-31).

28. Install powerplant (page 5-14).

End of Task

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 1 of 9)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-126
Installation	6-131

TOOLS: Ratchet with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 5/8 in. socket with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 Alining punch
 1/2 in. combination box and open end wrench
 3/8 in. combination box and open end wrench
 9/16 in. combination box and open end wrench
 11/16 in. socket with 1/2 in. drive
 4 in. flat-tip screwdriver

PERSONNEL: Two

PRELIMINARY PROCEDURES
 Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)
 Remove centrifugal fan housing (page 9-64)
 Remove engine cooling fans (page 9-55)
 Remove engine cooling fan shroud (page 9-47)
 Remove engine access covers (left bank) (page 6-112)
 Remove engine left oil cooler (page 6-19)
 Remove transmission left oil cooler (page 6-38)

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 2 of 9)

NOTE

Because of space limitations, it may be necessary to interchange like size sockets and wrenches to get at a particular screw.

REMOVAL:

NOTE

It may be necessary to use screwdriver and 3/8 inch wrench to remove clamp (A) and move tube (B) before fuel-water separator filter (C) can be lowered.

1. Using 1/2 inch socket, remove four cap-screws, lockwashers, and flat washers (D),

2. Lower fuel-water separator filter (C) away from mounting bracket (E).
3. Using 5/8 inch socket, remove three screws, lockwashers and flatwashers (F) securing mounting bracket (E) to engine. Remove mounting bracket (E).
4. Using 1/2 inch socket, remove three assembled washer bolts (G).

5. Using 1/2 inch socket, remove screw and clamp (H).
6. Using 1/2 inch wrench, remove two screws (J).
7. Remove ignition unit (K) with clamps and leads from frame.

Go on to Sheet 3

TA107594

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 3 of 9)

8. Using 1/2 inch socket and 1/2 inch wrench, remove two capscrews and self-locking nuts (L).
9. Remove bracket (M) with harness attached from frame.

10. Using 9/16 inch socket and 9/16 inch wrench, remove eight capscrews and self-locking nuts (N). Use 9/16 inch wrench to keep nuts from turning.

11. Using 1/2 inch socket with extension, remove four screws (P).
12. Using 1/2 inch socket and 1/2 inch wrench, remove screw and self-locking nut (Q).

NOTE

It may be necessary to pull frame (R) out before oil cooler support frame (S) can be removed.

Go on to Sheet 4

TA107595

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 4 of 9)
NOTE

It may be necessary to depress three flanges (T) on frame bottom during removal to clear protruding obstacles on the engine.

13. Remove oil cooler support frame (S).

14. Using 9/16 inch socket with 5 inch extension and 9/16 inch wrench, remove locknut (u).
15. Using 1/2 inch socket with extension, remove nuts (V).
16. Move two shims and clamp (W) to UP Position and remove bracket (X) and screw (Y).
17. Remove screw (Y) from bracket (X).
18. Using 1/2 inch socket and 1/2 inch wrench, remove screw and nut (Z).
19. Remove clamp (AA) from bracket (AB) and fuel line.
20. Using 1/2 inch socket with extension, remove nuts (AC).
21. Remove bracket (AB).
22. Using 1/2 inch socket with extension, remove four brackets (AD).

Go on to Sheet 5

TA107596

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 5 of 9)

23. Using 11/16 inch socket, remove two locknuts and spacers from three frame support brackets (AD). Remove three frame support brackets.

24. Check oil cooler support frame (S) for dents and breaks. Repair if possible or replace if necessary.
25. Check timing access cover (AE) for breaks. Using 1/2 inch socket, replace if necessary.
26. Check rubber strips (AF) for breaks and tears. Replace if necessary.
27. Check brackets (AG) for cracks and breaks. Replace if necessary.

Go on to Sheet 6

TA107597

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 6 of 9)

INSTALLATION:

NOTE

Because of space limitations, it may be necessary to interchange like size sockets with wrenches to get at a particular screw.

1. Install screw (A) through bracket (B).
2. Position bracket (B) and screw (A) on engine.
3. Install clamp and two shims (C) on screw (A).
4. Using 9/16 inch socket and 9/16 inch wrench, install nut (D).
5. Using 1/2 inch socket with extension, install nuts (E).
6. Position bracket (F) on engine.

7. Using 1/2 inch socket with extension or 1/2 inch wrench, install nuts (G).
8. Position clamp (H) on fuel line and install screw (J) through clamp (H) and bracket (F).
9. Using 1/2 inch socket and 1/2 inch wrench, install nut (K) on screw (J).
10. Using 1/2 inch socket with extension, install four brackets (L).
11. Position frame support brackets (M) on engine and, using 11/16 inch socket, install two locknuts (N) to secure each frame support bracket (M).

Go on to Sheet 7

TA107598

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 7 of 9)

NOTE

It may be necessary to pull frame (P) out and depress three flanges (Q) on frame bottom during installation to clear protruding obstacles on the engine. It may be necessary to loosen and move brackets (B, F and L) slightly before oil cooler support frame can be installed.

12. Install oil cooler support frame.

13. Using alining punch, aline screw holes and, using 1/2 inch socket with extension, install four screws (R).

14. Using 1/2 inch socket and 1/2 inch wrench, install screw and self-locking nut (S).

Go on to Sheet 8

TA107599

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT (Sheet 8 of 9)

15. Using alining punch, aline screw holes and, using 9/16 inch socket and 9/16 inch wrench, install eight capscrews and self-locking nuts (T).

16. Position bracket (U) to frame.
17. Using 1/2 inch socket and 1/2 inch wrench, install two capscrews and self-locking nuts (V) to hold bracket (U) to frame.
18. Position ignition unit (W) with clamps and leads to frame.
19. Using 1/2 inch wrench, install two capscrews (X).
20. Using 1/2 inch socket, install screw and cushioned clamp (Y).
21. Using 1/2 inch socket, install three assembled washer bolts (Z).

Go on to Sheet 9

TA107600

POWERPLANT LEFT BANK OIL COOLER FRAME AND BRACKETS REPLACEMENT(Sheet 9 of 9)

22. Place mounting bracket (AA) in position and, using 5/8 inch socket, tighten three screws (AB).

23. Position fuel-water separator (AC) to mounting bracket (AA).

CAUTION

Mounting bracket (AA) is made of aluminum, Overtightening of cap-screws (AD) could strip threads.

24. Using 1/2 inch socket, install four capscrews, lockwashers, and flat washers (AD).

25. Using screwdriver and 3/8 inch wrench, install clamp (AE) if removed.
26. Install transmission left oil cooler (page 6-43).
27. Install engine left oil cooler (page 6-22).
28. Install engine access covers (left bank) (page 6-115).
29. Install engine cooling fan shroud (page 9-51).
30. Install engine cooling fans (page 9-57).
31. Install centrifugal fan housing (page 9-65).
32. Install engine shroud (page 9-31).
33. Install powerplant (page 5-14).

End of Task

TA107601

CYLINDER HEAD AND OIL PAN DRAIN TUBES (LEFT AND RIGHT) REPLACEMENT
 (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	6-135
Inspection	6-136
Installation	6-137

TOOLS: 7/8 in. socket with 1/2 in. drive
 Flat-tip screwdriver
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 Diagonal cutting pliers
 Slip joint pliers
 3/8 in. combination box and open end wrench

SUPPLIES: Lockwire (Item 61, Appendix D)

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1).

REFERENCES: LO 5-5420-226-12

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Drain engine oil (page 6-12)
 Remove left oil cooler frame and brackets (page 6-126)
 (as required)
 Remove right oil cooler frame and bracket (page 6-117)
 (as required)

REMOVAL:

- Using 1/2 inch socket, remove two bolts and washers (A).
- Remove gasket (B) and throw away.

RIGHT SIDE

Go on to Sheet 2

TA107602

**CYLINDER HEAD AND OIL PAN DRAIN TUBES (LEFT AND RIGHT) REPLACEMENT
(Sheet 2 of 4)**

3. Holding nut with wrench and using screwdriver, disconnect four fuel line clamps (C) from oil drain line.
4. Using screwdriver, loosen 16 clamps (D) on eight hoses (E) on each end of drain tube assembly.
5. Using pliers, cut lockwire (F) on six capscrews (G).
6. Using 7/8 inch socket, remove six capscrews (G) and 12 washers (H).
7. Remove washers (H) and throw away.
8. Remove drain tube assembly (J) from engine.

INSPECTION:

1. Inspect capscrews for stripped threads.
2. Inspect hose clamps for general serviceability.
3. Replace defective parts as required.

Go on to Sheet 3

TA107603

**CYLINDER HEAD AND OIL PAN DRAIN TUBES (LEFT AND RIGHT) REPLACEMENT
(sheet 3 of 4)**

INSTALLATION:

1. Cut eight hoses (A) to prescribed length (3 inches).
2. Install 16 clamps (B) on drain line assembly (C).
3. Install eight hoses (A) on drain line assembly (C).
4. Position assembled drain tube assembly (C) to engine.
5. Install 12 washers (D) on six capscrews (E).
6. Using 7/8 inch socket, install six capscrews (E).
7. Using pliers, install lockwire (F).

Go on to Sheet 4

TA107604

CYLINDER HEAD AND OIL PAN DRAIN TUBES (LEFT AND RIGHT) REPLACEMENT
(sheet 4 of 4)

8. Position two bolts and washers (G) through *lower* drain tube end and place new gasket (H) over bolts.
9. Using 1/2 inch socket, tighten two bolts and washers (G) to engine.
10. Using screwdriver, tighten 16 clamps (B) on hoses (A) and (C) on each end of lower drain lines assembly.
11. Holding nut with 3/8 inch wrench and using screwdriver, connect four fuel line clamps (J) to oil drain line.
12. Install left oil “cooler frame and brackets (page 6-131) (as required).
13. Install right oil cooler frame and brackets (page 6-121) (as required).
14. Replenish engine oil (LO 5-5420-226-12).
15. Connect powerplant test (ground hop) equipment (page 5-25).
16. Start engine and check for leaks.
17. Disconnect powerplant test (ground hop) equipment (page 5-25).
18. Install powerplant (page 5-14).

End of Task

TA107605

CHAPTER 7

FUEL SYSTEM MAINTENANCE

INDEX

Procedure.	Page
Fuel Pump Replacement - Right Fuel Tank	7-5
Fuel Pump Replacement - Left Fuel Tank	7-11
Fuel Pump-to-Fuel-Water Separator Hose Assembly Replacement	7-20
Fuel Backflow Valve Replacement.	7-25
Tube Assembly (Fuel Injection Pump Inlet to Bulkhead Elbow) Replacement	7-29
Water Separator Fuel Filter Outlet Hose Assembly Replacement	7-34
Engine Fuel Pump Replacement.	7-37
Hose Assembly (Primary Fuel Filter to Backflow Valve) Replacement	7-40
Fuel Line Insulator Replacement	7-42
Fuel Return Lines Replacement	7-52
Fuel Injector Nozzles and Holders Inspection	7-62
Purge Fuel System	7-64
Air Cleaner Intake and Hose Replacement	7-66
Air Cleaner Plug Replacement	7-71
Air Cleaner Intake Elbow Replacement	7-72
Air Cleaner Turbocharger Elbow Replacement	7-75
Air Cleaner Blower Fan Power Lead Replacement	7-78
Air Cleaner Outlet Hose Replacement	7-81
Air Cleaner Restriction Indicator (Left or Right) Replacement	7-84
Air Cleaner Replacement	7-85
Air Cleaner Filter Element Cleaning or Replacement	7-93
Air Cleaner Outlet Elbow Replacement	7-98

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-5
Installation	7-8

TOOLS: 7/16 in. socket with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-237 N•m)
 Diagonal cutting pliers
 Flat-tip screwdriver
 Cross-tip screwdriver
 3/8 in. combination box and open end wrench

SUPPLIES: Sealing compound (Item 28, Appendix D)
 Silicone compound (Item 32, Appendix D)
 Rags (Item 12, Appendix D)
 Lockwire (Item 61, Appendix D)
 Gasket (10873918)
 Gasket (11637078)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Isolate right fuel tank (TM 5-5420-226-10)
 Drain right fuel tank (page 7-191)
 Remove rear access cover (page 17-7)

Go on to Sheet 2

TA107610

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 2 of 6)

REMOVAL:

1. Using pliers, cut lockwire (A) on 12 screws (B).
2. Using 1/2 inch socket, remove 12 screws and washers (B) securing fuel pump access cover (C) to fuel tank.
3. Using pliers, cut lockwire (D) securing five screws (E).
4. Using 9/16 inch socket, remove four of five screws (E) securing access cover (C) to fuel pump mounting bracket (underneath cover).
5. Using 9/16 inch socket, loosen, but do not remove, the fifth screw (E).

6. Swivel access cover (C) on fifth screw (E) until you can remove mounting bracket (F) with fuel pump (G) attached part way out of fuel tank.

Go on to Sheet 3

TA107611

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 3 of 6)

7. Disconnect electrical connector (H) by pulling out.
8. Using flat-tip screwdriver, loosen hose clamp (J).
9. Remove hose (K) from fuel pump.

10. Remove gasket (L) from fuel tank opening and throw away.
11. Remove remaining screw (E) from access cover (C).
12. Separate cover (C), gasket (M), and mounting bracket (N). Throw gasket away.
13. Using fingers, open clamp lever (P).
14. Remove fuel pump (Q) from mounting bracket (N).
15. Using cross-tip screwdriver and wrench, remove screw (R), lockwasher (S), and nut (T) securing ground lead (U) to pump (Q).
16. Remove ground lead (U) from pump (Q).
17. Using 7/16 inch socket, remove two screws (V) and lockwashers (W) securing lead (U) and clamp (X) to bracket (N).
18. Remove lead (U) and clamp (X).
19. Using hands, remove two clamps (Y) and packing (Z) from pump (Q).

Go on to Sheet 4

TA107612

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 4 of 6)

INSTALLATION:

1. Position packing (A) around pump (B) and, using hands, install clamps (C) around packing (A) and pump (B).

2. Using screwdriver and 3/8 inch wrench, secure ground lead (D) to fuel pump (B) with screw (E), lockwasher (F), and nut (G).

3. Using 7/16 inch socket, secure ground lead (D) and clamp (H) to bracket (J) with two screws (K) and two lockwashers (L).

4. Position fuel pump (B) in mounting bracket (J) so that pump discharge port (M) will be directly beneath stamped lettering "PUMP DISCHARGE LOCATION" on access cover (N). Lock pump in bracket by closing clamp lever (P).

5. Position new gasket (Q) on mounting bracket (J). Apply sealing compound to threads of one screw (R). Install one screw (R) through access cover (N) and gasket (Q) into mounting bracket (J). Leave screw (R) loose.

Go on to Sheet 5

TA107613

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 5 of 6)

6. Place new gasket (S) over opening in fuel tank.
7. Place silicone compound (Item 32, Appendix D) on electrical lead (T).
8. Place fuel pump close to opening of fuel tank. Connect electrical lead (T) to electrical connector (U).
9. Place hose (V) on pump outlet port (W). Using screwdriver, tighten clamp (X) on hose.

10. Swivel access cover (N) on single installed screw (R) to work fuel pump into position in fuel tank.
11. Position access cover and gasket on mounting bracket (J).
12. Apply sealing compound to threads of remaining four screws (R). Using 9/16 inch socket, install and tighten all five screws (R). Secure screws with lockwire (Y).

Go on to Sheet 6

TA107614

FUEL PUMP REPLACEMENT - RIGHT FUEL TANK (Sheet 6 of 6)

13. Position access cover (N) over fuel tank opening so that lettering "FRONT OF VEHICLE" stamped on cover is facing toward front of tank.
14. Using 1/2 inch socket, install 12 screws and 12 washers (Z) securing cover (N).
15. Using torque wrench, tighten screws to 10-15 lb-ft (14-20 N•m).
16. Secure screws with lockwire (AA).
17. Open fuel tank crossover valve (TM 5-5420-226-10).
18. Fill fuel tanks (TM 5-5420-226-10).
19. Check for operation of fuel pump.
20. Replace rear access cover (page 17-8).

End of Task

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 1 of 9)

PROCEDURE INDEX	
PROCEDURE	PAGE
Removal	7-11
Installation	7-16

TOOLS: 1/4 in. combination box and open end wrench
 1/2 in. combination box and open end wrench
 1/2 in. socket with 3/8 in. drive
 Ratchet with 3/8 in. drive
 Diagonal cutting pliers
 Torque wrench with 3/8 in. drive (0-200 lb-in)
 Slip joint pliers
 Flat-tip screwdriver

SUPPLIES: Lockwire (Item 61, Appendix D)
 Gasket (10873918)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Isolate left fuel tank (TM 5-5420-226-10)
 Drain left fuel tank (page 7-191)
 Remove powerplant (page 5-2)

REMOVAL:

1. Using hands, unplug electrical lead (A) from capacitor and housing assembly (B) located on fuel pump access cover (C).

Go on to Sheet 2

TA107616

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 2 of 9)

- Using diagonal cutting pliers, remove Lockwire (D) securing four screws (E).
- Using screwdriver, remove four screws (E) from capacitor and housing assembly (B). Slowly separate capacitor and housing assembly (B) from fuel pump access cover (C). Capacitor and housing assembly is connected to cover (C) by electrical lead (F).

- Using screwdriver, remove screw (G) and lockwasher (H) securing electrical lead (F). Throw lockwasher (H) away and remove capacitor and housing assembly (B) from cover (C).
- Using diagonal cutting pliers, remove lockwire (J) securing 12 screws (K) on fuel pump access cover (C).
- Using socket, remove 12 screws (K) and flatwashers (L).

Go on to Sheet 3

TA107617

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 3 of 9)

7. Slowly pull back fuel pump access cover (C) to expose electrical lead (M) connecting fuel pump access cover to fuel pump (N).
8. Using hand, disconnect electrical lead (M) from fuel pump (N). Remove gasket (P) and throw it away.

Go on to Sheet 4

TA107618

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 4 of 9)

9. Using screwdriver, loosen two hose clamps (Q) and (R) on hose (S) attached to fuel pump (N).
10. Remove bottom of hose (S) from fuel pump hose connection (T).
11. Remove top of hose (S) from fuel line (U). Remove hose (S).

12. Hold retainer (V) in place against body of fuel pump (N).
13. Using socket and 1/2 inch wrench, remove nut (W) and washer (X) from screw (Y). Throw lockwasher (X) away.
14. Remove screw (Y) and washer (Z) from mounting bracket (AA). Let ground lead (AB) fall away.

15. Hold fuel pump (N). Swing back retainer (V).
16. Remove fuel pump (N).

Go on to Sheet 5

TA107619

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 5 of 9)

17. Remove retainer (V) from slot (AC).

18. Remove retainer (V).

19. Using screwdriver and 1/4 inch wrench, remove screw (AD), lockwasher (AE), and nut (AF), and remove ground lead (AB) from fuel pump (N). Throw lockwashers away.

Go on to Sheet 6

TA107620

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 6 of 9)

INSTALLATION:

1. Using screwdriver and 1/4 inch wrench, install ground strap (A) of fuel pump (B) with screw (C), new lock-washer (D), and nut (E). Using flat-tip screwdriver, tighten screw (C).
2. Using hands, position packing (F) and two clamps (G) on fuel pump (B).

3. Insert fuel pump (B) through opening in fuel tank and onto mounting bracket (H) so that electrical connector (J) is to the left as shown.

4. Insert end of retaining strap (K) into mounting bracket (H) slot.

5. Position ground strap (A) terminal on mounting bracket (H). Insert screw (L) through terminal of ground strap (A), mounting bracket (H), and retaining strap (K). Using fingers, install washer (M) and new lockwasher (N).
6. Using fingers, install nut (P) loosely onto screw (L).

Go on to Sheet 7

TA107621

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 7 of 9)

7. Install clamp (Q) on each end of hose (R).

NOTE

It may be necessary to turn fuel pump (B) 1/4 turn in order to install hose (R) onto fuel pump outlet (S).

8. Install hose (R) between fuel pump outlet (S) and fuel line (T). Using screwdriver, tighten screws on clamps (Q).

9. Turn fuel pump (B) so electrical connector (J) is clear of top clamp (Q). Using hands, connect electrical lead (U) at back of capacitor housing (V) to electrical connector (J).
10. Using 1/2 inch wrench to hold screw (L), use socket and tighten nut (P).

Go on to Sheet 8

TA107622

FUEL PUMP REPLACEMENT -LEFT FUEL TANK (Sheet 8 of 9)

10. Position access cover (W) with capacitor housing adapter (X) up (as shown). Install new gasket (Y) over fuel tank opening with holes aligned, and using 1/2 inch socket and wrench, install twelve screws (Z) and washers (AA). Use torque wrench and tighten screws (Z) to 50 to 85 lb-in. (6-10 N•m).

11. Using slip joint pliers, install lockwire (AB) between screws (Z).
12. Using screwdriver, secure electrical lead (AC) of housing and capacitor lead (AD) to adapter (X) with screw (AE) and new lockwasher (AF).

13. Position capacitor and housing (AD) onto cover (W). Using screwdriver, install four screws (AG) and washers (AH) securing capacitor and housing (AD) to cover (W).
14. Using slip joint pliers, install lockwire (AJ) into screws (AG).

Go on to Sheet 9

TA107623

FUEL PUMP REPLACEMENT - LEFT FUEL TANK (Sheet 9 of 9)

15. Install electrical lead (AK) to connector (AL).
16. Turn fuel isolate valves back to original position (TM 5-5420-226-10).
17. Fill fuel tank (TM 5-5420-226-10).
18. Install powerplant (page 5-14).

End of Task

FUEL PUMP-TO-FUEL-WATER SEPARATOR HOSE ASSEMBLY REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-20
Inspection	7-22
Installation	7-23
Test	7-23

TOOLS: 7/16 in. combination box and open end wrench
 13/16 in. combination box and open end wrench
 7/8 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

PERSONNEL: Two

SUPPLIES: Rags (Item 12, Appendix D)
 Drain pan
 Sealing compound (Item 28, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107625

FUEL PUMP-TO-FUEL-WATER SEPARATOR HOSE ASSEMBLY REPLACEMENT (Sheet 2 of 5)

REMOVAL:

1. Place drain pan under manual drain valve (A).
2. Open manual drain valve (A) by turning valve handle to left.
3. Using 7/16 inch wrench, turn fuel-water separator bleeder cap (B) to the left until loose.

FUEL WATER SEPARATOR

4. Allow fuel in fuel-water separator filter (C) to drain through manual drain valve (A).
5. Using 7/16 inch wrench, turn fuel-water separator bleed cap (B) to the right until snug.

6. Close manual drain valve (A) by turning valve handle to the right.

Go on to Sheet 3

TA107626

FUEL PUMP-TO-FUEL-WATER SEPARATOR HOSE ASSEMBLY REPLACEMENT (Sheet 3 of 5)

7. Using 7/8 inch wrench, loosen nut (D).
8. Disconnect hose assembly (E) from fuel pump (F).

9. Using 7/8 inch wrench, loosen nut (G) from elbow (H).
10. Disconnect hose assembly (E) from elbow (H).

FUEL WATER SEPARATOR

INSPECTION:

1. Check assembly components for cracks, breaks, frayed hose, crossed threads, and general serviceability.
2. Replace components as necessary.

Go on to Sheet 4

TA107627

FUEL PUMP-TO-FUEL-WATER SEPARATOR HOSE ASSEMBLY REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

NOTE

Apply sealing compound to male threads before installation.

1. Install hose assembly (A) to elbow (B).
2. Using 7/8 inch wrench, tighten nut (C) to elbow (B).
3. Using 7/8 inch wrench, install hose assembly (A) to fuel pump (D).

4. Remove drain pan and rags placed under manual drain valve.

TEST:

1. Connect engine for powerplant ground hop (page 5-25).
2. Using 7/16 inch wrench, turn fuel-water separator bleed cap (A) to the left until loose.

Go on to Sheet 5

TA107628

FUEL PUMP-TO-FUEL-WATER SEPARATOR HOSE ASSEMBLY REPLACEMENT (Sheet 5 of 5)

3. Set fuel pumps switch to ON position (TM 5-5420-226-10).
4. Set MASTER BATTERY switch to ON position (TM 5-5420-226-10).
5. Watch fuel-water separator bleed cap (A) until air release (bubbles) appear, then set MASTER BATTERY switch to OFF.

NOTE

It may be necessary to perform steps 5 and 6 several times until a constant fuel flow (no bubbles) from the bleed cap (A) is observed. Two persons will be required to perform steps 3, 4, and 5.

6. Wait about one minute and repeat step 4 until a constant free flow is observed at bleed cap (A).
7. Using 7/16 inch wrench, turn fuel-water separator bleed cap (A) to the right until snug.
8. Check for leaks. Tighten or replace components as necessary.
9. Perform operational check of automatic drain (page 7-233).
10. Set MASTER BATTERY switch to OFF position (TM 5-5420-226-10).
11. Disconnect engine from powerplant ground hop (page 5-40).
12. Install powerplant (page 5-14).

End of Task

FUEL BACKFLOW VALVE REPLACEMENT (Sheet 1 of 4)
PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-25
Cleaning and Inspection	7-27
Installation	7-27

TOOLS: 9/16 in. combination box and open end wrench
 5/8 in. combination box and open end wrench
 7/8 in. combination box and open end wrench
 1 in. combination box and open end wrench
 Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive

SUPPLIES: Rags (Item 12, Appendix D)
 Dry cleaning solvent (Item 54, Appendix D)
 Sealing compound (Item 27, Appendix D)
 Fuel line plugs

PRELIMINARY PROCEDURE: Remove lower engine access panel (page 17-16)

NOTE

Place rags under disconnect points to soak up fuel spilled when disconnecting fuel lines.

Go on to Sheet 2

TA107630

FUEL BACKFLOW VALVE REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using 7/8 inch combination wrench, loosen nut (A) from elbow (B).
2. Insert fuel line plug in hose assembly (C).
3. Do step 1 for hose assembly (D).
4. Insert fuel line plug in hose assembly (D).
5. Using 9/16 inch combination wrench, hold reducer (E).
6. Using 1 inch combination wrench, disconnect fuel filter (F) from reducer (E).
7. Using 5/8 inch combination wrench, loosen nut (G). Remove tube assembly (H) from fuel backflow valve (J).
8. Using 7/16 inch socket, remove two screws, flat washers, and lockwashers (K).
9. Remove fuel backflow valve (J) from bracket (L).

Go on to Sheet 3

TA107631

FUEL BACKFLOW VALVE REPLACEMENT (Sheet 3 of 4)

10. Remove elbows (B) and (M) from fuel backflow valve (J).
11. Remove tee (N) from fuel backflow valve (J).
12. Remove reducer (E) from tee (N).

CLEANING AND INSPECTION:

1. Using clean rags and solvent, clean fittings and mounting hardware thoroughly.
2. Inspect fittings and mounting hardware for nicks, cracks, wear or thread damage. Replace if required.

INSTALLATION:

NOTE

Coat threads of fittings with sealing compound before installation.

1. Install two elbows (A) to fuel backflow valve (B).
2. Install tee (C) to fuel backflow valve (B).
3. Mount assembled fuel backflow valve (D) to bracket.

Go on to Sheet 4

TA107632

FUEL BACKFLOW VALVE REPLACEMENT (Sheet 4 of 4)

4. Using 7/16 inch socket and ratchet, install two screws, flat washers, and lockwashers (E) to bracket (F).

5. Remove fuel plug from hose assembly (G).

6. Using 7/8 inch combination wrench, connect hose assembly (G) to elbow (A).

7. Remove fuel plug from hose assembly (H).

8. Using 7/8 inch combination wrench, connect hose assembly (H) to elbow (A).

9. Using 5/8 inch combination wrench, connect tube assembly (J) to fuel backflow valve (B).

10. Install reducer (K) to tee (C).

11. Using 1 inch combination wrench, reconnect fuel filter (L) to tee (C).

12. Install lower engine access panel (page 17-17).

End of Task

TA107633

**TUBE ASSEMBLY (FUEL INJECTION PUMP INLET TO BULKHEAD ELBOW)
REPLACEMENT (Sheet 1 of 5)**

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-30
Cleaning and Inspection	7-31
Installation	7-31

TOOLS: 1 in. combination box and open end wrench
 7/8 in. combination box and open end wrench
 3/4 in. combination box and open end wrench
 3/8 in. combination box and open end wrench
 Wire brush
 Flat-tip screwdriver

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Rags (Item 12, Appendix D)
 Drain pan
 Sealing compound (Item 27, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove cooling fans (page 9-56)

Go on to Sheet 2

TA107634

**TUBE ASSEMBLY (FUEL INJECTION PUMP INLET TO BULKHEAD ELBOW)
REPLACEMENT (Sheet 2 of 5)**

NOTE

Use drain pan and rags to catch fuel in hose and tube assemblies.

REMOVAL:

1. Using 7/8 inch wrench, remove hose assembly (A) from bulkhead elbow (B).
2. Using 1 inch wrench to hold nut of bulkhead elbow (B) and 7/8 inch wrench, remove tube assembly (C) from bulkhead elbow (B).
3. Using 3/4 inch wrench to hold bulkhead elbow (B) and 1 inch open end wrench, remove nut, lockwasher and flat washer (D) from bulkhead elbow (B).
4. Remove bulkhead elbow (B) from engine bulkhead.

5. Using 3/8 inch wrench and flat-tip screwdriver, remove three screws and self-locking nuts (E) from tube clamps (F).

6. Using fingers, remove three tube clamps (F) from tube assembly (C).

Go on to Sheet 3

TA107635

**TUBE ASSEMBLY (FUEL INJECTION PUMP INLET TO BULKHEAD ELBOW)
REPLACEMENT (Sheet 3 of 5)**

7. Using 7/8 inch wrench, remove tube assembly (C) from fuel injection pump adapter (G).
8. Using fingers, remove tube assembly (C) from vehicle.

CLEANING AND INSPECTION:

1. Using clean rags and solvent, clean elbow and tube assembly mounting hardware thoroughly. Using wire brush, clean threaded parts.
2. Inspect elbow and tube assembly mounting hardware for bends, breaks, rounded edges, wear, or thread damage. Replace if required.
3. Inspect adapter on fuel injection pump for thread damage.

INSTALLATION:

NOTE

Coat pipe threads of fittings with sealing compound before installation.

1. Using 7/8 inch wrench, install tube assembly (A) on fuel injection pump adapter (B).

Go on to Sheet 4

TA107636

**TUBE ASSEMBLY (FUEL INJECTION PUMP INLET TO BULKHEAD ELBOW)
REPLACEMENT (Sheet 4 of 5)**

2. Using fingers, install bulkhead elbow (C) in hole in front side of engine bulkhead.
3. Using 3/4 inch wrench to hold bulkhead elbow (C) and 1 inch wrench install flat washer (D), lockwasher (E), and nut (F) on bulkhead elbow (C).
4. Using 3/4 inch wrench, turn bulkhead elbow (C) until aligned with hose assembly (G). Tighten nut (F).

5. Using 1 inch wrench to hold nut (F) and 7/8 inch open end wrench, install tube assembly (A) on bulkhead elbow (C).
6. Using 7/8 inch wrench, install hose assembly (G) on bulkhead elbow (C).

Go on to Sheet 5

TA107637

**TUBE ASSEMBLY (FUEL INJECTION PUMP INLET TO BULKHEAD ELBOW)
REPLACEMENT (Sheet 5 of 5)**

7. Using fingers, install three new tube clamps (H) on tube assembly (A).
8. Using 3/8 inch wrench and flat-tip screwdriver, install three screws and self-locking nuts (J) through tube clamps (H).
9. Install cooling fans (page 9-57).
10. Install ground hop kit (page 5-25).
11. Perform powerplant test run (page 5-30).
12. Disconnect ground hop kit (page 5-40).
13. Install powerplant (page 5-14).

End of Task

TA107638

WATER SEPARATOR FUEL FILTER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 1 of 3)

TOOLS: 7/8 in. combination box and open end wrench
9/16 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Rags (Item 12, Appendix D)
Sealing compound (Item 27, Appendix D)
Drain pan
Dry cleaning solvent (Item 55, Appendix D)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain fuel-water separator (page 7-21, steps 1 thru 6)

REMOVAL:

1. Using 9/16 inch wrench, remove self-locking nut (A) and hose clamp (B) from hose assembly (C).
2. Using 7/8 inch wrench, remove hose assembly (C) from bulkhead elbow (D).

Go on to Sheet 2

TA107639

WATER SEPARATOR FUEL FILTER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 2 of 3)

- Using 7/8 inch wrench, remove hose assembly (C) from elbow (E) of water separator fuel filter (F).

CLEANING AND INSPECTION:

- Using clean rags and solvent, clean hose clamp and self-locking nut thoroughly.
- Inspect hose clamp and self-locking nut for wear or damage.
- Inspect bulkhead elbow and water separator fuel filter outlet elbow for stripped threads.
- Replace defective parts as required.

INSTALLATION:

- Coat threads of bulkhead elbow (A) with sealing compound.
- Using fingers, install hose assembly (B) on bulkhead elbow (A).
- Using 7/8 inch wrench, tighten nut (C) of hose assembly (B) on bulkhead elbow (A).

Go on to Sheet 3

TA107640

WATER SEPARATOR FUEL FILTER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 3 of 3)

4. Coat threads of water separator fuel filter outlet elbow (D) with sealing compound.
5. Using fingers, install hose assembly (B) on water separator fuel filter outlet elbow (D).
6. Using 7/8 inch wrench, tighten nut of hose assembly (B) on water separator fuel outlet elbow (D).
7. Using fingers, install hose clamp (E) on hose assembly (B).
8. Using fingers, install hose clamp (E) and hose assembly (B) on mounting stud (F).
9. Using 9/16 inch wrench, install self-locking nut (G) on hose clamp (E) and mounting stud (F).
10. Using ground hop kit, perform powerplant test run (page 5-25).
11. Install powerplant (page 5-14).

End of Task

TA107641

ENGINE FUEL PUMP REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. combination box and open end wrench
7/8 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Rags (Item 12, Appendix D)
Dry cleaning solvent (Item 55, Appendix D)
Sealing compound (Item 27, Appendix D)
Kit, fuel pump replacement (8725292)
Gasket (7415354)
Drain pan

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107642

ENGINE FUEL PUMP REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using 7/8 inch wrench, loosen two nuts (A) (one hidden) securing two hose assemblies (B) to fuel pump (C).
2. Remove hose assemblies (B) from fuel pump (C).
3. Using 1/2 inch wrench, remove four nuts and flat washers (D) securing fuel pump (C) and gasket (E) to power takeoff adapter (F).
4. Remove fuel pump (C) and gasket (E) from power takeoff adapter (F). Throw gasket (E) away.
5. Remove elbows (G) (one hidden) from fuel pump (C).

CLEANING AND INSPECTION:

1. Using dry cleaning solvent and rags, clean all removed parts.

Go on to Sheet 3

TA107643

ENGINE FUEL PUMP REPLACEMENT (Sheet 3 of 3)

2. Using rags, wipe all removed parts dry.
3. Inspect fuel pump gear shaft for excessive wear or break. If defective, replace fuel pump.
4. Inspect fittings and mounting hardware for cracks, wear, or thread damage. Replace parts if required.

INsTALLATION:

NOTE

Coat threads of all fittings and elbows with sealing compound before installing.

1. Install two elbows (A) to fuel pump (B).
2. Install new gasket (C) to adapter (D).
3. Mount fuel pump (B) to adapter (D).
4. Using 1/2 inch wrench, install four nuts (E) and flat washers (F) to fuel pump (B).
5. Using 7/8 inch wrench, install hose assemblies (G) to fuel pump (B).
6. Service fuel tanks (TM 5-5420-226-10)
7. Using ground hop kit, perform powerplant test run (page 5-25).
8. Install powerplant (page 5-14).

End of Task

TA107644

HOSE ASSEMBLY (PRIMARY FUEL FILTER TO BACKFLOW VALVE) REPLACEMENT (Sheet 1 of 2)

TOOLS: 7/8 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Rags (Item 12, Appendix D)
Sealing compound (Item 27, Appendix D)
Drain pan

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

1. Using 7/8 inch wrench, disconnect nuts (A) of hose assembly (B).
2. Remove hose assembly (B).

CLEANING AND INSPECTION:

1. Inspect for breaks, cracks, and damaged fittings. If defective, replace hose assembly.

Go on to Sheet 2

TA107645

HOSE ASSEMBLY (PRIMARY FUEL FILTER TO BACKFLOW VALVE) REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

NOTE

Coat threads of fittings with sealing compound before installing.

1. Install hose assembly (A) to primary fuel filter and backflow valve.
2. Using 7/8 inch wrench, tighten nuts (B).
3. Service fuel tanks (TM 5-5420-226-10).
4. Using ground hop kit, perform powerplant test run (page 5-25).
5. Install powerplant (page 5-14).

End of Task

TA107646

FUEL LINE INSULATOR REPLACEMENT (Sheet 1 of 10)
 PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-42
Installation	7-47

TOOLS: Ratchet with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 1/2 in. combination box and open end wrench (2 required)
 5 in. extension with 1/2 in. drive

PRELIMINARY PROCEDURES: Remove top deck (page 16-21)
 Remove transmission shroud supports (page 9-2)
 Remove engine shroud supports (page 9-39)
 Remove cooling fans (page 9-55)
 Remove engine shroud (page 9-30)
 Remove cooling fan shroud (page 9-47)

REMOVAL:

- Using two 1/2 inch wrenches, remove two bolts (A) and nuts (B) holding insulators (C) and plate (D) to support (E). Remove insulator (C) and plate (D).
- Using two 1/2 inch wrenches, remove insulator and plate (F), (G), (H), (J), and (K), same as step 1 above.

Go on to Sheet 2

TA107647

FUEL LINE INSULATOR REPLACEMENT (Sheet 2 of 10)

3. Using 1/2 inch socket and 1/2 inch wrench, remove four bolts and nuts (L) holding insulator (M) and plate (N) to bracket (P). Remove insulator (M) and plate (N).
4. Remove insulators and plates from (Q), same as step 3 above.
5. Using 1/2 inch socket and 1/2 inch wrench, remove bolts and nut (R) holding insulator (S) and plate (T) to support (U). Remove insulator (S) and plate (T).
6. Using 1/2 inch socket and 1/2 inch wrench, remove bolt and nut (V) holding insulators (W) and plates (X) to fuel lines. Remove insulators (W) and plates (X).
7. Remove insulators and plates (Y), (Z), (AA), and (AB), same as step 6 above.

Go on to Sheet 3

TA107648

FUEL LINE INSULATOR REPLACEMENT (Sheet 3 of 10)

- Using two 1/2 inch wrenches, remove bolts and nuts (AC) holding insulators (AD) and plate (AE). Remove insulators (AD) and plate (AE).

- Remove insulators and plates from (AF), (AG), (AH), (AJ), and (AK), same as step 8 above.

Go on to Sheet 4

TA107649

FUEL LINE INSULATOR REPLACEMENT (Sheet 4 of 10)

10. Using 1/2 inch socket and 2/3 inch wrench, remove eight bolts and nuts (AL) holding insulators (AM) and plates (AN) to bracket (AP). Remove insulators (AM) and plates (AN).

11. Using 1/2 inch socket and 1/2 inch wrench, remove four bolts and nuts (AQ) holding insulators (AR) and plate (AS) to bracket (AT). Remove insulators (AR) and plate (AS) and bracket (AT).

Go on to Sheet 4

TA107650

FUEL LINE INSULATOR REPLACEMENT (Sheet 5 of 10)

- Using 1/2 inch socket and 1/2 inch wrench, remove two bolts (AU) holding plate (AV) and insulators (AW) to bracket (AX). Remove insulators (AW) and plate (AV).

- Using 1/2 inch socket and 1/2 inch wrench, remove two bolts and nuts (AY). Remove insulators (AZ) and plates (BA).
- Using 1/2 inch socket and 1/2 inch wrench, remove two bolts (BB) holding plate (BC) and two insulators (BD) to bracket (BE). Remove insulators (BD).

Go on to Sheet 6

TA107651

FUEL LINE INSULATOR REPLACEMENT (Sheet 6 of 10)

INSTALLATION:

1. Position two insulators (A) and plate (B) onto fuel lines and bracket (C).
2. Using 1/2 inch socket and 1/2 inch wrench, install bolt (D) and nut (E) securing plate (B) and insulators (A) to bracket (C).

FRONT OF ENGINE
→

3. Position four insulators (F) and four plates (G) onto fuel lines.
4. Using 1/2 inch socket and 1/2 inch wrench, install four bolts (H) and nuts (J) securing insulators (F) and plates (G) to fuel lines.
5. Position two insulators (K) and plate (L) onto fuel lines and bracket (M).

6. Using two 1/2 inch wrenches, install two bolts (N) securing insulators (K) and plate (L) to fuel lines and bracket (M).

Go on to Sheet 7

TA107652

FUEL LINE INSULATOR REPLACEMENT (Sheet 7 of 10)

7. Position four insulators (P), two plates (Q), and bracket (R) onto fuel lines.
8. Using 1/2 inch socket and 1/2 inch wrench, install four bolts (S) and nuts (T) securing insulators, plates, and bracket to fuel lines.

9. Position four insulators (U) and two plates (V) onto brackets (W).
10. Using 1/2 inch socket and 1/2 inch wrench, install eight bolts (X) and nuts (Y) securing insulators and plates to brackets.

Go on to Sheet 8

TA107653

FUEL LINE INSULATOR REPLACEMENT (Sheet 8 of 10)

- Position insulators (Z) and plate (AA) onto bracket (AB).

- Using 1/2 inch socket and 1/2 inch wrench, install two bolts (AC) and nuts (AD) securing insulators and plate to bracket.
- Install insulators and plates (AE), (AF), (AG), (AH), and (AJ), the same as steps 11 and 12 above.

Go on to Sheet 9

TA107654

FUEL LINE INSULATOR REPLACEMENT (Sheet 9 of 10)

14. Position insulators (AK) and plates (AL) onto fuel lines.
15. Using 1/2 inch socket and 1/2 wrench, install bolt (AM) and nut (AN) securing insulators (AK) and plates (AL) to fuel lines.

16. Install insulators and plates (AP), (AQ), (AR), and (AS), the same as steps 14 and 15 above.
17. Position four insulators (AT) and two plates (AU) onto bracket (AV).
18. Using 1/2 inch socket and 1/2 inch wrench, install eight bolts (AW) and nuts (AX) securing insulators, plates and fuel lines to brackets.
19. Position insulators (AY) and plate (AZ) onto bracket (BA).
20. Using 1/2 inch socket and 1/2 inch wrench, install two bolts (BB) and nuts (BC) securing insulators, plate and fuel lines to bracket.

Go on to Sheet 10

TA107655

FUEL LINE INSULATOR REPLACEMENT (Sheet 10 of 10)

21. Position insulators (BD) and plate (BE) onto bracket (BF).
22. Using 1/2 inch socket and 1/2 inch wrench, install two bolts (BG) and nuts (BH) securing insulators, plate, and fuel lines to brackets.

FRONT OF
ENGINE

23. Install insulators and plates (BJ), (BK), (BL), (BM), and (BN), the same as in steps 21 and 22.
24. Install engine cooling shroud (page 9-31).
25. Install cooling fans (page 9-57).
26. Install engine shroud support (page 9-40).
27. Install engine shroud (page 9-33).
28. Install transmission shroud (page 9-6).
29. Install top deck (page 16-21).

End of Task

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

- SUPPLIES: Sealing compound (Item 24, Appendix D)
 Sealing compound (Item 23, Appendix D)

- PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove cooling fans (page 9-55)
 Remove engine access covers (pages 6-107 and 6-112)

Go on to Sheet 2

TA107657

FUEL RETURN LINES REPLACEMENT (Sheet 2 of 10)

REMOVAL:

NOTE

Left and right side fuel return lines are removed the same except for fuel return lines (A) and (B) on right side. For left side fuel return lines removal, go to step 7; skip steps 1 through 6.

RIGHT SIDE SHOWN

1. Using 1/2 inch wrench, remove screw and lockwasher (C) securing clamp (D).
2. Place drip pan under fuel filter (E).
3. Using 9/16 inch wrench, disconnect fuel return line (A) at fuel filter (E) and let fuel drain.
4. Using 9/16 inch wrench, remove fuel return line (A).
5. Remove clamp (D) from fuel return line (A).

Go on to Sheet 3

TA107658

FUEL RETURN LINES REPLACEMENT (Sheet 3 of 10):

6. Using 9/16 inch wrench, remove fuel return line (B).
7. Using 9/16 inch wrench, remove fuel return lines (E), (F), (G), (H), and (J).
8. Using 9/16 inch wrench, disconnect fuel return line (K) from connector (L).

9. Using 11/16 inch socket, remove bolts, washers, and connectors (L), (M), (N), (P), (Q), and (R).
Go on to Sheet 4

TA107659

FUEL RETURN LINES REPLACEMENT (Sheet 4 of 10)

10. Using 9/16 inch wrench, disconnect fuel return lines (S) and (T) from cross tube (U).
11. Using 7/8 inch wrench, disconnect fuel return line (V) from cross tube (U).
12. Using 9/16 inch wrench, disconnect hose (W) from elbow (X).
13. Using 1/2 inch socket and 1/2 inch wrench, remove two nuts (Y) securing two clamps (Z).
14. Remove fuel return lines (K) and (S) from engine.
15. Using screwdriver, remove two clamps (Z) from fuel return line (S).
16. Using 7/16 inch wrench on elbow (AA) and 9/16 inch wrench on fuel return line (K), remove fuel return line (K).
17. Using 1/2 inch wrench on elbow (AA) and 9/16 inch wrench on fuel return line (S), remove fuel return line (S).

Go on to Sheet 5

TA107660

FUEL RETURN LINES REPLACEMENT (Sheet 5 of 10)

18. Using 1-1/8 inch wrench, disconnect fuel return line (AB) from cross tube (U).
19. Using 1-1/8 inch wrench, remove nut (AC) from cross tube (U).
20. Remove flat washer (AD) and cross tube (U).
21. Place cross tube (U) in vise and, using 7/16 inch wrench, remove elbow (X).
22. Remove cross tube (U) from vise.

23. Using screwdriver and 7/16 inch wrench, remove screw (AE) and nut (AF) securing clamp (AG).
24. Remove clamp (AG) from fuel return line (V).
25. Using 3/4 inch wrench on vent valve (AH) and 7/8 inch wrench on fuel return line (V), remove vent valve (AH) from fuel return line (V).
26. Using 15/16 inch wrench on elbow (AJ) and 3/4 inch wrench on vent valve (AH), remove vent-valve (AH) from elbow (AJ).

CLEANING AND INSPECTION:

Inspect fuel return lines for deterioration, cracks, stripped threads, and clogging. Replace unserviceable parts as required.

Go on to Sheet 6

TA107661

FUEL RETURN LINES REPLACEMENT (Sheet 6 of 10)**INSTALLATION:**

1. Using 15/16 inch wrench on elbow (A) and 3/4 inch wrench on vent valve (B), install vent valve (B) in elbow (A).
2. Using 3/4 inch wrench on vent valve (B) and 7/8 inch wrench on fuel return line (C), install fuel return line (C) on vent valve (B).
3. Install clamp (D) on fuel return line (C).
4. Using screwdriver and 7/16 inch wrench, install screw (E) and nut (F) securing clamp (D).

5. Place cross tube (G) in vise and, using 7/16 inch wrench, install elbow (H) in cross tube (G). Remove from vise.
6. Place cross tube (G) in position and, using hands, install flat washer (J), nut (K), and fuel return line (L) on cross tube (G).
7. Using 1-1/8 inch wrench, tighten nut (K) and fuel return line (L) on cross tube (G).

Go on to Sheet 7

TA107662

FUEL RETURN LINES REPLACEMENT (Sheet 7 of 10)

8. Using 1/2inch wrench on elbow (M) and 9/16 inch wrench on fuel return line (N), install fuel return line (N) on elbow (M).

9. Using 1/2 inch wrench on elbow (M) and 9/16 inch wrench on fuel return line (P), install fuel return line (P) on elbow (M).

10. Install two clamps (Q) on fuel return line (N).

11. Place fuel return lines (N) and (P) in position on engine.

12. Using 9/16 inch wrench, install fuel return line (N) on cross tube (R).

13. Using 9/16 inch wrench, install fuel return line (S) on cross tube (R).

14. Using 1/2 inch socket with extension and 1/2 inch wrench, install two nuts (T) securing two clamps (Q).

15. Using 9/16 inch wrench on hose (V), install hose (V) on elbow (U).

16. Using 7/8 inch wrench, install fuel return line (W) on cross tube (R).

FUEL RETURN LINES REPLACEMENT (Sheet 8 of 10)

NOTE

Connectors on left and right sides are same except for last connector at accessory end of engine. Connector at accessory end on left side of engine has only one connection.

17. Using 11/16 inch socket, install bolt (X) securing new washer (Y), connector (Z), and new washer (AA).
18. Using 11/16 inch socket, install bolts, new washers, and connectors (AB), (AC), (AD), (AE), and (AF).

Go on to Sheet 9

TA107664

FUEL RETURN LINES REPLACEMENT (Sheet 9 of 10)

19. Using 9/16 inch wrench, install fuel return line (P) to connector (AG).
20. Using 9/16 inch wrench, install fuel return lines (AF), (AH), (AJ), (AK) and (AL).

NOTE

Steps 21 through 24 are for right side only. If left side fuel return lines are being replaced, go on to step 25, skip steps 21 through 24.

21. Using 9/16 inch wrench, install fuel return line (AM).

FUEL RETURN LINES REPLACEMENT (Sheet 10 of 10)

- 22. Install clamp (AN) on fuel return line (AP).
- 23. Using 9/16 inch wrench, install fuel return line (AP).
- 24. Using 1/2 inch wrench, install screw and lockwasher (AQ) securing clamp (AN).
- 25. Install cooling fans (page 9-57).
- 26. Ground hop engine (page 5-25). Purge fuel system (page 7-62) and check for leaks.

- 27. Install engine access covers (right bank) (page 6-110).
- 28. Install engine access covers (left bank) (page 6-115).
- 29. Install powerplant (page 5-14).

End of Task

TA107666

FUEL INJECTOR NOZZLES AND HOLDERS INSPECTION (Sheet 1 of 2)

TOOLS: Ratchet with 1/2 in. drive
1-1/4 in. socket with 1/2 in. drive

SPECIAL TOOLS: Spacers (Item 2, Chapter 3, Section I)

PERSONNEL: Two

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove engine cooling fan (page 9-55)
Remove engine access cover (right bank) (page 6-107)
Remove engine access cover (left bank) (page 6-112)

1. Using socket, install spacers (A) on fan drive shafts (B) and secure with nuts (C).

Go on to Sheet 2

TA107667

FUEL INJECTOR NOZZLES AND HOLDERS INSPECTION (Sheet 2 of 2)

CAUTION

Do not exceed 700 to 750 rpm and do not run engine for more than 10 minutes at a time. Before restarting, allow engine to cool.

2. Start engine (TM 5-5420-226-10).

3. Place hand between nozzle heads (A) and top of holders (B) on each fuel injector. If movement is felt, stop engine and notify support maintenance.
- 4* Using 1-1/4 inch socket, remove nut (C) and spacers (D) from fan drive shaft (E).
5. Install engine access cover (left bank) (page 6-115).
6. Install engine access cover (right bank) (page 6-110).
7. Install cooling fans (page 9-57).

End of Task

A107668

PURGE FUEL SYSTEM (Sheet 1 of 2)

TOOLS: 7/16 in. combination box and open end wrench
Flashlight

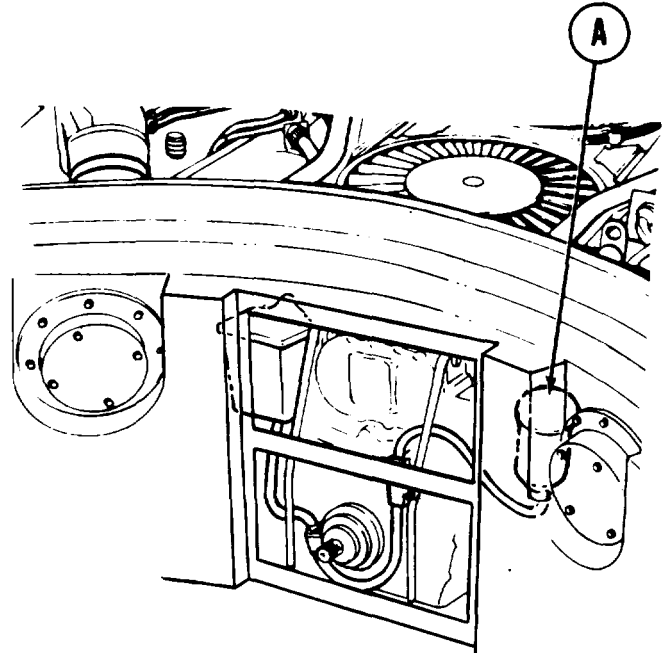

PERSONNEL: Two

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove upper engine access cover (page 17-14)

PURGING:

1. Using wrench and flashlight, reach through access and loosen fuel filter bleed cap (A).
2. Set FUEL PUMP switch to ON (TM 5-5420-226-10).
3. Set MASTER BATTERY switch to ON (TM 5-5420-226-10).

NOTE

If no air bubbles are observed in step 4, go to step 7.

4. Observe for air release bubbles from bleed cap (A).
5. Set MASTER BATTERY switch to OFF (TM 5-5420-226-10).
6. Wait approximately 1 minute, then repeat steps 3 and 4 until a constant fuel flow is observed from bleed cap (A).

Go on to Sheet 2

TA107669

PURGE FUEL SYSTEM (Sheet 2 of 2)

7. Using wrench, tighten bleed cap (A).
8. Set MASTER BATTERY and FUEL PUMP switches to OFF (TM 9-2350-257-10).

9. Using wrench and flashlight, reach through access and loosen fuel-water separator bleed cap (B).

NOTE

Do not activate manifold heater switch when operating primer pump handle.

10. MANUALLY operate primer pump handle (TM 5-5420-226-10).
11. Observe air release bubbles from fuel-water separator bleed cap (B).
12. Continue to operate primer pump until a constant fuel flow is observed from bleed cap (B).
13. Using wrench, close bleed cap (B).
14. Install engine upper access cover (page 17-15).

End of Task

TA107670

AIR CLEANER INTAKE AND HOSE REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-66
Installation	7-69

TOOLS: 9/16 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 Flat-tip screwdriver
 Putty knife
 3/8 in. open end wrench
 Universal socket with 1/2 in. drive

SUPPLIES: Gasket (10863870)
 Gasket (11591585) (2 required)
 Adhesive (Item 2, Appendix D)
 Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top grille doors (TM 5-5420-226-10)

NOTE

Removal of the left or right intake hose is the same. Left side shown.

Go on to Sheet 2

TA107671

AIR CLEANER INTAKE AND HOSE REPLACEMENT (Sheet 2 of 5)**REMOVAL:**

1. Use a 3/8 inch wrench and loosen clamp nut (A) at end of intake hose (B).
2. Slide clamp (C) over intake hose (B) to middle of hose.
3. Use a screwdriver and pry hose (B) from elbow (D), remove clamp (C).

4. Close grille doors and go inside crew compartment.
5. Use a 1/2 inch socket and remove four screws and washers (E).
6. Remove cover and gasket (F).
7. Inspect gasket cemented to cover (F). If damaged, use putty knife and remove gasket. Apply adhesive to new gasket and position onto cover.
8. Use a 9/16 inch socket and remove eight nuts and washers (G).
9. Remove air intake flange assembly (H) and hose (B).
10. Inspect gasket (J) cemented to bulkhead. If damaged, use putty knife and remove gasket. Apply adhesive to new gasket (J) and position on bulkhead.

Go on to Sheet 3

TA107672

AIR CLEANER INTAKE AND HOSE REPLACEMENT (Sheet 3 of 5)

11. Use a universal joint and 9/16 inch socket and remove six nuts and washers (K).
12. Use a 3/8 inch wrench and loosen clamp nut (L) at end of intake hose (B), remove clamp (M).
13. Remove hose (B) from flange (N).

14. Separate intake (P) and screen (Q) with gaskets (R) from flange (N).
15. Clean and inspect screen and gaskets. If screen is damaged or defective, replace.
16. If one *or* both gaskets (R) are damaged, scrape gaskets (R) from screen (Q). Apply adhesive to new gasket and position onto screen.
17. Inspect and replace studs (S) in flange (N) as necessary.

Go on to Sheet 4

TA107673

AIR CLEANER INTAKE AND HOSE REPLACEMENT (Sheet 4 of 5)

INSTALLATION :

1. Position screen (A) with gaskets (B) over studs onto flange (C).
2. Position intake (D) over studs onto flange (C).

3. Install six nuts and washers (E) to secure intake (D), screen (A), and flange (C). Use a 9/16 inch socket and universal socket, tighten nuts (E).
4. Position hose (F) and clamp (G) onto flange (C). Use a 3/8 inch wrench and tighten nut (H) on clamp (G) securing hose (F) to flange (C).
5. Position intake (D) and flange (C) (assembled in steps 1 through 4 above), with flange (C) toward engine, over studs on bulkhead.
6. Install eight washers and nuts (J) to secure intake and flange to bulkhead. Use a 9/16 inch socket and tighten nuts (J).

Go on to Sheet 5

TA107674

AIR CLEANER INTAKE AND HOSE REPLACEMENT (Sheet 5 of 5)

7. Position cover (K) and gasket (L) onto intake.
8. Install four screws and washers (M) to secure cover (K) and gasket (L) to intake. Use 1/2 inch socket and tighten screws (M).
9. Go back to engine compartment and open grille doors (TM 5-5420-226-10).
10. Install hose (N) onto elbow (P).
11. Position clamp (Q) onto edge of hose. Use a 3/8 inch wrench and tighten clamp nut (R) securing hose (N) to elbow (P).
12. Close grille doors (TM 5-5420-226-10).

End of Task

TA107675

AIR CLEANER PLUG REPLACEMENT (Sheet 1 of 1)

TOOLS: 1-1/8 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 7/16 in. combination box and open end wrench

SUPPLIES: Sealer (Item 54, Appendix D)

NOTE

Removal of the left or right plugs are the same. Left side shown.

**REMOVAL:**

1. Using 1-1/8 inch socket, remove two plugs (A) from air cleaner housing (C).
2. Using 7/16 inch wrench, remove plug (B) from air cleaner housing (C).
3. Inspect plug threads for damage. Replace as necessary.

INSTALLATION:

1. Coat threads of three plugs (A and B) with sealer and install into air cleaner housing (C).
2. Using 1-1/8 inch wrench, tighten two plugs (A).
3. Using 7/16 inch wrench, tighten plug (B).

End of Task

TA107676

AIR CLEANER INTAKE ELBOW REPLACEMENT (Sheet 1 of 3)

TOOLS: 3/8 in. combination open and box end wrench
9/16 in. socket with 1/2 in. drive
10 in. extension with 1/2 in. drive
Ratchet with 1/2 in. drive
9/16 in. combination open and box end wrench
"Universal joint with 1/2 in. drive
Pry bar

REFERENCES: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top grille doors (TM 5-5420-226-10)

NOTE

Removal of the left or right intake elbow is the same. Left side shown.

Go on to Sheet 2

TA107677

AIR CLEANER INTAKE ELBOW REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using 3/8 inch wrench, loosen clamp nut (A).
2. Slide clamp (B) down over hose (C).
3. Disconnect hose (C) from elbow (D).
4. Using 9/16 inch socket, universal joint, and 9/16 inch wrench, as necessary, remove 10 nuts (E) securing elbow (D).

5. Using pry bar, pry elbow (D) away from air cleaner.
6. Remove elbow (D) off studs (F) of air cleaner.
7. Remove and discard gasket (G) from studs of air cleaner.

Go on to Sheet 3

TA107678

AIR CLEANER INTAKE ELBOW REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position new gasket (A) onto studs of air cleaner.
2. Install elbow (B) onto studs of air cleaner.
3. Install 10 nuts (C) onto studs to secure elbow (B) to air cleaner.

4. Using 9/16 inch socket, universal joint, or 9/16 inch wrench, tighten 10
5. Install hose (D) onto elbow (B).
6. Slide clamp (E) up over hose (D) and onto elbow (B).
7. Using 3/8 inch wrench, tighten clamp nut (F) to secure clamp (E).
8. Close top grille doors (TM 5-5420-226-10).

End of Task

TA107679

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 1 of 3)

TOOLS: Flat-tip screwdriver
1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
1/2 in. combination box and open end wrench
10 in. extension with 1/2 in. drive

SUPPLIES: Gasket (8762780)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top grille doors (TM 5-5420-226-10)

NOTE

Removal of left or right turbo-charger elbow is the same. Left side shown.

Go on to Sheet 2

TA107680

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using screwdriver, loosen two clamps (A) securing hose (B) to turbocharger elbow (C).

2. Using socket and wrench, remove eight nuts, lockwashers, and flat washers (D) securing elbow (C) to turbocharger.
3. Remove elbow (C) and gasket (E). Throw gasket away.
4. Make sure elbow (C) and turbocharger inlet mating surfaces are not nicked, burred, or damaged. Make sure eight nuts and studs are not stripped or damaged.

TA107681

AIR CLEANER TURBOCHARGER ELBOW REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position new gasket (A) onto studs of turbocharger.
2. Position elbow (B) onto studs of turbocharger.
3. Install eight flat washers, lock-washers, and nuts (C) onto studs to secure elbow.
4. Using socket and wrench, tighten nuts (C).

5. Install hose (D).
6. Using screwdriver, tighten two clamps (E) to secure hose to elbow (B).

NOTE

Make sure fingers of clamp (E) grip lip of elbow (B).

7. Close top grille doors (TM 5-5420-226-10).

End of Task

TA107682

AIR CLEANER BLOWER FAN POWER LEAD REPLACEMENT (Sheet 1 of 3)

TOOLS: Slip joint pliers

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open top grille doors (TM 5-5420-226-10)
Remove blower fan hose (page 7-103)

NOTE

Removal of left or right blower fan power lead is the same. Left side shown.

REMOVAL:

1. Disconnect electrical connector (A).
2. Push shell (B) back away from contact (C).
3. Using slip joint pliers, remove washer (D) from contact (C).
4. Remove shell (B).

Go on to Sheet 2

TA107683

AIR CLEANER BLOWER FAN POWER LEAD REPLACEMENT (Sheet 2 of 3)

5. Using slip joint pliers, disconnect nut (E) from adapter (G).
6. Pull lead (F) out of adapter (G). When lead is pulled, washers (H) and (J) and gasket - (K) will also be pulled out.
7. Remove lead (F). Remove washers (H) and (J), and nut (E) from lead (F).
8. Inspect all parts removed for defects or deterioration. Replace as necessary.

Go on to Sheet 3

TA107684

AIR CLEANER BLOWER FAN POWER LEAD REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Install the following parts onto lead (A): nut (B), washer (C), washer (D), and gasket (E).

2. Install lead (A) through adapter (F). Pull approximately 10 inches of lead out of adapter.
3. Install shell (G) approximately 5 inches over end of lead (A) and install washer (H).
4. Pull shell (G) toward end until it is stopped by washer (H).
5. Push gasket (E) and washers (C) and (D) into adapter (F).
6. Thread nut (B) onto adapter (F). Use slip joint pliers and tighten nut.

7. Install blower fan hose (page 7-103).
8. Connect electrical connectors (K).
9. Check operation of air cleaner (TM 5-5420-226-10).
10. Close top grille doors (TM 5-5420-226-10).

End of Task

TA107685

AIR CLEANER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 1 of 3)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-81
Installation	7-82

TOOLS 7/16 in. deepwell socket, 3/8 in. drive
 Knife, pocket
 Ratchet, 3/8 in. drive
 Wrench, torque, 3/8 in. drive, 0 to 200 lb in.

SUPPLIES: Packing, preformed (2 required)
 Adhesive (Item 4, Appendix D)
 Rag, wiping (Item 65, Appendix D)

REFERENCE: (TM 5-5420-226-10).

NOTE

Replacement of left and right side air cleaner outlet hose assemblies is the same. Left side shown.

REMOVAL:

CAUTION

Do not open top deck doors when air cleaner door assembly is open. Damage to air cleaner door may result.

1. Open top deck door assemblies (TM 5-5420-226-10).

Go on to Sheet 2

AIR CLEANER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 2 of 3)

2. Pull pin (A) and release quick release clamp (B).
3. Remove quick release clamp (B) from hose and elbow.
4. Using socket, loosen nut (C) securing clamp (D).
5. Remove hose assembly (E).
6. Remove clamp (D).

7. Cover air cleaner outlet elbow and turbosupercharger inlet elbow with rags to prevent entrance of foreign matter.
8. Inspect hose assembly (E) for damage or defective parts. Replace hose assembly if hose or flange is unserviceable.
9. If hose (F) is serviceable, remove preformed packings (G) from ends of hose assembly flanges. Throw packings away. Using knife, clean old adhesive from grooves in flanges.

INSTALLATION:

NOTE

If installing new hose **assembly**, skip step 1 and 2.

1. Apply adhesive to grooves in flanges in hose (A).
2. Install new preformed packings (B) into grooves in flanges.

Go on to Sheet 3

AIR CLEANER OUTLET HOSE ASSEMBLY REPLACEMENT (Sheet 3 of 3)

3. Put clamp (C) on turbosupercharger elbow flange.
4. Position hose assembly (D) between air cleaner outlet elbow and turbosupercharger inlet elbow.
5. Aline hose flange to turbosupercharger elbow flange. position clamp (C) on hose assembly (D) and hand tighten clamp nut.

6. Aline hose flange to air cleaner outlet elbow and install clamp (E).
7. Engage T-bolts to hasp on clamp (E) and close clamp handle.
8. Install pin (F) to secure clamp handle.
9. Using socket, tighten adjusting nut (G) on clamp (E) to eliminate clearance between hasp and T- bolt. Turn nut one additional turn.
10. Using socket and torque wrench, tighten nut of clamp (D) to 25 to 35 lb-in (3 to 4 N•m).
11. Close top deck door assemblies (TM 5-5420-226-10).

End of Task

AIR CLEANER RESTRICTION INDICATOR (LEFT AND RIGHT) REPLACEMENT (Sheet 1 of 1)

TOOLS: 7/16 in. combination box and open end wrench
Slip joint pliers

REFERENCES: TM 5-5420-226-10

NOTE

Removal of left or right restriction indicator is the same. Left side is shown.

REMOVAL:

1. Using wrench, remove restriction indicator (A).
2. Remove plug (B) from side of guard (C) and thread plug into threaded hole where restriction indicator was.
3. Using pliers, open hooks (D) and replace hooks (D), chain (E), or plug (B), as necessary.

INSTALLATION:

1. Remove plug (B) from restriction indicator mounting hole.
2. Install restriction indicator (A). Using wrench, tighten restriction indicator.
3. Thread plug (B) into threaded hole on side of guard (C).
4. Check indicator for operation (TM 5-5420-226-10).

End of Task

TA107689

AIR CLEANER REPLACEMENT (Sheet 1 of 8)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-85
Installation	7-89

TOOLS: 3/8 in. combination box and open end wrench
 Flat-tip screwdriver
 Torque wrench with 1/2 in. drive (0-175 lb-ft)
 Oil can
 Ratchet with 1/2 in. drive
 Hinged handle breaker bar with 1/2 in. drive

9/16 in. socket with 1/2 in. drive
 9/16 in. combination box and open end wrench
 5/8 in. socket with 1/2 in. drive
 5/8 in. combination box and open end wrench
 10 in. extension with 1/2 in. drive

SPECIAL TOOLS: Three-point sling (Item 31, Chapter 3, Section I)

SUPPLIES: Silicone compound (Item 32, Appendix D)
 Covers (for turbocharger hose)
 Locking compound (Item 18, Appendix D)
 Primer paint (Item 50, Appendix D)

REFERENCE: TM 5-5420-226-10

Go on to Sheet 2

TA107690

AIR CLEANER REPLACEMENT (Sheet 2 of 8)

REMOVAL:

1. Open top deck doors (TM 5-5420-226-10).
2. Using 3/8 inch wrench, loosen clamp (A) holding inlet hose (B) to inlet elbow (C).
3. Separate hose (B) far enough from inlet elbow (C) to allow air cleaner to be removed without pulling hose.
4. Pull air cleaner electrical lead (D) from harness connector (E).

5. Using screwdriver, loosen clamp (F) securing air cleaner outlet hose (G) to turbocharger.
6. Disconnect hose from air cleaner elbow (H).

NOTE

If right air cleaner is being removed, do steps 7 and 8 and then go on to step 9. If left air cleaner is being removed, skip steps 7 and 8 and go on to step 9.

7. Using 9/16 inch wrench, loosen nut (J).
8. Using 9/16 inch wrench, disconnect hose (K) from air cleaner elbow (H).

Go on to Sheet 3

TA107691

AIR CLEANER REPLACEMENT (Sheet 3 of 8)

9. Using 9/16 inch socket, remove four screws (L) and washers (M) holding fender skirt (N) to air cleaner.
10. Using 9/16 inch socket, remove two locknuts (P) and washer (Q) holding fender skirt to both outriggers.
11. Using 9/16 inch socket, remove bolt (R), lockwasher (S), washer (T), lockwasher (U), and nut (V) holding fender skirt (N). Remove fender skirt (N).

12. Close top deck grille doors (TM 5-5420-226-10).
13. Attach sling to three lifting eyes. Take up slack on sling with hoist.

Go on to Sheet 4

TA107692

14. Use 5/8 inch wrench to hold nut (W) while using 5/8 inch socket, extension, and breaker handle to remove six screws (X), washers (Y), lockwashers (Z) and nuts (W).
15. While two persons guide air cleaner, use hoist to lift air cleaner off vehicle.
16. Install hose covers on hose (G).

AIR CLEANER REPLACEMENT (Sheet 5 of 8)

INSTALLATION:

NOTE

Clean all dirt and debris from mounting area before installing air cleaner.

1. Attach three-point sling (A) to three lifting eyes (B) on air cleaner (C) and lift air cleaner to mounting place on vehicle.

NOTE

It may be necessary to open grille doors while guiding air cleaner into place. Close doors after air cleaner is positioned.

2. Have two persons guide air cleaner into mounting place. Make sure electrical lead comes through hull access opening.

Go on to Sheet 6

TA107694

AIR CLEANER REPLACEMENT (Sheet 6 of 8)

3. Before installing air cleaner, apply primer and locking compound to threads of nuts and bolts and to washers.

4. Using 5/8 inch socket, install six bolts (D), washers (E) and (F), and nuts (G).

5. Using torque wrench and 5/8 inch socket, tighten six bolts (D) 85 to 95 lb-ft (115 to 129 N·m).

Go on to Sheet 7

TA107695

AIR CLEANER REPLACEMENT (Sheet 7 of 8)

7. Using 9/16 inch socket, install two locknuts (J) and washers (K) to hold fender skirt (H) to both outriggers.
8. Lubricate four screws (L).
9. Using 9/16 inch socket, install four screws (L) and washers (M) to hold fender skirt (H) to air cleaner (N).
10. Using torque wrench and 9/16 inch socket, tighten four screws (L) to 25 to 30 lb-ft (34 to 41 N•m).
11. Install washer (P) and bolt (Q) from top of fender skirt.
12. Install all bolt (Q) through washer (P) and fender skirt.

NOTE

If right air cleaner is being installed, do steps 15 and 16 and then go on to step 17. If left air cleaner is being installed skip steps 15 and 16.

13. Place washer (R), lockwasher (S), and nut (T) on bolt (Q). Using 9/16 inch socket on bolt (U) and 9/16 inch open end wrench on nut (T), tighten nut (T).
14. Open top deck doors (TM 5-5420-226-10).
15. Using 9/16 inch wrench, install hose (U) to air cleaner.
16. Using 9/16 inch wrench, tighten nut (V).

TA107696

Go on to Sheet 8

AIR CLEANER REPLACEMENT (Sheet 8 of 8)

17. Remove cover from hose (W) opening.
18. Connect hose (W) to air cleaner elbow (X).
19. Using screwdriver, tighten clamp (Y) securing hose (W) to elbow (X).
20. Coat electrical leads (Z) and (AA), with silicone compound.
21. Connect air cleaner lead (Z) to wiring harness' lead (AA).
22. Connect hose (AB) to air cleaner elbow (AC).
23. Using 3/8 inch wrench, tighten clamp (AD) nut to hold hose (AB) to elbow (AC).
24. Check air cleaner for operation (TM 5-5420-226-10).
25. Close top deck doors (TM 5-5420-226-10).

End of task

AIR CLEANER FILTER ELEMENT CLEANING OR REPLACEMENT (SHEET 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-93
Inspection	7-95
Cleaning	7-95
Installation	7-96

TOOLS: 9/16 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive

SPECIAL TOOLS: V-Pack cleaner assembly (Item 4.1, Chapter 3, Section I)

SUPPLIES: Detergent (Item 33, Appendix D)
 Rags (Item 65, Appendix D)
 Leather gloves (Item 68, Appendix D)
 Goggles (Item 71, Appendix D)
 Face shield (Item 69, Appendix D)
 Watch
 Container for washing filter
 90 psi air supply
 Water
 Extension light

Go on to Sheet 2

AIR CLEANER FILTER ELEMENT CLEANING OR REPLACEMENT (Sheet 2 of 5)

REMOVAL:

WARNING

if NBC exposure is suspected, all air filter media should be handled by personnel wearing protective equipment. Consult your unit NBC Officer or NBC NCO for appropriate handling or disposal instructions.

To prevent screws from pulling out of box and injuring personnel, a minimum of 200 pounds must be placed atop the door before attempting to remove screws

1. Using socket, loosen three screws (A) and remove from door (B).
2. Open door (B) until it rests on rear fender box,
3. Inspect gasket on door(B). If damaged, replace (page 7-115).

5. Carefully lift filter element (C) out of air cleaner housing (D).

CAUTION

When removing filter element (C), use care not to damage filter seal (E). Do not stand filter element on seal end.

6. Cover engine air intake opening (F) with barrier material to keep out dust

Go on to Sheet 3.

4. Slide filter element (C) toward front of vehicle.

AIR CLEANER FILTER ELEMENT CLEANING OR REPLACEMENT (Sheet 3 of 5)**INSPECTION:**

1. Inspect filter element for rupture in filter material or damage or looseness of seal. Replace element if damaged in any way.
2. Inspect filter element to determine if contaminated with dust or oil. Element can be cleaned by using compressed air or by washing.
3. If filter is contaminated with dust, clean by using 90 psi compressed air.
4. If filter is contaminated with carbon or oil deposits, clean by washing.

CLEANING:**WARNING**

Compressed air used for cleaning air filter elements will not exceed 90 psi. Use only with effective chip guarding and personal protective equipment (goggles, face shield, gloves, long sleeves, etc.).

Compressed Air:

1. Using V-Pack cleaner assembly (Item 4.1, Chapter 3, Section I), direct stream of compressed air against inside of filter element.
2. Move air stream up and down length of pleats until no dust is visibly being blown out.

Washing:**CAUTION**

Do not hit element against solid object. Damage may occur to element.

1. Shake or blow off dust before wetting filter element.
2. Prepare solution of warm water (80°F to 110°F) (27°C to 43°C) and detergent in container large enough to hold filter element.

Go on to Sheet 4

AIR CLEANER FILTER ELEMENT CLEANING OR REPLACEMENT (Sheet 4 of 5)

3. Soak filter element in cleaning solution for 15 to 20 minutes, then gently shake it back and forth for 2 to 3 minutes to free dirt deposits.
4. Rinse filter element with cool water (35°F to 80°F) (2°C to 27°C) until all traces of dirt and detergent are removed.
5. If hose is used to rinse filter element, maximum line pressure of 40 psi should be used.

CAUTION

Make sure filter element is completely dry before using. Inspect filter element after drying to be sure dust is not caked inside element.

6. Air dry at normal room temperature until filter element is completely dry. If circulating air is used, temperature must not exceed 180°F (82°C).
7. After cleaning, inspect filter element for damage to seal or ruptured filter material, place light inside filter element, and inspect from outside. If ruptured, replace with new filter element.
8. Use a clean, damp rag and wipe out filter compartment.

INSTALLATION:

CAUTION

Be careful when installing filter element not to damage filter seal.

1. Open door (A).
2. Install filter element (B) by lowering it to bottom of filter compartment (C).
3. Slide filter element (B) rearward to seal element in position.

Go on to Sheet 5

AIR CLEANER FILTER ELEMENT CLEANING OR REPLACEMENT (sheet 5 of 5)

4. Make sure that filter element (B) is properly positioned so that door arms (D) engage locking pins on sides of filter element.

WARNING

To prevent screws from pulling out of box and injuring personnel, a minimum of 200 pounds must be placed atop the door before installing screws.

- 5* Close door (A) and, using socket, install screws (E).
6. Using socket, tighten screws (E) to secure door (A).
7. Press indicator reset button (F) to make sure indicator shows clear window.
8. Check operation of air cleaner (TM 5-5420-226-10).

End of Task

AIR CLEANER OUTLET ELBOW REPLACEMENT (Sheet 1 of 2)

- TOOLS:
- 9/16 in. socket with 1/2 in. drive
 - Ratchet with 1/2 in. drive
 - Torque wrench with 1/2 in. drive
(0-175 lb-ft) (0-237 N•m)
 - 10 in. extension with 1/2 in. drive
 - Pry bar
 - 9/16 in. combination box and open end wrench
 - Universal joint with 1/2 in. drive

- SUPPLIES:
- Gasket
 - Self-locking nuts (14 required)

- PRELIMINARY PROCEDURES:
- Remove air cleaner (page 7-85)
 - Remove restriction indicator (page 7-84)

NOTE

Removal of left or right outlet elbow is the same. Left side shown.

REMOVAL:

1. Using socket and wrench, remove 14 nuts (A).
2. Using pry bar, loosen elbow (B) from air cleaner.
3. Remove elbow (B) and gasket (C). Throw gasket away.
4. Inspect studs for damaged threads and for stamping of H on ends. If threads are damaged *or* ends are not stamped with H, replace studs.

Go on to Sheet 2

AIR CLEANER OUTLET ELBOW REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Position new gasket (A) and elbow (B) onto studs on air cleaner.
2. Using socket, extension, and wrench, install **14** nuts (C) securing elbow (B) to air cleaner. Tighten nuts (C) to 35 lb-ft (47 N*m) using sequence shown.
3. Repeat sequence tightening nuts (C) to 50 lb-ft (68 N-m)
4. Install restriction indicator (page 7-84)
5. Install air cleaner (page 7-89).

End of Task

AIR CLEANER BLOWER COVER AND GASKET REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
2 in. extension with 1/2 in. drive
Cross-tip screwdriver

SUPPLIES: Sealing compound (Item 24, Appendix D)
Silicone compound (Item 32, Appendix D)
Gasket (12251902)

REFERENCE: TM 5-5420-226-10

Go on to Sheet 2

TA107705

AIR CLEANER BLOWER COVER AND GASKET REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using socket, remove 10 screws and lockwashers (A) securing cover (B).
2. Place cover (B) on top of housing (C).

3. Disconnect four electrical leads from two circuit breakers (D) mounted to underside of cover (B).
4. Remove cover (B) and gasket (E). Throw gasket away.

5. Using screwdriver, remove four screws and lockwashers (F) securing two circuit breakers to cover (B).

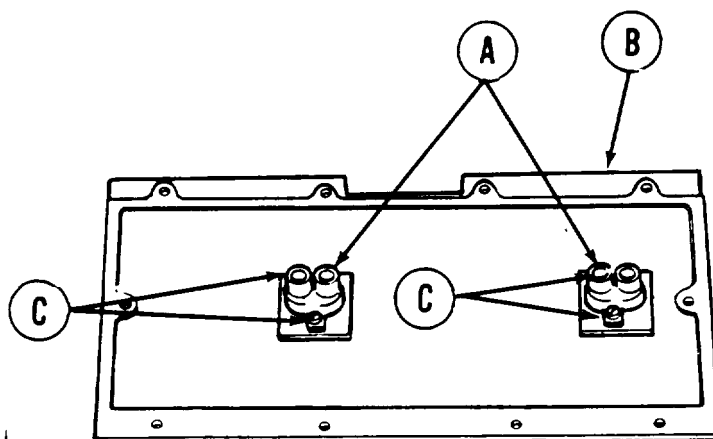

Go on to Sheet 3

TA107706

AIR CLEANER BLOWER COVER AND GASKET REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Place two circuit breakers (A) in position on cover (B).
2. Using screwdriver, install four screws (C) securing circuit breaker (A) to cover (B).

3. Apply sealing compound (Item 24, Appendix D) on new gasket (D) and place in position.
4. Apply silicone compound (Item 32, Appendix D) to four male leads (E).
5. Connect leads (E) to two circuit breakers (A).

6. Place cover (B) in position on air cleaner (F).
7. Using socket, install ten screws and lockwashers (G).

End of Task

TA107707

AIR CLEANER BLOWER FAN HOSE REPLACEMENT (Sheet 1 of 1)

TOOLS: Flat-tip screwdriver
 1/2in. socket with 1/2in. drive
 Ratchet with 1/2 in. drive

SUPPLIES: Silicone compound (Item 32, Appendix D)

NOTE

Removal of left or right blower fan hose is the same. Left side shown.

REMOVAL:

1. Using socket, remove 10 screws (A) and lockwashers (B) securing cover (C).
2. Using flat-tip screwdriver, loosen clamps (D).
3. Slide clamps (D) onto hose (E).
4. Remove hose (E) from blower fan (F) and housing (G).
5. Inspect hose (E) and clamps (D). Replace as necessary.

**INSTALLATION:**

1. Position clamps (D) onto hose (E).
2. Coat inside diameter of hose ends with silicone compound and install hose (E) to blower fan (F) and housing (G).
3. Slide clamps (D) to ends of hose. Use flat-tip screwdriver and tighten clamps (D).
4. Install cover (C) and secure with 10 screws (A) and lockwashers (B).
5. Using socket, tighten screws (A).

End of Task

TA107708

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 1 of 7)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-104
Inspection and Repair	7-106
Installation	7-107

TOOLS: 1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
10 in. extension with 1/2 in. drive
Flat-tip screwdriver

SUPPLIES: Sealing compound (Item 24, Appendix D)
Silicone compound (Item 32, Appendix D)

REFERENCES: TM 5-5420-226-10

NOTE

Removal of the left or right blower fan is the same. Left side shown.

Go on to Sheet 2

TA107709

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 2 of 7)

REMOVAL:

1. Using socket, remove 10 screws and lockwashers (A) securing cover (B).
2. Place cover (B) on housing (C).

3. Disconnect four electrical leads from two circuit breakers (D) mounted to underside of cover (B).
4. Remove cover (B).

NOTE

There are two blower fans in each air cleaner. Each blower fan is removed in the same way.

5. Using screwdriver, loosen clamp (E) securing hose (F) to inlet of blower fan (G). Slide clamp onto hose.
6. Remove hose (F) from inlet of blower fan (G).

Go on to Sheet 3

TA107710

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 3 of 7)

7. Disconnect blower fan lead (H) from ground lead (J).
8. Using socket and extension, remove two screws and washers (K) securing strap (L).
9. Remove strap (L).
10. Remove blower fan (G).

11. Disconnect jumper lead (M) from blower fan lead.
12. Using socket and extension, remove screw (N) and washer (P).
13. Remove support (Q) and pad (R).

INSPECTION AND REPAIR:

1. Inspect gasket on housing. If damaged or deteriorating, replace.

Go on to Sheet 4

TA107711

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 4 of 7)

2. Inspect support for defects or damage. Replace or repair as necessary.
3. Inspect condition of pad. If defective or deteriorating, replace.
4. Inspect jumper lead. Check condition of insulation, connectors, and for continuity. Replace as necessary.
5. Inspect all threaded holes for damage or defects. Repair as necessary.

**INSTALLATION:**

1. Position pad (A) and support (B) into housing.
2. Coat threads of screw (C) with sealer and install with washer (D) to secure support (B).
3. Using socket with extension, tighten screw (C).

Go on to Sheet 5

TA107712

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 5 of 7)

4. Connect jumper lead (E) to short lead from blower fan (F).

5. Position blower fan (F) into housing (with exhaust outlet of blower facing exhaust elbows) onto support.

6. Position strap (G) over blower fan (F).

7. Install two screws and washers (H) to secure strap (G) to support.

8. Using socket with extension, tighten screws (H).

9. Connect long lead (J) from blower fan (F) to ground lead connector (K).

Go on to Sheet 6

TA107713

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 6 of 7)

10. Apply silicone compound to inside diameter of hose end and connect hose (L) to inlet of blower fan (F).

11. Slide clamp (M) up over hose and inlet of blower fan (F).

12. Using screwdriver, tighten clamp (M).

13. If new gasket (N) is being used, apply sealing compound to gasket and position onto housing.

14. Lay cover (P) (with circuit breakers facing up) on air cleaner housing.

15. Connect four electrical leads to two circuit breakers (Q).

16. Check operation of blower fan (TM 5-5420-226-10).

Go on to Sheet 7

TA107714

AIR CLEANER BLOWER FAN REPLACEMENT (Sheet 7 of 7)

17. Position cover (P) onto housing (R).

18. Install 10 screws and washers (S) to secure cover (P).

19. Using socket, tighten screws (S).

End of Task

TA107715

AIR CLEANER CIRCUIT BREAKER REPLACEMENT (Sheet 1 of 1)

TOOLS: Cross-tip screwdriver
 1/2in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive

REFERENCE: TM 5-5420-226-10

NOTE

All air cleaner circuit breakers are removed and installed the same way.

REMOVAL:

1. Using socket, remove 10 screws (A) and lockwashers (B) securing cover (C).
2. Using screwdriver, remove screws (D) and washers (E) securing circuit breaker (F) to cover (C).
3. Remove circuit breaker (F).
4. Disconnect two electrical leads (circuit 415).

INSTALLATION:

1. Position circuit breaker (F) onto cover (C).
2. Install washers (E) and screws (D) to secure circuit breaker (F) to cover (C). Use cross-tip screwdriver and tighten screws (D).
3. Connect two electrical leads (circuit 415).
4. Install cover (C) and secure with 10 screws (A) and lockwashers (B).
5. Using socket, tighten screws (A).
6. Check operation of blowers (TM 5-5420-226-10).

End of Task

TA107716

AIR CLEANER BLOWER FAN GROUND LEAD REPLACEMENT (Sheet 1 of 2)

TOOLS: 7/16 in. socket with 1/2 in. drive
1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
10 in. extension with 1/2 in. drive

REFERENCE: TM 5-5420-226-10

NOTE

Removal of left or right blower fan ground lead is the same. Left side shown.

REMOVAL:

1. Using 1/2 inch socket, remove 10 screws (A) and lockwashers (B) securing cover (C). Remove cover (c).
2. Disconnect two connectors (D) from blower leads (E).
3. Using 7/16 inch socket, remove screw (F) and two washers (G) securing ground lead (H) to boss (J).

Go on to Sheet 2

TA107717

AIR CLEANER BLOWER FAN GROUND LEAD REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Connect two connectors (A) to blower connectors (B).
2. Install screw (C) and two washers (D) to secure ground lead (E) terminal to boss (F).
3. Using 7/16 inch socket, tighten screw (C).
4. Install cover (G) and secure with 10 screws (H) and lockwashers (J).
5. Using 1/2 inch socket, tighten screws (H).
6. Check operation of blower (TM 5-5420-226-10).

End of Task

TA107718

AIR CLEANER DOOR REPAIR (Sheet 1 of 3)

TOOLS: 9/16 in. combination box and open end wrench
 Long round nose pliers
 Hammer (or mallet)
 Slip joint pliers

SUPPLIES: Gasket
 Cotter pins (3 required)
 Goggles (Item 71, Appendix D)
 Leather gloves (Item 68, Appendix D)
 Loctite adhesive (Item 66, Appendix D)
 Face shield (Item 69, Appendix D)

REMOVAL:

WARNING

To prevent screws from pulling out of box and injuring personnel, a minimum of 200 pounds must be placed atop the door before attempting to remove screws.

NOTE

If captive screws are used, they will only be loosened and not removed.

1. Using wrench, remove three screws (A).
2. Using long round nose pliers, pull three cotter pins (B) out of three straight pins (c).
3. Remove flat washers (D).
4. Using hammer, tap straight pins (C) free of door hinges (E).
5. Using slip joint pliers, pull three straight pins (C) from door hinges.
6. Lift door assembly (F) and remove it from air cleaner housing (G).

Go on to Sheet 2

AIR CLEANER DOOR REPAIR (sheet 2 of 3)**INSPECTION AND REPAIR:**

1. Inspect bolts (A) and gasket (B).
2. If threads of bolts (A) are stripped, replace bolts.
3. If gasket (B) is damaged in any way, remove it.
4. Apply adhesive on new gasket (B). Install gasket into groove at underside of door (C).

WARNING

Compressed air used for cleaning purposes will not exceed 30 psi. Use only with effective chip guarding and personal protective equipment (goggles face shield, gloves, long sleeves, etc.).

5. Inspect screw holes in housing (D). If holes are not drilled through, use compressed air to remove sand, dirt, or debris from holes.
6. Replace marker (E) or identification plate (F) as necessary. Install marker (E) so it can be read from center of vehicle.

Go on to Sheet 3

AIR CLEANER DOOR REPAIR (Sheet 3 of 3)

INSTALLATION:

1. Lift door assembly (A) into place on air cleaner housing (B).
2. Using hammer, tap three straight pins (C) into three hinges (D).
3. Install three flat washers (E) onto three straight pins (C).
4. Using hammer, tap three new cotter pins (F) into holes in straight pins (C).
5. Using hammer, tap cotter pins (F) around straight pins (C) to secure washers (E) and pins in place.
6. Make sure door assembly (A) is in closed position (lowered).

WARNING

To prevent screws from pulling out of box and injuring personnel, a minimum of 200 pounds must be placed atop the door before installing screws.

7. Using wrench, install and tighten three screws (G) to secure door assembly (A) to air cleaner housing (B).

End of Task

AIR CLEANER MANIFOLD COVER GASKET REPLACEMENT (Sheet 1 of 2)

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 2 in. extension with 1/2 in. drive

SUPPLIES: Sealing compound (Item 24, Appendix D)
 Gasket
 Lockwasher (10 required)

NOTE

Replacement of left or right side cover and gasket is similar. Left side shown.

REMOVAL:

1. Using socket, remove 10 screws and lockwashers (A) securing cover (B).

2. Remove cover (B) and gasket (C). Throw gasket away.

Go on to Sheet 2

AIR CLEANER MANIFOLD COVER AND GASKET REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Apply sealing compound to mounting surface (A) of air cleaner (B).
2. Put gasket (C) in place on mounting surface (A).
3. Place cover (D) in position on air cleaner (B).
4. Using socket, install 10 screws (E) and new lockwashers (F).

End of Task

AIR CLEANER MANIFOLD AND RELATED PARTS REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-116.4
Installation	7-116.5

TOOLS: 1/4 in. flat-tip screwdriver
 7/16 in. combination box and open end wrench
 1/2 in. combination box and open end wrench
 1/2 in. socket with 1/2 in. drive
 6 in. extension with 1/2 in. drive
 Ratchet with 1/2 in. drive

SUPPLIES: Silicone compound (Item 32, Appendix D)
 Sealing compound (Item 24, Appendix D)
 Gasket
 Hose (2 required)
 Lockwasher (5 required)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open top deck grille doors (TM 5-5420-226-10)
 Remove manifold cover (page 7-116.1)

NOTE

Replacement of left or right manifold is similar. Left manifold shown.

Go on to Sheet 2

ALR CLEANER MANIFOLD AND RELATED PARTS REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using screwdriver, loosen clamps (A) securing hose (B).
2. Slide hose (B) back onto elbow (C).
3. Using screwdriver, loosen four clamps (D) securing two hoses (E) to manifold (F) and precleaned tubes (G).
4. Using 7/16 inch wrench, remove four screws (H) and lockwashers (J) securing manifold (F) to side of housing.
5. Using 1/2 inch socket, remove screw (K) and lockwasher (L) securing bracket (M) to bottom of housing.
6. Slide hoses (E) onto manifold (F) until hoses are even with edge of manifold. Turn manifold until both inlet tubes are facing up. Remove clamps (D).
7. Remove manifold (F) from housing.
8. Remove and discard hoses (E) and gasket (N) from manifold (F).
9. Using 7/16 inch wrench, remove screw (P) and lockwasher (Q) securing bracket (M) to manifold (F).

Go on to Sheet 3

AIR CLEANER MANIFOLD AND RELATED PARTS REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position bracket (A) to manifold (B).
2. Using 7/16 inch wrench, install screw (C) and new lockwasher (D) to secure manifold (B) to bracket (A).
3. Apply silicone compound to inside ends of two new hoses (E).
4. Slide hoses (E) onto manifold (B).
5. Install new gasket (F) onto manifold (B).
6. Position manifold into housing.
7. With hoses (E) facing up, install two clamps (G) onto each hose (E).
8. Rotate manifold (B) until hoses (E) line up with precleaned tubes (H).
9. Slide hoses (E) onto precleaned tubes (H).

10. Using 1/2 inch wrench, install screw (J) and new lockwasher (K) to secure bracket (A) to bottom of housing.
11. Apply a thin coat of sealing compound to threads of four screws (L).
12. Using 7/16 inch wrench, install four screws (L) and new lockwashers (M) to secure manifold (B) and gasket (F) to side of housing.
13. Position clamps (G) on hoses (E) over manifold (B) and precleaned tubes (H). Use screwdriver and tighten clamps (G).

Go on to Sheet 4

AIR CLEANER MANIFOLD AND RELATED PARTS REPLACEMENT (Sheet 4 of 4)

14. Install manifold cover (page 7-116.2).
15. Slide hose (N) from elbow (P) onto manifold (B).
16. Position clamps (Q) over hose (N) and, using screwdriver, tighten clamps (Q) to secure hose (N) to elbow (P) and manifold (B).
17. Close top deck grille doors (TM 5-5420-226-10).

End of Task

DUST DETECTOR PRESSURE SWITCH AND BRACKET REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-116.7
Installation	7-116.9

TOOLS: 7/16 in. combination box and open end wrench
 9/16 in. combination box and open end wrench (2 required)
 5/8 in. combination box and open end wrench (2 required)

SUPPLIES:
 Preformed packing (2 required)
 Lockwasher (3 required)

REFERENCE: TM 5-5420-226-20-2

NOTE

Replacement procedures for the left and right side pressure switch and bracket are the same except that the left side requires removal of the top deck.

PRELIMINARY PROCEDURES: Open top deck grille doors (TM 5-5420-226-10)
 For left-side only, remove top deck (page 16-21)

Go on to Sheet 2

DUST DETECTOR PRESSURE SWITCH AND BRACKET REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Disconnect electrical connector (A) from pressure switch (B).

2. Using one 9/16 inch wrench to hold adapter (C), use other 9/16 inch wrench and disconnect hose assembly (D) from adapter (C).
3. Using 9/16 inch wrench, remove adapter (C) and preformed packing (E) from pressure switch (B). Discard preformed packing (E).
4. Using one 5/8 inch wrench to hold adapter (F), use other 5/8 inch wrench and disconnect hose assembly (G) from adapter (F).
5. Using 5/8 inch wrench, remove adapter (F) and preformed packing (H) from pressure switch (B). Discard preformed packing (H).

Go on to Sheet 3

DUST DETECTOR PRESSURE SWITCH AND BRACKET REPLACEMENT (Sheet 3 of 4)

6. Using 9/16 inch wrench, remove assembled washer-screw (J) securing bracket (K). Remove bracket with pressure switch (B) from turbosupercharger.
7. Using 7/16 inch wrench, remove three screws (L) and lockwashers (M) securing pressure switch (B) and ground lead (N) to bracket (K).
8. Remove pressure switch (B).

INSTALLATION:

1. Position pressure switch (A) to bracket (B).
2. Using 7/16 inch wrench, install three screws (C) and three new lockwashers (D) to secure pressure switch (A) and ground lead (E) to bracket (B).

Go on to Sheet 4

DUST DETECTOR PRESSURE SWITCH AND BRACKET REPLACEMENT (sheet 4 of 4)

3. Position bracket (B) with pressure switch (A) to turbosupercharger and, using 9/16 inch wrench, install assembled screw-washer (F) to secure bracket (B) to turbo-supercharger.

4. Install new preformed packing (G) onto adapter (H). Using 5/8 inch wrench, install adapter (H) onto pressure switch (A).

5. Install new preformed packing (J) onto adapter (K). Using 9/16 inch wrench, install adapter (K) onto pressure switch (A).
6. Using 5/8 inch wrench, connect and tighten hose assembly (L) to adapter (H).
7. Using 9/16 inch wrench, connect and tighten hose assembly (M) to adapter (K).
8. Connect electrical connector (N) to pressure switch (A).
9. Perform operational test (page 10-298.16).
10. For left side only, install top deck (page 16-23).
11. Close top deck grille doors (TM 5-5420-226-10).

End of Task

DUST DETECTOR FILTER STRIP AND COVER REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. combination box and open end wrench

SUPPLIES: Preformed packing (3 required)
Encased seal

REFERENCE TM 5-5420-226-20-2

PRELIMINARY PROCEDURE: Open top deck grille doors (TM 5-5420-226-10)

Go on to Sheet 2

DUST DETECTOR FILTER STRIP AND COVER REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using 1/2 inch wrench, remove screw(A) and washer (B) securing chain (C) and fastener (D).
2. Using 1/2 inch wrench, remove screw (E) and washer (F).
3. Using 1/2 inch wrench, remove screw (G) and encased seal (H). Discard encased seal.
4. Remove cover (J) from turbosupercharger (K).

5. Remove filter strip (L) and retaining strap (M) from cover (J).
6. Remove and discard preformed packings (N), (P), and (Q).

Go on to Sheet 3

DUST DETECTOR FILTER STRIP AND COVER REPLACEMENT (sheet 3 of 3)

INSTALLATION:

1. Install filter strip (A) in retaining strap (B) and insert into cover (C).
2. Install new preformed packings (D), (E), and (F) into cover (C).
3. Pull out filter strip (A) so it extends about 1/2 inch past edge of cover (C).
4. Position assembled cover (C) onto turbo-supercharger compressor housing (G).

5. Install screw (H) and washer (J) through chain fastener (K) and cover.
6. Install screw (L) and new encased seal (M).
7. Install screw (N) and washer (P).

8. Using 1/2 inch wrench, tighten screws (H), (L), and (N).
9. perform operational test (page 10-298.16).

End of Task

SERVICE DUST DETECTOR FILTER STRIP (Sheet 1 of 2)

- SUPPLIES: Pipe cleaner (Item 67, Appendix D)
 Tubing, non-metallic (Item 70, Appendix D)
 Wire, 0.030 inch diameter (Item 63, Appendix D)
 Cloth (Item 12, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)
 Goggles (Item 71, Appendix D)
 Rubber gloves (Item 72, Appendix D)

PRELIMINARY PROCEDURE: Remove dust detector filter strip and cover (page 7-116.11)

SERVICE:

WARNING

Dry Cleaning Solvent P-D-680 is toxic and flammable. To avoid injury, wear protective goggles and gloves and use in a well-ventilated area. Avoid contact with skin, eyes, and clothes, and do not breathe vapors. Do not use near open fire or excessive heat. The flash point for Type I Dry Cleaning Solvent is 100°F (38°C), and for Type II is 138°F (50°C). If you become dizzy while using Dry Cleaning Solvent, get fresh air immediately and get medical aid. If contact with eyes is made, wash your eyes with water and get medical aid immediately.

1. Using clean cloth dampened with cleaning solvent, clean cover (A) and mounting face of compressor housing (B).
2. Inspect compressor housing chamber (C) for contamination. Clean chamber (C) as required.
3. Using pipe cleaner, clean compressor housing orifice chamber (C). Use wire to clean orifice (D). Blow out chamber (C) and orifice (D) by mouth, using a short piece of tubing.

Go on to Sheet 2

SERVICE DUST DETECTOR FILTER STRIP (Sheet 2 of 2)

4. Blow out (by mouth) compressor housing hole (E).
5. Inspect cover chamber (F) for con-
lamination. Clean chamber (F) as
required.
6. Using pipe cleaner, clean drilled holes
(G) and blow out (by mouth).
7. Install dust detector filter strip and
cover (page 7-116.13).

End of Task

AIR PRESSURE HOSE ASSEMBLIES REPLACEMENT (Sheet 1 of 2)

TOOLS: 9/16 in. combination box and open end wrench (2 required)
5/8 in. combination box and open end wrench (2 required)

NOTE

Replacement of the left side air pressure hose assemblies will require removal of the top deck.

REFERENCE TM 5-5420-226-20-2

PRELIMINARY PROCEDURES: Open top deck grille doors (TM 5-5420-226-10)
For left side only, remove top deck (page 16-21)

REMOVAL:

1. Using one 9/16 inch wrench to hold adapters (A), use other 9/16 inch wrench to disconnect hose assembly (B) from adapters (A). Remove hose assembly (B).

2. Using one 5/8 inch wrench to hold adapters (C), use other 5/8 inch wrench to disconnect hose assembly (D) from adapters (C). Remove hose assembly (D).

Go on to Sheet 2

AIR PRESSURE HOSE ASSEMBLIES REPLACEMENT (Sheet 2 of 2)**INSTALLATION:**

1. Connect hose assembly (A) to adapters (B). Using 5/8 inch wrench, tighten hose assembly (A) onto adapters (B).
2. Connect hose assembly (C) to adapters (D). Using 9/16 inch wrench, tighten hose assembly (C) onto adapter (D).
3. For left side only, install top deck (page 16-23).
4. Close top deck grille doors (TM 5-5420-226-10).

End of Task

CONDENSATE RELIEF VALVE REPLACEMENT (LEFT OR RIGHT) (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
■ Removal	7-116.18
Cleaning and Inspection	7-118
Installation	7-118

- TOOLS:
- 1-3/4 in. open end wrench
 - 6 in. ruler
 - Slip joint pliers
 - Ratchet with 1/2 in. drive
 - 15/16 in. socket with 1/2 in. drive
 - Flat-tip screwdriver

- SUPPLIES:
- Dry cleaning solvent (Item 55, Appendix D)
 - Preformed packing (MS28775-214)
 - Cloth, lint-free (Item 12, Appendix D)

REMOVAL:

1. Using 15/16 inch socket, loosen bolts (A) securing top assembly doors (B). Open doors (B) to gain access to left and right fuel tanks.

Go on to Sheet 2

TA107721

CONDENSATE RELIEF VALVE REPLACEMENT (LEFT OR RIGHT) (Sheet 2 of 4)

2. Press down on connector sleeve (C) and remove plug (D).
3. Using slip joint pliers, remove chain (E) from plug (D).
4. Using 1-3/4 inch wrench, remove pipe adapter (G) from fuel tank (F). Cover fuel tank opening (F) with clean rags.
5. Press and hold down connector sleeve (C). Using screwdriver, remove retaining ring (H) by pulling out.
6. Remove connector sleeve (C), spring (J), preformed packing (K), and three ball bearings (L) from pipe adapter (G). Throw preformed packing (K) away.

Go on to Sheet 3

TA107722

CONDENSATE RELIEF VALVE REPLACEMENT (LEFT OR RIGHT) (Sheet 3 of 4)

CLEANING AND INSPECTION:

1. Using dry cleaning solvent.
2. Inspect components for cracks or breaks. Replace unserviceable components.
3. Using 6 inch ruler as measure, replace spring if free length is less than 1 inch.

INSTALLATION:

1. Position three ball bearings (A), new preformed packing (B), and spring (C) on pipe adapter (D).
2. Press connector sleeve (E) down on pipe adapter (D). Using pliers, install retaining ring (F).
3. Remove rags from fuel tank.
4. Using 1-3/4 inch wrench, install pipe adapter (D) in fuel tank (G).
5. Press down on connector sleeve (E) and install plug (H).
6. Using slip joint pliers, install chain (J) on plug (H).

Go on to Sheet 4

CONDENSATE RELIEF VALVE REPLACEMENT (LEFT OR RIGHT) (Sheet 4 of 4)

7. Close top assembly doors (K). Using 15/16 inch socket, tighten bolts (L) to secure doors (K).

End of Task

TA107724

RIGHT FUEL TANK FILLER REPAIR (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-120
Cleaning and Inspection	7-123
Installation	7-124

TOOLS: Ratchet with 1/2 in. drive
 7/8 in. socket with 1/2 in. drive
 3/16 in. socket head screw key
 Putty knife
 Diagonal cutting pliers
 Slip joint pliers
 Flat-tip screwdriver

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
 Rags (Item 12, Appendix D)
 Gasket (7398888)
 Lockwire (Item 61, Appendix D)
 Gasket (7398887)

REMOVAL:

- Using 7/8 inch socket, loosen fuel filler cover lockscrew (A).

Go on to Sheet 2

TA107725

RIGHT FUEL TANK FILLER REPAIR (Sheet 2 of 6)

- Remove lockpin (B) securing fuel filler cover (C).

- Pull up and out to remove fuel filler cover (C) to gain access to fuel tank filler.

- Rotate filler cap (D) 1/4 turn left and remove from filler neck (E).

- Disconnect filler cap retaining chain (F) from filler neck (E).

Go on to Sheet 3

TA107726

RIGHT FUEL TANK FILLER REPAIR (Sheet 3 of 6)

7. Using screwdriver, remove eight screws (G) securing filler neck seal assembly (H) between filler neck (E) and hull.
8. Remove filler neck seal washer (J), two gaskets (K and L) and neck washer (M) from between filler neck (E) and hull.

9. Throw away gaskets (K) and (L).

Go on to Sheet 4

TA107727

RIGHT FUEL TANK FILLER REPAIR (Sheet 4 of 6)

10. If required, use diagonal cutting pliers to remove lockwire (N) securing screws (P).
11. Using allen wrench, remove eight screws (P) securing filler neck (E) to fuel tank (Q).
12. Remove filler neck (E) from fuel tank (Q).
13. Remove strainer element (R) from fuel tank (Q).

CLEANING:

1. Using dry cleaning solvent, clean strainer (R).
2. Using putty knife, dry cleaning solvent, and lint-free cloth, clean around filler hole area of fuel tank (S).

INSPECTION:

Inspect strainer (R) for contamination or damage. Replace strainer (R) if unserviceable.

Go on to Sheet 5

TA107728

RIGHT FUEL TANK FILLER REPAIR (Sheet 5 of 6)

INSTALLATION:

1. Install strainer (A) in fuel tank (B).
2. Install filler neck (C) on fuel tank (B).
3. Using allen wrench, secure filler neck (C) to fuel tank (B) using eight screws (D).
4. If required, use slip joint pliers and install lockwire (E) in eight screws (D).
5. Using two new gaskets (F) and (G), assemble seal assembly (H) and tighten screws (J) finger tight.
6. Install seal assembly (H) on filler neck and, while holding filler neck in position, tighten screws (J) until gaskets (F) and (G) are compressed to form tight seal between filler neck and hull.

Go on to Sheet 6

TA107729

RIGHT FUEL TANK FILLER REPAIR (Sheet 6 of 6)

7. Connect filler cap retaining chain (K) to filler neck (C).
8. Install filler cap (L) and rotate cap 1/4 turn right to secure to filler neck (C).

9. Close fuel filler cover (M) and secure with lockpin (N).
10. Using socket, tighten lock screw (P).

End of Task

TA107730

LEFT FUEL TANK EMERGENCY FILLER REPAIR (Sheet 1 of 2)

TOOLS: Ratchet with 1/2 in. drive
7/16 in. socket with 1/2 in. drive
Diagonal cutting pliers
Slip joint pliers
Putty knife

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
Lint-free cloth (Item 12, Appendix D)
Gasket (10884006)
Lockwire (Item 61, Appendix D)

REFERENCES: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open left top deck grille door assembly (TM 5-5420 -226-10)

REMOVAL:

1. Using diagonal pliers, remove lockwire (A) from screws (B).

2. Using 7/16 inch socket, remove eight screws (B) and washers (C) holding cover (D) to fuel tank (E).
3. Remove cover (D) and gasket (F). Throw gasket away.
4. Lift out strainer (G) from fuel tank (E).

Go on to Sheet 2

TA107731

LEFT FUEL TANK EMERGENCY FILLER REPAIR (Sheet 2 of 2)

CLEANING AND INSPECTION:

1. Using dry cleaning solvent, clean strainer.
2. Using putty knife, dry cleaning solvent, and lint-free cloth, clean excess gasket material from fuel tank (A) and cover (B).
3. Inspect strainer (C) for con lamination or damaged element. Replace strainer (C) if unserviceable.

INSTALLATION:

1. Install strainer (A) in fuel tank (B).
2. Install new gasket (C) and cover (D), using eight screws (E) and washers (F).
3. Using 7/16 inch socket, tighten eight screws (E).
4. Using slip joint pliers, install lockwire (G) through eight screws (E).
5. Close left top deck grille doors (TM 5-5420-226-10).

End of Task

TA107732

FUEL TANKS (LEFT AND RIGHT) LEVEL GAGE TRANSMITTER REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-128
Installation	7-130

TOOLS: 7/16 in. open end wrench
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 Diagonal cutting pliers
 Flat-tip screwdriver
 Putty knife

SUPPLIES: Gasket (8378722)
 Locking wire (Item 61, Appendix D)
 Clean rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Launch bridge (TM 5-5420-226-10)
 Open left or right top deck grille doors (TM 5-5420-226-10)

REMOVAL:

NOTE

This procedure applies to both the left and right fuel gage transmitters unless otherwise noted.

Go on to Sheet 2

TA107733

FUEL TANKS (LEFT AND RIGHT) LEVEL GAGE TRANSMITTER REPLACEMENT (Sheet 2 of 4)

NOTE

Steps 1, 2, and 3 only apply to the right fuel gage transmitter.

1. Using 1/2 inch socket, remove three bolts (A), lockwashers (B), and two flat washers (C) securing bracket (D), safety chain (E), and cover (F) to fuel tank.
2. Using 7/16 inch open end wrench to hold nut (G), use 7/16 inch socket to remove screw (H), lockwasher (J), and nut (G) securing clamp (K) to bracket (D).
3. Remove bracket (D) and cover (F).
4. Disconnect electrical lead (L) from transmitter (M).
5. Using pliers, cut and remove lockwire (N).
6. Using screwdriver, remove five screws and washers (P) securing transmitter (M) to fuel tank.
7. Carefully lift transmitter (M) out of fuel tank until float arm gears (Q) are visible in fuel tank opening (R).
8. Reach in with finger and pull up on visible tip of float arm. Pull transmitter (M) out of tank opening (R) until float appears.

Go on to Sheet 3

TA107734

FUEL TANKS (LEFT AND RIGHT) LEVEL GAGE TRANSMITTER REPLACEMENT (Sheet 3 of 4)

9. Tilt transmitter (M). Withdraw float arm (S) from fuel tank opening (R).
10. Using putty knife, remove gasket (T) from transmitter (M). Throw gasket (T) away.
11. Cover opening (R) with clean rags to keep dirt out of fuel tank.

INSTALLATION:

NOTE

This procedure applies to both the left and right fuel gage transmitters unless otherwise noted.

1. Remove rags covering fuel tank opening (A).
2. Slip new gasket (B) onto transmitter (C).
3. Carefully work float (D) and float arm (E) into fuel tank opening (A).
4. Place gasket (B) in position on fuel tank opening (A).
5. Carefully lower transmitter (C) into position.

NOTE

Transmitter mounting holes are patterned so that the transmitter can only be installed with the electrical connector facing the hull wall.

Go on to Sheet 4

TA107735

FUEL TANKS (LEFT AND RIGHT) LEVEL GAGE TRANSMITTER REPLACEMENT (Sheet 4 of 4)

6. Using screwdriver, install five screws and washers (F) securing transmitter (C) to fuel tank.
7. Secure screws (F) with lockwire (G).
8. Connect electrical connector (H) to transmitter (C).
9. Check fuel gage for proper operation (TM 5-5420-226-10).

NOTE

Steps 10 thru 16 apply only to the right fuel gage transmitter.

10. Place cover (J) in position over transmitter (C).
11. Position safety chain (K) on bracket (L) and secure bracket with two bolts (M), lockwashers (N) and flat washers (P).
12. Install bolt (Q) and lockwasher (R) to cover (J).
13. Using 1/2 inch socket, tighten three bolts (M and Q) securing cover (J) to fuel tank.
14. Place clamp (S) around hose.
15. Install screw (T), clamp (S), lockwasher (U), and nut (V) securing clamp to bracket (L).
16. Using 7/16 inch open end wrench to hold nut (V) and use 7/16 inch socket to tighten screw (T).
17. Check fuel gage for proper operation (TM 5-5420-226-10).
18. Close top deck grille door (TM 5-5420-226-10).

End of Task

TA107736

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 1 of 7)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-132
Installation	7-135

TOOLS: Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-238 N•m)
 1/2 in. combination box and open end wrench
 Slip joint pliers
 Diagonal cutting pliers
 Putty knife
 1/2 in. socket with 1/2 in. drive

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
 Rags (Item 12, Appendix D)
 Gasket (10864231)

PRELIMINARY PROCEDURES: Drain both fuel tanks (page 7-191)
 Remove powerplant (page 5-2)
 Remove floor rear access cover (page 17-7)

Go on to Sheet 2

TA107737

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 2 of 7)**REMOVAL:****NOTE**

Steps 1 through 4 are performed through crew compartment fuel crossover access.

1. Using diagonal cutting pliers, remove lockwire (A) from butterfly valve (B).

2. Using diagonal cutting pliers, remove lockwire (C) from three screws (D) holding preformed hose (E) to left fuel tank (F), and three screws (G) holding preformed hose (E) to right fuel tank (H).
3. Using 1/2 inch wrench, remove three screws and washers (D) holding preformed hose (E) to left fuel tank (F).
4. Using 1/2 inch wrench, remove three screws and washers (G) holding valve (B) to right fuel tank (H).

Go on to Sheet 3

TA107758

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 3 of 7)

NOTE

The remaining steps for removal of butterfly valve will be performed in engine compartment.

5. Using diagonal cutting pliers, remove lockwire (J) from five screws (K) holding preformed hose (E) to left fuel tank (F).
6. Using diagonal cutting pliers, remove lockwire (L) from five screws (M) holding valve (B) to right fuel tank (H).

7. Using 1/2 inch wrench, remove five screws (K) holding preformed hose (E) to left fuel tank (F).
8. Using 1/2 inch wrench, remove five screws (M) holding valve (B) to right fuel tank (H).
9. Remove butterfly valve (B), preformed hose (E), and gasket from the vehicle. Discard gasket.

Go on to Sheet 4

TA107739

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 4 of 7)

10. Using dry cleaning solvent, rags, and putty knife, clean excess material from fuel tank.

NOTE

The following steps of valve installation will be performed in engine compartment.

INSTALLATION:

1. Install gasket (A), butterfly valve (B), and preformed hose (C) to right fuel tank (D) using five screws (E) and washers (F).
2. Install preformed hose (C) to left fuel tank (G) using five screws (H) and washers (J).

3. Using 1/2 inch wrench, tighten five screws (E) and five screws (H).

Go on to Sheet 5

TA107740

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 5 of 7)

NOTE

The following steps of valve installation will be performed through the butterfly valve access in crew compartment.

4. Install remaining three screws (E) and washers (F) holding butterfly valve (B) and preformed hose (C) to right fuel tank (D).

5. Install remaining three screws (H) and washer (J) holding preformed hose (C) to left fuel tank (G).
6. Using 1/2 inch wrench, tighten three screws (E) and three screws (H).

Go on to Sheet 6

TA107741

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 6 of 7)

7. Using torque wrench, tighten three screws (E) and (H) to 13 lb-ft (17.6 N·m).
8. Using slip joint pliers, install lockwire (K) in three screws (E) and (H).

NOTE

The following steps of valve installation will be performed in engine compartment.

9. Using torque wrench, tighten the remaining five screws (E) and (H) to 13 lb-ft (17.6 N·m).
10. Using slip joint pliers, install lockwire (K) in five screws (E) and (H).

Go on to Sheet 7

TA107742

FUEL TANK BUTTERFLY VALVE REPLACEMENT (Sheet 7 of 7)

NOTE

The remaining steps of valve installation will be performed in crew compartment.

11. Using slip joint pliers, install lockwire (K) and valve control (L).

12. Install floor rear access cover (page 17-8).
13. Service fuel tanks (TM 5-5420-226-10).
14. Install powerplant (page 5-14).

End of Task

TA107743

FUEL TANK TO AIR CLEANER VALVE AND HOSE REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-139
Cleaning and Inspection	7-141
Installation	7-142

TOOLS: Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 7/16 in. open end wrench
 9/16 in. open end wrench
 15/16 in. open end wrench
 1-1/16 in. open end wrench

SUPPLIES: Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top right grille door TM 5-5420-226-10

Go on to Sheet 2

TA107744

FUEL TANK TO AIR CLEANER VALVE AND HOSE REPLACEMENT (Sheet 2 of 5)

REMOVAL:

1. Holding nut (A) with 7/16 inch wrench, use 7/16 inch socket to remove screw (B) and lock-washer (C) securing clamp (D) to guard (E).
2. Remove clamp (D) from valve (F).
3. Holding valve (F) with 1-1/16 inch wrench, use 9/16 inch wrench to remove hose (G) from valve (F).
4. Holding valve (F) with 1-1/16 inch wrench, use 9/16 inch wrench to remove hose (H) from valve (F).

Go on to Sheet 3

TA107745

FUEL TANK TO AIR CLEANER VALVE AND HOSE REPLACEMENT (sheet 3 of 5)

- Using 9/16 inch wrench, remove hose (H) from air cleaner outlet (J).

6. Holding bushing (K) with 15/16 inch wrench, use 9/16 inch wrench to remove hose (G) from bushing (K).
7. Using 15/16 inch wrench, remove bushing (K) from fuel tank (L).

CLEANING AND INSPECTION:

- Using rags, wipe all parts clean.
- Inspect parts for deterioration, cracks, nicks, and stripped threads.

Go on to Sheet 4

TA107746

FUEL TANK TO AIR CLEANER VALVE AND HOSE REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Using 15/16 inch wrench, install bushing (A) in right fuel tank (B).
2. Holding bushing with 15/ 16 inch" wrench, use 9/16 inch wrench to install hose (C) in bushing (A).

3. Using 9/16 inch wrench, install hose (D) in air cleaner outlet (E).

Go on to Sheet 5

TA107747

FUEL TANK TO AIR CLEANER VALVE AND HOSE REPLACEMENT (Sheet 5 of 5)

4. Holding valve (F) with 1-1/16 inch wrench, use 9/16 inch wrench to install hose (D) on valve (F).
5. Holding valve (F) with 1-1/16 inch wrench, use 9/16 inch wrench to install hose (C) on valve (F).
6. Install clamp (G) on valve (F).
7. Place screw (H), clamp (G), lockwasher (J), and nut (K) in position on guard (L).
8. Holding nut (K) with 7/16 inch wrench, use 7/16 inch socket to tighten screw (H) securing clamp (G) to guard (L).
9. Secure top right grille door (TM 5-5420-226-10).

End of Task

TA107748

LEFT FUEL TANK JETTISON PIPE PLUG REPLACEMENT (Sheet 1 of 1)

TOOLS: 9/16 in. open end wrench

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top left grille doors (TM 5-5420-226-10)

REMOVAL:

1. Using wrench, remove plug (A) from fuel tank (B) by turning left.

INSTALLATION:

1. Using wrench, install plug (A) in fuel tank (B) by turning right.
2. Close top left grille door (TM 5-5420-226-10).

End of Task

TA107749

BREATHER LINE REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-145
Inspection	7-147
Installation	7-148

TOOLS: Ratchet handle with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 1-1/2 in. open end wrench (2 required)
 Pipe wrench, 10 in.
 1-5/16 in. open end wrench

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove air cleaner intake hoses (page 7-66)

Go on to Sheet 2

TA107750

BREATHER LINE REPLACEMENT (Sheet 2 of 5)

REMOVAL:

1. Using two 1-1/2 inch open end wrenches, disconnect connector (A) from connector (B) and connector (C) from connector (D).

2. Using 7/16 inch socket, remove three screws, lockwashers, and loop clamps (E). Remove metal tube (F).
3. Using 1-1/2 inch open end wrench, disconnect hose (G) from elbow (H) and hose (J) from elbow (K).

Go on to Sheet 3

TA107751

BREATHER LINE REPLACEMENT (Sheet 3 of 5)

NOTE

It may be necessary to use a pipe wrench.

- Using 1-5/16 inch open end wrench, remove elbow (H) from left fuel tank (L) and elbow (K) from right tank (M).

INSPECTION:

- Check all hoses for cracks and holes.
- Check all hose connections for tightness and stripped threads.
- Replace parts as needed.

Go on to Sheet 4

TA107752

BREATHER LINE REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Using 1-5/16 inch open end wrench, install elbow (A) on left and right fuel tanks.
2. Using 1-1/2 inch open end wrench, install rubber breather hose (B) on each elbow.

3. Using two 1-1/2 inch open end wrenches, connect hose connector (C) to connector (D) and connector (E) to connector (F).

Go on to Sheet 5

TA107753

BREATHER LINE REPLACEMENT (Sheet 5 of 5)

4. Install two loop clamps (H) on metal breather tube (G) and one loop clamp (H) on hose (B).

5. Using 7/16 inch socket, install two loop clamps (H), lockwashers (J), and screws (K).
6. Check all hose connections for tightness.
7. Tighten if necessary.
8. Install air cleaner intake hoses (page 7-69).
9. Install powerplant (page 5-14).

End of Task

TA107754

RIGHT FUEL TANK RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 1 of 3)

TOOLS: 1-3/8 in. open end wrench
1-1/2 in. open end wrench
7/16 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive

SUPPLIES: Clean rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain fuel tanks (page 7-191)

REMOVAL:

1. Using 1-3/8 inch wrench and 1-1/2 inch wrench, disconnect left nut of tube (A) from fuel tank selection valve adapter (B).
2. Using 1-1/2 inch wrench and 1-3/8 inch wrench, disconnect right nut of tube (A) from right fuel tank return hose (C).

Go on to Sheet 2

TA107757

RIGHT FUEL TANK RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 2 of 3)

3. Using 7/16 inch socket, remove screw (D) and lockwasher (E) holding tube (A) and clamp (F) to threaded stud.
4. Remove tube (A) and clamp (F).
5. Remove clamp (F) from tube

6. Using 1-3/8 inch wrench, remove adapter (B) from fuel tank selector valve (G).

Go on to Sheet 3

TA107758

TM 5-5420-226-20-2

RIGHT FUEL TANK RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 3 of 3)**CLEANING AND INSPECTION:**

Inspect threaded components for thread damage. Replace or repair if defective.

INSTALLATION:

1. Using 1-3/8 inch wrench, install adapter (A) to fuel tank selector valve (B).
2. Install clamp (C) to tube (D).
3. Using 1-3/8 inch wrench and 1-1/2 inch wrench, loosely install left nut of tube (D) to fuel tank selector valve adapter (A).

4. Using 1-1/2 inch wrench and 1-3/8 inch wrench, loosely install right nut of tube (D) to right fuel tank return hose (E).
5. Using 7/16 inch socket wrench, secure clamp (C) and tube (D) to hull floor with screw (F) and lockwasher (G).
6. Tighten right and left nuts of tube (D).
7. Install powerplant (page 5-14).
8. Service fuel tanks (TM 5-5420-226-10).

End of Task

TA107759

FUEL RETURN HOSE (RIGHT TANK) REPLACEMENT (Sheet 1 of 2)

TOOLS: 1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
1-1/2 in. open end wrench (2 required)
1-3/8 in. open end wrench
Wire brush

SPECIAL TOOLS: Ground hop" kit (Item 30, Chapter 3, Section I)

SUPPLIES: Sealing compound (Item 24 and Item 20, Appendix D)
Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain fuel tanks (page 7-191)

Go on to Sheet 2

TA107760

FUEL RETURN HOSE (RIGHT TANK) REPLACEMENT (Sheet 2 of 2)

NOTE

Put rags under each connection before removing hose end fittings.

REMOVAL:

1. Using 1/2 inch socket, loosen and remove bolt and lockwasher (A) from hose clamp (B).
2. Using 1-1/2 inch open end wrench on hose and fitting (C), and 1-1/2 inch open end wrench on fitting (D), hold hose at point (C) while loosening fitting (D). Slide fitting (D) away from hose and fitting (C).
3. Using 1-3/8 inch open end wrench, loosen fitting (with hose) (E). Remove hose.

INSTALLATION:

1. Lightly coat threads of both male hose ends with sealing compound.
2. Using 1-3/8 inch open end wrench, secure fitting (with hose) (A).
3. Using 1/2 inch socket, secure clamp (B) with bolt and lockwasher (C).
4. Using 1-1/2 inch open end wrench on hose and fitting (D), and 1-1/2 inch open end wrench on fitting (E), hold hose at point (D) while securing fitting (E).
5. Service fuel tanks (TM 5-5420-226-10).
6. Ground hop engine (page 5-25) and allow it to run for brief time while checking for leaks. If leak is detected, stop engine and tighten fitting. If fittings do-not leak, disconnect ground hop (page 5-40).
7. Replace powerplant (page 5-14).

End of Task

TA107761

ENGINE FUEL RETURN SELECTOR COCK REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-155
Inspection	7-157
Installation	7-157

TOOLS: Vise

10 in. adjustable wrench

7/16 in. socket with 1/2 in. drive

Drain fuel tanks (page 7-191)

TA107762

Go on to Sheet 2

TM 5-5420-226-20-2

ENGINE FUEL RETURN SELECTOR COCK REPLACEMENT (Sheet 2 of 4)**REMOVAL:**

1. Using 1 inch wrench, disconnect fitting (A).
2. Using one 1-1/2 inch wrench, hold fitting (B) secure and loosen fitting (C) with other 1-1/2 inch wrench.
3. Using 1-3/8 inch wrench, hold fitting (D). Loosen fitting (E) with 1-1/2 inch wrench.
4. Using cutting pliers, cut lockwire (F) and remove.
5. Using 7/16 inch socket, remove three screws and lockwashers (G) and spacers (H) securing return selector cock (J) to mounting brackets (K). Remove selector cock.
6. Place selector cock (J) in vise.
7. Remove cotter pin and headless straight pin (L).
8. Remove pointer assembly (M).
9. Remove instruction plate (N).
10. Using adjustable wrench, remove elbows (P) and (Q).
11. Using 1-3/8 inch wrench, remove fitting (D).
12. Remove selector cock (J) from vise.

Go on to Sheet 3

TA107763

ENGINE FUEL RETURN SELECTOR COCK REPLACEMENT (Sheet 3 of 4)

INSPECTION:

Inspect headless straight pin (A), pointer assembly (B), instruction plate (C), elbows (D) and (E), and spacers (F) for damage or wear. Replace if necessary.

INSTALLATION:

1. Lightly coat male ends of elbows (A) and (B) and fitting (C) with sealing compound.
2. Place selector cock (D) in vise.
3. Using adjustable wrench, install elbows (A) and (B) on return selector cock (D).
4. Using 1-3/8 inch wrench, install fitting (C).

NOTE

Be sure elbows, when tightened, face in direction shown in figure.

Go on to Sheet 4

TA107764

ENGINE FUEL RETURN SELECTOR COCK REPLACEMENT (Sheet 4 of 4)

5. Position indicator plate (E) on return selector cock (D) with word BOTH at engine fuel return tube elbow (center outlet).
6. Position pointer assembly (F) at BOTH position.

NOTE

Check to be sure all three openings in return selector cock are open.

7. Install headless straight pin (G) in pointer assembly (F) and secure with cotter pin.
8. Using pliers, secure pointer assembly (F) in BOTH position with lockwire (H).
9. Remove selector cock (D) from vise.
10. Using 7/16 inch socket, secure return selector cock on mounting bracket (J) with three screws and lockwashers (K) and spacers (L).
11. Using 1-3/8 inch wrench on fitting (M) and 1-1/2 inch wrench on fitting (N), hold fitting (M) in a fixed position while securing fitting (N).
12. Using one 1-1/2 inch wrench on fitting (P) and other 1-1/2 inch wrench on fitting (Q), hold fitting (Q) in a fixed position while securing fitting (P).
13. Using 1 inch wrench, secure tube fitting (R).
14. Service fuel tanks (TM 5-5420-226-1 O).
15. Attach ground hop kit (page 5-25).

16. Start engine and allow it to run for a brief time while checking for leaks.
17. Disconnect ground hop kit (page 5-40).
18. Replace powerplant (page 5-14).

End of Task

TA107765

ENGINE FUEL RETURN HOSE ASSEMBLY (LEFT SIDE) REPLACEMENT (Sheet 1 of 2)

TOOLS: 1-1/2 in. open end wrench (2 required)
1-3/8 in. open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

REFERENCE: TM 5-5420-226-10

SUPPLIES: Sealing compound (Item 24, Appendix D)
Rags (Item 12, Appendix D)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain fuel tanks (page 7-191)
Remove engine fuel return hose assembly (page 7-16 1)

Go on to Sheet 2

TA107766

ENGINE FUEL RETURN HOSE ASSEMBLY (LEFT SIDE) REPLACEMENT (Sheet 2 of 2)

REMOVAL:

1. Using one 1-1/2 inch wrench to hold fitting (A), use other 1-1/2 inch wrench and loosen fitting (B) from elbow (C).
2. Using 1-3/8 inch wrench, loosen fitting (D) from fuel tank (E).
3. Carefully remove hose (F) from elbow and fuel tank (E).

INSTALLATION:

CAUTION

Make sure that drain plugs of both fuel tanks are correctly sealed.

1. Lightly coat threads of each hose end fitting with sealing compound.
2. Position hose (A) onto elbow (B) and fuel tank mount (C).
3. Using 1-3/8 inch wrench, tighten fitting (D) to fuel tank mount (C).
4. Using one 1-1/2 inch wrench to hold fitting (E), use other 1-1/2 inch wrench and tighten fitting (F) to elbow (B).
5. Install engine fuel return hose assembly (page 7-1 62).
6. Ground hop engine (page 5-25).

7. Allow engine to run for a brief time while checking for leaks. If a leak is detected, stop engine and tighten fittings.
8. Disconnect ground hop (page 5-40).
9. Install powerplant (page 5-14).

End of Task

TA107767

ENGINE FUEL RETURN HOSE REPLACEMENT (Sheet 1 of 2)

- TOOLS: 1-1/8 in. open end wrench
 1 in. open end wrench
 1-3/16 in. open end wrench
 10 in. adjustable wrench
- 7/16 in. socket with 1/2 in. sq. drive
 Ratchet with 1/2 in. sq. drive

PRELIMINARY PROCEDURE: Remove transmission shroud (page 9-2)

REMOVAL:

1. Using adjustable wrench to hold elbow (A), use 1 inch wrench to disconnect nut (B).
2. Using 1 inch wrench to hold fitting (C), use 1-1/8 inch wrench to disconnect nut (D).
3. Using 7/16 inch socket, remove screw (E), lockwasher (F), and clamp (G).
4. Remove tube assembly (H).
5. Using 1-1/8 inch wrench on nut (J) and 1 inch wrench on fitting (K), disconnect hose assembly (L) from tube assembly (M).
6. Remove coupled hose assemblies (L) and (N) from launcher.
7. Using 1 inch wrench on hose assemblies (L) and (N) and 1-3/16 inch wrench on coupling (P), remove coupling (P).

Go on to Sheet 2

TA107768

ENGINE FUEL RETURN HOSE REPLACEMENT (Sheet 2 of 2)

INSTALLATION:

1. Using 1 inch wrench on hose assemblies (A) and (B), and 1-3/8 inch wrench on coupling (C), connect coupling (C) and hose assemblies (A) and (B) together.
2. Position assembled hose assemblies (A) and (B) with coupler (C) into launcher and connect fitting (D) to nut (E) finger tight.
3. Position tube assembly (F) into launcher and install nut (G) to elbow (H) finger tight.
4. Using 7/16 inch socket, install clamp (J), lockwasher (K), and screw (L) to tube assembly (F).
5. Using 1 inch wrench on fitting (M) and 1-1/8 inch wrench on nut (N) connect tube assembly (F) to hose assembly (A).
6. Using 1 inch wrench on fitting (D) and 1-1/8 inch wrench on nut (E) tighten nut (E).
7. Using adjustable wrench to hold elbow (H), use 1 inch wrench to tighten nut (G).
8. Install transmission shroud (page 9-6).

End of Task

TA107769

FUEL SHUT-OFF HANDLE REPLACEMENT (Sheet 1 of 2)**TOOLS:** Vise

- 1/2 in. combination box and open end wrench
- Pin punch 1/8 inch
- Ball peen hammer
- Slip joint pliers
- 9/16 in. combination box and open end wrench

REFERENCES: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Set ENGINE FUEL SHUT OFF switch to OFF (TM 5-5420-226-10)

REMOVAL:

1. Release spring (A) securing handle (B).
2. Hold extension (C) with 1/2 inch wrench while loosening jamnut (D) with 9/16 inch wrench.
3. Remove handle (B) and handle extension (C) as assembly from cable (E).
4. Remove jamnut (D).

**NOTE**

If necessary, grip cable (E) with pliers to remove handle (B) and extension (C).

DISASSEMBLY:

1. Using vise to hold handle (B) drive two pins (F) out of handle (B) with hammer and pin punch.
2. Separate handle (B) from extension (C).

Go on to Sheet 2

TA107770

FUEL SHUT-OFF HANDLE REPLACEMENT (Sheet 2 of 2)

ASSEMBLY:

1. Position handle extension (A) in handle (B).
2. Using hammer, tap two pins (C) into holes in handle (B) to secure extension (A).

INSTALLATION:

1. Thread jamnut (A) onto cable (B).
2. Thread handle (C) and extension (D) as an assembly all the way onto cable (B).
3. Using 1/2 inch wrench to hold extension (D) and 9/16 inch wrench on jamnut (A), tighten jamnut against handle assembly (C) and (D).
4. Close spring (E) to secure handle (C) in place.

End of Task

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet of 15)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-165
Installation	7-173

TOOLS: Screwdriver, flat-tip, 1/4 in. wide

 Wire (8 to 10 ft) (Item 61, Appendix D)
 Adhesive (Item 19, Appendix D)

PERSONNEL: Two

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove fuel shutoff handle from bracket (page 7-163)
 Remove subfloor access cover, directly in front of
 operator's seat (page 17-10)

Go on to Sheet 2

TA107772

FUEL SHUT OFF CABLE ASSEMBLY REPLACEMENT (Sheet 2 Of 15)

REMOVAL:

1. Using 7/16 inch wrench, remove bolt (A) from clevis (B).

2. Using 9/16 inch wrench on locknut (C) and 15/16 inch wrench on clevis (B), back off locknut (C).

3. Remove clevis (B) and locknut (C) from fuel shut off cable (D).

Go on to Sheet 3

TA107773

FUEL SHUT OFF CABLE ASSEMBLY REPLACEMENT (Sheet 3 Of 15)

4. Using 3/4 inch wrench, remove nut (E), packing (F), and washer (G) from fuel shutoff cable (H). Throw packing away.

5. Using two 15/16 inch wrenches, remove nut (J) and lockwasher (K) from cable assembly (H).

6. Pull cable assembly (H) from bracket (L).

7. Using 15/16 inch wrench, remove lockwasher (M) and nut (N) from cable assembly (H).

Go on to Sheet 4

TA107774

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 4 of 15)

NOTE

Clamp (P) is located through subfloor access plate directly in front of operator's seat. Clamp (Q) is attached at the battery box.

8. Using 7/16 inch socket, remove both screws (R) and lockwashers (S) holding clamps (P) and (Q). Remove clamps (P) and (Q).
9. Using screwdriver, loosen clamp (T) and slide it forward on cable assembly (H).
10. Using hands, pull cable assembly (H) forward to dislodge grommet (U) from bulkhead connector (V).
11. Remove grommet (U) from cable assembly (H).
12. Using putty knife, remove bushing (W) from cable assembly (H). Throw bushing (W) away.

Go on to Sheet 5

TA107775

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 5 of 15)

13. Using pliers, remove cotter pin (X), flat washer (Y), and pin (Z) holding spring (AA) to hinge (AB).

14. Remove spring (AA).

Go on to Sheet 6

TA107776

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT {Sheet 6 of 15}

15. Using two 15/16 inch wrenches, remove top nut (AC) and lockwasher (AD) securing cable assembly (H) to bracket (AE).

16. Pulling down, remove cable assembly (H) from bracket (AE).

17. Using two 15/16 inch wrenches, remove three nuts (AF), lockwashers (AG), and hinge (AB) from cable (H).

Go on to Sheet 7

TA107777

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 7 of 15)

18. Wrap and securely tie 8 to 10 feet of wire (AH) around front end of cable assembly (H).

NOTE

Wire (AH) will be used during installation to thread cable assembly through bulkhead connector (V) and guide tube (AJ).

19. Using two persons, remove cable assembly (H) by slowly pulling cable assembly (H) into rear compartment allowing wire (AH) to thread through grommet (U), bulkhead connector (V), and guide tube (AJ).

20. Untie wire (AH) from front of cable assembly (H) and remove cable assembly (H) from hull. Leave wire (AH) in hull for cable assembly installation.

Go on to Sheet 8

TA107778

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 8 of 15)

21. Using two 7/16 inch wrenches, remove screw (AK) and nut (AL) holding fuel shutoff rod assembly (AM) to powerplant. Remove rod assembly (AM).

22. Using 1/2 inch wrench on jamnuts (AN) and 7/16 inch wrench on rod end bearings (AP), remove two rod end bearings (AP).

23. Remove two locknuts (AN) from rod (AQ).

Go on to Sheet 9

TA107779

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 9 of 15)

INSTALLATION:

1. Thread two locknuts (A) on rod (B).
2. Using 1/2 inch wrench on locknuts (A) and 7/16 inch wrench on rod end bearings (C), install rod end bearing (C) on rod (B).

NOTE

Rod assembly length will be adjusted at the time of powerplant installation.

3. Using two 7/16 inch wrenches, install rod assembly (D) to powerplant and secure with screw (E) and nut (F).

Go on to Sheet 10

TA107780

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 10 of 15)

NOTE

Wire (G) is installed on cable assembly (H) to aid unthreading cable back into place from engine compartment to operator's compartment,

4. Tie engine compartment end of wire (G) to front end of cable assembly (H).

5. Using two persons, install cable assembly (H) by threading through guide tube (J) and bulkhead connector (K).

6. Remove wire (G) after cable assembly (H) has been threaded into place.

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 11 of 15)

- 7. If old grommet (L) was removed, install new grommet (L) onto cable assembly (H).
- 8. Apply adhesive to bushing (M) and install inside grommet (L) onto cable assembly (H). Insert grommet (L) with bushing (M) into bulkhead connector (K).
- 9. Using screwdriver, install clamp (N) on the outside of grommet (L). Tighten clamp (N).
- 10. Install and position clamps (P) and (Q) onto cable assembly (H).
- 11. Using 7/16 inch socket, install two screws (R) and lockwashers (S) securing clamps into position.

Go on to Sheet 12

TA107782

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 12 of 15)

12. Using two 15/16 inch wrenches, install three nuts (T), three lockwashers (U), and hinge (V) on cable assembly (H).

13. Thread cable assembly (H) through hole at end of bracket (Y).

14. Using two 15/16 inch wrenches, install nut (W) and lockwasher (X) securing cable assembly (H) to bracket (Y).

Go on to Sheet 13

TA107783

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 13 of 15)

15. Aline spring (Z) to hinge (V) and install pin (AA) through spring (Z) and hinge (V). Install flat washer (AB).

16. Using pliers, install cotter pin (AC) into pin (AA).

NOTE

For adjustment of spring (Z), refer to fuel shutoff handle replacement (page 7-164).

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 14 of 15)

17. Using 15/16 inch wrench, install nut (AD), and lock-washer (AE) onto cable assembly (H).

18. Thread cable assembly (H) through hole in bracket (AF).

19. Using two 15/16 inch wrenches, install lockwasher (AG) and nut (AH) onto cable assembly (H).

20. Using 3/4 inch wrench, install washer (AJ), packing (AK), and nut (AL).

FUEL SHUTOFF CABLE ASSEMBLY REPLACEMENT (Sheet 15 of 15)

21. Using 9/16 inch wrench and 15/16 inch wrench, install (AM) and clevis (AN) onto fuel shutoff cable (AP).
22. Using 7/16 inch wrench, install bolt (AQ) through clevis (AN) and rod assembly (D).
23. Install powerplant (page 5-14).
24. Install fuel shutoff handle (page 7-164).
25. Install subfloor access cover (page 17-10).
26. Check operation of fuel shutoff system (TM 5-5420-226-10).

End of Task

TA107786

HOSE ASSEMBLY (TO PRIMARY FUEL FILTER) REPLACEMENT (Sheet 1 of 2)

TOOLS: 1-1/8 in. open end wrench
1-3/16 in. open end wrench
7/8 in. open end wrench

SUPPLIES: Clean rags (Item 12, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant from vehicle (page 5-2)

REMOVAL:

1. Using 7/8 inch wrench, remove hose assembly (A) from primary fuel filter.
2. Using 1-1/8 inch wrench and 1-3/16 inch wrench, disconnect coupler assembly (B) from hose assembly (A).

CLEANING AND INSPECTION:

1. Using clean rags, clean hose assembly (A).
2. Inspect hose assembly (A) for cracks and breaks. If damaged, replace hose assembly (A).

Go on to Sheet 2

TA107787

HOSE ASSEMBLY (TO PRIMARY FUEL FILTER) REPLACEMENT (Sheet 2 of 2)**INSTALLATION:**

1. Using 1-1/8 inch wrench and 1-3/16 inch wrench, install coupler assembly (A) to hose assembly (B).

2. Using 7/8 inch wrench, install assembled hose assembly (C) to powerplant.
3. Install powerplant to vehicle (page 5-14).

End of Task

TA107788

HOSE ASSEMBLY (TO PURGE LINE) REPLACEMENT (Sheet 1 of 3)

TOOLS: 9/16 in. combination box and open end wrench
5/8 in. open end wrench (2 required)
1 in. open end wrench

SUPPLIES: Clean rags (Item 12, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant from vehicle (page 5-2)

REMOVAL:

1. Using 9/16 inch wrench, remove nut (A).
2. Remove clamp (B).
3. Using 5/8 inch wrench, loosen bushing (C).
4. Unscrew hose assembly (D) from engine.

Go on to Sheet 2

TA107789

HOSE ASSEMBLY (TO PURGE LINE) REPLACEMENT (Sheet 2 of 3)

5. Using 5/8 inch wrench on bushing (C) and 1 inch wrench on coupler assembly (E), remove bushing (C).
6. Using 1 inch wrench on coupler assembly (E) and 5/8 inch wrench on bushing (D), remove coupler (E).
7. Using two 5/8 inch wrenches, remove bushing (D) from hose assembly (F).
8. Using two 5/8 inch wrenches, remove quick-disconnect (G) from bushing (H).
9. Using two 5/8 inch wrenches, remove bushing (H) from hose assembly (F).

**CLEANING AND INSPECTION:**

1. Using rags, clean hose assembly (F) and coupler assembly (E).
2. Inspect hose assembly (F) and coupler assembly (E) for cracks and breaks. If damaged, replace hose assembly (F) and coupler assembly (E).

Go on to Sheet 3

TA107790

HOSE ASSEMBLY (TO PURGE LINE) REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Using two 5/8 inch wrenches, install bushings (A) and (B) in hose assembly (C).
2. Using two 5/8 inch wrenches, install quick-disconnect (D) onto bushing (A).

3. Using 5/8 inch wrench on bushing (B) and 1 inch wrench on coupler assembly (E), install coupler assembly (E) onto bushing (B).
4. Using 1 inch wrench on coupler assembly (E) and 5/8 inch wrench on bushing (F), install bushing (F) into coupler assembly (E).
5. Position assembled hose assembly (G) to engine.
6. Install clamp (H) and nut (J) to engine.
7. Using 5/8 inch wrench, install bushing (F) to engine.
8. Using 9/16 inch wrench, tighten nut (J).
9. Install powerplant (page 5-14).

End of Task

PROCEDURE	PAGE
Installing Hand Pump	7-185
Removing Condensate	7-188
Removing Hand Pump	7-188

TOOLS: Hand fuel pump
Hoses (2)
Adapter

SUPPLIES: 55 gallon drum
Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top deck grille doors (TM 5-5420-226-10)

INSTALLING HAND PUMP:

NOTE

The procedures for condensate removal from left and right fuel tanks are identical. Left fuel tank condensate removal is covered in this task.

1. Install hand fuel pump (A) inside of lips of welded brackets (B) on air cleaner (C).

Go on to Sheet 2

TA107792

FUEL TANK CONDENSATE REMOVAL (Sheet 2 of 6)

NOTE

Steps 2 and 3 apply to removal of dust covers from hand fuel pump and hoses.

2. Using fingers in clamp ring (D), pull clamps (E) out and down against body of connector (F) to loosen dust cover (G).
3. Remove dust cover (G) from connector (F).
4. Install hose (H) on connector (F) on discharge side of hand fuel pump (A).

5. Using fingers in clamp ring (D), pull clamp (E) out and up against hose (H) to clamp hose (H) in place.
6. Repeat steps 4 and 5 for installing hose on connector on suction side of hand fuel pump (A).

Go on to Sheet 3

TA107793

FUEL TANK CONDENSATE REMOVAL (Sheet 3 of 6)

7. Install loose end of discharge hose (H) in 55 gallon drum (J).

8. Using one hand to push quick-disconnect (K) down, remove dust cover (L).
9. Install adapter (M) on suction hose (N).
10. Install adapter (M) on quick-disconnect (K) by pushing adapter down until it snaps into place.

Go on to Sheet 4

TA107794

FUEL TANK CONDENSATE REMOVAL (Sheet 4 of 6)

REMOVING CONDENSATE:

CAUTION

Use care not to spill fuel over tank. Wipe away any spilled fuel immediately with rags.

1. Operate pump handle (A) to transfer fuel from fuel tank to 55 gallon drum (B).
2. Continue operating pump handle (A) until all fuel has been removed from fuel tank.

REMOVAL OF HAND PUMP:

1. Using one hand to push quick-disconnect (A) down, remove adapter (B) from quick-disconnect (A).
2. Install dust cover (C) on quick-disconnect (A) by pushing dust cover (C) down until it snaps into place.
3. Remove adapter (B) from suction hose (D).

Go on to Sheet 5

TA107795

FUEL TANK CONDENSATE REMOVAL (Sheet 5 of 6)

4. Operate pump handle (E) several times to drain any fuel left in hoses (D) and (F) and hand fuel pump (G).
5. Remove discharge hose (F) from 55 gallon drum (H), and let hose hang over side of tank.

6. Using fingers in clamp rings (J), pull clamps (K) out and down to loosen discharge connector (L).
7. Remove discharge hose (E) from pump discharge connector (L).
8. Repeat steps 6 and 7 for removal of suction hose.

9. Install dust cover (M) on discharge connector (L).
10. Using fingers in clamp rings (J), pull clamps (K) out and up against dust cover (M) to clamp dust cover in place.
11. Repeat steps 9 and 10 for installing dust cover on hand fuel pump suction connector and hoses.

Go on to Sheet 6

TA107796

FUEL TANK CONDENSATE REMOVAL (Sheet 6 of 6)

12. Using both hands, slide hand fuel pump (H) out of lips of welded brackets (N).
13. Remove hand fuel pump (H) from tank air cleaner (P).
14. Close top deck grille doors (TM 5-5420-226-10).

End of Task

TA107797

DRAINING FUEL TANKS (Sheet 1 of 2)

TOOLS: 3/4 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 12 in. extension with 1/2 in. drive

SUPPLIES: Grease (Item 37, Appendix D)
 Rags (Item 12, Appendix D)
 Gasket (8734774)

REMOVAL:

WARNING

Do not smoke or allow flames or sparks within area while draining fuel tanks. Have a manned fire extinguisher present.

NOTE

Whenever possible, start draining procedure when minimum amount of fuel is indicated on fuel level indicator.

NOTE

Fuel may be drained from both fuel tanks by removing drain plug from left fuel tank. Some fuel will still be trapped in bottom of fuel tanks after draining.

1. Using socket, remove four screws and lockwashers (A) securing access cover (B) and gasket (C) to underside of hull (forward of engine compartment drain valve).
2. Place container under access opening to catch draining fuel.
3. Using extension and ratchet, remove drain plug (D) and allow fuel to drain. About 8 gallons will remain in fuel tanks.
4. Discard drained fuel.

Go on to Sheet 2

TA107798

DRAINING FUEL TANKS (Sheet 2 of 2)

INSTALLATION:

1. Clean plug (A) with rags and coat threads with grease.
2. Using extension and ratchet, install drain plug (A).
3. Place new gasket (B) and access cover (C) in position on under-side of hull.
4. Install four lockwashers and screws (D) securing access cover to hull.
5. Using socket, tighten four screws (D).

End of Task

FUEL TANKS (LEFT AND RIGHT) DRAIN PLUG REPLACEMENT (Sheet 1 of 1)

TOOLS: 10 in. extension with 1/2 in. drive
 Hinged handle with 1/2 in. drive

SUPPLIES: Grease (Item 37, Appendix D)

REFERENCE: TM 9-2350-257-10

PRELIMINARY PROCEDURES: Drain fuel tanks (page 7-191)

REMOVAL:

NOTE
 Fuel drain plug is removed to drain fuel tanks (preliminary procedures).

INSPECTION:

Inspect fuel drain plug for stripped threads or damaged flats. Replace unserviceable plug.

INSTALLATION:

1. Coat fuel drain plug threads with grease (Item 37, Appendix D).
2. Using extension and hinge handle, install fuel drain plug (A).
3. Install fuel drain access covers (page 16-38).
4. Fill fuel tanks (TM 5-5420-226-10).

End of Task

TA107800

PRIMARY FUEL FILTER ELEMENT REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-194
Cleaning and Inspection	7-196
Installation	7-196

TOOLS: 9/16 in. combination box and open end wrench
8 in. adjustable wrench

SUPPLIES: Fuel filter element kit (1 1668618)
Rags (Item 12, Appendix D)
Watch

REFERENCE: TM 5-5420-226-10

PERSONNEL: TWO

PRELIMINARY PROCEDURE: Open front left intake grille door (TM 5-5420 -226-10)

REMOVAL:

1. Position rags to catch fuel and, using 9/16 inch wrench, loosen capscrew (A) until capscrew turns free.
2. Lift cover (B) and gasket (C) off filter body (D). Throw gasket away.

Go on to Sheet 2

TA107801

PRIMARY FUEL FILTER ELEMENT REPLACEMENT (Sheet 2 of 5)

3. Remove filter element (E) from filter body (D). Throw element away.

4. Remove preformed packing (F) from element seat inside filter body. Throw preformed packing away.

5. Using 9/16 inch wrench and adjustable wrench, remove nut (G), cover (B), gasket (H), and washer (J) from screw (A). Throw gasket (H) away.

Go on to Sheet 3

TA107802

PRIMARY FUEL FILTER ELEMENT REPLACEMENT (Sheet 3 of 5)

CLEANING AND INSPECTION:

1. Using clean rags, clean inside of filter body and around the filter body rim.
- Z. Inspect filter body and cover for cracks, holes, or dents on sealing edges.
3. Replace any damaged parts.

INSTALLATION:

1. Install washer (A) and new gasket (B) from element kit and cover (C) on screw (D).

NOTE

Do not tighten nut (E) down completely. Leave enough nut showing to allow removal.

2. Using 9/16 inch wrench and adjustable wrench, install nut (E) on screw (D) and tighten nut (E).
3. Install new gasket (F), from kit, into seat on the inside of cap (C).

PRIMARY FUEL FILTER ELEMENT REPLACEMENT (Sheet 4 of 5)

4. Install new preformed packing (G) from kit onto seat inside filter body (H).
5. Install new filter element (J) inside filter body (H).
6. Install cap (C) with gasket (F) on rim of filter body (H) and tighten screw (D) enough to get good seal between cap (C) and filter body (H).

7. Unscrew bleed cap (K) until it can be opened or closed wing fingers" Leave valve open.

Go on to Sheet 5

TA107804

PRIMARY FUEL FILTER ELEMENT REPLACEMENT (Sheet 5 of 5)

8. Using another person, set FUEL PUMPS switch (L) on master control panel in driver's compartment to ON.
9. Set MASTER BATTERY switch (M) to ON and observe air release (bubbles) from bleed cap (K).

10. Set MASTER BATTERY switch (M) to OFF and, after about 1 minute, repeat step 9.

11. Repeat steps 9 and 10 until a steady flow of fuel comes out of bleed cap (K), then close bleed cap (K) and set MASTER BATTERY switch to OFF.
12. Using adjustable wrench, tighten bleed cap (K) enough so it cannot be opened with the fingers.
13. Close front left intake grille door (TM 5-5420-226-10).

End of Task

TA107805

PRIMARY FUEL FILTER REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-199
Installation	7-201

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench
 7/8 in. combination box and open end wrench
 3/4 in. combination box and open end wrench
 9/16 in. combination box and open end wrench
 8 in. adjustable wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section 1)

SUPPLIES: Sealing compound (Item 27, Appendix D)
 Drain pan

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107806

PRIMARY FUEL FILTER REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Position a suitable container to catch fuel drainage from disconnected lines.
2. Using 9/16 inch wrench, disconnect connector (A) from connector filter (B).
3. Using 7/8 inch wrench, disconnect hose assembly (C).
4. Using 7/8 inch wrench, disconnect fuel outlet hose (D) from fuel outlet elbow (E).
5. Using 1/2 inch socket and 1/2 inch wrench, loosen bolts (F) on bracket (G).
6. Remove primary fuel filter (H).

7. Using 3/4 inch wrench remove fuel outlet elbow (E).
8. Using 9/16 inch wrench remove connector filter (B) from fuel filter (G).

Go on to Sheet 3

TA107807

PRIMARY FUEL FILTER REPLACEMENT (Sheet 3 of 4)

INSTALLATION N:

1. Lightly coat elbow assembly fittings with sealing compound.
2. Using 3/4 inch wrench, install fuel outlet elbow (A) primary fuel filter (B).
3. Using 7/8 inch wrench install hose assembly (C) to primary fuel filter (B).
4. Using 9/16 inch wrench install connector filter (D) to primary fuel filter (B).
5. Install primary fuel filter (B).
6. Using 1/2 inch socket and 1/2 inch wrench, tighten bolts (E) on bracket (F).
7. Using 7/8 inch wrench connect fuel outlet hose (G) to fuel outlet elbow (A).

8. Using 9/16 inch wrench, connect connector (H) to connector filter (D).
9. Connect engine for powerplant ground hop (page 5-25).

Go on to Sheet 4

TA107808

PRIMARY FUEL FILTER REPLACEMENT (Sheet 4 of 4)

10. Unscrew bleed cap (J) until it can be opened or closed using fingers. Leave valve open.
11. Using another person, set FUEL PUMPS switch (K) on master control panel in driver's compartment to ON.
12. Set MASTER BATTERY switch (L) to ON and observe air release (bubbles) from bleed cap (J).

13. Set MASTER BATTERY switch (L) to OFF and, after about 1 minute, repeat step 12.

14. Repeat steps 12 and 13 until a steady flow of fuel comes out of bleed cap (J), then close bleed cap (J) and set MASTER BATTERY switch to OFF.
15. Using adjustable wrench, tighten bleed cap (J) enough so it cannot be opened with the fingers.
16. Install powerplant (page 5-14).

End of Task

TA107809

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-203
Cleaning and Inspection	7-205
Installation	7-205

TOOLS: 7/16 in. combination box and open end wrench
 7/8 in. combination box and open end wrench

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
 Parts kit (5702738)
 Drain pan
 Rags (Item 12, Appendix D)
 Crocus cloth (Item 14, Appendix D)
 Filter element (1 1602061)
 Plastic barrier material (Item 42, Appendix D)
 1/2 in. masking tape (Item 58, Appendix D)

PERSONNEL: Two

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107810

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 2 of 6)

REMOVAL:

NOTE

Replacement of the outer filter elements is required semi-annually or every 1500 miles of vehicle operation. The center filter element is to be replaced annually.

NOTE

When removing cover, make sure not to let any dirt fall into fuel-water separator.

1. Using 7/16 inch wrench, remove eight screws (A), lockwashers (B), and flat washers (C).
2. Remove cover (D) from fuel-water separator (E).
3. Remove preformed packing (F) from cover (D). Throw away packing.

4. Place drain pan under fuel-water separator (E) to catch fuel from fuel outlet line.
5. Using 7/8 inch wrench, disconnect fuel outlet line (G) from elbow (H).
6. Using plastic barrier material and 1/2 inch masking tape, cover fuel outlet line (G) to avoid getting dirt into line.

Go on to Sheet 3

TA107811

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 3 of 6)

CAUTION

Do not remove or otherwise disturb the center element during outer filter element replacement unless all three elements are scheduled for replacement.

7. Using hands, remove two outer filter elements (J) by turning slightly and lifting out. Throw away filters.
8. Remove center filter element (K) in same manner as outer filters, if required.

CLEANING AND INSPECTION:

NOTE

Exercise care when cleaning inside of fuel-water separator not to damage any internal parts.

1. Using dry cleaning solvent and rags, clean inside of fuel-water separator.
2. Inspect fuel-water separator for cracks or fractures. Inspect interior for scores and burrs.
3. Using dry cleaning solvent and crocus cloth, remove minor burrs and scores. If cracked, excessively burred, or scored, contact your supervisor.
4. Flush with clean dry cleaning fluid.

INSTALLATION:

1. Remove center airier from under fuel-water separator.
2. Remove plastic barrier material and tape from fuel outlet line (A).
3. Using 7/8 inch wrench, install fuel outlet line (A) to elbow (B).

Go on to Sheet 4

TA107812

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 4 of 6)

4. Place two outer filter elements (C) in position in fuel-water separator (D).
5. Place center filter element (E) in position in fuel-water separator (D), if required.

6. Place new preformed packing (F) in position in cover (G).

7. Place cover (G) in position on fuel-water separator (D).
8. Using 7/16 inch wrench, install eight screws (H), lockwashers (J) and flat washers (K).

Go on to Sheet 5

TA107813

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 5 of 6)

9. Install powerplant (page 5-14).

NOTE

The following steps require the assistance of another person located in the driver's compartment.

10. Remove engine upper access cover (page 17-14).
11. Locate fuel-water separator (D), and using 7/16 inch wrench, loosen bleeder valve (L). Do not remove.
12. Person in driver's compartment set FUEL PUMPS switch (M) ON and MASTER BATTERY switch (N) ON.

13. Person at fuel-water separator observe for air relase (bubbles) from bleeder valve (L).
14. Person in driver's compartment set MASTER BATTERY switch (N) OFF.

Go on to Sheet 6

TA107814

FUEL-WATER SEPARATOR FILTER ELEMENT REPLACEMENT (Sheet 6 of 6)

15. Repeat steps 12 through 14. It may be necessary to do this several times until a constant flow of fuel is observed.
16. Using 7/16 inch wrench, tighten bleeder valve (L).
17. Install engine upper access cover (page 17-15).

End of Task

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 1 of 7)

PROCEDURE INDEX

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107816

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 2 of 7)

REMOVAL:

1. Place drip pan under manual drain valve (A).
2. Open manual drain valve (A) by turning valve handle counterclockwise.

3. Using 7/16 inch wrench, turn bleed cap (B) counterclockwise until loose.
4. Allow fuel in fuel-water separator filter (C) to drain through manual drain valve (A).
5. Using 7/16 inch wrench, turn bleed cap (B) clockwise until snug.
6. Place drip pan under fuel-water separator filter (C).

Go on to Sheet 3

TA107817

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 3 of 7)

7. Using 7/8 inch wrench, remove fuel outlet line (D) from elbow (E).
8. Using plastic barrier material and tape, seal openings of fuel outlet line (D) and elbow (E).
9. Using 7/8 inch wrench, remove fuel inlet line (F) from elbow (G).
10. Using plastic barrier material and tape, seal openings of fuel inlet line (F) and elbow (G).
11. Using 9/16 inch wrench, remove condensate drain line (H) from elbow (J).

**VIEW FROM BOTTOM OF FILTER
(SHOWN REMOVED FROM ENGINE

Go on to Sheet 4

TA107818

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 4 of 7)

12. Using 7/16 inch wrench, turn bleed cap (K) counterclockwise until loose. Let fuel-water filter drain.
13. Using 1/2 inch socket and extension, remove three cap screws, lockwashers, and flat washers (L).
14. Remove clamp (M) from filter (C).

NOTE

It may be necessary to tap sensor just above the threaded portion of the adapter with a 1/8 inch punch and hammer.

15. Using 1/2 inch socket and extension, loosen cap screw (N) to provide movement to fuel-water separator filter (C).
16. Using 9/16 inch wrench, remove upper sensor (P) from fuel-water separator filter (C).
17. Tag upper sensor (P) to make sure of correct installation.
18. Using 9/16 inch wrench, remove lower sensor (Q) from fuel-water separator filter (C).
19. Tag lower sensor (Q) to make sure of correct installation.

**VIEW FROM BOTTOM OF FILTER
(SHOWN REMOVED FROM ENGINE
FOR CLARITY)**

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 5 of 7)

20. Support fuel-water separator filter (C) to keep it from falling.
21. Using 1/2 inch socket, remove cap screw, lockwasher, and flat washer (N).
22. Lift fuel-water separator filter (C) away from mounting bracket (R).

INSTALLATION:

1. Position fuel-water separator filter on mounting bracket (A).
2. Using 1/2 inch socket, loosely install cap screw, lockwasher, and flat washer (B).

VIEW FROM BOTTOM OF FILTER
(SHOWN REMOVED FROM ENGINE
FOR CLARITY)

3. Using 9/16 inch wrench, install lower sensor (C) to fuel-water separator filter. Remove tag.
4. Using 9/16 inch wrench, install upper sensor (D) to fuel-water separator filter. Remove tag.

Go on to Sheet 6

TA10782O

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 6 of 7)

5. Using 1/2 inch socket and extension, install two cap screws, lockwashers, and flat washers (E).
6. Position clamp (F) around sensor wires (C) and (D) and, using 1/2 inch socket, install cap screw, lockwasher, and flat washer (G) and clamp (F) onto fuel-water separator filter (H).
7. Using 1/2 inch socket, tighten cap screw (B).

**VIEW FROM BOTTOM OF FILTER
(SHOWN REMOVED FROM ENGINE
FOR CLARITY)**

8. Using 9/16 inch wrench, install condensate drain line (J) to elbow (K).
9. Remove plastic barrier material and tape from openings of fuel inlet line (L) and elbow (M).
10. Using 7/8 inch wrench, install fuel line (L) to elbow (M).
11. Remove plastic barrier material and tape from openings of fuel outlet line (N) and elbow (P).
12. Using 7/8 inch wrench, install outlet line (N) to elbow (P).

Go on to Sheet 7

TA107821

FUEL-WATER SEPARATOR FLUID PRESSURE FILTER ASSEMBLY REPLACEMENT (Sheet 7 of 7)

13. Using rags, wipe bottom of fuel-water separator filter and connecting lines clean of fuel.
14. Remove drip pan.

TEST:

1. Perform operational check of automatic drain (page 7-233).
2. Connect engine for powerplant ground hop (page 5-25).
3. Using 7/16 inch wrench, open bleed cap (A).
4. Set FUEL PUMPS switch on master control panel to ON (TM 5-5420-226-10).
5. Set MASTER BATTERY switch on master control panel to ON (TM 5-5420-226-10). Watch bleed cap (A) of fuel-water separator filter (B) for air release (bubbles).
6. Set MASTER BATTERY switch to OFF (TM 5-5420-226-10). After about 1 minute, repeat step 4. When constant fuel flow is seen, go to step 7.

**NOTE**

It may be necessary to perform steps 4 and 5 several times until a constant fuel flow (no bubbles) from the bleed cap (A) is observed.

7. Check for leaks and tighten or replace components as necessary.
8. Using 7/16 inch wrench, turn fuel-water separator bleed cap (A) to the right until snug.
9. Set FUEL PUMPS switch to OFF (TM 5-5420-226-10).
10. Set MASTER BATTERY switch to OFF (TM 5-5420-226-10).
11. Disconnect engine from powerplant ground hop (page 5-40).
12. Install powerplant (page 5-14).

End of Task

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Drip pan

PERSONNEL: Two

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

FUEL-WATER SEPARATOR CONTROL ASSEMBLY REPLACEMENT (Sheet 2 of 5)

REMOVAL:

1. Place drip pan under manual drain valve (A).
2. Open manual drain valve (A) by turning valve handle to the left.
3. Using 7/16 inch wrench, turn fuel-water separator bleed cap (B) to the left until loose.

4. Allow fuel in fuel-water separator filter (C) to drain through manual drain valve (A).
5. Using 7/16 inch wrench, turn fuel-water separator bleed cap (B) to the right until snug.

6. Close manual drain valve (A) by turning valve handle to the right.
7. Remove drip pan placed under manual drain valve (A).

8. Using 1/2 inch socket and extension, remove three capscrews, lockwashers, flat washers (D), and clamp (E).
9. Using 1/2 inch socket and extension, loosen capscrew (F) to provide movement to fuel-water separator filter.

NOTE

If adapters turn while removing sensors, use 1/2 inch wrench to hold them in place.

10. Using 9/16 inch wrench, remove upper sensor (G) from fuel-water separator filter.

NOTE

It may be necessary to use hammer and punch to unseat sensors (G. and H) by tapping upward on the edge of the sensor retaining nut.

11. Using 9/16 inch wrench, remove lower sensor (H) from fuel-water separator filter.

Go on to Sheet 3

TA107824

FUEL-WATER SEPARATOR CONTROL ASSEMBLY REPLACEMENT (Sheet 3 of 5)

12. Using screwdriver, remove two screws and two cushioned clamps (J) and mounting plate (K) at right side and above fuel-water separator control assembly (L).

NOTE

It may be necessary to use pliers to start removal of connectors in steps 13 and 14.

13. Manually disconnect engine electrical harness connector (M) from fuel-water separator control assembly (L).
14. Manually disconnect solenoid valve electrical lead (N) from fuel-water separator control assembly (L).

15. Using 5/16 inch wrench, remove screw and cushioned clamp (P) holding solenoid valve electrical lead (N) to fuel-water separator control assembly (L).
16. Using 5/16 inch wrench, remove three remaining screws and washers (Q) holding fuel-water separator control assembly (L) to mounting plate. Remove control assembly.

Go on to Sheet 4

TA107825

FUEL-WATER SEPARATOR CONTROL ASSEMBLY REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Install three cushioned clamps (A) onto sensor leads from replaced fuel-water separator control assembly (B).
2. Position fuel-water separator control assembly (B) onto mounting plate.
3. Using 5/16 inch wrench, install three screws and washers (C).
4. Using 5/16 inch wrench, install screw (D) and cushioned clamp (A) holding solenoid valve electrical lead (E) to fuel-water separator control assembly (B).

CAUTION

Be careful not to strike ends of sensors during installation or damage may result.

NOTE

Straight edge of mounting plate (F) must be installed to the right against the fuel water separator.

5. Manually connect solenoid valve electrical lead (E) to fuel-water separator control assembly (B).
6. Manually connect engine electrical harness connector (G) to fuel-water separator control assembly (B).

7. Using screwdriver, install two screws (H), two cushioned clamps (A), and mounting plate (F) at right side and above fuel-water separator control assembly.

Go on to Sheet 5

TA107826

FUEL-WATER SEPARATOR CONTROL ASSEMBLY REPLACEMENT (Sheet 5 of 5)

8. Using 9/16 inch wrench, install lower (shorter) sensor (J) to fuel-water separator filter.
9. Using 9/16 inch wrench, install upper (longer) sensor (K) to fuel-water separator filter.
10. Using 1/2 inch socket and extension, install three capscrews, lockwashers, and flat washers (L) and clamp (M).
11. Using 1/2 inch socket, tighten capscrew (N).

TEST:

1. Connect engine for powerplant ground hop (page 5-25).
2. Set FUEL PUMPS switch in ON position (TM 5-5420-226-1 O).
3. Set MASTER BATTERY switch to ON position (TM 5-5420-226-10). Watch fuel-water separator bleed cap (A) for air release (bubbles).
4. Set MASTER BATTERY switch to OFF position (TM 5-5420-226-10). After about 1 minute, repeat step 3.
5. Check for leaks and tighten or replace components as necessary.
6. Using 7/16 inch wrench, turn fuel-water separator bleed cap (A) to the right until snug.
7. Perform operational check of automatic drain (page 7-233).
8. Set FUEL PUMPS switch to OFF position (TM 5-5420-226-10).
9. Set MASTER BATTERY switch to OFF position (TM 5-5420-226-10).
10. Disconnect engine from powerplant ground hop (page 5-40).
11. Install powerplant (page 5-14).

End of Task

TA107827

FUEL-WATER SEPARATOR DRAIN SOLENOID VALVE REPLACEMENT (Sheet 1 of 3)

TOOLS: 5/16 in. combination box and open end wrench
 7/16 in. combination box and open end wrench
 9/16 in. combination box and open end wrenches (2 required)
 Slip joint pliers

SUPPLIES: Drip pan
 Rags
 Zinc chromate (Item 51, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

1. Place drip pan under drain valve (A).
2. Using pliers, open drain valve (A) by turning valve handle counterclockwise.

Go on to Sheet 2

TA107828

FUEL-WATER SEPARATOR DRAIN SOLENOID VALVE REPLACEMENT (Sheet 2 of 3)

3. Using 7/16 inch wrench, turn fuel-water separator bleed cap (B) counterclockwise until loose.
4. Allow fuel in fuel-water separator filter (C) to drain through drain valve (A).

5. Move drip pan to catch fuel from hose assembly (D).

6. Using two 9/16 inch wrenches, disconnect hose assembly (D) from solenoid valve (E),
7. Using pliers, disconnect electrical lead (F) from solenoid valve (E).
8. Using 5/16 inch wrench, remove two screws and lockwashers (G) securing solenoid valve (E) to bracket.
9. Remove solenoid valve (E).

NOTE

It will be necessary to secure solenoid valve (E) in vise.

10. Using 9/16 inch wrench, remove elbow and tube (H) as a unit from solenoid valve (E).
11. using 9/16 inch wrench, remove adapter (J) from solenoid valve (E).

Go on to Sheet 3

TA107829

FUEL-WATER SEPARATOR DRAIN SOLENOID VALVE REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

NOTE

Coat all exposed threads of adapter and elbow with zinc-chromate (Item 51, Appendix D) before installing.

1. Using 9/16 inch wrench, install elbow and tube (A) to solenoid valve (B).
2. Using 9/16 inch wrench, install adapter (C) in solenoid valve (B).
3. Position solenoid valve (B) to bracket (E).
4. Using 5/16 inch wrench, install two screws and lockwashers (D) to secure solenoid valve (B) to bracket (E).
5. Using two 9/16 inch wrenches, connect hose assembly (F) to adapter (C).
6. Connect electrical lead (G) to solenoid valve (B).

7. Close drain valve (H) by turning valve handle clockwise.

8. Using 7/16 inch wrench, turn bleed cap (J) clockwise until snug.
9. Test fuel-water separator (page 7-230, steps 1 thru 11).
10. Install powerplant (page 5-14).

End of Task

TA10783O

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-224
Installation	7-228

TOOLS: 11/16 in. combination box and open end wrench (2 required)
9/16 in. combination box and open end wrench
7/16 in. combination box and open end wrench
5/8 in. combination box and open end wrench
6 in. adjustable wrench
Vise
Slip joint pliers

SUPPLIES: Rags
Drip pan

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

NOTE

These procedures are given for the replacement of all fuel-water separator drain lines. Only perform those steps necessary to replace the defective part.

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 2 of 6)

REMOVAL:

1. Place drip pan under manual drain valve (A).
2. Using pliers, open manual drain valve (A) by turning valve handle counterclockwise.

3. Using 7/16 inch wrench, turn bleed cap (B) counterclockwise until loose.
4. Allow fuel in fuel-water separator filter (C) to drain through manual drain valve (A).
5. Using 7/16 inch wrench, turn bleed cap (B) clockwise until snug.

Go on to Sheet 3

TA107832

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 3 of 6)

6. Using 9/16 inch wrench, remove nut (D) securing clamp (E).
7. Remove clamp (E) from hose assembly (F).
8. Using 9/16 inch wrench, disconnect hose assembly (F) from elbow (G).

9. Using 11/16 inch wrench to hold adapter (H), use 9/16 inch wrench and disconnect hose assembly (F) from adapter (H).
10. Remove hose assembly (F).
11. Using 9/16 inch wrench, disconnect hose assembly (J) from tee (K).
12. Using 5/8 inch wrench to hold tee (K), use adjustable wrench and remove drain valve (A).
13. Using 11/16 inch wrench to hold adapter (H), use 11/16 inch wrench and remove nut and lockwasher (L). Tee (K) and adapter (H) will fall free when nut (L) is removed.

14. Install tee (K) into vise and, using 11/16 inch wrench, remove adapter (H) from tee (K).

Go on to Sheet 4

TA107833

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 4 of 6)

15. Using 9/16 inch wrench, disconnect hose assembly (J) from solenoid valve adapter (M).
16. Remove hose assembly (J).
17. Using 9/16 inch wrench, disconnect tube assembly (N) from elbow (P).
18. Using 9/16 inch wrench, remove elbow (P) from solenoid valve (Q).
19. Using 9/16 inch wrench, remove adapter (M) from solenoid valve (Q).

Go on to Sheet 5

TAI07834

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 5 of 6)

INSTALLATION:

1. Using 9/16 inch wrench, install elbow (A) to solenoid valve (B).
2. Using 9/16 inch wrench, install tube assembly (C) onto elbow (A).
3. Using 9/16 inch wrench, install adapter (E) into solenoid valve (B).
4. Position hose assembly (D) to solenoid valve (B) and along engine block.
5. Using 9/16 inch wrench, install hose assembly (D) to solenoid valve adapter (E).

Go on to Sheet 6

TA107835

FUEL-WATER SEPARATOR DRAIN LINES REPLACEMENT (Sheet 6 of 6)

6. Install tee (F) into vise and, using 11/16 inch wrench, install adapter (G) into tee (F).
7. Remove tee (F) and adapter (G) assembly from vise.
8. Position tee (F) and adapter (G) assembly into mounting bracket (H).
9. Using 11/16 inch wrench to hold adapter (G), use 11/16 inch wrench and install lockwasher and nut (J) onto adapter (G).
10. Using adjustable wrench, install drain valve (K) into tee (F).

11. Position hose assembly (L) to adapter (G) and elbow (M).
12. Using 9/16 inch wrench, install hose assembly (L) to adapter (G) and elbow (M).
13. Using 9/16 inch wrench, install hose assembly (D) to tee (F).
14. Position clamp (N) onto hose assembly (L).
15. Using 9/16 inch wrench, install nut (P) to secure clamp (N).
16. Close drain valve (K) by turning clockwise.
17. Test fuel-water separator (page 7-230).
18. Install powerplant (page 5-14).

End of Task

TA107836

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 1 of 11)

PROCEDURE INDEX

PROCEDURE	PAGE
Manual Drain Test	7-230
Automatic Drain Test	7-233
15-Second Drain Test	7-235
Sequential Drain Test	7-237

TOOLS: Connector pliers
Adjustable wrench
1/2in. socket with 1/2in. drive
7/16 in. socket with 1/2 in. drive
One 3 ft jumper cable with alligator clips on both ends
Two 10 ft jumper cables with alligator clips on one end and probe on other end

5 in. extension with 1/2in. drive
Ratchet with 1/2in. drive
1/2 in. combination box and open end wrench
7/16 in. combination box and open end wrench
9/16 in. combination box and open end wrench

SUPPLIES: 24 volt D.C. power source
1/8 in. pipe plug (2 required)
Metal container (2 gal. capacity)

Fuel can
Drip pan
Gasket

PERSONNEL: Two

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

Go on to Sheet 2

TA107837

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 2 of 11)
Manual Drain Test (Sheet 1 of 2)

NOTE

In order to perform any of the tests in this procedure, they must be performed in the sequence listed.

1. Place drip pan under fuel-water separator (A) and sensor probes (B) and (C).
2. Using 1/2 inch socket and extension, remove three capscrews, lock-washers, and flat washers (D).
3. Using hands, remove clamp (E) from sensor probe wires (B) and (C).
4. Using 1/2 inch socket and extension, loosen capscrew (F) to provide movement of fuel-water separator.

NOTE

It may be necessary to use hammer and punch to unseat sensors (B) and (C) by tapping upward on the edge of the sensor retaining nut.

5. Using 1/2 inch wrench to hold sensor retaining nut (G), use 9/16 inch wrench and remove upper sensor (B) from fuel-water separator.
6. Check to see if fluid level is above upper sensor probe (B) hole by noting leakage when upper sensor probe (B) is removed.
7. Using adjustable wrench, install pipe plug into upper sensor probe (B) hole.
8. Using 1/2 inch wrench to hold sensor retaining nut (H), use 9/16 inch wrench and remove lower sensor (C) from fuel-water separator.
9. Using adjustable wrench, install pipe plug into lower sensor probe (C) hole.

CAUTION

Be very careful not to disturb center filter element. .
 The center filter element must be replaced if disturbed
 in any way.

Go on to Sheet 3

TA107838

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 3 of 11)

Manual Drain Test (Sheet 2 of 2)

CAUTION

There is a gasket located between fuel-water separator cover and fuel-water separator body. Each time cover is removed care must be taken not to disturb gasket.

10. If fluid level in fuel-water separator (A) is not above upper sensor probe (B) hole, using 7/16 inch wrench, remove eight screws, lockwashers, and flat washers (J) securing cover (K) to separator (A).
11. Add fuel to fuel-water separator (A) until fluid level is above upper sensor (B) hole.
12. Place cover (K) in position and, using 7/16 inch wrench, install eight screws, lockwashers, and flat washers (J).
13. Using 7/16 inch socket, open bleed cap (L) by turning counterclockwise.

14. Place metal container (M) under outlet of manual drain valve (N).
15. Open manual drain valve (N) by turning petcock (P) counterclockwise. Allow small amount of fluid to drain into metal container (M).
16. If fluid does not drain, refer to troubleshooting procedures,
17. If fluid does drain, go on to automatic drain test on next page.

Go on to Sheet 4

TA107839

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 4 of 11)

Automatic Drain Test (Sheet 1 of 2)

1. Fill metal container (A) with water.
2. Place metal container (A) under drain line solenoid drain valve drain tube (B).
3. Using pliers, disconnect engine electrical harness connector (C) from fuel-water separator control box (D) by turning counterclockwise.
4. Connect jumper wires from negative terminal of power source (E) to metal center airer (A).

NOTE

In order to perform steps 5 and 6, two leads, similar to multimeter leads with probe on one end and alligator clip on the other end, will be required.

It will be necessary to use two persons each time these leads are used. These probes are touched to the pins in receptacle (F) and held in place with hands of second person throughout these tests.

5. With one lead, connect ground contact B (F) at fuel-water separator control box (D) to negative (-) terminal of power source (E).

WARNING

Do not let probe at contact A (F) of fuel-water separator control box (D) touch side of receptacle (F). Do not let upper (G) and lower (H) sensor probes come in contact with each other or with bottom or side of metal container (A). When moving sensor probes, do so by touching insulated cables (J and K). Do not touch (G) or (H) with hands.

6. With other lead, connect power contact A (F) at fuel-water separator control box (D) to positive (+) terminal of power source (E).

Go on to Sheet 5

TA107840

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 5 of 11)
Automatic Drain Test (Sheet 2 of 2)

7. Using crescent wrench, remove pipe plug from upper sensor hole (L).

CAUTION

Be very careful not to disturb center filter element. The center filter element must be replaced if disturbed in any way.

8. Using 7/16 inch wrench, remove eight screws, lockwashers, and flat washers (M) securing cover to separator (P). Remove cover (N) from separator (P).

9. Add fuel to fuel-water separator (P) until fluid level is above upper sensor hole (L).

10. Using adjustable wrench, install pipe plug into upper sensor hole (L).
11. Place cover (N) in position and, using 7/16 inch wrench, install eight screws, lockwashers, and flat washers (M).
12. Hold tips of upper (G) and lower (H) sensor probes in water in metal container (A).

NOTE

Remove both upper (G) and lower (H) sensor probes from water in metal container (A) as soon as fluid begins draining from drain tube (B).

13. Listen for solenoid drain valve (Q) to click and watch for fluid to begin draining from solenoid drain valve drain tube (B).
14. If fluid does not begin draining, refer to troubleshooting procedures.
15. If fluid does begin draining, go on to 15-second drain test on next page.

Go on to Sheet 6

TA107841

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 6 of 11)

15-Second Drain Test (Sheet 1 of 2)

- Using adjustable wrench, remove pipe plug from upper sensor hole (A).

CAUTION

Be very careful not to disturb center filter element. The center filter element must be replaced if disturbed in any way.

- Using 7/16 inch wrench, remove eight screws, lockwashers, and flat washers (B) securing cover (C) to separator (D). Remove cover (C) from separator (D).
- Add fuel to fuel-water separator (D) until fluid level is above upper sensor hole (A).
- Using adjustable wrench, install pipe plug into upper sensor hole (A).
- Place cover (C) in position and, using 7/16 inch wrench, install eight screws, lockwashers, and flat washers (B).

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 7 of 11)

15-Second Drain Test (Sheet 2 of 2)

WARNING

Do not let upper (E) and lower (F) sensor probes come into direct contact with each other.

Do not let upper (E) or lower (F) sensor probes come into contact with metal container (G).

Hold insulated cables (J) attached to upper (E) and lower (F) sensor probes. Do not touch either probe.

6. Hold tips of both upper (E) and lower (F) sensor probes in water in metal container (G) until fluid stops draining from solenoid drain valve drain tube (H).
7. If fluid does not stop draining from solenoid drain valve drain tube (H) within 15 seconds from starting, refer to troubleshooting procedures ,
8. If fluid does stop draining, go to sequential drain test on next page.
9. Remove upper (E) and lower (F) sensor probes from metal container (G).

Go on to Sheet 8

TA107843

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 8 of 11)

Sequential Drain Test (Sheet 1 of 4)

- Using adjustable wrench, remove pipe plug from upper sensor hole (A).

CAUTION

Be very careful not to disturb center filter element. The center filter element must be replaced if disturbed in any way.

- Using 7/16 inch wrench, remove eight screws, lockwashers, and flat washers (B) securing cover (C) to separator (D). Remove cover (C) from separator (D).
- Add fuel to fuel-water separator (D) until fluid level is above upper sensor hole (A).
- Using adjustable wrench, install pipe plug into upper sensor hole (A).
- Place cover (C) in position and, using 7/16 inch wrench, install eight screws, lockwashers, and flat washers (B).

Go on to Sheet 9

TA107844

WARNING

Do not let upper (E) and lower (F) sensor probes come into direct contact with each other.

Do not let upper (E) or lower (F) sensor probes come into contact with metal container (G).

Hold insulated cables (H) attached to upper (E) and lower (F) sensor probes. Do not touch either probe.

NOTE

Steps 6 through 9 must be performed seconds.

6. Hold tip of lower (F) sensor probe in water in metal container (G).
7. Hold tip of upper (E) sensor probe in water in metal container (G) and check if fluid starts draining from solenoid drain valve drain tube (J).
8. Remove tip of upper (E) sensor probe from water in metal container (G) and check if fluid keeps draining from solenoid drain valve drain tube (J).

Go on to Sheet 10

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 10 of 11)

Sequential Drain Test (Sheet 3 of 4)

9. Remove tip of lower (F) sensor probe from water in metal container (G) before 15 seconds have gone by from time of putting it in and check if fluid stops draining from solenoid drain valve drain tube (J).

10. If fluid does not start draining “ (step 7), does not keep draining (step 8), or does not stop draining (step 9), refer to troubleshooting procedures (page 4-247).
11. Disconnect jumper wire from negative (-) terminal of power source (K).
12. Disconnect ground contact B (L) at fuel-water separator control box (M).
13. Disconnect ground contact B (L) and jumper wire (N) from metal container (G).
14. Disconnect jumper wires from positive (+) terminal of power source (K) and power contact A (P) at fuel-water separator control box (M).
15. Remove metal container (G) with water and fuel from underdrain line solenoid drain valve drain tube (J).
16. Using pliers, connect engine electrical harness connector (Q) to fuel-water separator control box (M) by turning clockwise.

Go on to Sheet 11

TA107846

TM 5-5420-226-20-2

FUEL-WATER SEPARATOR OPERATIONAL TESTS (Sheet 11 of 11)

Sequential Drain Test (Sheet 4 of 4)

17. Using adjustable wrench, remove two pipe plugs from upper (A) and lower (R) sensor holes.

18. Using 1/2 inch wrench to hold sensor retaining nut (S), use 9/16 inch wrench and install upper sensor (E) into fuel-water separator (D).

19. Using 1/2 inch wrench to hold down sensor retaining nut: (T), use 9/16 inch wrench install lower sensor (F) into fuel-water separator (D).

20. Using 7/16 inch socket, close bleed cap (U) until snug by turning clockwise.

21. Position clamp (V) onto fuel-water separator and, using 1/2 inch socket, install three capscrews, lockwashers, and flat washers (W).

22. Using 1/2 inch socket and extension, tighten capscrew (X).

23. Install powerplant (page 5-14).

24. Perform fuel system bleeding procedure (page 7-64).

End of Task

TA107847

ENGINE FUEL RETURN TUBE REPLACEMENT (Sheet 1 of 2)

TOOLS: 1-1/8 in. open end wrench
7/16 in. combination box and open end wrench

SUPPLIES: Sealing compound (Item 24, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain left fuel tank (page 7-191)

Go on to Sheet 2

TA107848

ENGINE FUEL RETURN TUBE REPLACEMENT (Sheet 2 of 2)

REMOVAL:

1. Using 1-1/8 inch wrench, loosen tube fitting (A).
2. Using 1-1/8 inch wrench on tube fitting (B) and 1 inch wrench on hose fitting (C), loosen tube fitting (B) from hose fitting (C).
3. Using 7/16 inch wrench, remove screw and lockwasher (D) from clamp (E). Remove clamp (E) from tube (B).
4. Remove tube (B) from tank.

INSTALLATION :

1. Lightly coat tube assembly connections (A) and (B) with sealing compound.
2. Using 1-1/8 inch wrench on tube fitting (C) and 1 inch wrench on hose fitting (B), install tube assembly (C) to hose (B).
3. Using 1-1/8 inch wrench on tube fitting (A), install tube fitting (A) to selector cock (D).
4. Using 7/16 inch wrench, install clamp (E) and screw and lockwasher (F).
5. Fill fuel tanks (TM 5-5420-226-10).
6. Install powerplant (page 5-14).

End of Task

TA107849

MAIN FUEL FEED HOSE REPLACEMENT (Sheet 1 of 2)

TOOLS: 1 in. combination box and open end wrench (2 required)
 1/2 in. combination box and open end wrench (2 required)
 7/8 in. combination box and open end wrench
 1-1/4 in. open end wrench

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open left top deck grille doors (TM 5-5420-226-10)

REMOVAL:

1. Using two 1 inch wrenches, disconnect main fuel feed hose (A) from tube assembly (B).
2. Using 1-1/4 inch wrench on quick-disconnect (C) and 7/8 inch wrench on main fuel feed hose fitting (D), remove hose from quick-disconnect.

Go on to Sheet 2

TA107850

TM 5-5420-226-20-2

MAIN FUEL FEED HOSE REPLACEMENT (Sheet 2 of 2)

- Using two 1/2 inch wrenches, remove screw (E), flat washer (F), lock-washer (G), and nut (H) holding clamp (J) and hose (A) to fuel tank bracket.
- Remove hose (A) and clamp (J).
- Remove clamp (J) from hose (A).

INSPECTION:

- Inspect threaded components for thread damage.
- Replace or repair if defective.

INSTALLATION:

- Install clamp (A) on main fuel feed hose (B).
- Using two 1 inch wrenches, install hose (B) to tube assembly (C).
- Install main fuel feed hose (B) to quick-disconnect (D) by using 1-1/4 inch wrench and 7/8 inch wrench.
- Using two 1/2 inch wrenches, secure clamps (A) and (E) to fuel tank bracket with screw (F), flat washer (G), lockwasher (H), and nut (J).
- Close left top deck grille doors (TM 5-5420-226-10).

End of Task

PRELIMINARY PROCEDURES: Remove powerplant
 Drain fuel tanks
 (page 7-191)

REMOVAL:

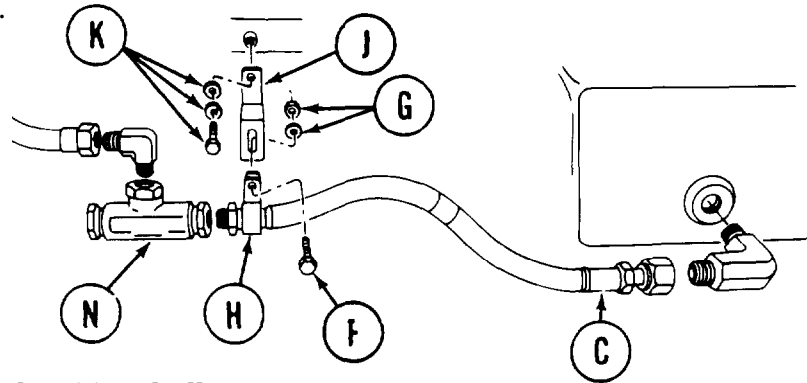

- Using 7/8 inch wrench to hold connector (A), use 1-1/8 inch wrench on connector (B) and remove hose (C) from elbow (D).
- Using automotive wrench, remove elbow (D) from right fuel tank (E).

Go on to Sheet 2

TA107852

INTER-TANK SWING CHECK VALVE REPLACEMENT (Sheet 2 of 5) - Continued

- Using 9/16 inch socket and 9/16 inch wrench, remove screw (F) and nut and washer (G) holding clamp (H) to bracket (J).
- Remove clamp (H) from hose (C).

- Using 9/16 inch socket, remove screw and washers (K) holding bracket (J) to hull.
- Remove bracket (J).
- Using 1 inch wrench on fuel hose (L) and 7/8 inch wrench on elbow (M), loosen fuel line (L) from elbow (M).
- Using 7/8 inch wrench on fuel hose (C) coupling nut and 1-1/4 inch wrench on check valve (N), remove fuel hose (C).
- Using 1-1/4 inch wrench on check valve (N) and 7/8 inch wrench on elbow (M), remove elbow (M). Use vise if necessary.

Go on to Sheet 3

TA107853

INTER-TANK SWING CHECK VALVE REPLACEMENT {Sheet 3 of 5} - Continued

10. Using 1 inch wrench on fuel line (P) and 7/8 inch wrench on elbow (Q), loosen fuel line (P) from elbow (Q).
11. Using 7/8 inch wrench, remove elbow (Q) from check valve (N).
Use vise if necessary.
12. Using 7/16 inch socket, remove screw and washers (S) holding clamp (T) to fuel tank.
13. Remove clamp (T) from fuel line (L).

14. Using 1 inch wrench on fuel line (L) and 7/8 inch wrench on elbow (R), loosen fuel line (L) from elbow (R) (located behind left fuel tank rear mount).
15. Using 7/8 inch open end wrench, remove elbow (R) from left fuel tank.
16. Remove fuel line (L).

INSPECTION:

Inspect threaded parts for bad threads. Check tubing for cracks or bends. Replace defective parts.

INSTALLATION:

1. Using 7/8 inch wrench, install elbow (A) to left fuel tank.
2. Using 1 inch wrench, install fuel line (B) to elbow (A).

Go on to Sheet 4

TA107854

INTER-TANK SWING CHECK VALVE REPLACEMENT (Sheet 4 of 5) - Continued

3. Install clamp (C) to fuel line (B).
4. Using 7/16 inch socket, install screw and washers (D) to secure clamp (C) to hull.

5. Using 1-1/4 inch wrench on check valve (E) and 7/8 inch wrench on elbow (F), install elbow (F) to check valve (E).
6. Using 1-1/4 inch wrench on check valve (E) and 7/8 inch wrench on elbow (G), install elbow (G) on check valve (E).
7. Using 7/8 inch wrench on elbow (F) and 1 inch wrench on fuel line (B) install fuel line (B) to elbow (F).
8. Using 7/8 inch wrench on elbow (G) and 1 inch wrench on fuel line (H), install fuel line (H) to elbow (G).
9. Using 1-1/4 inch wrench on check valve (E) and 7/8 inch wrench on fuel line (J), install fuel line (J) to check valve (E).

Go on to Sheet 5

TA107855

INTER-TANK SWING CHECK VALVE REPLACEMENT (Sheet 5 of 5) - Continued

10. Using 7/8 inch wrench, install elbow (K) to right fuel tank.
11. Using 7/8 inch wrench to hold connector (L) and 1-1/8 inch wrench on connector (M), install fuel line (N) to elbow (K).

12. Using 9/16 inch socket, install bracket (p) to hull using screw and washers (Q).
13. Install clamp (T) to hose (N).
14. Using 9/16 inch socket on screw (R) and 9/16 inch wrench on nut and washer (S), install screw (R) and nut (S) through clamp (T) and bracket (P).
15. Tighten screw (R) and nut and washer (S).
16. Install powerplant (page 5-14).
17. Fill fuel tanks (TM 5-5420-226-10).

End of Task

TM 5-5420-226-20

FUEL INLET FLUID PRESSURE FILTER REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. combination box and open end wrench
9/16 in. combination box and open end wrench
Cross-tip screwdriver

SUPPLIES: Sealing compound (Item 28, Appendix D)
Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Turn shutoff cock on inlet fuel line to OFF position
(TM 5-5420-226-10)

REMOVAL:

1. Place rags under filter (A) to catch dripping fuel.

Go on to Sheet 2

TA107857

FUEL INLET FLUID PRESSURE FILTER REPLACEMENT (Sheet 2 of 3)

2. Using 1/2 inch wrench on adapter (B) and 9/16 inch wrench on nut (C) of tube assembly (D), disconnect fuel line.
3. Using 1/2 inch wrench on adapter (E) and 9/16 inch wrench on nut (F) of tube assembly (G), disconnect fuel line.

4. Using hands, pull tubes (D) and (G) out of filter (A).
5. Using screwdriver, remove two screws (H) and lockwashers (J) securing filter (A) to vehicle.

6. Using 1/2 inch wrench, remove adapters (B) and (E) from filter (A).

Go on to Sheet 3

TA107858

FUEL INLET FLUID PRESSURE FILTER REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

NOTE

Apply sealing compound to all male threaded ends before making connections.

- Using 1/2 inch wrench, install adapters (A) and (B) into filter (C).

- Using screwdriver, install filter (C) to hull with two screws (D) and lockwashers (E).

- Place ends of tube assemblies (F) and (G) on adapters (A) and (B). Slide fuel line nuts (H) and (J) onto adapters (A) and (B) and tighten finger tight.
- Using 1/2 inch wrench on adapters (A) and (B) and 9/16 inch wrench on fuel line nuts (H) and (J), tighten fuel line nuts (H) and (J).

- Open shutoff cock (K).
- Start engine and check each connection of fuel lines for leaks.
- Remove and dispose of rags safely.

End of Task

TA107859

FUEL INLET FLUID PRESSURE FILTER REPAIR (Sheet 1 of 2)

TOOLS: 10 in. adjustable wrench

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)

PRELIMINARY PROCEDURE: Remove fuel inlet filter from vehicle (page 7-250)

DISASSEMBLY:

1. Using wrench, remove filter bowl (A) from filter head (B).

2. Remove filter element (C) from filter head (B).
3. Remove preformed packing (D) from filter bowl (A).

Go on to Sheet 2

TA107860

FUEL INLET FLUID PRESSURE FILTER REPAIR (Sheet 2 of 2)

CLEANING AND INSPECTION:

1. Inspect for broken, cracked components and for general serviceability. Replace as necessary.
2. Clean filter bowl, element, and spring with dry cleaning solvent (Item 55, Appendix D).
3. Blow low-pressure, compressed air through filter element to remove dirt particles. Replace element if damaged.

ASSEMBLY:

1. Place new preformed packing (A) in position on filter bowl (B).
2. Place filter element and spring (C) in filter head (D).

3. Place filter bowl (B) and filter head (D) together.
4. Using wrench, screw together filter bowl (B) and filter head (D).
5. Install fuel inlet filter (page 7-252).

End of Task

 Wrench set, combination box and open end
 5/16 in. thru 1 in. openings

SUPPLIES: Sealing compound (Item 28, Appendix D)
 Drain pan

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove engine compartment access covers
 (pages 17-14 and 17-16)

REMOVAL:

CAUTION

When removing or installing fuel lines, care must be taken not to damage fittings and threads or twist or distort fuel lines or hoses.

Go on to Sheet 2

TA107862

NOTE

Use a suitable container to catch any fuel that may leak out whenever any part of the fuel system is loosened or disconnected.

REMOVAL:

1. Disconnect electrical lead (A) from solenoid valve (B).
2. Using 7/16 inch and 1/2 inch open end wrench, remove fuel lines (C) from tee (D).
3. Using 1/2 inch and 5/8 inch open end wrench, remove fuel line (E) from adapter (F).

Go on to Sheet 3

TA107863

MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 3 of 8)
 Fuel Filter Replacement (Sheet 3 of 5)

4. Using 5/16 inch open end wrench, remove two bolts and washers (G) securing solenoid valve (B) to bracket.
5. Using screwdriver, remove two screws, lock-washers, and flat washers (H) securing fuel filter (J) to bracket.

6. Remove solenoid valve (B), fuel filter (J), and attached fittings as a unit.

NOTE

It may be necessary to place fuel filter in a vise.

7. Using 7/16 inch open end wrench, hold nipple (K) and remove fuel filter (J) from nipple.
8. Using 1/2 inch open end wrench, remove adapter (L) from fuel filter (J).
9. Inspect hoses, tube assemblies, and fittings.

Go on to Sheet 4

TA107864

**MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 4 of 8)
Fuel Filter Replacement (Sheet 4 of 5)**

INSTALLATION:

1. Coat threads of nipple (A) and adapter (B) with sealing compound.
2. Using 1/2 inch open end wrench, install and secure adapter (B) to input port of fuel filter (C).
3. Using 7/16 inch open end wrench, hold nipple (A) and install fuel filter (C) securely onto nipple (A).
4. Aline fuel filter (C) and solenoid valve (D) as shown on illustration.
5. Position solenoid valve (D) and fuel filter (C) with attached fittings to brackets on engine.
6. Using screwdriver, secure fuel filter (C) to bracket with two screws, lockwashers, and flat washers (E).

7. Using 5/16 inch open end wrench, secure solenoid valve (D) to bracket with two bolts and washers (F).

Go on to Sheet 5

TA107865

MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 5 of 8)
 Fuel Filter Replacement (Sheet 5 of 5)

8. Connect two fuel lines (G) to tee (H). Using 7/16 inch wrench, tighten fuel line nuts.
9. Connect tube assembly (J) to adapter (B). Using 1/2 inch and 5/8 inch open end wrenches, tighten tube nut to adapter.

10. Connect electrical lead (K) to solenoid valve (D).
11. Operate purge pump (TM 5-5420-226-10) and check for fuel leaks. If leaks are found, tighten connections as required.
12. Install engine access covers (pages 17-15 and 17-17).

End of Task

TA107866

TM 5-5420-226-20-2

MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 6 of 8)
Fuel Filter Element Replacement (Sheet 1 of 2)

TOOLS: Adjustable wrench

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
Low-pressure compressed air
Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove engine compartment access covers
(pages 17-14 and 17-16)

REMOVAL:

NOTE

Use a suitable container to catch any fuel that may leak out when bowl is removed.

1. Using adjustable wrench, loosen filter bowl (A).

2. Remove bowl (A), preformed packing (B), and filter element (C).

3. Throw away preformed packing (B) and filter element (C).

4. Clean filter bowl with dry cleaning solvent.

Go on to Sheet 2

TA107867

MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 7 of 8)
 Fuel Filter Element Replacement (Sheet 2 of 2)

- Wipe out bowl (A) and dry with compressed air.

INSTALLATION:

- Position filter element, (C) in filter bowl (A).
- Position preformed packing (B) over lip of filter bowl (A) and install to filter head (D).
- Using adjustable wrench, tighten filter bowl (A) to filter head (D).
- Operate purge pump (TM 5-5420-226-10) and check for leaks. If leak is found, tighten filter bowl.
- Install engine access covers (pages 17-15 and 17-17).

TM 5-5420-226-20-2

MANIFOLD HEATER FUEL FILTER AND INPUT FUEL LINE REPLACEMENT (Sheet 8 of 8)
Fuel Filter Input Fuel Line Replacement (Sheet 1 of 1)

TOOLS: 1/2 in. open end wrench
5/8 in. open end wrench

SUPPLIES: Clean bucket or drip pan

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove engine access covers (pages 17-14 and 17-16)

REMOVAL:

CAUTION

When removing or installing fuel lines, care must be taken not to damage fittings and threads or twist or distort fuel lines or hoses.

NOTE

Use a suitable container to catch any fuel that may leak out wherever any part of the fuel system is loosened or disconnected.

1. Using 1/2 inch and 5/8 inch open end wrenches, disconnect both ends of tube assembly (A) from adapters (B and C).
2. Remove tube assembly (A).

INSTALLATION:

1. Position tube assembly (A) to adapter (B and C).
2. Using 1/2 inch and 5/8 inch open end wrench, install tube assembly to adapters.
3. Operate purge pump (TM 5-5420-226-10) and check for leaks. If leak is found, tighten connection as required.
4. Install engine access covers (pages 17-15 and 17-17).

 3/8 in. combination box and open end wrench
 Flat-tip screwdriver

SUPPLIES: Cent airier
 Rags (Item 12, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

NOTE

Replacement instructions for left or right side manifold heater input lines are same except as noted.

Go on to Sheet 2

TA107870

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 2 of 10)
Input Fuel Line Replacement (Sheet 2 of 5)

1. Using 3/8 inch wrench and screwdriver, remove screws (A) and nuts (B) that secure five clamps (C) on engine left side, or five clamps (D) on engine right side.
2. Using socket, remove nut (E) securing clamp (F) (right side only).
3. Remove clamps (C, D, and F) from tube assembly (G or H).

Go on to Sheet 3

TA107871

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 3 of 10)
 Input Fuel Line Replacement (Sheet 3 of 5)

NOTE

Use suitable container to catch fuel whenever any fuel line or connection is loosened or disconnected. Use rags to wipe any spillage.

4. Using 7/16 inch wrench, disconnect input fuel line (J) or (K) from elbow (L) and tee (M).
5. Remove input fuel line (J) or (K).
6. Inspect elbows and tee for damage. Replace as necessary.

Go on to Sheet 4

TA107872

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 4 of 10)
Input Fuel Line Replacement (Sheet 4 of 5)

INSTALLATION:

1. Position input fuel line (A) or (B) in place on engine.

2. Connect input fuel line (A) or (B) to elbow (C) and tee (D).
3. Using 7/16 inch wrench, tighten input fuel line (A) or (B) to elbow (C) and tee (D).

Go on to Sheet 5

TA107873

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT {Sheet 5 of 10}
 Input Fuel Line Replacement (Sheet 5 of 5)

4. Install clamps (E) onto input fuel line (A) or (B).
5. Install screws (F) and nuts (G) to secure clamps (E) to clamps (H). Using 3/8 inch wrench and screwdriver, tighten screws (F) and nuts (G).
6. Install clamps (J) onto input fuel line (B).
7. Install nut (K) to secure clamp (J). Using socket, tighten nut (K) (right side only).
8. Perform manifold heater operational check (page 7-298).
9. Install powerplant (page 5-14).

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 7 of 10)
 Input Solenoid Valve Replacement (Sheet 2 of 5)

NOTE

use suitable container to catch fuel that may leak whenever any part of fuel system is loosened or disconnected.

REMOVAL:

1. Disconnect electrical lead (A) from solenoid valve (B).
2. Using 7/16 inch and 1/2 inch wrenches, disconnect two fuel lines (C) from tee (D).
3. Using 1/2 inch and 5/8 inch wrenches, remove fuel line (E) from adapter (F).
4. Using 5/16 inch wrench, remove two screws and washers (G).
5. Using screwdriver, remove two screws (H) with lockwashers and flat washers. Throw lockwashers away.
6. Remove solenoid valve (B), fuel filter (J), and attached fittings as a unit.

Go on to Sheet 3

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 8 of 10)
Input Solenoid Valve Replacement (Sheet 3 of 5)

7. Using 7/16 inch wrench, hold nipple (K) and remove filter (J) from nipple (K).
8. Using 7/16 inch wrench, remove nipple (K) from solenoid valve (B).
9. Using 7/16 inch wrench, remove tee (D).
10. Using 9/16 inch wrench, remove elbow (L) from solenoid valve (B).
11. Using 7/16 inch wrench, remove two screws (M) securing bracket (N).
12. Remove bracket (N).
13. Inspect all parts removed. Replace parts as necessary.

Go on to Sheet 4

TA107877

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 9 of 10)
 Input Solenoid Valve Replacement (Sheet 4 of 5)

INSTALLATION:

NOTE

Coat male threads of elbow, tee, and adapter with sealing compound (Item 28, Appendix D) before installation.

1. Install and align elbow (A) as shown to solenoid valve (B). Using 9/16 inch wrench, tighten elbow.
2. Install and align tee (C) to elbow (A) as shown. Using 7/16 inch wrench, tighten tee.
3. Install nipple (D) to solenoid valve (B). Using 7/16 inch wrench, tighten nipple.
4. Using 7/16 inch wrench, hold nipple (D) and install fuel filter (E) on nipple. Align filter as shown.
5. Position bracket (F) in place on engine.
6. Install two screws (G) to secure bracket. Using 7/16 inch wrench, tighten screws.

Go on to Sheet 5

TA107878

MANIFOLD HEATER INPUT SOLENOID VALVE AND FUEL LINE REPLACEMENT (Sheet 10 of 10)
Input Solenoid Valve Replacement (Sheet 5 of 5)

7. Position solenoid valve (B) and fuel filter (E) with attached fittings to brackets on engine.
8. Install two screws (H) with new lockwashers and flat washers to secure fuel filter (E) to engine bracket. Using screwdriver, tighten screws.
9. Install two screws and washers (J) to secure solenoid valve (B) to bracket. Using 5/16 inch wrench, tighten screws.
10. Connect two fuel lines (K) to tee (C). Using 7/16 inch wrench, tighten fuel line nuts.
11. Connect hose assembly (L) to adapter (M). Using 1/2 inch and 5/8 inch wrenches, tighten hose nut to adapter.
12. Connect electrical lead (N) to solenoid valve (B).
13. Operate purge pump (TM 5-5420-226-10). Check for leaks. If leaks are found, tighten connections as required.
14. Install powerplant (page 5-14).

End of Task

TA107879

CHECK VALVE (MANIFOLD HEATER - RETURN FUEL) REPLACEMENT (Sheet 1 of 3)

TOOLS: 7/16 in. combination box and open end wrench
9/16 in. combination box and open end wrench
13/16 in. combination box and open end wrench
Wire brush

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Drain pan
Sealing compound (Item 28, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Remove engine shroud (page 9-30)

REMOVAL:

CAUTION

When removing or installing fuel lines, care must be taken not to damage fittings and threads or *twist* or distort fuel lines or hoses.

NOTE

It maybe necessary to use two wrenches for removal or installation of hoses and tubes.

Go on to Sheet 2

TA107880

CHECK VALVE (MANIFOLD HEATER - RETURN FUEL) REPLACEMENT (Sheet 2 of 3)

NOTE

Use a suitable container to catch any fuel that may leak out whenever any part of the fuel system is loosened or disconnected.

1. Using 7/16 inch and 9/16 inch wrenches, disconnect end fitting of hose assemble (A) from elbow (B).
2. Using 7/16 inch and 13/16 inch wrenches, remove elbow (B) from check valve (C).
3. Using 13/16 inch and 7/16 inch wrenches, remove check valve (C) from nipple (D).
4. Using 7/16 inch and 9/16 inch wrenches, remove nipple (D) from elbow (E).
5. Using 9/16 inch wrench, remove elbow (E) from solenoid valve (F).

CLEANING AND INSPECTION:

1. Using wire brush, clean threaded parts.
2. Inspect all hoses, tube assemblies, and fittings. Replace as required.

Go on to Sheet 3

TA107881

CHECK VALVE (MANIFOLD HEATER - RETURN FUEL) REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Coat threads of elbow (A), nipple (B), check valve (C), and elbow (D) with sealing compound.
2. Using 9/16 inch wrench, install elbow (A) in solenoid valve in position shown.
3. Install nipple (B) to elbow (A).
4. Install check valve (C) to nipple (B).
5. Install elbow (D) to check valve (C).
6. Using proper wrenches, tighten and aline parts (B), (C), and (D) to be able to connect hose assembly (E) to elbow (D).

7. Connect hose assembly (E) to elbow (D).
8. Using 7/16 inch and 9/16 inch wrenches, tighten hose assembly (E) connection to elbow (D).
9. Connect engine ground hop (page 5-25). DO NOT start engine.
10. Operate purge pump (TM 5-5420-226-10) and check for leaks. If leaks are found, tighten connections as required.
11. Disconnect engine ground hop (page 5-40).
12. Install engine shroud (page 9-31).
13. Install powerplant (page 5-14).

End of Task

TA107882

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 1 of 7)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-276
Cleaning and Inspection	7-279
Installation	7-280

TOOLS: 5/16 in. combination box and open end wrench
 8 in. adjustable wrench
 Flat-tip screwdriver
 Hammer, 2 lb ball peen
 9/16 in. combination box and open end wrench (2 required)
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench

SUPPLIES: Clean rags (Item 12, Appendix D)
 Sealing compound (Item 27, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)
 Container

PERSONNEL: Two

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)

CAUTION

When removing or installing fuel lines, care must be taken not to damage fittings and threads or twist or distort fuel lines or hoses.

NOTE

There are two manifold heater fuel return tube assemblies, one for the left bank and one for the right bank. Removal and installation procedures for both tube assemblies are similar. This procedure covers the right bank tube assembly.

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 2 of 7)

NOTE

Use a suitable container to catch any fuel that may leak out whenever any part of the fuel system is loosened or disconnected.

REMOVAL:

1. Using screwdriver and 1/2 inch wrench, remove two screws and washers (A) from two clamps (B).
2. Using fingers, remove clamps (B) from tube assembly (C).

Go on to Sheet 3

TA107884

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 3 of 7)

- Using 1/2 inch socket, ratchet, and 1/2 inch wrench, remove four screws and washers (D) from lower engine cooling fan shroud (E).
- Using screwdriver, remove two screws and washers (F) from lower engine cooling fan shroud (E). (Left screw is hidden. You will have to feel for it.)

NOTE

The engine cooling fan shroud (E) must be slightly displaced in step 5 to allow clearance for removal of the manifold heater return tube (C).

- Using hammer handle, tap on bottom of engine cooling fan shroud (E). Second person, using screwdriver, pry up on front lip of cooling fan shroud and slightly displace it.
- Using fingers, remove grommet (G) from tube assembly (C).
- Using 9/16 inch wrench, remove line nut of tube assembly (C) from elbow (H) on manifold heater (J).

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 4 of 7)

8. Using 9/16 inch wrench, remove line nut of tube assembly (C) from tee (K).
9. Using 9/16 inch wrench, remove line nut of tube assembly (L) from tee (K).
10. Using 5/16 inch open end wrench, remove two screws (M) and pull solenoid valve (N) forward approximately 1 inch.
11. Using 1/2 inch open end wrench on coupling (P), remove coupling (P) with elbow (Q) and tee (K) attached.
12. Using 9/16 inch wrench on elbow (Q) and adjustable wrench on tee (K), remove tee (K) from elbow (Q).
13. Using 9/16 inch wrench on elbow (Q) and 1/2 inch wrench on coupling (P), remove elbow (Q) from coupling (P).
14. Push engine cooling fan shroud aside to allow clearance for removal of tube assembly (C). Other person, using both hands, carefully remove tube assembly (C) from engine.

CLEANING AND INSPECTION:

1. Using clean rags and so solvent, clean fittings thoroughly.
2. Inspect fittings for nicks, cracks, thread damage, or wear. Replace if required.
3. Inspect internal threads of manifold heater and solenoid adapter for damage.

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 5 of 7)

INSTALLATION:

NOTE

Coat pipe thread fittings with sealing compound before installation

1. Using both hands, carefully push tube assembly (A) down through lower engine cooling shroud opening (B).
2. Using 9/16 inch wrench, install line nut of tube assembly (A) on elbow (C) at manifold heater (D).
3. Install grommet (E) on tube assembly (A) with flat side of grommet facing toward front of engine.

Go on to Sheet 6

TA107887

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 6 of 7)

4. Using 9/16 inch wrench, install coupling (F) on elbow (G).
5. Using 9/16 inch wrench on elbow (G) and adjustable wrench on tee (H), install elbow (G) on tee (H).
6. Using 1/2 inch wrench, install coupling (F), elbow (G), and tee (H) to solenoid valve (J).
7. Using 9/16 inch wrench, install line nut of tube assembly (K) on tee (H).
8. Using 9/16 inch wrench, install line nut of tube assembly (C) on tee (H).
9. Position solenoid valve (J) on bracket (L).
10. Using 5/16 inch wrench, install two screws and washers (M) through bracket (L) and into solenoid valve (J).
11. Using fingers, install grommet (E) in slot of lower engine cooling fan shroud (N).
12. Using both hands, install lower engine cooling fan shroud (N) over mounting holes in engine bulkhead.
13. Using hands, manually install four screws and washers (P) in lower engine cooling fan shroud (N).
14. Using socket and 1/2 inch wrench, tighten four screws and washers (P) in lower engine cooling fan shroud (N).

Go on to Sheet 7

TA107888

MANIFOLD HEATER FUEL RETURN TUBE ASSEMBLY REPLACEMENT (LEFT AND RIGHT BANK) (Sheet 7 of 7)

15. Using fingers, install clamps (Q) on tube assembly (A).
16. Using screwdriver and 1/2 inch wrench, install two screws and washers (R) through clamps (Q).
17. Using screwdriver, install two screws and washers (S) in lower engine cooling fan shroud (N).
18. Perform manifold heater operational check (page 7-298).
19. Install engine shroud (page 9-31).
20. Install powerplant (page 5-14).

End of Task

MANIFOLD HEATER NOZZLE REPLACEMENT (Sheet 1 of 3)

TOOLS: 7/16 in. combination box and open end wrench (2 required)
9/16 in. combination box and open end wrench
13/16 in. combination box and open end wrench
1/2 in. combination box and open end wrench
1 in. combination box and open end wrench

SUPPLIES: Rags (Item 12, Appendix D)
Filter (11610365-1)
Nozzle (7335555)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

NOTE

Nozzle on right manifold heater is shown. Nozzle on left manifold is similar.

Go on to Sheet 2

TA107890

MANIFOLD HEATER NOZZLE REPLACEMENT (Sheet 2 of 3)

REMOVAL:

1. Using two 7/16 inch wrenches, disconnect fuel inlet line (A) from elbow (B).
2. Using 7/16 inch and 9/16 inch wrenches, disconnect fuel return line (C) from elbow (D).
3. Using 1 inch wrench, loosen jamnut (E).
4. Using 13/16 inch wrench, remove nozzle (F) and fitting from manifold heater (G).

5. Using 1/2 inch wrench, remove elbow (H) and (if present) filtering disk from nozzle (F). Throw filtering disk away.
6. Using 9/16 inch and 1/2 inch wrenches, remove elbow (B) from nozzle (F).
7. Using 9/16 inch and 13/16 inch wrenches, remove bushing (J) and (if present) filtering disk. Throw filtering disk away.
8. Throw nozzle (F) away.

9. Inspect all parts disconnected or removed. Replace all items as necessary.

Go on to Sheet 3

TA107891

MANIFOLD HEATER NOZZLE REPLACEMENT (Sheet 3 of 3)**INSTALLATION:**

1. Using 13/16 inch and 9/16 inch wrenches, install bushing (A) in new nozzle (B).
2. Using 9/16 inch and 1/2 inch wrenches, install elbow (C) to bushing (A).
3. Using 7/16 inch wrench, install elbow (D) into nozzle (B).

4. Install nozzle (B) and fittings into manifold heater (E).
5. Aline nozzle for ease of connecting fuel lines. Using 1 inch wrench, tighten jamnut (F).
6. Using two 7/16 inch wrenches, connect input fuel line (G) to elbow (C).
7. Using 7/16 inch and 9/16 inch wrenches, install return fuel line (H) to elbow (D).
8. Perform manifold heater operational check (page 7-298).
9. Install powerplant (page 5-14).

End of Task

RIGHT

NOTE

**Procedures for replacement of left or right manifold heater are the same.
Procedures given here are for right manifold heater.**

MANIFOLD HEATER (LEFT AND RIGHT) REPLACEMENT (Sheet 2 of 3)**REMOVAL:**

1. Using 3/4 inch wrench, disconnect ignition lead (A) from spark plug (B).

NOTE

Use suitable drip pan to catch fuel spillage whenever any fuel line or fitting is loosened or removed.

2. Using 7/16 inch wrench, disconnect fuel input tube (C) from elbow (D).
3. Using 9/16 inch wrench, disconnect fuel return tube (E) from elbow (F).
4. Using 1/2 inch wrench, remove four nuts and washers (G). Throw nuts away.
5. Remove manifold heater (H) and gasket (J). Throw gasket away.

6. Using 7/16 inch wrench, remove elbow (H).
7. Using 1/2 inch wrench, remove elbow (J).
8. Using 9/16 inch wrench, remove bushing (K).
9. Inspect all items disconnected or removed for cracks, nicks, or other damage. Replace as necessary.

Go on to Sheet 3

TA107894

MANIFOLD HEATER (LEFT AND RIGHT) REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Install elbow (A). Using 7/16 inch wrench, tighten elbow.
2. Install bushing (B). Using 9/16 inch wrench, tighten bushing.
3. Install elbow (C). Using 1/2 inch wrench, tighten elbow.

4. Position new gasket (D) and manifold heater (E) onto manifold.
5. Install four washers and new nuts (F) to secure manifold heater.
6. Using 1/2 inch open end wrench, tighten nuts (F).

7. Connect fuel return tube (G) to elbow. Using 9/16 inch open end wrench, tighten tube.
8. Connect fuel input tube (H) to elbow. Using 7/16 inch open end wrench, tighten tube.
9. Connect ignition lead (J) to spark plug. Using 3/4 inch open end wrench, tighten ignition lead.
10. Perform manifold heater operation check (page 7-298).
11. Install powerplant (page 5-14).

End of Task

TA107895

MANIFOLD HEATER IGNITION COIL AND CABLE REPLACEMENT (Sheet 1 of 3)

TOOLS: 7/8 in. combination box and open end wrench
 3/4 in. combination box and open end wrench
 1/2 in. combination box and open end wrench
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 Slip joint pliers

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

NOTE
 Replacement instructions are the same for both sides. Therefore, only the left side is shown.

Go on to Sheet 2

TA107896

MANIFOLD HEATER IGNITION COIL AND CABLE REPLACEMENT (Sheet 2 of 3)

REMOVAL:

WARNING

Ignition coils on engine are capable of producing extremely high voltage. Output of this ignition system is sufficient to cause a dangerous electrical shock. Never touch any uncovered or live connections.

1. Using 3/4 inch wrench, disconnect cable (A) from spark plug (B).

2. Using pliers, disconnect electrical connector (C) from coil (D).
3. Using 7/16 inch socket, remove two screws (E) and cable clamp (F).
4. Using 1/2 inch socket, extension, and 1/2 inch wrench, remove two screws (G) and cable bracket (H).
5. Using hands, put down pressure on coil (D) to give access to screws (J).
6. Using 1/2 inch socket and extension, remove two screws (J).
7. Remove coil (D), cable (A), and clamps (K) as a unit.
8. Remove clamps (K) from coil (D).
9. Using 7/8 inch wrench, disconnect cable (A) from coil (D).

INSPECTION:

1. Inspect clamps and coil for cracks or other damage.
2. Check continuity and insulation resistance of cable.
3. Replace faulty parts as required.

TA107897

MANIFOLD HEATER IGNITION COIL AND CABLE REPLACEMENT (Sheet 3 of 3)**INSTALLATION:**

1. Position two clamps (A) onto coil (B).
2. Position coil (B) and clamps (A) on frame.

3. Install two screws (C) to secure clamps (A) to frame. Do not tighten.
4. Connect cable (D) to coil (B).
5. Using 7/8 inch wrench, tighten cable (D) connector.
6. Using 1/2 inch socket, extension, and 1/2 inch wrench, install two screws (E) to hold bracket (F) to frame.
7. Using 7/16 inch socket, install two screws (G) and clamp (H) to bracket (F).
8. Route cable (D) over bracket and connect to spark plug (J).
9. Using 3/4 inch wrench, tighten cable (D).
10. Using 1/2 inch socket and extension, tighten screws (C).
11. Alining keyway, connect electrical connector (K) to coil (B).
12. Using pliers, tighten electrical connector (K).
13. Perform manifold heater operational check (page 7-298).
14. Install powerplant (page 5-14).

End of Task

TA107898

MANIFOLD HEATER FUEL RETURN SOLENOID VALVE REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-292
Inspection	7-294
Installation	7-295

TOOLS: Slip joint pliers
9/16 in. combination box and open end wrench
1/2 in. combination box and open end wrench
5/16 in. combination box and open end wrench
1/2 in. socket with 1/2 in. drive
5 in. extension with 1/2 in. drive
Ratchet with 1/2 in. drive

SUPPLIES: Cent airier
Rags (Item 12, Appendix D)
Sealing compound (Item 28, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Remove engine shroud (page 9-300)

NOTE

Use suitable container to catch any fuel that may leak out whenever any part of fuel system is loosened or disconnected.

MANIFOLD HEATER FUEL RETURN SOLENOID VALVE REPLACEMENT (Sheet 2 of 5)**REMOVAL:**

1. Using pliers, disconnect electrical connector (A) from solenoid valve (B).
2. Using 9/16 inch wrench, disconnect two fuel lines (C) from tee (D).
3. Using 9/16 inch wrench, disconnect hose assembly (E) from elbow (F).
4. Using 5/16 inch wrench, remove two screws and washers (G) securing solenoid valve (B) to bracket.
5. Remove solenoid valve (B) and fittings as a unit.

Go on to Sheet 3

TA107900

MANIFOLD HEATER FUEL RETURN SOLENOID VALVE REPLACEMENT (Sheet 3 of 5)

6. Using 1/2 inch wrench, remove coupling (H) with elbow and tee attached.
7. Using 9/16 inch wrench, remove elbow (J) with nipple, check valve, and elbow attached.

8. Using 1/2 inch wrench, socket, and extension, remove three screws (K) securing bracket (L) to shroud.
9. Remove bracket (L).

INSPECTION:

Inspect all items disconnected or removed.
Replace defective parts as necessary.

MANIFOLD HEATER FUEL RETURN SOLENOID VALVE REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

NOTE

Coat all male threads of fittings with sealing compound before installation.

1. Position bracket (A) in place on shroud.

2. Using 1/2 inch wrench, socket, and extension, install three screws (B) to secure bracket to shroud.
3. Using 9/16 inch wrench, install elbow with nipple, check valve, and elbow (C) as a unit on solenoid valve (D).
4. Using 1/2 inch wrench, install coupling with elbow and tee (E) on solenoid valve (D).

Go on to Sheet 5

TA107902

MANIFOLD HEATER FUEL RETURN SOLENOID VALVE REPLACEMENT (Sheet 5 of 5)

5. Place solenoid valve (D) with fittings on bracket. Position solenoid valve so the electrical connector is facing rearward.
6. Using 5/16 inch wrench, install two screws and washers (F) to secure solenoid valve (D) to bracket.
7. Connect hose assembly (G) to elbow (H). Using 9/16 inch wrench, tighten hose assembly (G) to elbow (H).
8. Connect two fuel lines (J) to tee (K). Using 9/16 inch wrench, tighten fuel lines (J) to tee (K).
9. Using pliers, install electrical connector (L) to valve.
10. Operate purge pump (TM 5-5420-226-10). Check for leaks. If leaks are found, correct as necessary.
11. Install engine shroud (page 9-31).

End of Task

TA107903

MANIFOLD HEATER SPARK PLUG REPLACEMENT (Sheet 1 of 1)

TOOLS: 3/4 in. combination box and open end wrench
 7/8 in. combination box and open end wrench
 Feeler gage

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

**REMOVAL:**

1. Using 3/4 inch wrench, disconnect ignition cable (A) from spark plug (B).
2. Using 7/8 inch wrench, remove spark plug (B) with gasket. Throw gasket away.

INSTALLATION:

1. Using feeler gage, set spark plug gap at 0.097 inch (-0.003 or +0.017).
2. Using 7/8 inch wrench, install spark plug (B) and new gasket.
3. Connect ignition cable (A) to spark plug (B). Using 3/4 inch wrench, tighten ignition cable (A) to spark plug (B).
4. Perform manifold heater operational check (page 7-298).
5. Install powerplant (page 5-14).

End of Task

TA107904

MANIFOLD HEATER OPERATIONAL CHECK (Sheet 1 of 2)

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

PERSONNEL: Two

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

OPERATIONAL CHECK:

1. Using ground hop kit, prepare engine for powerplant test run (page 5-25).
2. Have first person positioned near intake manifold heater tube (A) to check heat on tube (A) when engine is started.

NOTE

This check must be made after any part of the manifold heater system is replaced.

3. Have second person sit on driver's seat (B). Set FUEL PUMPS switch (C) to OFF (down) position and MASTER BATTERY switch (D) to ON (up) position on master control panel (E).

Go on to Sheet 2

TA107905

MANIFOLD HEATER OPERATIONAL CHECK (Sheet 2 of 2)

4. Depress accelerator pedal (F) about 3/4 to pedal stop (G).
5. Press and hold STARTER switch (H).

6. At the same time, press manifold heater (J) and operate purge pump handle (K).

7. Have person near intake manifold heater tube check for heat. If no heat is felt, refer to troubleshooting.
8. When checks are completed, hold ENGINE FUEL SHUTOFF switch (L) to OFF (up) position.
9. Set MASTER BATTERY switch (M) to OFF (down) position.
10. Disconnect engine from powerplant test run hookup (page 5-40).
11. Install powerplant (page 5-14).

End of Task

TA107906

MANIFOLD HEATER FUEL RETURN HOSE ASSEMBLY REPLACEMENT(Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-300
Cleaning and Inspection	7-301
Installation	7-302

TOOLS: Wire brush
 9/16 in. combination box and open end wrench
 7/16 in. combination box and open end wrench
 7/8 in. combination box and open end wrench

SPECIAL TOOLS: Ground hop kit (Item 30, Chapter 3, Section I)

SUPPLIES: Bucket or drip pan
 Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove engine shroud (page 9-30)
 Remove rear cooling fan (page 9-55)

REMOVAL:

CAUTION

When removing or installing fuel lines or hoses, care must be taken not to damage fittings and threads or twist or distort fuel lines or hoses.

Go on to Sheet 2

TA107907

MANIFOLD HEATER FUEL RETURN HOSE ASSEMBLY REPLACEMENT (Sheet 2 of 4)**NOTE**

Use suitable container to catch any fuel that may leak out whenever any part of fuel system is loosened or disconnected.

1. Using 7/16 inch and 9/16 inch wrenches, disconnect hose assembly (A) from elbow (B).
2. Using 7/8 inch wrench, disconnect hose assembly (C) from elbow (D).

3. Using 7/16 inch and 9/16 inch wrenches, disconnect hose assembly (A) from elbow (D) on engine side of shroud.
4. Remove grommet (E) from shroud and hose assembly (A).
5. Pull hose assembly (A) from shroud.

CLEANING AND INSPECTION:

1. Using wire brush, clean threaded parts.
2. Inspect all hoses and fittings and replace as necessary.

Go on to Sheet 3

TA107908

MANIFOLD HEATER FUEL RETURN HOSE ASSEMBLY REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position hose assembly (A) through shroud. Be sure that end with 90-degree bend is on engine side of shroud.

2. Install grommet (B) onto hose assembly and position grommet in opening in shroud.

3. Connect hose assembly (A) to elbow (C).

4. Connect hose assembly (A) to elbow (D).
5. Using 7/16 inch and 9/16 inch wrenches, tighten hose assembly (A) to elbows (C) and (D).
6. Using 7/8 inch wrench, install hose assembly (E).

Go on to Sheet 4

TA107909

MANIFOLD HEATER FUEL RETURN HOSE ASSEMBLY REPLACEMENT (Sheet 4 of 4)

7. Connect for powerplant test run (ground hop test) (page 5-25) outside of hull. DO NOT start engine.
8. Operate purge pump (TM 5-5420-226-10) and check for leaks. If leaks are found, tighten connections as required.
9. Disconnect powerplant ground hop kit (page 5-40).
10. Install rear cooling fan (page 9-57).
11. Install engine shroud (page 9-31).
12. Install powerplant (page 5-14).

End of Task

PRIMER FUEL PUMP REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-304
Installation	7-306

TOOLS: 1/2 in. combination box and open end wrench
 9/16 in. open end wrench
 9/16 in. socket with 1/2 in. drive, ratchet, and 3 in. extension

SUPPLIES: Sealing compound (Item 28, Appendix D)
 Silicone compound (Item 32, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Shut off fuel at fuel shutoff cock (TM 5-5420-226-10)

Go on to Sheet 2

TA107910

PRIMER FUEL PUMP REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Disconnect two electrical connectors (A) located on handle support bracket (B) by pulling apart.
2. Using 7/16 inch wrench, remove screw and lockwasher (C) securing clamp (D) to handle support bracket (B).

3. Using 9/16 inch wrench, remove inlet tube nut (E), outlet tube nut (F), and heater fuel pump inlet tube nut (G) from primer pump (H).
4. Pull back three tubes (J) from primer pump (H).

5. Using 1/2 inch wrench, remove adapter (K) and tee assembly (L) from primer pump (H).

Go on to Sheet 3

TA107911

PRIMER FUEL PUMP REPLACEMENT (Sheet 3 of 4)

6. Using 9/16 inch socket and extension, remove four screws, lockwashers, and flat washers (M) securing primer pump (H) to vehicle.
7. Remove primer pump (H).

INSTALLATION:

1. Place primer pump (A) in position in vehicle.
2. Using 9/16 inch socket and extension, install four screws, lockwashers, and flat washers (B) securing primer pump (A) to vehicle.

3. Place sealing compound on male pipe threads of adapter (C) and tee assembly (D).
4. Using 1/2 inch wrench, install adapter (C) and tee assembly (D) into primer pump (A).

Go on to Sheet 4

TA107912

PRIMER FUEL PUMP REPLACEMENT (Sheet 4 of 4)

5. Using 9/16 inch wrench, install inlet tube nut (E) and heater fuel pump inlet tube nut (F) to tee assembly (D). Install outlet tube nut (G) to adapter (H).

6. Apply silicone compound to two electrical connectors (J).
7. Connect two electrical connectors (J) located on handle support bracket (K) by pushing together.
8. Using 7/16 inch wrench, install screw and lockwasher (L) securing clamp (M) to handle support bracket (K).

9. Turn on fuel at fuel shutoff cock (TM 5-5420-226-10).
10. Check primer pump operation (TM 5-5420-226-10).

End of Task

TA107913

ENGINE FUEL RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 1 of 3)

TOOLS: 1 in. open end wrench
1-1/8 in. open end wrench (2 required)
9/16 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
Extension, 1/2 in. drive, 5 in. long
7/16 in. open end wrench (2 required)

PRELIMINARY PROCEDURE: Remove transmission shroud (page 9-2)

Go on to Sheet 2

TA107914

ENGINE FUEL RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 2 of 3)**REMOVAL:**

1. Using two 1-1/8 inch wrenches, hold nut (A) while disconnecting nut (B).
2. Using 9/16 inch socket, remove nut (C) and lockwasher (D) holding clamp (E) to stud (F).
3. Using 1 inch wrench to hold hose assembly fittings, use 1-1/8 inch wrench to disconnect nut (G).
4. Using 7/16 inch wrench on nut (H) and other 7/16 inch wrench on screw (J), remove screw (J), washer (K), lockwasher (L), and clamp (M) from bracket (N).
5. Remove tube assembly (P).
6. Remove clamps (E) and (M) from tube assembly (P).

Go on to Sheet 3

TA107915

ENGINE FUEL RETURN TUBE ASSEMBLY REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position tube assembly (A) in place. Tighten nuts (B) and (C) finger tight.
2. Position clamps (D) and (E) to tube assembly (A).
3. Position washer (F) onto screw (G). Place screw (G) through clamp (D) and, using 7/16 inch wrench, install lockwasher (H) and nut (J) onto screw (G), securing clamp (D) to bracket (K).
4. Using 7/16 inch wrench on screw (G) and other 7/16 inch wrench on nut (J), tighten assembled parts (G), (F), (D), (K), (H), and (J) together.
5. Position clamp (E) to stud (L) and install lockwasher (M).
6. Using 9/16 inch socket, install nut (N) onto stud (L), securing clamp (E).
7. Using 1-1/8 inch wrench to hold nut (P), use other 1-1/8 inch wrench to tighten nut (B).
8. Using 1 inch wrench to hold fitting (Q), use 1-1/8 inch wrench to tighten nut (C).

9. Install transmission shroud (page 9-6).

End of Task

TA107916

FUEL LINES REPLACEMENT - PRIMER PUMP ASSEMBLY TO FUEL PUMP (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-311
Installation	7-314

TOOLS: 7/16 in. combination box and open end wrench
 9/16 in. combination box and open end wrench
 1/2 in. combination box and open end wrench
 8 in. adjustable wrench

SUPPLIES: Sealing compound (Item 28, Appendix D)
 Rags (Item 12, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Shut fuel off at fuel shutoff cock (TM 5-5420-226-10)

FUEL LINES REPLACEMENT - PRIMER PUMP ASSEMBLY TO FUEL PUMP (Sheet 2 of 5)

REMOVAL:

- Using 7/16 inch wrench on flats of tee assembly (A) to hold, use 9/16 inch wrench to loosen nut (B) from tee assembly (A) and slide back onto fuel line.

- Using 7/16 inch wrench, remove three screws (C), lockwashers (D), and clamps (E).

Go on to Sheet 3

TA107918

FUEL LINES REPLACEMENT - PRIMER PUMP ASSEMBLY TO FUEL PUMP (Sheet 3 of 5)

3. Using 1/2 inch wrench to hold nipple (F), use 9/16 inch wrench to loosen nuts (G) and (H).
4. Slide nuts (G) and (H) back onto fuel lines and remove nipple (F) and tube (J).

5. Using 7/16 inch wrench to hold elbow (K), use 9/16 inch wrench to loosen fuel line nut (L). Remove fuel line (M).
6. Using adjustable wrench, remove elbow (K).

Go on to Sheet 4

TA107919

FUEL LINES REPLACEMENT - PRIMER PUMP ASSEMBLY TO FUEL PUMP (Sheet 5 of 5)

7. Position nipple (K) and attach two nuts (L).
8. Using 7/16 inch wrench, install three screws (M), lockwashers (N), and clamps (P).
9. Using 1/2 inch wrench to hold nipple (K), use 9/16 inch wrench to tighten two nuts (L).
10. Using adjustable wrench to hold elbow (J), use 9/16 inch wrench to tighten nut (F).

11. Using adjustable wrench to hold tee assembly (E), use 5/8 inch wrench to tighten nut (A).
12. Open fuel shutoff cock (Q).
13. Start engine and check each connection on fuel line for leaks (TM 5-5420-226-10).

End of Task

6. Using 7/16 inch socket and 7/16 inch wrench, remove screw (K), clamp (L), lockwasher (M), and nut (N) from tube assembly (P).
7. Using 1/2 inch wrench to hold adapter (Q), use 9/16 inch wrench to disconnect tube assembly nuts (R) and (S). Remove adapter (Q).
8. Using 11/16 inch wrench to hold reducer (T), use 9/16 inch wrench to disconnect tube assembly nut (U). Remove tube assembly (P).
9. Using adjustable wrench to hold tee (V), use 1 inch wrench to remove reducer (T).

Go on to Sheet 4

TA107924

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 4 of 11)

10. Using 9/16 inch wrench to hold nut (W) use 9/16 inch socket to remove screw (X), clamp (Y), lockwasher (Z), and nut (W).

11. Using 9/16 inch socket, remove screw (AA), lockwasher (AB), and bracket (AC).
12. Using 7/16 inch socket, remove screw (AD), lockwasher (AE), and clamp (AF).
13. Using 1 inch wrench to hold hose assembly nut (AG), use adjustable wrench to remove quick-disconnect (AH).
14. Using one 1 inch wrench to hold nut (AJ), use other 1 inch wrench to disconnect and remove hose assembly (AK).
15. Using 1 inch wrench, disconnect nut (AL) and remove tube assembly (AM).

Go on to Sheet 5

TA107925

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 5 of 11)

16. Using 1-1/4 inch wrench to hold valve (AN), use adjustable wrench to remove tee (V) from valve (AN).
17. Using adjustable wrench to hold elbow (AP), use 1 inch wrench to remove hose assembly nut (AQ) from elbow (AP).
18. Using adjustable wrench, remove elbow (AP).
19. Using 1-1/4 inch wrench to hold valve (AN), use 7/8 inch wrench to remove hose assembly (AR) from valve (AN).
20. Using adjustable wrench to hold elbow (AS), use 1-1/4 inch wrench to remove valve (AN).

21. Using adjustable wrench to hold elbow (AS), use 1 inch wrench to disconnect tube nut (AT). Remove elbow (AS).

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 6 of 11)

22. Using 7/16 inch socket, remove screw (AU), lockwasher (AV), flat washer (AW), and clamp (AX).

23. Using 1 inch crowfoot wrench with extension, disconnect tube nut (AY). Remove tube assembly (AZ).

24. Using adjustable wrench, remove elbow (BA).

Go on to Sheet 7

TA107927

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 7 of 11)

INSTALLATION:

1. Using adjustable wrench, install elbow (A) into left fuel tank.
2. Position tube assembly (B) in place.
3. Using adjustable wrench to hold elbow (A), use 1 inch crowfoot wrench and extension to install tube nut (C) on elbow (A).
4. Position clamp (D) on tube assembly (B) and use 7/16 inch socket to install screw (E), lockwasher (F), and flat washer (G) securing clamp (D).

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 8 of 11)

- Using 1-1/4 inch wrench to hold valve (H), use adjustable wrench to install elbow (J) and tee (K).

- Using adjustable wrench to hold elbow (J), use 1 inch wrench to install tube nut (L) on elbow (J).

- Using 1-1/4 inch wrench to hold valve (H), use 7/8 inch wrench to install hose assembly (M) to valve (H).

- Using adjustable wrench, install elbow (N) into right fuel tank.

- Using adjustable wrench to hold elbow (N), use 1 inch wrench to install hose assembly nut (P) onto elbow (N).

Go on to Sheet 9

TA107929

FUEL LINES REPLACEMENT -ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 9 of 11)

10. Position tube assembly (Q) in place.

11. Using adjustable wrench to hold tee (K), use 1 inch wrench to install tube nut (R) onto tee (K).

12. Using one 1 inch wrench to hold hose assembly (S), use other 1 inch wrench to install tube nut (T) on hose assembly (s).

13. Using 1 inch wrench to hold hose assembly nut (U), use adjustable wrench to install quick-disconnect (V).

14. Position bracket (W) in place and use 9/16 inch socket to install screw (X) and lockwasher (Y).

15. Position clamp (Z) on tube assembly (Q) and use 9/16 inch socket and 9/16 inch wrench to install screw (AA), lockwasher (AB), and nut (AC).

16. Position clamp (AD) on tube assembly (Q) and use 7/16 inch socket to install screw (AE) and lockwasher (AF) to secure clamp (AD).

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 10 of 11)

17. Using adjustable wrench to hold tee (K), use 1 inch wrench to install reducer (AG) on tee (K).

18. Position tube assembly (AH) in place.

19. Using 1/2 inch wrench to hold adapter (AJ), use 9/16 inch wrench to install tube nuts (AK) and (AL) on adapter (AJ).

20. Using 11/16 inch wrench to hold reducer (AG), use 9/16 inch wrench to install tube nut (AM) on reducer (AG).

21. Position clamp (AN) on tube assembly (AH) and, using 7/16 inch socket and 7/16 inch wrench, install screw (AP), lockwasher (AQ), and nut (AR).

FUEL LINES REPLACEMENT - ENGINE COMPARTMENT PRIMER PUMP LINES (INLET) (OUTLET)
(Sheet 11 of 11)

- 22. Using 9/16 inch wrench to hold hose nut (AS), use 3/4 inch wrench to install quick-disconnect (AT) on hose assembly (AU).

- 23. Using 1/2 inch wrench to hold adapter (AV), use 9/16 inch wrench to install hose nut (AW) on adapter (AV).

- 24. Using 1/2 inch wrench to hold adapter (AV), use 5/8 inch wrench to install tube nut (AX) on adapter (AV).

- 25. Position clamp (AY) on hose assembly (AU) and, using 7/16 inch wrench, install screw (AZ) and lockwasher (BA) securing clamp (AY).

- 26. Service fuel tanks (TM 5-5420-226-10).

- 27. Install powerplant (page 5-14).

End of Task

TA107932

FUEL LINES REPLACEMENT- PRIMER PUMP TO BULKHEAD (Sheet 1 of 8)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-327
Installation	7-332

TOOLS: 11/16 in. combination wrench
 5/8 in. combination wrench
 1/2 in. combination wrench
 9/16 in. combination wrench
 7/16 in. combination wrench
 7/16 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive

SUPPLIES: 11/16 in. plastic caps (2)
 Rags (Item 12, Appendix D)
 Sealing compound (Item 28, Appendix D)
 Brush (Item 19, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Turn off FUEL SHUTOFF switch (TM 5-5420-226-10)

Go on to Sheet 2

TA107933

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 2 of 8)

REMOVAL:

1. Place rags under bulkhead nuts (A) and (B) to catch draining fuel.
2. Using 11/16 inch wrench to hold bulkhead nut (B), use 5/8 inch wrench to loosen fuel line nut (C).
3. Using 11/16 inch wrench to hold bulkhead nut (A), use 9/16 inch wrench to loosen fuel line nut (D).
4. Using hands, pull fuel lines out of nipples (E). Cap nipples (E) to prevent fuel drainage.

Go on to Sheet 3

TA107934

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 3 of 8)

5. Using 1/2 inch wrench on adapter (F) and 9/16 inch wrench on fuel line nut (G), loosen fuel line nut (G).
6. Remove tube assembly (H).
7. Using 9/16 inch wrench on flats of shutoff cock (J) and 1/2 inch wrench on adapter (F), remove adapter (F).
8. Using 1/2 inch wrench on adapter (K) and 9/16 inch wrench on flats of shutoff cock (J), remove shutoff cock (J).

9. Using 9/16 inch wrench on fuel line nut (L) and 1/2 inch wrench on adapter (K), remove adapter (K).
10. Using 1/2 inch wrench on adapter (M) and 9/16 inch wrench on fuel line nut (N), loosen fuel line nut (N).
11. Remove tube assembly (P).
12. Using 1/2 inch wrench, remove adapter (M).

Go on to Sheet 4

TA107935

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 4 of 8)

13. Using 1/2 inch wrench on adapter (Q) and 9/16 inch wrench on fuel line nut (R), loosen fuel line nut (R) and slide it back onto fuel line (S).

NOTE

The removal and installation of filter (T) is accomplished on page 7-250.

14. Place rags under fuel lines (S) and (U) at purge pump to catch draining fuel.
15. Using 7/16 inch wrench on tee assembly (V) and 9/16 inch wrench on fuel line nut (W), loosen and remove fuel line nut (W).
16. Using 1/2 inch wrench on adapter (X) and 9/16 inch wrench on fuel line nut (Y), loosen and remove fuel line nut (Y).

Go on to Sheet 5

TA107936

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 5 of 8)

- 17. Using socket, remove five screws (Z) and lockwashers (AA) securing shield (AB) to floor.

- 18. Remove shield (AB).

- 19. Holding screw (AC) with 7/16 inch wrench, use socket to remove nut (AD).

- 20. Remove three nuts (AD), three screws (AC), six clamps (AE), and three lockwashers (AF).

- 21. Using hands, remove fuel lines (S) and (U).

WARNING

Remove fuel-soaked rags to safe location.

Go on to Sheet 6

TA107937

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 6 of 8)

INSTALLATION:

1. Place lines (A) and (B) in position in vehicle.
2. Using brush, apply sealing compound to adapter (C) and tee assembly (D).
3. Using 9/16 inch wrench, install line (B) nut (E) to adapter (C).
4. Using 9/16 inch wrench, install line (A) nut (F) on tee assembly (D).

5. Using brush, apply sealing compound to adapter (G).
6. Using 9/16 inch wrench, install line (A) nut (H) to adapter (G).
7. Using brush, apply sealing compound to adapter (J).
8. Using 1/2 inch wrench, install adapter (J).

9. Using brush, apply sealing compound to adapter (J).
10. Using fingers, install nut (K) on adapter (J).

Go on to Sheet 7

TA107938

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 7 of 8)

11. Using brush, apply sealing compound to adapter (L).
12. Using fingers, install adapter (L) into tube nut (M).
13. Using brush, apply sealing compound to adapter (L).

14. Using fingers, install shutoff cock (N) to adapter (L).
15. Using brush, apply sealing compound to adapter (P).
16. Using fingers, install adapter (P) in shutoff cock (N).
17. Using brush, apply sealing compound to adapter (P).
18. Using fingers, install nut (Q) on adapter (P).
19. Remove caps from two nipples (R).
20. Using brush, coat two nipples (R) with sealing compound.
21. Using fingers, install tube nut (S) and line nut (T) on nipples (R).
22. Using wrenches, tighten parts installed finger tight.

Go on to Sheet 8

TA107939

FUEL LINES REPLACEMENT - PRIMER PUMP TO BULKHEAD (Sheet 8 of 8)

23. Place six clamps (U) in position on lines (A) and (B).
24. Using fingers, loosely install three screws (V), lockwashers (W), and nuts (X) on clamps (U).
25. Holding screws (V) with 7/16 inch wrench, use socket to tighten nuts (X).

26. Place shield (Y) in position over lines (A) and (B).
27. Using socket, install five screws (Z) and lockwashers (AA) in shield (Y).
28. Turn on FUEL SHUTOFF switch (TM 5-5420-226-10).

End of Task

TA107940

ENGINE IDLE ADJUSTMENT (Sheet 1 of 1)

TOOLS: 7/16 in. combination box and open end wrench
Flat-tip screwdriver

FABRICATED TOOLS: Gage (Figure F-3)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Start engine, run at idle (TM 5-5420-226-10)
Engage parking brake (TM 5-5420-226-10)
Remove upper engine access cover (page 17-14)

ADJUSTMENT:

- Using 3/16 inch end of fabricated gage, measure distance between stop pin (A) and bracket shoulder (B).

- Using 3/16 inch end of fabricated gage, measure distance between stop pin (A) and bracket shoulder (B).
- If distance is more than or less than 3/16 inch, use wrench and loosen jamnut (C) on idle adjustment screw (D).
- Using screwdriver, turn screw (D) to the right to increase distance, and to the left to decrease distance.
- Using wrench, tighten jamnut (C).
- Check idle speed. If it is not between 700-750 rpm (shown on tachometer), notify support maintenance.
- Stop engine (TM 5-5420-226-10).
- Install upper engine access cover (page 17-15).

End of Task

TA107941

ACCELERATOR PEDAL RETURN SPRING ADJUSTMENT (Sheet 1 of 2)

TOOLS: 7/16 in. combination box and open end wrench
Spring scale

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove operator's floor access plate (page 17-10)
Place shift lever in P (park) position (TM 5-5420-226-10)
Disconnect accelerator linkage at powerplant (page 7-340, steps 10 and 11)

ADJUSTMENT:

1. Using spring scale (A), as shown from behind, check pressure required to depress accelerator pedal (B).
2. Scale should read between 7 and 8 pounds.
3. If scale reads more than 8 pounds, perform steps 5 thru 7.
4. If scale reads less than 7 pounds, perform steps 9 thru 11.

Go on to Sheet 2

TA107942

ACCELERATOR PEDAL RETURN SPRING ADJUSTMENT (Sheet 2 of 2)

5. Using wrench, loosen screw (C).
6. Using fingers, move clamp (D) slightly toward rear of tank.
7. Using wrench, tighten screw (C).

8. Repeat steps 1 and 2. If scale (A) still reads over 8 pounds, repeat steps 5 thru 7 until between 7 and 8 pounds are required to depress pedal (B).
9. Using wrench, loosen screw (C).
10. Using fingers, move clamp (D) slightly toward front of vehicle.
11. Using wrench, tighten screw (C).
12. Repeat steps 1 and 2. If scale (A) still reads less than 7 pounds, repeat steps 9 thru 1-1 until between 7 and 8 pounds are required to depress pedal.
13. Connect accelerator linkage at powerplant (page 7-340, steps 14 and 15).
14. Install operator's floor access plate (page 17-10).

End of Task

TA107943

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 1 of 6)

TOOLS: Long round nose pliers
9/16 in. combination box and open end wrench (2 required)
1/2 in. combination box and open end wrench (2 required)
7/16 in. combination box and open end wrench
Flashlight

FABRICATED TOOLS: Throttle linkage adjusting go/no-go gage (Figure F-3, Appendix F)

SUPPLIES: 1/8 in. dia. by 2 in. by 4 in. long locating pins (2 required)
1/16 in. dia. by 2 in. long pin
Cotter pins (4 required)

PERSONNEL: TWO

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Remove operator's floor access plate (page 17-10)
Place shift lever in P (park) position (TM 5-5420-226-10)
Block tracks to prevent tank movement (TM 5-5420-226-10)
Remove upper engine access cover (page 7-14)

Go on to Sheet 2

TA107944

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 2 of 6)

ADJUSTMENT:

1. Check to see that threaded shaft (A) is flush with inside of clevis (B) at location (C). If threaded shaft is flush, go to step 5. If threaded shaft is not flush, go to steps 2, 3, and 4.
2. Using pliers, remove cotter pin (D) and pin (E). Throw cotter pin away.
3. Using 9/16 inch wrench to hold clevis (B), use 1/2 inch wrench to loosen nut (F) and adjust clevis (B) so that shaft is flush with clevis.
4. Using 9/16 inch wrench to hold clevis (B), use 1/2 inch wrench to tighten nut (F).
5. Insert 1/16 inch diameter pin at location (G) in rod end bearing (H) to be sure that threads of tube assembly (J) go into rod end bearing beyond location (G). If tube assembly is not inserted beyond locatin (G), go to steps 6 and 7. If tube assembly is inserted beyond location (G), go to step 8.
6. Using 7/16 inch wrench to hold rod end bearing (H) (on flats) and 1/2 inch wrench to loosen nut (K), adjust rod end bearing as stated in step 5.
7. Using 7/16 inch wrench to hold rod end bearing (H) (on flats), use 1/2 inch wrench to tighten nut (K).

NOTE

Rod (H) or clevis (B) may be pulled in order to insert pin (E).

8. Insert pin (E) and, using pliers, install new cotter pin (D).

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 3 of 6)

9. Insert 1/8 inch diameter locating pin (L) through alinement hole of remote control lever (M). If locating pin cannot be inserted, perform steps 10 thru 16. If locating pin can be inserted, go to step 16.
10. Using 7/16 inch wrench to hold rod end bearing (N) (on flats), use 1/2 inch wrench to loosen nut (P).
11. Using 7/16 inch wrench, remove screw (Q).
12. Insert locating pin (L) through alinement hole into housing (R).

NOTE

If rod (N) cannot be adjusted short enough for screw (Q) to slip freely through lever (M), push rod (N) forward and insert screw (Q).

13. Turn rod end bearing (N) until screw (Q) slips freely through remote control lever (M) and rod end bearing.
14. Using 7/16 inch wrench to hold rod end bearing (N), tighten nut (P).
15. Using 7/16 inch wrench, tighten screw (Q).
16. Remove locating pin (L).

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 4 of 6)

17. Have one person in driver's station ready to start engine and watch tachometer while the other person measures accelerator travel at engine.
18. Start engine (TM 5-5420-226-10).
19. Using fabricated go/no-go gage (S), measure for at least 1/8 inch and not more than 3/16 inch clearance at idle speed (700-750 rpm). If idle adjustment is necessary, perform steps 20 and 21. If adjustment is not necessary, go on to step 22.
20. Using 1/2 inch wrench, loosen nut (T). Adjust idle adjustment screw (U) to the requirements of step 19. If requirements are met, go to step 22. If requirements cannot be met, notify support maintenance.
21. Using 1/2 inch wrench, hold idle adjustment screw (U). Using 1/2 inch wrench, tighten nut (T).

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 5 of 6)

22. Stop engine (TM 5-5420-226-10).
23. Insert either end of go/no-go gage (S) between stop pin (V) and bracket (W). Hold in this position while person in driver's station presses pedal to full throttle position.
24. With pedal in full throttle position, screw (X) must contact floor and stop pin must contact either end of go/no-go gage (S). If this requirement cannot be met, do steps 25 and 26. If requirement is met, go to step 27.
25. Using two 9/16 inch wrenches, loosen nut (Y) and screw (X) on back side of accelerator pedal (Z).
26. Using two 9/16 inch wrenches, hold screw (X) and tighten nut (Y).
27. Holding pedal down (full throttle position), turn screw out until it is against floor. It may be necessary to press pedal down, raise and adjust, press it down again, raise and adjust several times.

Go on to Sheet 6

TA108048

ACCELERATOR LINKAGE ADJUSTMENT (Sheet 6 of 6)

28. Start engine (TM 5-5420-226-10).
29. Press accelerator pedal down to floor. Tachometer should read between 2550-2650 rpm. If engine will not accelerate to within 2550-2650 rpm, shut down engine (TM 5-5420-226-10). Go back and do steps 25 thru 29. If engine does accelerate to between 2550-2650 rpm, go to step 30.
30. Stop engine (TM 5-5420-226-10).
31. Install upper engine access cover (page 17-15).
32. Install operator's floor access plate (page 17-10).
33. Remove blocks from track (TM 5-5420-226-10).

End of Task

ACCELERATOR PEDAL ASSEMBLY REPLACEMENT (Sheet 1 of 2)

TOOLS: 9/16 in. combination wrench (2 required)

SUPPLIES: Clean rags (Item 12, Appendix D)
Dry cleaning solvent (Item 55, Appendix D)

PRELIMINARY PROCEDURES: Remove throttle control assembly (page 7-351)
Remove accelerator control rod (page 7-346)

REMOVAL:

1. Remove accelerator pedal (A) from vehicle.

Go on to Sheet 2

TA108050

ACCELERATOR PEDAL ASSEMBLY REPLACEMENT (Sheet 2 of 2)

- Using two wrenches, remove stop screw and nut (B).

CLEANING AND INSPECTION:

- Using dry cleaning solvent (Item 55, Appendix D) and clean rags, clean all parts.
- Inspect pedal (A) for cracks, bends, wear, and other defects.

INSTALLATION:

- Using two wrenches, install screw and nut (B) onto pedal (A).
- Install throttle control assembly (page 7-356).
- Install accelerator control rod (page 7-349).
- Using wrench, adjust pedal stop (C) to 1/4 inch gap.

End of Task

TA108051

ACCELERATOR CONTROL ROD REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-346
Cleaning and Inspection	7-348
Installation	7-349

TOOLS: 7/16 in. socket with 3/8 in. drive
 9/16 in. socket with 3/8 in. drive
 3/8 in. drive ratchet handle
 Slip joint pliers
 Ball peen hammer
 3/8 in. dia. drive punch
 Retaining ring pliers
 Vise

SUPPLIES: Clean rags (Item 12, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)

PRELIMINARY PROCEDURE: Remove throttle control handle assembly (page 7-365)

REMOVAL:

1. Using 9/16 inch socket and ratchet, remove two screws, lockwashers, and flat washers (A).

Go on to Sheet 2

TA108052

ACCELERATOR CONTROL ROD REPLACEMENT (Sheet 2 of 5)

2. Using retaining ring pliers, remove two retaining rings (B) from grooves (C) in control rod (D).
3. Remove housing (E) from control rod (D).

4. Using 7/16 inch socket and ratchet, remove three screws (F) and lockwashers (G).

5. Using 9/16 inch socket and ratchet remove two screws (H), lockwashers (J), flat washers (K), and shim (L) (if so equipped).

6. Remove housing (M) from control rod (D).

7. Using hammer and drive punch, remove bushings (N) from housings (E) and (M).

8. Using hammer and drive punch, tap control rod (D) out of link (P) and pedal (Q).

Go on to Sheet 3

TA108053

ACCELERATOR CONTROL ROD REPLACEMENT (Sheet 3 of 5)

- Using pliers, remove three woodruff keys (R) from control rod (D).

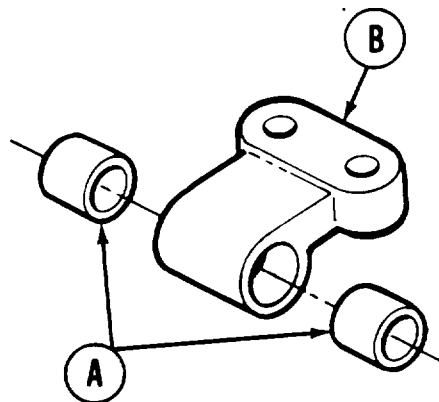

CLEANING AND INSPECTION:

WARNING

Cleaning agent specified is flammable. Use only in well ventilated areas. Keep away from flames, sparks, or heat. Do not smoke while using. Prevent contact with eyes, mouth, and/or skin. Wear rubber gloves when performing cleaning procedures.

- Using dry cleaning solvent (Item 55, Appendix D) and clean rags, clean all parts.
- Check all parts for bends, cracks, wear in holes, and other defects. Replace defective parts.
- Inspect bushings (A) for wear. Replace defective bushings (A) if damaged.
- Examine housing (B) for cracks.

ACCELERATOR CONTROL ROD REPLACEMENT (Sheet 4 of 5)

INSTALLATION:

1. Insert three woodruff keys (A) into slots (B).
2. Insert control rod (C) through pedal (D) and link (E).
3. Using vise, press bearings (F) into housings (G) and (H).

4. Install housing assemblies (G) and (H) on control rod (C).
5. Install shims (J) under housing (H) for proper alignment.
6. Install retaining rings (K) on control rod (C).

Go on to Sheet 5

TA108055

ACCELERATOR CONTROL ROD REPLACEMENT (Sheet 5 of 5)

7. Using 7/16 inch socket and ratchet, install three screws (L) and lockwashers (M).
8. Using 9/16 inch socket and ratchet, install two flat washers (N), lockwashers (P), and screws (Q) in housing (H).

9. Using 9/16 inch socket and ratchet, install two flat washers (R), lockwashers (S), and screws (T) in housing (G).
10. Install throttle control handle assembly (page 7-367).

End of Task

TA108056

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 1 of 9)
PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-351
Cleaning and Inspection	7-355
Installation	7-356

TOOLS: 1/2 in. open end wrench
 Slip joint pliers
 7/16 in. box end wrench
 Mechanic's scribe
 Torque wrench with 1/2 in. drive (100 lb-ft capacity)
 1/2 in. crowfoot attachment with 1/2 in. drive
 6 in. cross-tip screwdriver

SUPPLIES: Clean rags (Item 12, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)
 Pencil and paper

REMOVAL:

1. Using screwdriver, remove six screws (A) from access plate (B).

Go on to Sheet 2

TA108057

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 2 of 9)

2. Remove access plate (B) from access plate hole (C).
3. Using pliers, remove cotter pin (D) from straight pin (E).
4. Remove straight pin (E) from bellcrank lever (F).

5. Using pliers, remove cotter pin (G) from straight pin (H).
6. Remove straight pin (H).

Go on to Sheet 3

TA108058

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 3 of 9)

7. Using pliers, remove cotter pin (J) from straight pin (K).
8. Remove straight pin (K) from clevis (L).
9. While holding tube (M) clear of clevis (L), use 7/16 inch wrench to remove rod end (N).

10. Using 1/2 inch wrench, remove nut (P).

11. Lift throttle linkage (Q) out of bracket (R).
12. Pull throttle linkage (Q) through access plate hole (C).

Go on to Sheet 4

TA108059

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 4 of 9)

13. Using scribe, mark location of clamp (S) on rod (T).
14. Using 1/2 inch wrench, loosen nut (U).

NOTE

Count and write down number of turns needed to unscrew clevis (L).

15. Unscrew clevis (L) and nut (U) from rod (T).

16. Using 7/16 inch wrench, remove screw (V) and lockwasher (W) from clamp (S).
17. Remove clamp (S), spring (X), and flat washer (Y) from rod (T).

18. Using pliers, remove cotter pin (Z) from straight pin (AA).
19. Remove straight pin (AA).
20. Using 1/2 inch wrench, loosen nut (AB).

NOTE

Count and write down number of turns needed to unscrew clevis (AC).

21. Unscrew clevis (AC) and nut (AB) from rod (T).

Go on to Sheet 5

TA108060

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 5 of 9)

22. Using pliers, remove cotter pin (AD) from straight pin (AE).
23. Remove straight pin (AE).
24. Using 1/2 inch wrench, loosen nut (AF).

NOTE

Count and write down number of turns needed to unscrew clevis (AG).

25. Unscrew clevis (AG) and nut (AF) from connecting link (AH).
26. Remove bellcrank lever (F).

CLEANING AND INSPECTION:

1. Using dry cleaning solvent and clean rags, clean all parts.
2. Inspect all parts for bends, cracks, stripped threads, wear, or other defects. Replace defective parts.

Go on to Sheet 6

TA108061

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 6 of 9)

INSTALLATION:

1. Screw nut (A) onto connecting link (B).
2. Screw clevis (C) onto connecting link (B). Rotate clevis (C) to number of turns recorded.
3. Using torque wrench and crowfoot attachment, tighten nut (A) between 6-8 lb-ft (8.13-10.84 N m) while holding clevis (C) with pliers.

4. Connect clevis (C) to bellcrank lever (D). Insert straight pin (E) into connected clevis (C) and bellcrank lever (D).

5. Using pliers, install new cotter pin (F) to straight pin (E).

6. Mount assembled linkage (G) to bracket (H).
7. Inset straight pin (J) through bracket (H).
8. Using pliers, install new cotter pin (K) to straight pin (J).

Go on to Sheet 7

TA108062

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 7 of 9)

9. Connect link (L) to connecting link (B).
10. Insert straight pin (M) through assembled links.
11. Using pliers, install new cotter Pin (N) to straight pin (M).
12. Screw nut (P) onto rod (Q).
13. Place rod (Q) into holding bracket (R).
14. Screw smaller of remaining clevises (S) on rod (Q) the same number of turns recorded for removal.
15. Using torque wrench and crowfoot attachment, tighten nut (P) between 6-8 lb-ft (8.13-10.81 N m) while holding clevis (S) with pliers.

16. Install clevis (S) to bellcrank lever (D). Insert straight pin (T) into clevis (S).

17. Using pliers, install new cotter pin (U) to straight pin (T).

Go on to Sheet 8

TA108063

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 8 of 9)

18. Install flat washer (V), spring (W), and clamp (X) on rod (Q). Make sure clamp (X) is on scribe mark on rod (Q).
19. Using 7/16 inch wrench, install screw (Y) and lockwasher (Z) in clamp (X).
20. Screw nut (AA) onto rod ((Q)).

21. Screw clevis (AB) to same number of turns recorded for removal on rod (Q).
22. Using torque wrench and crowfoot attachment, tighten nut (AA) between 6-8 lb-ft (8.13-10.81 N•m) while holding clevis (AB) with pliers.
23. Using 1/2 inch wrench, install nut (AC) on tube (AD).
24. Using 7/16 inch wrench, install rod end (AE) on tube (AD).

Go on to Sheet 9

TA108064

ACCELERATOR THROTTLE LINKAGE REPLACEMENT (Sheet 9 of 9)

25. Tighten rod end (AE) on tube (AD) until hole of clevis (AF) aligns with hole in rod end (AE).
26. Insert straight pin (AG) into hole of rod end (AE) and clevis (AF).

27. Using pliers, install new cotter pin (AH) to straight pin (AG).
28. Place access plate (AJ) into access plate hole (AK).
29. Using screwdriver, install six screws (AL).

End of Task

TA108065

ACCELERATOR LINKAGE ENGINE CONTROL REPLACEMENT (Sheet 1 of 3)

TOOLS: 9/16 in. socket with 1/2 in. drive
5 in. long extension with 1/2 in. drive
1/2 in. drive ratchet
7/16 in. combination wrench (2 required)
1/2 in. combination wrench

SUPPLIES: Clean rags (Item 12, Appendix D)
Dry cleaning solvent (Item 55, Appendix D)
Pencil
Paper

PRELIMINARY PROCEDURE: Remove driver's seat backrest (page 17-76)

REMOVAL:

1. Using socket and extension, remove 12 screws (A) and lockwashers (B).
2. Remove top access plate (C).

ACCELERATOR LINKAGE ENGINE CONTROL REPLACEMENT (Sheet 2 of 3)

3. Using 7/16 inch wrench, remove screw (D).
4. Using two 7/16 inch wrenches, remove screw (E) and nut (F).
5. Using 1/2 inch wrench and 7/16 inch wrench, loosen nuts (G) from stud (H).
6. Unscrew rod ends (J) and nuts (G) from stud (H).

NOTE

Count and write down number of turns needed to unscrew rod ends (J).

CLEANING AND INSPECTION:

1. Clean all parts using dry cleaning solvent and clean rags.
2. Inspect all parts for bends, cracks, stripped threads, wear, or other defects. Replace defective parts.

INSTALLATION:

1. Install nuts (A) onto stud (B).
2. Screw rod ends (C) to same number of turns recorded for removal on stud (B).
3. Using 1/2 inch wrench and 7/16 inch wrench, tighten nuts (A).
4. Position rod assembly in place.
- 5* Using two 7/16 inch wrenches, install screw (D) and nut (E).
6. Using 7/16 inch wrench, install screw (F).

Go on to Sheet 3

TA108067

ACCELERATOR LINKAGE ENGINE CONTROL REPLACEMENT (Sheet 3 of 3)

7. Install access plate (G) back onto hull wall (H).
8. Using 9/16 inch socket and extension install 12 screws (J) and lockwashers (K).

End of Task

TA 108068

ACCELERATOR LINKAGE BULKHEAD FLANGE REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. open end wrench (2 required)
 Pliers
 9/16 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. drive punch
 Vise
 Hammer
 6 in. cross-tip screwdriver
 5 in. extension with 1/2 in. drive

SUPPLIES: Chalk
 Seal (7966631) (2 required)
 Bearing (7992946)

REMOVAL:

1. Using screwdriver, remove six screws (A) securing access plate (B). Remove plate (B).

Go on to Sheet 2

TA108069

ACCELERATOR LINKAGE BULKHEAD FLANGE REPLACEMENT (Sheet 2 of 3)

2. Using pliers, remove cotter pin (C) from pin (D).
3. Remove pin (D).
4. Holding rod end (E) with wrench, use wrench to back off nut (F). Use chalk to mark rod threads as close as possible to rod end.
5. Using wrench, remove rod end (E) and nut (F) from rod (G).
6. Using socket with extension, remove two nuts (H) and lockwashers (J) securing flange (K) to plate (L).
7. Pull flange (K) off rod.
8. Using vise, hammer, and punch, drive two seals (M) and bearing (N) out of flange (K).

Go on to Sheet 3

TA108070

ACCELERATOR LINKAGE BULKHEAD FLANGE REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Using vise, press two new seals (A) and new bearings (B) into flange (C), making sure lips of seals (A) are outward and seals (A) are flush with flange surface.
2. Push flange (C) onto rod and into position against plate (D).
3. Using socket with extension, install two nuts (E) and lockwashers (F).
4. Install nut (G) loosely on rod.
5. Using wrench, install rod end (H) on rod up to start of chalk mark.
6. Holding rod end (H) with wrench, use other wrench to tighten nut (G) against rod end (H).
7. Position clevis (J) on rod end (H).
8. Install pin (K) through clevis (J) and rod end (H).
- 9* Using pliers, install cotter pin (L).
10. Using cross-tip screwdriver, install six screws (M) securing access plate (N).

End of Task

TA108071

THROTTLE CONTROL HANDLE ASSEMBLY REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	7-366
Cleaning and Inspection	7-367
Installation	7-368

TOOLS: 9/16 in. socket with 1/2 in. drive
 7/16 in. combination box and open end wrench
 1/2 in. drive ratchet handle
 Ball peen hammer
 Slip joint pliers
 1/4 in. drive punch
 Vise

SUPPLIES: Clean rags (Item 12, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)

REMOVAL:

- Using 7/16 inch wrench, remove four screws (A), lockwashers (B) and flat washers (C).
- Position bracket (D) away from throttle control handle (E).

Go on to Sheet 2

TA108072

THROTTLE CONTROL HANDLE ASSEMBLY REPLACEMENT (Sheet 2 of 4)

3. Using 9/16 inch socket with ratchet, remove two screws and lockwashers (F).
4. Using 7/16 inch wrench, remove screw (G) and lockwasher (H).
5. Using pliers, remove spring (J) from bracket (K).

6. Using hammer, tap segment (L) lightly to remove segment (L) from shaft (M).
7. Using pliers, remove cotter pin (N).
8. Remove flat washer (P) and handle (Q) from bracket (K).
9. Using hammer and punch, remove bushing (R).
10. Using pliers, remove woodruff key (S) from shaft (M).

CLAENING AND INSPECTION:

WARNING

Cleaning agent specified is flammable. Use only in well ventilated areas. Keep away from flames, sparks, or heat. Do not smoke while using. Prevent contact with eyes, mouth, and/or skin. Wear rubber gloves when performing cleaning procedures.

1. Clean all parts using dry cleaning solvent and clean rags.
2. Inspect all parts for cracks, bends, wear, and other defects. Replace any defective parts.

TA108073

THROTTLE CONTROL HANDLE ASSEMBLY REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Using vise, press bushing (A) into handle (B).
2. Install handle (B) and lockwasher (C) to bracket (D).
3. Using pliers, install cotter pin (E).
4. Using pliers, install spring (F) onto bracket tab (G).
5. Insert woodruff key (H) into shaft (J).

6. Align segment (K) onto shaft (J). Using hammer, tap segment (K) lightly to install segment (K) onto shaft (J).
7. Using 7/16 inch wrench, install screw (L) and lock washer (M) to segment (K).
8. Align the assembled throttle control handle assembly (N) to segment (K) and base floor (P).

9. Using 9/16 inch socket with ratchet handle, install two screws (Q) and lockwashers (R).

Go on to Sheet 4

TA108074

THROTTLE CONTROL HANDLE ASSEMBLY REPLACEMENT (Sheet 4 of 4)

10. Install bracket (S) in position.
11. Using 7/16 inch wrench, install four screws (T), lockwashers (U), and flat washers (V).

End of Task

TA108075

FUEL TANK REPAIR (Sheet 1 of 2)

TOOLS: 1/4 in. portable electric drill
1/8 in. dia. twist drill
6 in. steel rule

SUPPLIES: Accelerator and sealer (Item 64, Appendix D)
Dry cleaning solvent (Item 55, Appendix D)
Sandpaper (Item 52, Appendix D)
Grease (Item 37, Appendix D)
Container (to mix accelerator and sealer)

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
Drain fuel tank to level approximately 3 in. below
crack (page 7-191).

NOTE

Repair of minor cracks in fuel tanks (up to 3 inches long and 1/16 inch wide) can be made. Cracks in excess of these dimensions will be repaired by support maintenance.

FUEL TANK REPAIR (Sheet 2 of 2)

WARNING

Use dry cleaning solvent in a well-ventilated area only.

CLEANING:

1. Using dry cleaning solvent, clean area around crack to remove all traces of dirt and grease. Wipe dry with rags.
2. Using sandpaper, sand area around crack for proper adhesion of sealer. Wipe with rag after sanding.

REPAIR:

1. Using ruler, mark spot to bore hole $\frac{1}{2}$ to 1 inch from ends of crack on a line with crack.
2. Coat drill bit with grease to minimize amount of metal chips falling into fuel tank.
3. Using drill, bore hole about $\frac{1}{2}$ to 1 inch from visible ends of crack as shown.

4. Clean crack and surrounding area with rag dampened in dry cleaning solvent. Wipe dry. Do not allow fingerprints, oil, or moisture on cleaned surface.

NOTE

Do not apply sealer at temperatures below 45 degrees F. Sealer will cure in approximately 24 hours at room temperature.

5. Mix accelerator and sealer in container.
6. Apply $\frac{3}{16}$ inch thickness of sealer to cleaned surface and at least $\frac{1}{2}$ inch beyond crack.
7. Install powerplant (page 5-14).

End of Task

TA169896

CHAPTER 8

EXHAUST SYSTEM MAINTENANCE INDEX

PROCEDURE	PAGE
Exhaust Pipe Cap Assembly Replacement	8-2
Exhaust Pipe (Left Side) Replacement	8-5
Exhaust Pipe (Right Side) Replacement	8-9
Intake Tube and Hoses Replacement	8-13
Cap Assembly Replacement	8-14
Intermediate Scavenger Tube Replacement	8-17
Left Exhaust Ejector Tube Replacement	8-21
Right Exhaust Ejector Tube Replacement	8-25

EXHAUST PIPE CAP ASSEMBLY REPLACEMENT (Sheet 1 of 3)

TOOLS: 7/16 in. combination box and open end wrench (2 required)

SUPPLIES: Self-locking nut

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open engine exhaust doors (TM 5-5420-226-10).

REMOVAL:

1. Using 7/16 inch wrench, remove nut (A) from clamp (B).
2. Remove clamp (B) from tube (C) and exhaust pipe (D).
3. Remove tube (C) from exhaust pipe (D).

Go on to Sheet 2

EXHAUST PIPE CAP ASSEMBLY REPLACEMENT (Sheet 2 of 3)

4. Using two wrenches, remove bolt (E) and self-locking nut (F) from tube cover (G) and tube (C).
5. Remove two spacers (H) from tube cover (G).
6. Remove tube cover (G) from tube (C).

Go on to Sheet 3

TA107946

EXHAUST PIPE CAP ASSEMBLY REPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. Position tube cover (A) onto top of tube (B) with mounting holes of tube cover (A) alined with mounting holes in tube (B).
2. Insert two spacers (C) into holes in top of tube cover (A).
3. Insert bolt (D) through spacer (C), tube cover (A), tube (B), tube cover (A), and spacer (C).
4. Start nut (E) onto bolt (D).
5. Using two wrenches, tighten nut (E) to bolt (D).
6. Position notch at rear of tube (B) into notch of exhaust pipe (F).
7. Position clamp (G) onto bottom of tube (B) and exhaust pipe (F). Latch clamp together with bolt (H).
8. Using wrench, tighten nut (J) on clamp (G) to hold tube (B) to exhaust pipe (F).
9. Close engine exhaust doors (TM 5-5420-226-10).

End of Task

TA107947

EXHAUST PIPE (LEFT SIDE) REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	8-5
Installation	8-7

TOOLS: Ratchet with 1/2 in. drive
 10 in. extension with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 Flat-tip screwdriver
 Cross-tip screwdriver
 5/16 in. combination box and open end wrench

SUPPLIES: Gasket (10864007)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open top grille doors (TM 5-5420-226-10)
 Remove transmission shroud (page 9-2)

Go on to Sheet 2

TA107948

EXHAUST PIPE (LEFT SIDE) REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using flat-tip screwdriver, loosen screw (A) holding clamp (B) onto tube (C).

2. Using socket, remove six nuts (D) holding exhaust pipe (E) to turbosupercharger housing (F).
3. Sliding exhaust pipe extension (G) out of tube (C), remove exhaust pipe (E) with insulation halves (H) and gasket (J) from turbosupercharger housing (F). Throw gasket (J) away.

4. Using cross-tip screwdriver and 5/16 inch wrench, remove 14 screws (K), each with two flat washers (L), one lockwasher (M), and one nut (N) holding insulation halves (H) to exhaust pipe (E).
5. Using flat-tip screwdriver, remove clamp (P) from packing (Q). Remove packing (Q) from pipe (E).

6. Remove insulation halves (H) from exhaust pipe (E).

Go on to Sheet 3

TA107949

EXHAUST PIPE (LEFT SIDE) REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position packing (A) and clamp (B) onto pipe (C) and, using flat-tip screwdriver, tighten screw on clamp (B), securing packing to pipe (C).
2. Check insulation halves (D) and all attaching hardware for damage. Replace if necessary.

3. Position insulation halves (D) onto exhaust pipe (C).

4. Using wrench and cross-tip screwdriver, install 14 screws (E), each with two flat washers (F), one lockwasher (G), and one nut (H) to hold insulation halves (D) to exhaust pipe (C).
5. Position new gasket (J) onto turbosupercharger housing (K).

6. Slide exhaust pipe extension (L) into tube (M) as far as it will go.
7. Position exhaust pipe (C) with installed insulation halves (D) onto turbosupercharger housing (K). Make sure exhaust Port (N) is pointing up.

Go on to Sheet 4

TA107950

EXHAUST PIPE (LEFT SIDE) REPLACEMENT (Sheet 4 of 4)

8. Manually start six nuts (P) to hold exhaust pipe (C) to turbosupercharger housing (K).
9. Using socket, tighten six nuts (P).
10. Using flat-tip screwdriver, tighten screw (Q) to hold clamp (R) onto tube (M).

11. Start engine. Check for exhaust leaks around exhaust pipe gasket (J) and tube (M).
12. Install transmission shroud (page 9-6).
13. Close top grille doors (TM 5-5420-226-10).

End of Task

TA107951

EXHAUST PIPE (RIGHT SIDE) REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	8-9
Installation	8-11

TOOLS: Ratchet with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 7/8 in. open end wrench
 Cross-tip screwdriver
 5/16 in. combination box and
 open end wrench

10 in. extension with 1/2 in. drive
 Hammer
 9/16 in. open end wrench
 Flat-tip screwdriver
 10 in. adjustable wrench

SUPPLIES: Gasket (10864007)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURES: Open top deck grille doors (TM 5-5420-226-10)
 Remove transmission shroud (page 9-2)

Go on to Sheet 2

TA107952

EXHAUST PIPE (RIGHTSIDE) REPLACEMENT (Sheet 2 of 4)

REMOVAL:

1. Using adjustable wrench to hold elbow (A), use 7/8 inch wrench and loosen fitting (B).
2. Using hammer, tap elbow (A) and lift tube (C) from exhaust pipe.
3. Using 9/16 inch socket and open end wrench, remove six nuts (D) holding exhaust pipe (E) to turbosupercharger housing (F). Remove exhaust pipe (E) with insulation halves (G) and gasket (H) from turbosupercharger housing (F). Throw gasket (H) away.

4. Using cross-tip screwdriver and 5/16 inch wrench, remove 14 screws (J), each with two flat washers (K), one lockwasher (L), and one nut (M) holding insulation halves (G) to exhaust pipe (E).
5. Using flat-tip screwdriver, remove clamp (N) from packing (P). Remove packing (P) from pipe (E).
6. Remove insulation halves (G) from exhaust pipe (E).

Go on to Sheet 3

TA107953

EXHAUST PIPE (RIGHT SIDE) REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position packing (A) and clamp (B) onto pipe (C) and, using flat-tip screwdriver, tighten screw on clamp (B) securing packing to pipe (C).
2. Check insulation halves (D) and all attaching hardware for damage. Replace if necessary.
3. Position insulation halves (D) onto exhaust pipe (C).

4. Using 5/16 inch wrench and cross-tip screwdriver, install 14 screws (E), each with two flat washers (F), one lockwasher (G), and one nut (H), to hold insulation halves (D) to exhaust pipe (C).
5. Position new gasket (J) onto turbosupercharger housing (K) .
6. Position exhaust pipe (C) with installed insulation halves (D) onto turbosupercharger housing (K). Make sure exhaust port (L) is pointing up.
7. Using 9/16 inch socket and open end wrench, install six nuts (M) securing exhaust pipe to housing.

Go on to Sheet 4

TA107954

EXHAUST PIPE (RIGHTSIDE) REPLACEMENT (Sheet 4 of 4)

8. Using hands, position elbow (N) into nut (P).
9. Using 7/8 inch wrench, tighten nut (P) securing tube (Q) to exhaust pipe (C).

10. Start engine. Check for exhaust leaks around exhaust pipe gasket and transmission breather tube (Q) connections.
11. Install transmission shroud (page 9-6).
12. Close top deck grille doors (TM 5-5420-226-10).

End of Task

TA107955

INTAKE TUBE AND HOSES REPLACEMENT (Sheet 1 of 1)

TOOLS: 1/4 in. flat-tip screwdriver

SUPPLIES: Silicone compound (Item 32, Appendix D)

REFERENCE TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top deck grille doors (TM 5-5420-226-10)

REMOVAL:

NOTE

Replacement of left or right intake tubes and hoses is the same.

1. Using screwdriver, loosen clamps (A) and remove tube (B) or hose (C or D) as required.
- 2* Remove clamps (A).

INSTALLATION:

1. Lightly coat inside ends of hose (C or D) with silicone compound.
2. Install two clamps (A) onto hose (C or D).

3. Install hose (C) onto manifold (E) and tube (B). Using screwdriver, tighten clamps (A).
4. Install hose (D) onto tube (B) and cap assembly (F). Using screwdriver, tighten clamps (A).

End of Task

CAP ASSEMBLY REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/4 in. flat-tip screwdriver
1/2 in. combination box and open end wrench
1/2 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
7/16 in. socket with 1/2 in. drive

SUPPLIES: Lockwasher (2 required)
Self-locking nut
Gasket
Silicone compound (Item 32, Appendix D)

REFERENCE: TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top deck grille doors (TM 5-5420-226-10)

REMOVAL:

NOTE

Replacement of left or right cap assembly is the same.

1. Using screwdriver, loosen clamps (A) and remove hoses (B) and tube (C) as a unit.

Go on to Sheet 2

CAP ASSEMBLY REPLACEMENT (Sheet 2 of 3)

2. Using wrench to hold nut (D), use 1/2 inch socket and remove screw (E) securing clamp (F). Discard nut (D).
3. Remove clamp (F) from cap assembly (G).
4. Using 7/16 inch socket, remove screw (H) and lockwasher (J) securing cap assembly (G).
5. Using 1/2 inch socket, remove screw (K) and lockwasher (L) securing cap assembly (G).
6. Remove cap assembly (G) and gasket (M). Discard gasket.

7. Inspect bracket (N) for damage. If damaged and replacement is required, using 1/2 inch socket, remove two screws (P) securing bracket and remove bracket.

Go on to Sheet 3

CAP ASSEMBLY RBPLACEMENT (Sheet 3 of 3)

INSTALLATION:

1. If bracket (A) was removed, position new bracket (A) onto engine. Using 1/2 inch socket, install two screws (B) to secure bracket (A).
2. Position new gasket (C) and cap assembly (D) to intermediate tube assembly (E).
3. Using 7/16 inch socket, install screw (F) and new lockwasher (G) to secure cap assembly (D).
4. Using 1/2 inch socket, install screw (H) and new lockwasher (J) to secure cap assembly (D).

5. Install clamp (K) onto cap assembly (D).
6. Using 1/2 inch socket and wrench, install screw and new nut (L) to secure clamp (K) to bracket (A).
7. Coat ends of hoses (M and N) with silicone compound.
8. Position hoses (M and N), tube (P), and clamps (Q), removed as a unit, to manifold (R) and cap assembly (D).
9. Using screwdriver, tighten clamps (Q) to secure hoses (M and N) to manifold (R) and cap assembly (D).
10. Close top deck grille doors (TM 5-5420-226-10).

End of Task

INTERMEDIATE SCAVENGER TUBE REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	8-17
Installation	8-19

TOOLS: 1/4 in. flat-tip screwdriver
 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench
 7/16 in. socket with 1/2 in. drive
 5 in. extension with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 9/16 in. combination box and open end wrench

SUPPLIES:
 Lockwasher (2 required)
 Gasket
 Self-locking nut (2 required)
 Silicone compound (Item 32, Appendix D)

REFERENCE TM 5-5420-226-10

PRELIMINARY PROCEDURE: Open top deck grille doors (TM 5-5420-226-10)

REMOVAL:

NOTE

Replacement of left or right side intermediate scavenger tube is the same.

Go on to Sheet 2

INTERMEDIATE SCAVENGER TUBE REPLACEMENT (Sheet 2 of 4)

1. Using 7/16 inch socket, remove **screw (A)** and lockwasher (B) securing intermediate scavenger tube (C) to cap assembly (D).
2. Using 1/2 inch socket, remove screw (E) and lockwasher (F) securing intermediate scavenger tube (C) to cap assembly (D).
3. Using 1/2 inch wrench to hold self-locking nut (G), use 1/2 inch socket and remove screw (H) securing clamp (J) to bracket (K).

4. Using 1/2 inch wrench to hold self-locking nut (L), use 1/2 inch socket and remove screw (M) securing clamp (N).
5. Using screwdriver, loosen clamp (P) securing intermediate scavenger tube (C) and hose (Q).

Go on to Sheet 3

INTERMEDIATE SCAVENGER TUBE REPLACEMENT (Sheet 3 of 4)

6. Use twisting motion and separate intermediate scavenger tube (C) from cap assembly (D) and hose (Q).
7. Remove and throw away gasket (R) from between intermediate scavenger tube (C) and cap assembly (D).
8. Inspect hose (Q) for cracks and defects. Replace as required.
9. Remove clamp (N) from intermediate scavenger tube (C) and inspect for defects. Replace clamp as required.

INSTALLATION:

1. Apply coat of silicone compound to inside of hose (A).
2. Position and install end of intermediate scavenger tube (B) into hose (A) and to cap assembly (C).
3. Insert new gasket (D) between flange of intermediate scavenger tube (B) and cap assembly (C).

Go on to Sheet 4

INTERMEDIATE SCAVENGER TUBE REPLACEMENT (Sheet 4 of 4)

4. Install screw (E) and new lockwasher (F) to secure intermediate scavenger tube (B) to cap assembly (C).
5. Install screw (G) and new lockwasher (H) to secure intermediate scavenger tube (B) to cap assembly (C).
6. Using 7/16 inch socket, tighten screw (E). Using 1/2 inch socket, tighten screw (G).
7. Position clamp (J) over hose (A) and intermediate scavenger tube (B). Using screwdriver, tighten clamp (J).

8. Install clamp (K) into intermediate scavenger tube (B).
9. Using 1/2 inch socket and 1/2 inch wrench, install screw (L) and new self-locking nut (M) to secure clamp (K) to bracket.
10. Using 1/2 inch socket and 1/2 inch wrench, install screw (N) and new self-locking nut (P) to secure clamp (Q) to bracket (R).
11. Close top deck grille doors (TM 5-5420-226-10).

End of Task

LEFT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	8-21
Installation	8-23

TOOLS: No. 1 cross-tip screwdriver
 9/16 in. open end wrench
 5/16 in. combination box and open end wrench
 1/2 in. combination box and open end wrench (two required)
 Screwdriver, flat-tip, 1/4 in.

SUPPLIES: Lockwasher (11 required)
 Gasket
 Self-locking nut (7 required)
 Silicone compound (Item 32, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

- Using flat-tip screwdriver, loosen two clamps (A).
- Using two 1/2 inch wrenches, hold nut (B) and remove screw (C) securing clamp (D) to left ejector tube bracket (E).

ENGINE LEFT BANK

Go on to Sheet 2

LEFT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 2 of 4)

3. Using 9/16 inch wrench, remove and discard six self-locking nuts (F) securing ejector tube (G) to turbosupercharger.
4. Remove ejector tube (G) and gasket (H). Discard gasket.
5. Using flat-tip screwdriver, remove clamp (J) and packing (K) from ejector tube (G).
6. Using cross-tip screwdriver and 5/16 inch wrench, remove 11 screws (L), 22 flat washers (M), 11 lockwashers (N), and 11 nuts (P).
7. Remove insulation (Q and R) from ejector tube (G).

ENGINE LEFT BANK

Go on to Sheet 3

LEFT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position insulation (A and B) to ejector tube (C).
2. Using cross-tip screwdriver and 5/16 in wrench, install 11 screws (D), 22 flat washers (E), 11 new lockwashers (F), and 11 nuts (G) to secure insulation (A and B) to ejector tube (C).
3. Position packing (H) and clamp (J) onto ejector tube (C). Use flat-tip screwdriver to tighten clamp (J).
4. Apply a light coat of silicone compound to end of two hoses(K).
5. Position left exhaust ejector tube (C) and new gasket (L) onto studs of turbosuper-charger housing (M).

ENGINE LEFT BANK

6. Using 9/16 inch wrench, install six new self-locking nuts (N) to secure left exhaust ejector tube (C) to turbosuper-charger housing (M).

Go on to Sheet 4

LEFT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 4 of 4)

7. Position two hoses (K) onto left exhaust ejector tube (C) and, using flat-tip screwdriver, tighten two clamps (P).
8. Using two 1/2 inch wrenches, install new self-locking nut (Q) and screw (R) to secure clamp (S) to bracket on ejector tube (C).
9. Install powerplant (page 5-14).

End of Task

RIGHT EXHAUST EJECTOR TUBE REPLACEMENT (sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	8-25
Installation	8-27

TOOLS: 10 in. adjustable wrench
 No. 1 cross-tip screwdriver
 9/16 in. open end wrench
 7/8 in. combination box and open end wrench
 5/16 in. combination box and open end wrench
 Screwdriver, flat-tip, 1/4 in.

SUPPLIES: Lockwasher (11 required)
 Gasket
 Self-locking nut (6 required)
 Silicone compound (Item 32, Appendix D)

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:**ENGINE RIGHT BANK**

1. Using adjustable wrench to hold elbow (A) and using 7/8 inch wrench, disconnect nut (B) from elbow (A).
2. Using flat-tip screwdriver, loosen clamp (C).

Go on to Sheet 2

RIGHT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 2 of 4)

3. Using 9/16 inch wrench, remove and discard six self-locking nuts (D) securing ejector tube (E) to the turbosupercharger.
4. Remove ejector tube (E) and gasket (F). Discard gasket.

5. Using flat-tip screwdriver, remove clamp (G) and packing (H) from ejector tube (E).
6. Using cross-tip screwdriver and 5/16 inch wrench, remove 11 screws (J), 22 flat washers (K), 11 lockwashers (L), and 11 nuts (M).
7. Remove insulation (N and P) from ejector tube (E).

Go on to Sheet 3

RIGHT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 3 of 4)

INSTALLATION:

1. Position insulation (A and B) to ejector tube (C).
2. Using cross-tip screwdriver and 5/16 inch wrench, install 11 screws (D), 22 flat washers (E), 11 new lockwashers (F), and 11 nuts (G) to secure insulation (A and B) to ejector tube (C).
3. Position packing (H) and clamp (J) onto ejector tube (C). Use flat-tip screwdriver to tighten clamp (J).

4. Apply coating of silicone compound to end of hose (K).
5. Position right exhaust ejector tube (C) and new gasket (L) onto studs of turbo-supercharger (M) and hose (K).
6. Using 9/16 inch wrench, install six new self-locking nuts (N) to secure right exhaust ejector tube (C) to turbosuper-charger (M).

Go on to Sheet 4

RIGHT EXHAUST EJECTOR TUBE REPLACEMENT (Sheet 4 of 4)

7. Using flat-tip screwdriver, tighten clamp (P).
8. Using adjustable wrench to hold elbow (Q), use 7/8 inch wrench to connect nut (R) to elbow (Q).
9. Install powerplant (page 5-14).

TRANSMISSION SHROUD REPLACEMENT (Sheet 1 of 7)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	9-2
Installation	9-6

TOOLS: Ratchet with 1/2in. drive
3/4in.socket with 1/2in. drive
1-1/8 in. socket with 1/2in. drive
7/16in. open end wrench

SUPPLIES: Plastic covers for exhaust (2 required)

PERSONNEL: Two

WARNING

Allow engine to cool one hour before removing shroud. Wear asbestos gloves for protection.

TRANSMISSION SHROUD REPLACEMENT (Sheet 2 of 7)

NOTE

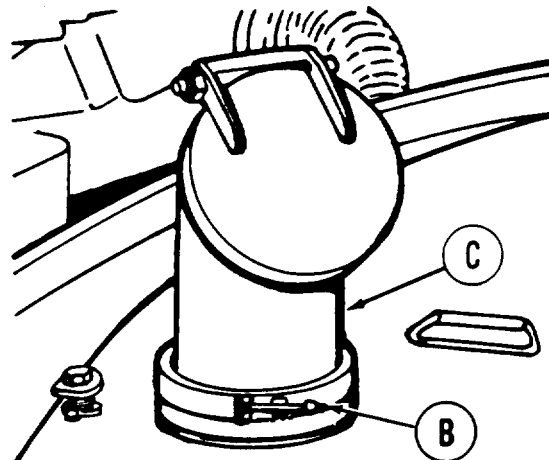

Remove bolts from the right exhaust door first. Then remove the bolts from the left door.

REMOVAL:

1. Using 1-1/8 inch socket, remove four bolts (A) securing exhaust doors to hull.
2. Open both exhaust doors.

3. Using open end wrench, loosen clamp assembly (B) securing exhaust elbow assembly (C) to exhaust pipe (both sides of vehicle). Unlock clamp assembly (B).
4. Remove elbow assembly (C) from exhaust pipe (both sides of vehicle).

Go on to Sheet 3

TA107958

TRANSMISSION SHROUD REPLACEMENT (Sheet 3 of 7)

5. Install plastic covers (D) over exhausts.

NOTE

Narrow end of turnlock fasteners (E) must be rotated 180° from their original position so they point inside engine compartment.

6. Using 3/4 inch socket, unlock three turnlock fasteners (E) holding shroud (F) to angle bracket (G) on both sides of vehicle.

Go on to Sheet 4

TA107959

TRANSMISSION SHROUD REPLACEMENT (Sheet 4 of 7)

- Both persons grasp handles (H) and lift shroud up (to clear exhaust pipe) and out.

CAUTION

Remove shroud carefully to avoid damage to shroud seal (J).

Go on to Sheet 5

TA107960

TRANSMISSION SHROUD REPLACEMENT (Sheet 5 of 7)

INSTALLATION:

CAUTION

Position shroud carefully onto vehicle to avoid damage to shroud seal (B).

1. Both persons grasp handles (A) of transmission shroud and lift shroud into position on vehicle.

NOTE

Narrow end of turnlock fasteners must be rotated 180° to lock.

LOCK UNLOCK

2. Using 3/4 inch socket, lock three turnlock fasteners (C) on each side of vehicle.

Go on to Sheet 6

TA107961

TRANSMISSION SHROUD REPLACEMENT (Sheet 6 of 7)

3. Remove plastic cover (D) from exhaust.

4. Position clamp assembly (E) over exhaust elbow assembly (F).
5. Position exhaust elbow assembly (F) over notch in exhaust pipe (both sides of vehicle). Cap assemblies (G) on outlets (F) will face rear and inward at rear of vehicle. Lock clamp assembly (E).
6. Using wrench, tighten clamp assembly (E).

Go on to Sheet 7

TA107962

TRANSMISSION SHROUD REPLACEMENT (Sheet 7 of 7)

7. Close engine exhaust doors (H).
8. Using 1-1/8 inch socket, install and tighten four bolts (J).

End of Task

TA107963

TRANSMISSION SHROUD REPAIR (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Disassembly	9 - 9
Cleaning and Inspection	9-12
Assembly	9-13

- TOOLS:** 7/16 in. combination wrench
 Diagonal cutting pliers
 Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 3/4 in. socket with 1/2 in. drive
 3/4 in. combination box and open end wrench
 Putty knife
 Slip joint pliers
 Ball peen hammer
 Cold Chisel

- SUPPLIES:** Lockwire (Item 60, Appendix D)
 Dry cleaning solvent (Item 55, Appendix D)
 Rags
 Key washer (10873733) (4 required)
 Self-locking nut (MS20500-428) (10 required)
 Self-locking nut (MS20500-820) (6 required)

PRELIMINARY PROCEDURE: Remove transmission shroud (page 9-2).

TRANSMISSION SHROUD REPAIR (Sheet 2 of 6)

DISASSEMBLY:

1. Using 7/16 inch socket, remove six screws (A), lockwashers (B) and flat washers (C) holding retainer (D) to transmission shroud (E).

2. Remove retainer (D) from shroud (E).
3. Remove seal assembly (F) from shroud (E).
4. Using 7/16 inch socket and 7/16 inch wrench, remove five screws (G), 10 flat washers (H), and five self-locking nuts (J) holding seal (K) to transmission shroud (E) both right and left sides. Throw self-locking nuts away.
5. Remove seal assembly (K) from shroud (E).

Go on to Sheet 3

TA107965

TRANSMISSION SHROUD REPAIR (Sheet 3 of 6)

6. Using diagonal cutting pliers, remove lockwire (L) from 21 screws (M) on back side of retainer (N).
7. Using hammer and chisel, straighten tabs on four key washers (P).

NOTE

Write down location of these four key washers for use when assembling shroud.

NOTE

If desired, a speed wrench may be used to remove screws (M).

8. Using 7/16 inch socket, remove 25 screws (M), 21 flat washers (Q), and four key washers (P) holding retainer (N) to shroud (E).
9. Remove retainer (N) from shroud (E).
10. Remove insulation (R) from shroud (E). Use putty knife as necessary.

Go on to Sheet 4

TA107966

TRANSMISSION SHROUD REPAIR (Sheet 4 of 6)

11. Using 3/4 inch socket and 3/4 inch wrench, remove three turnlock fasteners (S) from both sides of shroud (E). Throw self-locking nuts away.

CLEANING AND INSPECTION:

1. Using dry cleaning solvent, clean all parts of transmission shroud.
2. Inspect assembly for worn or damaged parts.
3. Replace faulty parts.

Go on to Sheet 5

TA107967

TRANSMISSION SHROUD REPAIR (Sheet 5 Of 6)

ASSEMBLY:

1. Position insulation (A) on shroud (B).
2. Using 7/16 inch socket, install retainer (C) to shroud with 25 screws (D), 21 washers (E), and four key washers (F). Be sure to position four key washers (F) properly and bend tabs with chisel and hammer.

NOTE

Both parts of turnlock fasteners must be pointing in the same direction.

3. Using 3/4 inch socket and 3/4 inch wrench, install three turnlock fasteners (G) to both sides of shroud (B). Use new self-locking nuts.
4. Using slip joint pliers, install new lockwire in 21 screws (D) (page C-39).

Go on to Sheet 6

TA107968

TRANSMISSION SHROUD REPAIR (Sheet 6 Of 6)

- Using 7/16 inch socket and 7/16 inch wrench, install seal (H) to shroud (B), both sides, with 10 screws (J), 20 washers (K), and 10 new self-locking nuts (L).

- Position seal (M) and retainer (N) to shroud (B) with six screws (P), lockwashers (Q), and flat washers (R).
- Using 7/16 inch socket, tighten six screws (P).
- Install transmission shroud (page 9-6).

End of Task

TA107969

TRANSMISSION SHROUD SUPPORTS (LEFT OR RIGHT) REPLACEMENT (Sheet 1 of 1)

TOOLS: Ratchet with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 2 in. extension with 1/2 in. drive

PRELIMINARY PROCEDURES: Remove transmission shroud assembly (page 9-2).

REMOVAL:

1. Using socket and extension, remove three screws, washers, and lockwashers (A) holding (left or right) supports (B) to hull wall.
2. Remove supports from vehicle.

INSTALLATION:

1. Position supports (B) (left or right) on hull wall and attach supports with three screws, washers, and lockwashers (A).
2. Using socket and extension, tighten three screws, washer, and lockwasher (A).
3. Install transmission shroud assembly (page 9-6).

End of Task

TA107970

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 1 of 6)

PROCEDURE INDEX

PROCEDURE	PAGE
Disassembly	9-16
Assembly	9-19

TOOLS: Putty knife
 Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 Cross-tip screwdriver, tip no. 2
 Flat-tip screwdriver

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
 Silicone adhesive (Item 7, Appendix D)
 Rags

PRELIMINARY PROCEDURE: Remove shroud supports (page 9-1 5).

DISASSEMBLY:

- Using cross-tip screwdriver, remove four screws (A) and washers (B) holding retainer (C) to bracket (D).
- Using flat-tip screwdriver, remove retainer (c), seal (E), and retainer (F) from bracket (D).

Go on to Sheet 2

TA107971

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 2 of 6)

3. Using socket, remove five screws (G), lockwashers (H), and flat washers (J) securing retainers (K) to shroud bracket (D) .
4. Remove retainers (K) and side insulation (L) from shroud bracket (D).

5. Using cross-tip screwdriver, remove three screws (M) and lockwashers (N) securing retainer (P) to shroud bracket (D)”

Using flat-tip screwdriver, remove retainer (P), seal (Q), and retainer (R) from shroud bracket (D).

Go on to Sheet 3

TA107972

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 3 of 6)

7. Using cross-tip screwdriver, remove two screws (S) and washers (T) holding pad (U) to shroud bracket (D).

8. Using putty knife, dry cleaning solvent, and rags, clean insulation from shroud bracket (D).

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 4 of 6)

ASSEMBLY:

1. Install pad (A) to shroud bracket (B) using screw (C) and washer (D).
2. Using cross-tip screwdriver, tighten screw (C).

3. Using putty knife, apply adhesive to ret airier (E) and (F).

Go on to Sheet 5

TA107974

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 5 of 6)

4. Install retainer (E), seal (G), and retainer (F) to bracket (B), using three screws (H) and washer (J).
5. Using cross-tip screwdriver, tighten screws (H).

6. Using putty knife, apply adhesive to shroud bracket (B) to hold insulation (K).
7. Install insulation (K) and retainers (L) to shroud bracket (B) using five screws (M), lockwashers (N), and flat washers (P).
8. Using socket, tighten screws (M).

TRANSMISSION SHROUD SUPPORT REPAIR (Sheet 6 Of 6)

9. Using putty knife, apply adhesive to retainer (Q) to hold seal (R).
10. Install retainer (Q), seal (R), and ret airier (S) to bracket (B) using four screws (T) and washers (U).
11. Using cross-tip screwdriver, tighten screws (T).
12. Install transmission shroud support (page 9-15).

End of Task

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	9-22
Installation	9-25

- TOOLS:** 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench
 Spanner wrench

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2).

Go on to Sheet 2

TA107977

TRANSMISSION SHROUDS REPLACEMENT (Sheet 2 of 8)
Right Intermediate Shroud Replacement (Sheet 2 of 5)

REMOVAL:

1. Using spanner wrench, disconnect connector (A) from generator connector.
2. Remove grommet (B) from shroud (C) and cable assembly (D).
3. Inspect grommet (B) for defects. If defective, replace grommet.
4. Pull cable assembly (D) through shroud (C).

Go on to Sheet 3

TA107978

TRANSMISSION SHROUDS REPLACEMENT (Sheet 3 Of 8)

Right Intermediate Shroud Replacement (Sheet 3 Of 5)

NOTE

Intermediate shroud is located between transmission and engine.

TRANSMISSION REMOVED FOR CLARITY

5. Using socket and wrench, remove screw, lockwashers, and nut (E).
6. Using socket or wrench, remove nine screws and lockwashers (F).
7. Remove intermediate shroud (G).

Go on to Sheet 4

TA107979

TRANSMISSION SHROUDS REPLACEMENT (Sheet 4 of 8)
Right Intermediate Shroud Replacement (Sheet 4 of 5)

INSTALLATION:

TRANSMISSION REMOVED FOR CLARITY

1. Position intermediate shroud (A) into place on engine.
2. Install nine screws and washers (B) to secure intermediate shroud (A) to engine.
3. Install screw, lockwasher, and nut (C) to secure intermediate shroud (A) to turbocharger shroud (D).
4. Using socket and wrench, tighten screws (B and C).

Go on to Sheet 5

TA107980

TRANSMISSION SHROUDS REPLACEMENT (Sheet 5 Of 8)

Right intermediate Shroud Replacement (Sheet 5 Of 5)

5. Install cable assembly (E) through intermediate shroud (A).
6. Route cable assembly(E) to generator (F).
7. Using spanner wrench, connect cable assembly (E) connector to generator (F) connector.
8. Install grommet (G) around cable assembly (E) and into intermediate shroud (A).
9. Install powerplant (page 5-14)

End of Task

TA107981

TRANSMISSION SHROUDS REPLACEMENT (Sheet 6 of 8)
Lower Shroud Replacement (Sheet 1 of 2)

- TOOLS:** 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench
 6 in. flat-tip screwdriver
 2 in. flat-tip screwdriver

- PRELIMINARY PROCEDURES:** Remove powerplant (page 5-2).
 Remove engine shroud (page 9-30).
 Remove generator air exhaust pipe and hose (page 10-16) (right side only).

NOTE

Replacement of right and left lower shrouds (A) is similar. Left lower shroud (A) is shown.

NOTE

When lower shroud is removed, a grommet (G) may come out with it or stay on fuel return 1 inc.

REMOVAL:

1. Using 2 inch screwdriver, remove screw (B).
2. Using 6 inch screwdriver, remove screw (c).
3. Using socket or wrench, remove three screws and washers (D).
4. Using socket or wrench, remove screw and washer (E) securing clamp (F).
5. Remove lower shroud (A). Be careful not to damage fuel return line when removing shroud (A).
6. Inspect grommet (G) for tears or deterioration. Relace-if defective.

n. (HIDDEN)

Go on to Sheet 2

TA107982

TRANSMISSION SHROUDS REPLACEMENT (Sheet 7 of 8)
Lower Shroud Replacement (Sheet 2 of 2)

INSTALLATION:

1. Position grommet (A) on fuel line.
2. Position lower shroud (B) in place on engine and on grommet (A).
3. Using 2 inch screwdriver, install screw (C).
4. Using 6 inch screwdriver, install screw (D).
5. Using 1/2 inch socket or wrench, install three screws and washers (E).
6. Using 1/2 inch socket or wrench, install screw and washer (F) securing clamp (G).
7. Install generator air exhaust pipe and hose (page 10-16) (if removed).
8. Install engine shroud (page 9-31).
9. Install powerplant (page 5-14).

End of Task

TA107983

TRANSMISSION SHROUDS REPLACEMENT (Sheet 8 of 8)
Left Intermediate Shroud Replacement (Sheet 1 of 1)

TOOLS: 1/2 in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive
 1/2 in. combination box and open end wrench

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2)
 Remove oil filler (upper) tube (page 6-84)

REMOVAL:

1. Using socket and wrench, remove screw, lockwasher, and nut (A).
2. Using wrench or socket, remove seven screws and washers (B) securing intermediate shroud (C) to engine.
3. Remove intermediate shroud (C).

INSTALLATION:

1. Position intermediate shroud (C) into place, on engine.
2. Install seven screws and washers (B) to secure intermediate shroud (C) to engine.
3. Install screw, lockwasher, and nut (A).
4. Using wrench and socket, tighten screws (A and B).
5. Install engine oil filler tube (page 6-86).
6. Install powerplant (page 5-14)

End of Task

TA107984

ENGINE SHROUD REPLACEMENT (Sheet 1 of 2)

TOOLS: Ratchet with 1/2 in. drive
9/16 in. socket with 1/2in. drive
2 in. extension with 1/2 in. drive
Torque wrench with 1/2 in. drive (0-175 lb-ft)(0-237 NŽm)
6 in. cross-tip screwdriver

PERSONNEL: Two

PRELIMINARY PROCEDURES: Remove top deck assembly (page 16-21)
Remove transmission shroud (page 9-2).

REMOVAL:

1. Using socket and extension, remove twenty screws, washers, and lockwashers (A) securing engine shroud (B) to powerplant.
2. Using cross-tip screwdriver, remove two screws and lockwashers (C) securing engine shroud (B) to powerplant.

3. Remove engine shroud (B) from powerplant.

ENGINE SHROUD REPLACEMENT (Sheet 2 of 2)**INSTALLATION:**

1. Position engine shroud (A) on powerplant.

2. Using socket, install twenty screws, washers, and lockwashers (B) securing engine shroud (A) to powerplant.
3. Using torque wrench, tighten twenty screws (B) to 20-27 lb-ft (27-37 NŹm).
4. Using cross-tip screwdriver, install two screws and lockwashers (C) securing engine shroud (A) to powerplant.
5. Install transmission shroud (page 9-6).
6. install top deck (page 16-23).

End of Task

TA107986

ENGINE SHROUD REPAIR OFF ENGINE (Sheet 1 of 2)

TOOLS: Putty knife
 Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive

SUPPLIES: Dry cleaning solvent (Item 55, Appendix D)
 Rags
 Adhesive (Item 4, Appendix D)
 Insulation

PRELIMINARY PROCEDURES: Remove engine shroud (page 9-30).

DISASSEMBLY:

1. Using socket, remove six screws (A), lockwashers (B), and flat washers (C) securing retainer (D) to engine shroud (E) both sides.
2. Using socket, remove six screws (F), lockwashers (G), and flat washers (H) securing retainer (J) to engine shroud (E) both sides.
3. Remove retainers (D) and (J).
- 4* Using putty knife, remove insulation (K) and (L) from both sides of engine shroud (E).
5. Using dry cleaning solvent and rags, clean areas where insulation (K) and (L) were removed.

Go on to Sheet 2

TA107987

ENGINE SHROUD REPAIR OFF ENGINE (Sheet 2 of 2)

ASSEMBLY:

1. Using putty knife, apply adhesive to engine shroud (A) to hold new insulation (B) and (C) both sides.
2. Install insulation (B) and (C) to both sides at engine shroud (A).
3. Using socket, install retainer (D) with six screws (E), lockwashers (F), and flat washers (G) both sides.
4. Using socket, install retainer (H) with six screws (J), lockwashers (K), and flat washers (L) both sides.
5. Install engine shroud on engine (page 9-31).

End of Task

TA107988

ENGINE SHROUD REPAIR ON THE ENGINE (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Disassembly	9-34
Assembly	9-36

TOOLS: Ratchet with 1/2 in. drive
 7/16 in. socket with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 2 in. extension with 1/2 in. drive
 Putty knife
 Cross-tip screwdriver

SUPPLIES: Adhesive (Item 4, Appendix D)
 Drycleaning solvent (Item 15, Appendix D)

PRELIMINARY PROCEDURES: Remove top deck assembly (page 16-21)
 Remove transmission shroud (page 9-2).

DISASSEMBLY:

1. Using 7/16 inch socket, remove ten screws, washers and lockwashers (A) holding four seal (B) retainers (C) to engine shroud both right and left side.
2. Remove retainers (C) from shroud.

Go on to Sheet 2

TA107989

ENGINE SHROUD REPAIR ON THE ENGINE (Sheet 2 of 5)

3. Using screwdriver, remove two screws and lockwashers (D) hidden under seal, holding retainers (E) to engine shroud right and left side.

4. Remove retainers (E) from shroud.

5. Displace seals (B) from shroud right and left sides.

6. Using screwdriver, lift front seal (F) and remove two screws and lockwashers (G) holding retainer (H).

7. Remove retainer (H) from shroud.

8. Remove seal (F) from shroud.

Go on to Sheet 3

TA107990

ENGINE SHROUD REPAIR ON THE ENGINE (Sheet 3 Of 5)

9. Using screwdriver, remove six screws and lockwashers (J) from retainer (K).
10. Remove retainer (K) from shroud.
11. Remove seal (L) from shroud.

12. Using 9/16 inch socket, remove six screws, washers, and lockwashers (M) holding access plate (N) to right and left sides of shroud.
13. Remove access plate (N) with gasket from shroud.
14. Using putty knife, remove gasket from access plate (N).
15. Clean with dry cleaning solvent.

ASSEMBLY:

1. Using putty knife, apply adhesive to back side of access plates (A).
2. Install gaskets (B) to access plates (A).

ENGINE SHROUD REPAIR ON THE ENGINE (Sheet 4 of 5)

3. Position access plates (A) on engine shroud (C).
4. using 9/16 inch socket, install six screws, washers and lockwashers (D) to secure access plate (A) to shroud (C).

5. Install seal (E) and retainer (F) to shroud (C) using six screws and lockwashers (G).
6. Using screwdriver, tighten six screws (G).
7. Install seal (H) and retainer (J) to shroud (C) using two screws and lockwashers (K).
8. Using screwdriver, tighten two screws (K).

Go on to Sheet 5

TA107992

ENGINE SHROUD REPAIR ON THE ENGINE (Sheet 5 of 5)

9. Install retainer (L) to seal (M) and shroud using two screws and lockwashers (N) hidden under seals on both sides.
10. Using screwdriver, tighten two screws (N) on each side.

11. Install four retainers (P) to shroud both sides using ten screws, washers and lockwashers (Q).
12. Using 7/16 inch socket, tighten ten screws (Q).
13. Install transmission shroud (page 9-6).
14. Install top deck assembly (page 16-23).

End of Task

TA107993

ENGINE SHROUD SUPPORT REPLACEMENT (Sheet 1 of 2)

TOOLS: Putty knife
 9/16 in. combination box and open end wrench

SUPPLIES: Adhesive (Item 1, Appendix D)
 Insulation

PRELIMINARY PROCEDURES: Remove top deck assembly (page 16-21)
 Remove transmission shroud (page 9-2)
 Remove engine shroud (page 9-30)

REMOVAL:

1. Using wrench, remove four screws, washers, and lockwashers (A) holding front shroud support (B) to engine (C).
2. Remove shroud support.
3. Using wrench, remove four screws, washers, lockwashers (D) holding rear shroud support assembly (E) to engine (C).
4. Remove shroud support (E).

Go on to Sheet 2

TA107994

ENGINE SHROUD SUPPORT REPLACEMENT (Sheet 2 Of 2)

CLEANING AND INSPECTION:

1. Inspect support (A) and (B) insulation for wear, tears, or loose areas.
2. If required, use putty knife to remove insulation from shroud supports.

INSTALLATION:

1. If required, use putty knife to apply adhesive to shroud supports. Install new insulation.
2. Position front support (A) onto engine (B). Using wrench, install four washers, lockwashers, and screws (C) to secure support (A) to engine (B).
3. Position rear support (D) onto engine (B). Using wrench, install four washers, lockwashers, and screws (E) to secure support (D) to engine (B).
4. Install engine shroud (page 9-31).
5. Install transmission shroud (page 9-6).
6. Install top deck assembly (page 16-23).

End of Task

 Remove rear engine shroud support (page 9-39)
 Remove transmission oil cooler lines (page 6-64 or 6-68)

Go on to Sheet 2

TA107996

TURBOCHARGER SHROUDS REPLACEMENT (Sheet 2 of 6)
Inner Shroud Replacement (Sheet 2 of 4)

NOTE

Procedures for replacement of the left or right transmission shrouds are similar. Procedures for the left side are shown.

REMOVAL:

1. Using 11/16 inch wrench, disconnect hose assembly (A) from turbocharger elbow (B).
2. Using 1/2 inch socket, remove two screws and washers (C) securing inner shroud (D) to turbocharger plate.
3. Using 1/2 inch socket, remove two screws and washers (E) securing inner shroud (D) to turbocharger plate.

4. Using 1/2 inch wrench and 1/2 inch socket, remove screw, lockwasher, and nut (F) securing inner shroud (D) to upper shroud (G).
5. Using 1/2 inch socket and extension, remove three screws and washers (H) securing inner shroud (D) to oil cooler frame.
6. Remove hose assembly (A) and grommet (J) from inner shroud (D).
8. Remove inner shroud (D).
7. Remove grommet (J) from hose assembly (A).

TA107997

TURBOCHARGER SHROUDS REPLACEMENT (Sheet 3 Of 6)
Inner Shroud Replacement (Sheet 3 Of 4)

INSTALLATION:

1. Place inner shroud (A) into position.
2. Install grommet (B) on hose assembly (C).
3. Install grommet (B) and hose assembly (C) in inner shroud (A).

4. Install three screws and washers (D) securing inner shroud (A) to oil cooler frame.
5. Install screw, lockwasher, and nut (E) to secure inner shroud (A) to upper shroud (F).
6. Install four screws and washers (G) securing inner shroud (A) to turbocharger plate (H).
7. Using 1/2 inch socket, tighten four screws (G).
8. Using 1/2 inch socket with extension, tighten three screws (D).
9. Using 1/2 inch socket and 1/2 inch wrench, tighten screw and nut (E).
10. Connect hose assembly (C) to elbow (J). Using 11/16 inch wrench, tighten hose assembly-(C) onto elbow (J).

Go on to Sheet 4

TA107998

TURBOCHARGER SHROUDS REPLACEMENT (Sheet 4 of 6)
Inner Shroud Replacement (Sheet 4 of 4)

11. Install transmission oil cooler lines (page 6-66 or 6-70).
12. Ground hop engine (page 5-25) and check for oil leaks.
13. Install rear engine shroud support (page 9-39).
14. Disconnect engine from powerplant test run hookup (page 5-25).
15. Install powerplant (page 5-14).

End of Task

TURBOCHARGER SHROUDS REPLACEMENT (Sheet 5 of 6)

Outer Shroud Replacement (Sheet 1 of 1)

TOOLS: 1/2in. combination box and open end wrench
 1/2in. socket with 1/2 in. drive
 Ratchet with 1/2 in. drive

PRELIMINARY PROCEDURE: Remove powerplant (page 5-2)

REMOVAL:

NOTE

Procedures for replacement of the left or right transmission shrouds are similar. Procedures for the left side are shown.

1. Using 1/2 inch socket, remove screw and lockwasher (A).
2. Using 1/2 inch socket and 1/2 inch wrench, remove three screws, lockwashers, and nuts (B) securing outer shroud (C).
3. Remove outer shroud (C).

INSTALLATION:

1. Position outer shroud (C) to turbocharger.
2. Install three screws, lockwashers, and nuts (B) to secure outer shroud (C) to turbocharger.
3. Install screw and washer (A) to secure outer shroud (C) to turbocharger.
4. Using 1/2 inch socket and 1/2 inch wrench, tighten screws (A and B).
5. Install powerplant (page 5-14).

End of Task

TA107999

TURBOCHARGER SHROUDS REPLACEMENT (Sheet 6 of 6)

Upper Shroud Replacement (Sheet 1 of 1)

TOOLS: 1/2in. combination box and open end wrench
1/2in. socket with 1/2 in. drive
5in. extension with 1/2 in. drive
Ratchet with 1/2 in. drive

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2).
Remove rear engine shroud support (page 9-39).

NOTE

Procedures for replacement of the left or right transmission shrouds are similar. Procedures for the left side are shown.

REMOVAL:

1. Using 1/2 inch socket with extension and 1/2 inch wrench, remove screw, lockwasher, and nut (A).
2. Using 1/2 inch socket with extension, remove three screws and lockwashers (B).
3. Remove upper shroud (C).

INSTALLATION:

1. Position upper shroud (C) in place.
2. Install three screws and washers (B).
3. Install screw, lockwasher, and nut (A)..
4. Using 1/2 inch socket with extension and 1/2 inch wrench, tighten screws (A and B).
5. Install rear engine shroud support (page 9-40).
6. Install powerplant (page 5-14),

End of Task

TA108000

COOLING FAN SHROUD REPLACEMENT (Sheet 1 of 8)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	9-47
Installation	9-51

TOOLS: 9/16 in. combination box and open end wrench (2 required)
 Slip joint pliers
 9/16 in. socket with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 3 in. extension with 1/2 in. drive
 Ratchet with 1/2 in. drive
 Thickness gage (feeler gage)
 1-1/4 in. socket with 1/2 in. drive.
 1/2 in. combination box and open end wrench
 Torque wrench with 1/2 in. drive (0-175 lb-ft) (0-237 N*m)

SUPPLIES: Cotter pin

PRELIMINARY PROCEDURES: Remove powerplant (page 5-2).
 Remove engine shroud (page 9-30).
 Remove front and rear shroud supports (page 9-39).

Go on to Sheet 2

TA108001

COOLINGFAN SHROUD REPLACEMENT (Sheet 2 Of 8)

REMOVAL:

1. Using 1/2 inc hsocket and extension, remove ten bolts (A) securing two cover plates (B).
2. Remove two cover plates(B).
3. Using 9/16 inch socket, remove eight bolts and washers (C) securing fan guards to shroud (D).
4. Remove fan guards(E) from shroud(D).

5. Using 1/2 inch socket, remove two bolts (F).

NOTE

To gain access to bolts (G) and nuts (H) reach through holes in shroud rails.

6. Using 1/2 inch socket, remove two bolts (G).
7. Using 1/2 inch socket, remove 12 nuts (H).

Go on to Sheet 3

TA108002

COOLINGFAN SHROUD REPLACEMENT (Sheet 3 Of 8)

8. Using pliers, remove cotter pins (J) from nuts (K) from each fan (L). Throw cotter pins away.
9. Using 1-1/4 inch socket, remove nut and washer (K) securing each fan (L) to engine.
10. Lift fans (L) from engine.

NOTE

Four nuts (N) are located under fan shroud and hold fuel line clamps. When nut (N) and screws (P) are removed, clamps will remain on fuel line.

11. Using 1/2 inch socket, remove three screws (M).
12. using 1/2 inch wrench to hold nuts (N), use 1/2 inch socket and remove four screws (P) and nuts (N).
13. Using 1/2 inch socket, remove five screws (Q) securing shroud (D) to engine.

FRONT OF ENGINE

TA108003

Go on to Sheet 4

COOLING FAN SHROUD REPLACEMENT (Sheet 4 of 8)

- Using two 9/16 inch wrenches remove two screws, washers, and nuts (R) from fan housing (s).

- Using 9/16 inch socket, remove four screws and washers (T) from fan housing (S).
- Using hands, lift two pieces of fan housing (S) from powerplant.
- Using hands, lift shroud (D) from powerplant.

Go on to sheet 5

TA108004

COOLINGFAN SHROUD REPLACEMENT (Sheet 5 Of 8)**INSTALLATION:**

1. Position cooling fan shroud (A) on engine.

2. Using 1/2 inch socket, install 12 nuts (B).
3. Using 1/2 inch socket, install two bolts (C).
4. Using 1/2 inch socket, install two bolts (D).

Go on to Sheet 6

TA108005

COOLING FAN SHROUD REPLACEMENT (Sheet 6 of 8)

5. Using 1/2 inch socket, install two screws (E) securing shroud and fuel line clamps to engine.
6. Using 1/2 inch socket, install one screw (F) securing shroud to engine.
7. Using 1/2 inch socket, install four screws (G) securing shroud to engine.
8. Position clamps on fuel line, located on underside of shroud, onto screws (G). Using 1/2 inch wrench, install four nuts onto screws (G) securing fuel line clamp.

REAR OF ENGINE

9. Using 1/2 inch socket, install five screws (H) securing clamps and engine shrouds to fan shrouds.

FRONT OF ENGINE

Go on to Sheet 7

TA108006

COOLING FAN SHROUD REPLACEMENT (Sheet 7 Of 8)

10. Position two pieces of fan housing (J) onto powerplant.
11. Using two 9/16 inch wrenches, install two screws, washers, and nuts (K) securing two pieces of fan housing (J) together.

12. Using 9/16 inch socket, install four screws and washers (L) securing fan housing (J) to fan shroud (A).

13. Using hands, position two fans (M) onto engine.

14. Using 1-1/4 inch socket, install on each fan washer (N) and nut (P) securing fans (M) to engine.

15. Using 1-1/4 inch socket and torque wrench, tighten nuts (P) to 50-55 lb-ft (68-75 N•m).

16. Back nuts (P) off until slot in nut (P) aligns with hole in shaft. Using pliers, install new cotter pins (Q).

Go on to Sheet 8

TA108007

COOLING FAN SHROUD REPLACEMENT (Sheet 8 of 8)

17. Using thickness gage, check clearance between tip of each fan blade and fan housing (J). If clearance is less than 0.062 inch (0.157 mm) all around, loosen screws (L) and shift fan housing (J) as necessary to attain clearance.
18. When clearance is attained, use 9/16 inch socket and tighten screws (L).
19. Position two fan guards (R) onto fan housing (J).
20. Install eight bolts and washers (S) to secure fan guards (R) to fan housing (J).
21. Using 9/16 inch socket, tighten bolts (S).

22. Position two cover plates (T) onto shroud (U).
23. Using 1/2 inch socket, install five bolts (V) to secure each cover plate (T).
24. Install front and rear shroud supports (page 9-40).
25. Install engine shroud (page 9-31).
26. Install powerplant (page 5-14).

End of Task

TA108008

ENGINE COOLING FAN REPLACEMENT (Sheet 1 of 4)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	9-55
Installation	9-57

TOOLS: Thickness gage (feeler gage)
 Torque wrench (0-1751b-ft)
 Ratchet with 1/2 in. drive
 9/16 in. socket with 1/2 in. drive
 1/2 in. socket with 1/2 in. drive
 1/2 in. combination box and open end wrench
 Slip joint pliers
 Hammer
 1-1/4 in. socket with 1/2 in. drive

SUPPLIES: Cotter pins (18 required)
 2x4 in. block of wood 6 in. long

PRELIMINARY PROCEDURE: Remove top deck (page 16-21)

CAUTION

Do not drop screws and lockwashers into fan assembly.

Go on to Sheet 2

TA108009

ENGINE COOLING FAN REPLACEMENT (Sheet 2 of 4)

NOTE

Both engine cooling fans are replaced the same.

REMOVAL:

1. Using 9/16 inch socket, remove four screws and lockwashers (A) holding fan cover (B) to engine.
2. Remove fan cover (B).

3. Using slip joint pliers remove cotter pin (C) and throw away.
4. Using 1-1/4 inch socket, remove hex nut and flat washer (D) holding fan to shaft (E).
5. Remove assembled fan and hub (D) from shaft (E).

Go on to Sheet 3

TA108010

ENGINE COOLING FAN REPLACEMENT (Sheet 3 Of 4)

6. Using slip joint pliers, remove 16 cotter pins (G) and throw away.
7. Using 1/2 inch socket and open end wrench, remove 16 nuts, bolts, and washers (H) holding fan (J) to hub (K).
8. Place block of wood on hub (K). Using hammer, strike block of wood until hub (K) is separated from fan (J).
9. Inspect hub (K) for damages. Replace hub if damaged.

**INSTALLATION:**

1. Position hub (A) on fan (B) machined surface up (marked top).
2. Using 1/2 inch socket and open end wrench, install 16 bolts, nuts, and washers (C). Using torque wrench, torque nuts to 15-20 lb-ft (20-27 N•m).

3. Using slip joint pliers, install 16 new cotter pins (D).

Go on to Sheet 4

TA108011

ENGINE COOLING FAN REPLACEMENT (Sheet 4 of 4)

4. Install assembled fan and hub on shaft (E).
5. Using 1-1/4 inch socket, install washer and hex nut (F). Using torque wrench, tighten nut from 45-55 lb-ft (61-75 N•m).

6. Using feeler gage, check clearance between fan (H) and housing (J). If clearance is less than 0.62 inch all around, loosen four screws (A) and shift housing (J) until clearance is obtained.
7. Using torque wrench, turn nut (F) clockwise and check that clutch releases (fan turns) between 18-22 lb-ft (25-30 N•m). If clutch does not release between 18-22 lb-ft (25-30 N•m), notify support maintenance.
8. Using slip joint pliers, install new cotter pin (G).
9. Position fan cover (K) over fans.
10. Using 9/16 inch socket, install four screws and lockwashers (L).
11. Install top deck (page 16-23).

End of Task

TA108012

FAN DRIVE OIL SEAL REPLACEMENT (Sheet 1 of 5)

PROCEDURE INDEX

PROCEDURE	PAGE
Removal	9-59
Installation	9-61

TOOLS: Ratchet with 1/2 in. drive
 Putty knife
 Diagonal cutters
 Slip joint pliers
 Hammer
 1/2 in. socket with 1/2 in. drive
 Brass drift

SPECIAL TOOLS: Puller (2ea) (Item 1, Chapter 2, Section 3)

SUPPLIES: Sealing compound (Item 24, Appendix D)
 Seal (10935537)
 Lockwire (Item 60, Appendix D)
 Dry cleaning solvent (Item 15, Appendix D)
 Rags
 Watch

PRELIMINARY PROCEDURES: Remove top deck (page 16-21)
 Remove cooling fans (page 9-55).

FAN DRIVE OIL SEAL REPLACEMENT (Sheet 2 Of 5)

REMOVAL:

1. Using diagonal cutters, cut and remove lockwire (A).
2. Using socket, remove six bolts (B) and washers (C).

3. Install two pullers (D) in screw holes in oil seal housing (E).
4. Alternately tighten pullers (D) until oil seal housing (E) separates from fan drive housing (F).

Go on to Sheet 3

TA108014

FAN DRIVE OIL SEAL REPLACEMENT (Sheet 3 of 5)

5. Using hammer and brass drift, drive out oil seal (G) from housing (E) and throw away.
6. Clean housing (E) with dry cleaning solvent and rags and remove any dried adhesive and oil.

**INSTALLATION:**

1. Using putty knife, coat sides of replacement oil seal with sealing compound. Use care to prevent sealing compound from contacting felt part of seal.
2. Position new oil seal (A) in housing with lip of seal toward gasket surface of oil seal housing (B).

Go on to Sheet 4

TA108015

FAN DRIVE OIL SEAL REPLACEMENT (Sheet 4 of 5)

- Using hammer and brass drift, drive new seal (A) into housing (B), seating seal. Remove excess sealing compound.

- Position assembled oil seal housing (B) on fan drive housing (C). Be sure puller holes in housing (B) align with indents in fan housing (C).
- Using socket, install six bolts and washers (D).

Go on to Sheet 5

TA108016

FAN DRIVE OIL SEAL REPLACEMENT (Sheet 5 of 5)

6. Install cooling fan (page 9-57). operate engine for five minutes. Stop engine, remove fan and check for oil leaks around seal.
7. Using slip joint pliers, install lockwire (E) through bolt heads.

8. Install cooling fans (page 9-57).
9. Install top deck (page 16-23).

End of Task

TA108017

CENTRIFUGAL FAN HOUSING REPLACEMENT (Sheet 1 of 3)

TOOLS: 1/2 in. socket with 1/2 in. drive
9/16 in. socket with 1/2 in. drive
Ratchet with 1/2 in. drive
Thickness gage (feeler gage)
9/16 in. open end wrench (2 required)

PRELIMINARY PROCEDURES: Remove top deck (page 16-21)
Remove engine shroud (page 9-30)

REMOVAL:

CAUTION

Do not drop screws or lockwashers into fan housing as damage to fan could result.

1. Using 9/16 inch socket, remove eight screws (A) and lockwashers holding two fan housings (B) to engine (front end and flywheel end).

Go on to Sheet 2

TA108018

CENTRIFUGAL FAN HOUSING REPLACEMENT (Sheet 2 Of 3)

2. Remove fan housings (B) from powerplant.
3. Using 1/2 inch socket, remove ten screws (C) securing covers (D) to shroud (E).
4. Remove covers (D) from powerplant.
5. Using two 9/16 inch wrenches, remove two screws, lockwashers and nuts (F) that hold housing (G) and mount (H) together.
6. Using 9/16 inch socket, remove four screws (J).
7. Remove housing (G) and mount (H) from powerplant.

INSTALLATION:

NOTE

Make sure no foreign matter is present in fan housing.

1. Position mount (A) and housing (B) onto powerplant.
2. Using two 9/16 inch wrenches, install two screws, lockwashers, and nuts (C) securing mount (A) and housing (B) together.
3. using 9/16 inch socket, install four screws (D) securing mount (A) and housing (B) to engine shroud.
4. Using feeler gage, check clearance between tip of each fan blade and housing (B). If clearance is less than 0.062 inch, loosen screws (D) and shift housing (B) until clearance is obtained.

Go on to Sheet 3

TA108019

CENTRIFUGAL FAN HOUSING REPLACEMENT (Sheet 3 Of 3)

5. Position covers (E) onto shroud (F).
6. Using 1/2 inch socket, install ten screws (G) securing covers (E) to shroud (F).
7. Position fan housings (H) onto powerplant.
8. Using 9/16 inch socket, install eight screws and lockwashers (J) securing two fan housings (H) to powerplant.
9. Install engine shroud (page 9-31).
10. Install top deck (page 16-23).

End of Task

TA108020

By Order of the Secretary of the Army:

Official:

E. C. MEYER
General, United States Army
Chief of Staff

ROBERT M. JOYCE
Brigadier General, United States Army
The Adjutant General

Distribution:

To be distributed in accordance with DA Form 12-37, Organizational Maintenance requirements for Tank, Bridge, Launcher, M48A5 (AVLB).

THEN... JOT DOWN THE DOPE ABOUT IT ON THIS FORM. CAREFULLY TEAR IT OUT. FOLD IT AND DROP IT IN THE MAIL!

12	1-6a		

IN THIS SPACE TELL WHAT IS WRONG AND WHAT SHOULD BE DONE ABOUT IT:

Item 10. Change illustration. Reason: Tube end shown assembled on wrong side of lever cam.

Item 3. The NSN and P/N are not listed on the AMDF nor the MCRL. Request correct NSN and P/N be furnished.

Preventive Maintenance Checks and Services. Item 7 under "Items to be inspected" should be changed to read as follows: Firing linkage and firing mechanism pawl.

Since there are both 20- and 30- round magazines for this rifle, data on both should be listed.

THE METRIC SYSTEM AND EQUIVALENTS

LINEAR MEASURE

1 Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches
 1 Meter = 100 Centimeters = 1000 Millimeters = 39.37 Inches
 1 Kilometer = 1000 Meters = 0.621 Miles

WEIGHTS

1 Gram = 0.001 Kilograms = 1000 Milligrams = 0.035 Ounces
 1 Kilogram = 1000 Grams = 2.2 Lb.
 1 Metric Ton = 1000 Kilograms = 1 Megagram = 1.1 Short Tons

LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces
 1 Liter = 1000 Milliliters = 33.82 Fluid Ounces

SQUARE MEASURE

1 Sq. Centimeter = 100 Sq. Millimeters = 0.155 Sq. Inches
 1 Sq. Meter = 10,000 Sq. Centimeters = 10.76 Sq. Feet
 1 Sq. Kilometer = 1,000,000 Sq. Meters = 0.386 Sq. Miles

CUBIC MEASURE

1 Cu. Centimeter = 1000 Cu. Millimeters = 0.06 Cu. Inches
 1 Cu. Meter = 1,000,000 Cu. Centimeters = 35.31 Cu. Feet

TEMPERATURE

$\frac{5}{9}(\text{°F} - 32) = \text{°C}$
 212° Fahrenheit is equivalent to 100° Celsius
 90° Fahrenheit is equivalent to 32.2° Celsius
 32° Fahrenheit is equivalent to 0° Celsius
 $\frac{9}{5} \text{°C} + 32 = \text{°F}$
