# ORGANIZATIONAL MAINTENANCE MANUAL

RADIO SETS AN/VRC-24 AND AN/TRC-68

This copy is a reprint which includes current pages from Changes 2,6,and 7.

DEPARTMENT OF THE ARMY AND THE AIR FORCE
9 JUNE 1960

### **WARNING**

#### DANGEROUS VOLTAGES EXIST AT THE ANTENNAS AND IN RECEIVER-TRANSMITTER GROUPS OA-2648/VRC-24 AND OA-2649/TRC-68

Turn the equipment power off before removing components. Serious injury or death may result from contact with many of the terminals within the equipment.

TM 11-5820-222-20 TO 31R2-2TRC68-12 C 2

#### Organizational Maintenance Manual

RADIO SETS AN/VRC-24, AN/VRC-24A, AN/TRC-68, AND AN/TRC-68A

TM 11-5820-222-20 TO 31R2-2TRC68-12 CHANGES No. 2 DEPARTMENTS OF THE ARMY AND THE AIR FORCE WASHINGTON 25, D. C., 31 October 1962

TM ll-5820-222-20/T0 31R2-2TRC68-12, 9 June 1960, is changed as indicated so that the manual also applies to the following equipment:

| Nomenclature         | Order No.        | Serial No.    |
|----------------------|------------------|---------------|
| Radio Set AN/VRC-24A | 4295-PP-61-A1-51 | 1 through 527 |
| Radio Set AN/TRC-68A | 4295-PP-61-A1-51 | 1 through 129 |

Change the title of the manual to read as shown above.

Page 3, chapter 1. Below the title, add the following note:

Note. Radio Sets AN/VRC-24A and AN/TRC-68A are similar to Radio Sets AN/VRC-24 and AN/TRC-68. Information in this manual applies to all sets unless otherwise specified.

Paragraph 1. Delete subparagraph d and substitute:

d. Forward comments on this publication direct to: Commanding Officer, U. S. Army Electronic Material Support Agency, ATTN: SELMS-MPP-4, Fort Monmouth, N. J. (DA Form 1598 (Record of Comments on Publications), DA Form 2028 (Recommended Changes to DA Technical Manual Parts Lists or Supply Manuals 7, 8, or 9), DD Form 96 (Disposition Form), or letter may be used).

Note. For applicable forms and records, refer to paragraph 2, TM 11-5820-222-10.

Page 14. After paragraph 9, add paragraph 9.1.

#### 9.1. Differences in Models

Radio Sets AN/VRC-24A and AN/TRC-68A differ from earlier models in the following details:

a. On the front panel assembly, a dummy connector with pins B to H jumpered is attached by a chain near the BROAD BAND

receptacle and must be connected thereto for normal operation when security equipment is not connected.

b. On Order No. 19275–PC–60, serial numbers 41 and above, and on the A models, tube V106 is type 7609.

Page 18, paragraph 13a (6). Add the following after subparagraph (6):

(7) Loose or disconnected dummy plug on BROADBAND connector.

Page 19, paragraph 14b, step 6a, "Corrective measures" column. Insert the following above "Check LINE 30 AMP fuse": Check continuity between pins B and H of dummy connector mounted on the BROADBAND receptacle.

Page 28, paragraph 15b (3). Make the following changes:

Delete (a) and (b) and substitute:

- (a) Depress the microphone push-to-talk switch and check for continuity from terminal C (terminal K on AN/VRC-24A and AN/TRC-68A) of the BROAD BAND receptacle on the front panel to ground. If terminal C (terminal K on AN/VRC-24A and AN/TRC-68A) is not grounded, check V802 through V808 (left side view, fig. 13).
- (b) If terminal C (terminal K on AN/VRC-24A and AN/TRC-68A) is

grounded, check the broadband coder.

Page 90, figure 13. Add the following note to figure 13:

Note. On Order No. 19275-PC-60, serial numbers 41 and above, and on the A models, tube V106 is type 7609.

> Armies (2) Corps (2)

InstÎ (2) except

Change No. 6

HEADQUARTERS DEPARTMENT OF THE ARMY Washington, D. C., 8 August 1967

# Organizational Maintenance Manual RADIO SETS AN/VRC-24, AN/VRC-24A, AN/TRC-68, AND AN/TRC-68A

TM 11-5820 -222-20.9 June 1960, is changed as indicated so that the manual also applies to the following equipment:

Nomenclature Radio Set AN/TRC-68A Order No. FR 36-039-D-6-31865(E) Serial No. 1 through 224

NOTE: The parenthetical reference to a previous change (example: page 2 of C2) indicates that pertinent material was published in that change.

Page 3, paragraph 1 (as changed by C 5. 19 Nov 64). Delete subparagraph d and substitute:

d. Reporting of Equipment Manual Improvements. Report of errors, omissions, and recommendations for improving this manual by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to DA Publications) and forwarded direct to (Commanding General, U. S. Army Electronics Command, ATTN: AMSEL-MR-NMP-AD, Fort Monmouth. N.J., 07703

Page 4, paragraph 2b. Add the following after subparagraph b:

b.1. Radio Set AN/ TRC-68A Packaging Data (Order FR 36-039-D-6-31R65(E)).

When packaged for shipment, the components of the AN/TRC-68A. furnished on Order FR 36-039-D-6-3186.5(E), are placed in cartons and packed in two wooden hexes (fig. 3.4.1, and the following chart).

| Box No. | Height<br>(in.) | Width<br>(in.) | Depth<br>(in.) | Volume<br>(cu ft) | Unit<br>weight<br>(lb) | Contents of box   |

Page 5, figure 3. Add the following note to figure 3:

#### NOTE:

ON ORDER FR 3b-039-11-6-31865 (E) RADIO SET CONTROL C-1439/U IS PACKED WITH STANDARDIZED ELECTRICAL COMPONENTS CASE CY-4868/TRC-68 (FIG. 4.1).

Page 6. Add figure 4.1 after figure 4:

Figure 4.1 Standardized Electrical Components Case Cy-4868/TRC-6U, Antenna AT-197-GR, and Radio Set Control C-1439/U. packageing diagram.

<sup>\*</sup>This change supersedes CS, 19 November 1964.

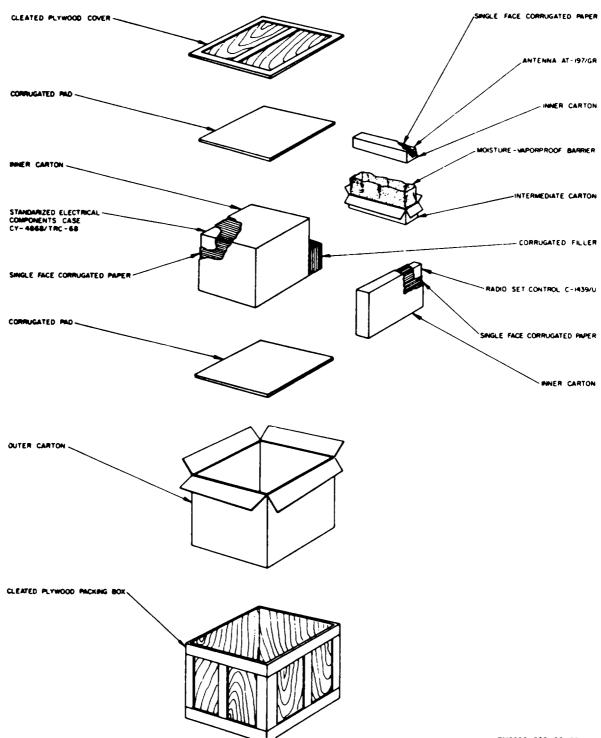

Page 5, figure 3. Add the following note to figure 3:

#### NOTE:

ON ORDER FR 36-039-D-6-31865(E) RADIO SET CONTROL C-1439/U IS PACKED WITH STANDARDIZED ELECTRICAL COMPONENTS CASE CY-4868/TRC-68 (FIG. 4.1).

Page 6. Add figure 4.1 after figure 4:

Figure 4.1, Standardized Electrical Components Case CY-4868/TRC-68, Antenna AT-197-CR, and Radio Set Control C-1439/U, packaging diagram

Page 7, paragraph 3b. Add the following note after subparagraph b(9):

Note. On order FR 36-039-D-6.3186.5(E). the accessory case is replaced by Standardized Electrical Components Case CY-4868/TRC-68 (fig.4. 1). Check the contents of each box and the components case against the, table of components of Radio Set AN/TRC-68A (para 5. TM 11-5820-222-10).

Page 14. Add paragraph 9.1 after paragraph 9.

#### 9.1 Differences in Models

Radio Set AN/TRC-68A (serial numbers 1 through 224 ) differs from earlier models in the following details:

- a. Centrifugal Fan HD-390A/U replaces Centrifugal Fan HD-390/U with which it is interchangeable.
- b. Standardized Electrical Components Case CY-4868/TRC-68 replaces Accessory Case CY-2713/TRC-68 with which it is not interchangeable. The contents and stowage arrangements differ.
- c. Dynamic Loudspeaker LS-166/U is not furnished.
- d. Spool DR-8-A and Wire WD-1/TT are not furnished.

Page 18, paragraph 14b (as changed by C S, 19 Nov 64). Insert the following caution before the checklist:

Caution: When operating the CHAN SEL switch, or the CHANNEL selector switch, allow a minimum of 10 seconds between channel reselections.

Page 24, paragraph 14b. Step 20a, "Corrective measures" column: delete the last line and substitute: 15 Amp SLO BLO fuse.

Page 30, figure 13. Delete NOTE 2 (added by C5, 19 Nov 64) and substitute:

2. ON ORDERS 32626-PC-63 AND FR 36-039-D-6-31865(E), ELECTRON TUBE 6J4WA HAS BEEN REPLACED BY ELECTRON TUBE 6J4WB.

Page 35, paragraph 19a. Add the following note after subparagraph a:

Note. On Order FR 36-039-D-6-31865(E).the accessory case is replaced by Standardized Electrical Components Case CY-4868/TRC-68.

Page 37, appendix II. Make the following changes:

(Page 3 of C 4). Chart. Add the following after the last line:

| Part or component  | Maintenance |   | Echelon |   |   |   | Tools required | Remarks             |
|--------------------|-------------|---|---------|---|---|---|----------------|---------------------|
|                    | function    | 1 | 2       | 3 | 4 | 5 | 10012 tedniten | A CHILDREN          |
| Case. Standardized |             |   |         |   |   |   |                | In AN/TRC-68A       |
| Components.        | replace     |   | X       |   |   |   |                | on Order FR         |
| Electrical         | repair      |   |         | X |   |   |                | 36-039-D-6-31865(E) |
| CY-4868/TRC-68     | •           |   |         |   |   |   |                | only                |

(Page 7 of C 4). Chart. In "PART OR COMPONENT" column, under entry for the OA-2649/TRC-68, add: OA-2649A/TRC-68.

Under entry for the HD-390/U, add: HD-390A/U.

(Page 8 of C 4). Chart. "PART OR COM-PONENT" column. Add on line 2: RT-441A/TRC-68.

By Order of the Secretary of the Army:

HAROLD K. JOHNSON, General, United States Army, Chief of Staff.

Official:

KENNETH G. WICKHAM, Major- General, United States Army, The Adjutant General.

Change No. 7

HEADQUARTERS
DEPARTMENT OF THE ARMY
WASHINGTON, DC, 29 June 1979

# Organizational Maintenance Manual RADIO SETS AN/VRC-24 (NSN5820-00-402-2264), AN/VRC-24A (NSN5820-00-223-741 3), AN/TRC48 (NSN5820-00-682-2718), AND AN/TRC-68A (NSN5820-00482-2718)

TM 11-5820-222-20, 9 June 1960, is changed as follows:

The title of the manual is changed as shown above.

Page 3. Paragraph 1d is superseded as follows:

- d. Reporting of Errors. The reporting of errors, omissions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to Publications and Blank Forms) and forwarded direct to Commander, US Army Communications and Electronics Materiel Readiness Command, ATTN: DRSEL-ME-MQ, Fort Monmouth, New Jersey 07003.
- d.1. Reporting Equipment Improvement Recommendation (EIR). EIR's will be prepared using Standard Form 368, Quality Deficiency Report. Instructions for preparing EIR's are provided in TM 38-750, The Army Maintenance

Management System. EIR's should be mailed direct to Commander, US Army Communications and Electronics Materiel Readiness Command, ATTN:DRSEL-ME-MQ, Fort Monmouth, New Jersey 07703. A reply will be furnished direct to you.

#### **NOTE**

For applicable forms and records, refer to paragraph 2, TM 11-5820-222-10.

Paragraph 1.1 is superseded as follows:

#### 1.1. Indexes of Publications

- a. DA Pam 310-.4. Refer to the latest issue of DA Pam 310-4 to determine whether there are new editions, changes or additional publications pertaining to the equipment.
- b. *DA Pam 310-7*. Refer to DA Pam 310-7 to determine whether there are modification work orders (MWO'S) pertaining to the equipment.

Page 15. Section I is superseded as follows:

#### Section I. MAINTENANCE

## 10. Scope of Organizational Maintenance Duties

Following is a list of maintenance duties performed by the organizational maintenance personnel.

- a. Replacement of defective fuses and lamps.
- b. Organizational preventive maintenance (para 12).
- c. Organizational preventive maintenance checks and services (table 2-1).
  - d. Visual inspection (para 13).
- e. Troubleshooting using equipment performance checklist (para 14).

- f. Removal and replacement (para 16). g. Tube testing and Replacement (para 17).
- 11. Tools, Materials, and Test Equipment Required

The tools, materials, and test equipment required for organizational maintenance are listed below:

- a. *Tools*. Tool Kit, Electronic Equipment TK-101/G
  - b. Materials.
    - (1) Dry lint-free cloth.
    - (2) Trichlorotrifluoroethane (NSN6850-00-

<sup>\*</sup>This change supersedes Change 3 1 May 1963, and Change 4, 29 MAY 1963.

1 05-3084).

- (3) Sandpaper No. 000.
- (4) Small soft-bristled dry brush.
- c. Test Equipment.
  - (1) Multimeter AN/URM-105.
  - (2) Electron Tube Set TV-7/U.

#### 12. Organizational Preventive Maintenance Checks and Services

a. Organizational preventative maintenance is the systematic care and inspection of equipment to maintain it in serviceable condition, to prevent breakdown, and to assure maximum operational capability. Preventative maintenance is the responsibility of all categories of maintenance concerned with the equipment. It includes inspection, testing, and repair or replacement of parts (as authorized) that inspections and tests indicate would probably fail before the next scheduled periodic service. Preventive maintenance and services of AN/ VRC-24. AN/VRC-24A, AN/TRC-68, and AN/ TRC66A at the organizational category of maintenance are made at monthly intervals, unless otherwise directed by the commanding officer.

b. Maintenance forms and records to be used and maintained on this equipment are specified in TM 38-750.

c. When the monthly checks and services are performed, the daily checks and services also form a part of the monthly checks and services.

#### NOTE

Before you operate, always keep in mind the CAUTIONS and WARN-INGS.

#### WARNING

**ADEOUATE VENTILATION** SHOULD BE PROVIDED WHILE TRICHLOROTRI-USING FLUOROETHANE. PROLONGED BREATHING OF VAPOR SHOULD BE AVOIDED. THE SOLVENT SHOULD NOT BE USED NEAR HEAT OR OPEN FLAME: THE PRODUCTS OF DECOMPOSITION ARE TOXIC AND IRRITATING. TRICHLOROETRI-SINCE FLUOROETHANE DISSOLVES NATURAL OILS, PROLONGED CONTACT WITH SKIN SHOULD BE AVOIDED. WHEN NECESSARY, USE GLOVES WHICH THE SOLVENT CANNOT PENETRATE. IF THE SOLVENT IS TAKEN IN-TERNALLY, CONSULT A PHYSI-CIAN IMMEDIATELY.

Table 2-1. Organizational Preventative Maintenance Checks and Services

| Item<br>No.                          | Item to be inspected   | Procedure Check for and have repaired, replaced, adjusted as necessary  |
|--------------------------------------|--|---|
| 1<br>2<br>3<br>4<br>5<br>6<br>7<br>8 | Modification  Completeness Publication Mounting Installation  Antenna Daily checks and services  Equipment operation | Check DA Pam 310-7 to determine if new applicable MWO'S have been published. All URGENT MWO'S must & applied immediately.  Check to ace that the equipment is complete. (TM 11-5820-222-10, Appendix B). See that all publications arc complete, serviceable, and current (DA Pam 310-4). Inspect seating and stability of mounting. Check for loose or missing hardware. Sea that the equipment is properly installed. Check to see that all bolts, nuts washers are correctly positioned and properly tightened.  Check that the antenna being used has not been damaged.  Perform the operator daily preventative maintenance checks and services (TM 11-5820-222-10, Table 3-1).  Operate the equipment (Chapter 2, Section II of TM 11-5820-222-10). |

# APPENDIX II MAINTENANCE ALLOCATION

#### **Section I. INTRODUCTION**

#### A2-1. General

This appendix provides a summary of the maintenance operations for AN/VRC-24 and ANNRC-24A. It authorizes categories of maintenance for specific maintenance functions on repairable items and components and the tools and equipment required to perform each function. This appendix may be used as an aid in planning maintenance operations.

#### A2-2. Maintenance Function

Maintenance functions will be limited to and defined as follows:

- a. Inspect. To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination.
- b. Test. To verify serviceability and to detect incipient failure by measuring the mechanical or electrical characteristics of an item and comparing those characteristics with prescribed standards.
- c. Service. Operations required periodically to keep an item in proper operating condition; i.e., to clean (decontaminate), to preserve, to drain, to paint, or to replenish fuel, lubricants, hydraulic fluids, or compressed air supplies.
- d. Adjust. To maintain, within prescribed limits, by bringing into proper or exact position, or by setting the operating characteristics to the specified parameters.
- e. Align. To adjust specified variable elements of an item to bring about optimum or desired performance.
- f. Calibrate. To determine and cause corrections to be made or to be adjusted on instruments or test measuring and diagnostic equipments used in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.

- a. Install. The act of emplacing, seating, or fixing into position an item, part, module (component or assembly) in a manner to allow the proper functioning of the equipment or system.
- h. Replace. The act of substituting a serviceable like type part, subassembly, or module (component or assembly) for an unserviceable counterpart.
- i. Repair. The application of maintenance services (inspect, test, service, adjust, align, calibrate, replace) or other maintenance actions (welding, grinding, riveting, straightening, facing, remachining, or resurfacing) to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.
- j. Overhaul. That maintenance effort (service/action) necessary to restore an item to a completely serviceable/operational condition as prescribed by maintenance standards (i.e., DMWR) in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.
- k. Rebuild. Consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of materiel maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (hours, miles, etc.) considered in classifying Army equipments/components.

#### A2-3. Column Entries

a. Column 1, Group Number. Column 1 lists group numbers, the purpose of which is to identify components, assemblies, subassemblies, and modules with the next higher assembly.

- b. Column 2, Component/Assembly. Column 2 contains the noun names of components, assemblies, subassemblies, and modules for which maintenance is authorized.
- c. Column 3, Maintenance Functions. Column 3 lists the functions to be performed on the item listed in column 2. When items are listed without maintenance functions, it is solely for purpose of having the group numbers in the MAC and RPSTL coincide.
- d. Column 4, Maintenance Category. Column 4 specifies, by the listing of a "work time" figure in the appropriate subcolumn(s), the lowest level of maintenance authorized to perform the fur ction listed in column 3. This figure represents the active time required to perform that maintenance function at the indicated category of maintenance. If the number or complexity of the tasks within the listed maintenance function vary at different maintenance categories, appropriate "work time" figures will be shown for each category. The number of task-hours specified by the "work time" figure represents the average time required to restore an item (assembly, subassembly, component, module, end item or system) to a serviceable condition under typical field operating conditions. This time includes preparation time, troubleshooting time, and quality assurance/quality control time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the maintenance allocation chart. Subcolumns of column 4 are as follows:
  - C Operator/Crew O Organizational

  - F Direct Support
  - H General Support
  - D Depot

- e. Column 5, Tools and Equipment. Column 5 specifies by code, those common tool sets (not individual tools) and special tools, test, and support equipment required to perform the designated function.
- f. Column 6, Remarks. Column 6 contains an alphabetic code which leads to the remark in section IV, Remarks, which is pertinent to the item opposite the particular code.

#### A2-4. Tool and Test Equipment Requirements (See III)

- a. Tool or Test Equipment Reference Code. The numbers in this column coincide with the numbers used in the tools and equipment column of the MAC. The numbers indicate the applicable tool or test equipment for the maintenance functions.
- b. Maintenance Category. The codes in this column indicate the maintenance category allocated the tool or test equipment.
- c. Nomenclature. This column lists the noun name and nomenclature of the tools and test equipment required to perform the maintenance functions.
- d. National/NATO Stock Number. This column lists the National/NATO stock number of the specific tool or test equipment.
- e. Tool Number. This column lists the manufacturer's part number of the tool followed by the Federal Supply Code for manufacturers (5-digit) in parentheses.

#### A2-5. Remarks (See IV)

- a. Reference Code. This code refers to the appropriate item in section II, column 6.
- b. Remarks. This column provides the required explanatory information necessary to clarify items appearing in section II.

#### CHAPTER 1

#### **INSTALLATION**

#### Section L SERVICE ON RECEIPT OF EQUIPMENT

#### 1 Scope

- a. This manual covers installation and second echelon maintenance instructions for Radio Sets AN/VRC-24 and AN/TRC-68. The manual also includes disassembly and repackaging procedures for shipment and limited storage. The operating instructions for this equipment are contained in TM 11-5820-222-10.
- b. Installation procedures for Radio Sets AN/VRC-24 and AN/TRC-68 consist of the following:
  - (1) Unpacking and checking the equipment (para.3).
  - (2) Installing the components (para, 5 or 7).
  - (8) Connecting the components (para, 6 or 8),
- c. Second echelon maintenance of Radio Sets AN/VRC-24 and AN/TRC-68 consists of

the following:

- (1) Preventive maintenance (para. 12).
- (2) Visual inspection (para. 13).
- (3) Troubleshooting, using the equipment performance checklist (para. 14).
- (4) Removal and replacement (para. 16).
- (5) Tube testing and replacement (para. 17).
- d. Forward comments concerning this manual to the Commanding Officer, U. S. Army Signal Publications Agency, Fort Monmouth, N. J.

Note. For applicable forms and records, refer to paragraph 2, TM 11-6820-222-10,

#### 2. Packaging Data

a. Radio Set AN/VRC-Z4 Packaging Data. When packed for shipment, the components of the AN/VRC-24 are placed in cartons and packed in two wooden boxes (fig. 1 and 2).

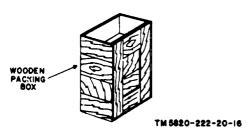

Figure 2. Radio Set Control C-1439/U, and accessory items (AN/VRC-24), packaging diagram.

#### 3. Unpacking and Checking Equipment

- a. Radio Set AN/VRC-24 (fig. 1 and 2). Perform all the steps in the order outlined below.
  - (1) Remove the nails from the top and one side of each wooden packing box with a nailpuller. Remove the top and one side. Do not attempt to pry the top and side off because the equipment may become damaged.
  - (2) Open the outer carton inside each box.
  - (3) Remove the two inner cartons in the smaller box (fig. 2) and remove the radio set control and the three cable assemblies from these cartons.
  - (4) Remove the inner carton from the larger box (fig. 1), open the carton, and remove the antenna, the microphone, the loudspeaker, the antenna cable, the running spares, and the technical manuals.
  - (5) Remove the corrugated pads and fillers and the plywood pallet from the outer carton in the larger box and lift the receiver-transmitter group and mounting carefully out of the carton.
  - (6) Inspect the equipment and running spares for signs of possible damage incurred during shipment. If the equipment is damaged, refer to paragraph 2, TM 11-5820-222-10.
  - (7) Check the contents of each box against the packing list and against the table of components of Radio Set AN/VRC-24, paragraph 5a, TM 11-5820-222-10.
  - (8) Check the boxes and cartons for any

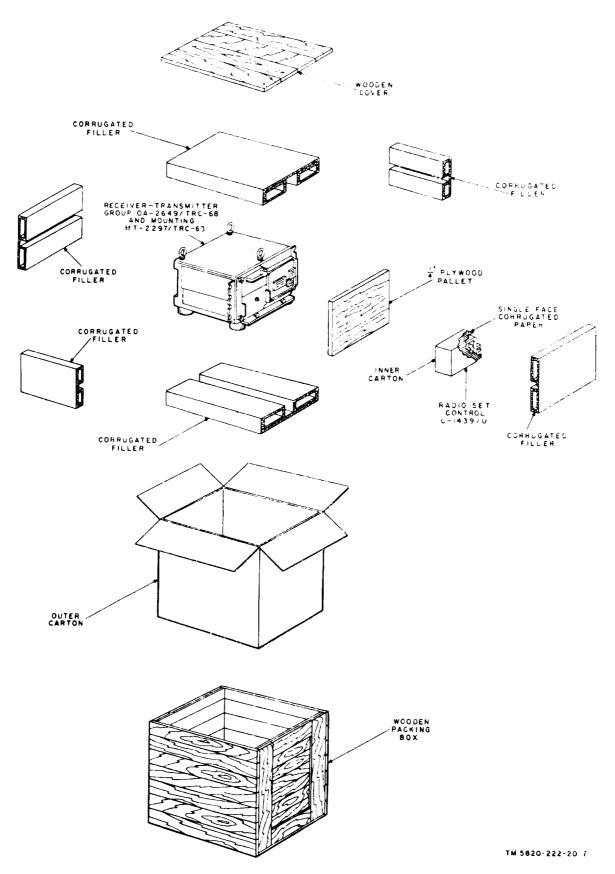

Figure 3. Receiver-Transmitter Group OA-2649/TRC-68, Mounting MT-2297/TRC-68, and Radio Set Control C1439/U, packaging, diagram,

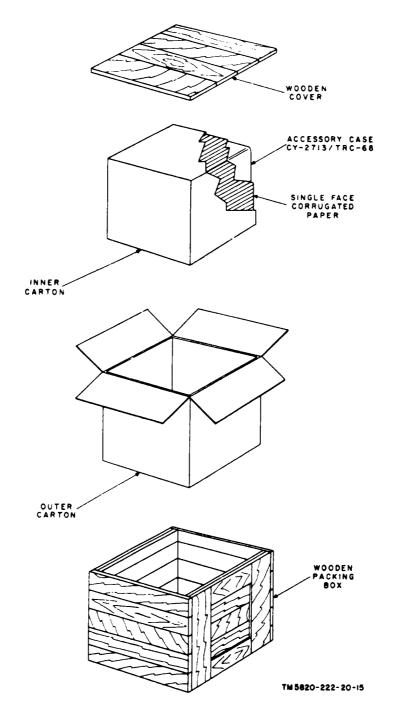

Figure 4. Accessory Case CY-2713/TRC-68, packaging diagram.

missing items. If storage space is available, replace the cartons, pads, and pallet in the wooden boxes and store them for future use.

- b. Radio Set AN/TRC-68 (fig. 3 and 4). Perform all the steps in the order outlined below.
  - (1) Remove the nails from the top and one side of each box with a nailpuller. Remove the top and side. Do not attempt to pry the top and side, off because the equipment may become damaged.
  - (2) Open the outer carton inside each box.
  - (3) Remove and open the inner carton that contains the accessory case (fig. 4) and remove the accessory case.
  - (4) Remove the corrugated fillers and the plywood pallet from the outer carton containing the receiver-transmitter group (fig. 3),
  - (5) Remove and open the small carton that contains the radio set control, Remove the radio set control.
  - (6) Slit the exposed side of the outer carton and slide the receiver-transmitter group and mounting carefully out of the box.

- (7) Inspect the contents of each box for signs of possible damage incurred during shipment. If the equipment is damaged, refer to paragraph 2, TM 11 5820222 10.
- (8) Check the contents of each box and the accessory case against the packing list and against the table of components of Radio Set AN TRC-68 (para. 5b, TM 11-5820-222-10),
- (9) Check the boxes and cartons for any missing items, If storage space is available, replace the pads, pallet, and cartons in the boxes and store them for future use,
- c. Fuses. After unpacking the equipment, check all fuses against pane] markings beside the fuseholders that indicate the fuse ratings. Be sure that the proper value fuses are inserted in the fuseholders.
- d. Service Upon Receipt of Used or Reconditioned Equipment, If the equipment has been used or reconditioned, see whether it has been changed by a modification work order (MWO). If modified, the MWO number will appear on the equipment near the nomenclature plate.

#### Section II, INSTALLATION INSTRUCTIONS

#### 4. Siting

Radio Sets AN/VRC-24 and AN/TRC-68 transmit and receive signals over greater distances when the antenna is as high as possible and the surrounding area is clear of hills, buildings, power or telephone lines, and other obstructions, Such objects absorb, and sometimes reflect, radio frequency (rf) energy, producing weak or otherwise undesirable signals. Whenever possible, consider the following when choosing a site:

- a. Select a site on a hilltop or elevation.
- b. Select an area surrounded by level ter-
- c. Try several locations within the selected area and choose the location where the best signals from the desired stations are received.
- d. Avoid siting the equipment near sources of electrical interference, such as power or telephone lines, radar sets, and field hospitals.
  - e. Enemy jamming action against the radio

set is always a possibility. The effects of enemy jamming may be reduced by locating the antenna so that nearby obstructions act as a screen in the direction of probable sites of enemy jamming transmitters, This screening action may also reduce the transmitted signal strength in a direction toward the enemy, thereby making it more difficult for the enemy to receive the signals.

#### 5. Installation of Radio Set AN/VRC-24

Follow the procedures outlined below for all vehicular installations of the AN/VRC-24. For specific procedures, refer to the instructions furnished with the installation unit for the particular vehicle in which the-equipment is to be installed. Dimensional data for the receiver-transmitter group and mounting are given in figure 6.

- a. Mounting M1-1436/U.
  - (1) Remove the cover plate from the

- terminal box (fig. 5) on the rear of the mounting,
- (2) Insert Electrical Power Cable Assembly CX-4629/U through the front of the smaller gland just to the right of center in the terminal box. Connect the center conductor to the positive terminal of TB1703, Connect the outer shield to the negative terminal.
- (3) Insert Electrical Special Purpose Cable Assembly CX-4630 'U through the front of the larger gland on the right side of the terminal box. Solder the conductors to the terminals of TB1701 and TB1702 and to ground lug E1703 as indicated in the chart below,

| CX-4630/U<br>wire collar        | TB1701<br>terminal<br>No. | TB1702<br>terminal<br>No. | Function               |

(4) Electrical Special Purpose Cable Assembly CX-4498/U is not part of Radio Set AN/VRC-24 but is required when the radio set is to be installed for use in conjunction with Radio Sets AN/GRC-3 through -8 for retransmission purposes. The cable assembly is part of an installation unit that is ordered as directed in the installation data supplied with the particular vehicle in which the equipment is to be installed. To install the CX-4498/U, insert the single end of the cable assembly through the front of the single gland on the left side of the terminal box. Solder the conductors to the terminals of TB1701 and TB1702 (fig. 5) as shown in the chart below,

| CX-4498/U<br>wire color | TB1701<br>terminal<br>No. | TB1702<br>terminal<br>No. | Function                |
|-------------------------|---------------------------|---------------------------|-------------------------|

Note. Check continuity of terminals A and B, P1601, to ground lug E1708.

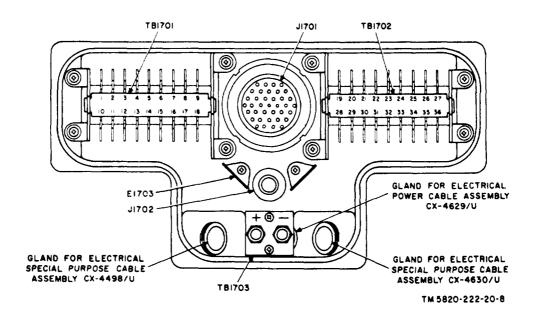

Figure 5. Mounting MT-1436/U, terminal box cover removed, rear view.

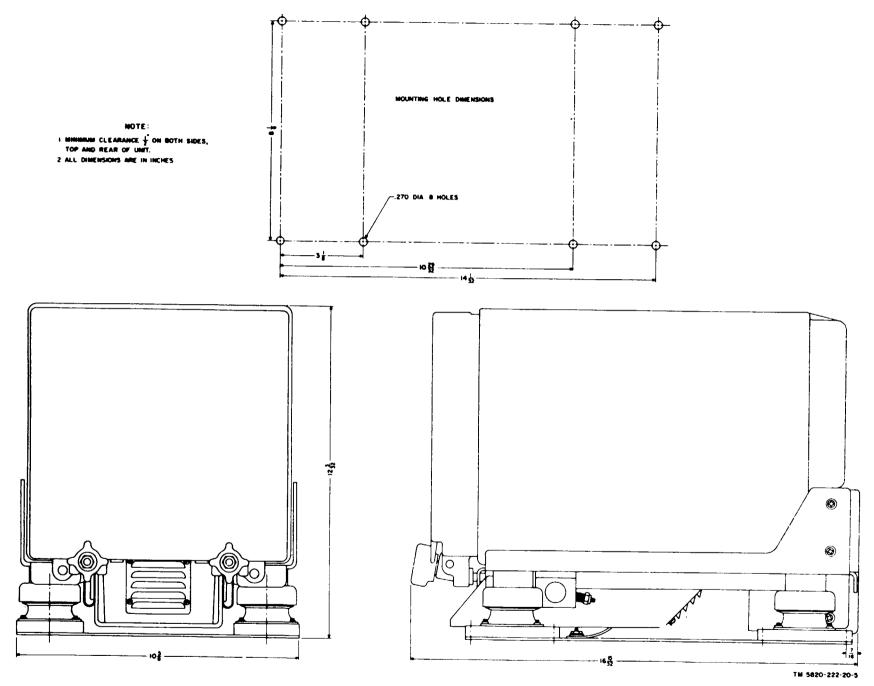

Figure 6. Receiver-Transmitter Group OA-2648/VRC-21

Mounting MT-1436/U, outline and mounting dimensions.

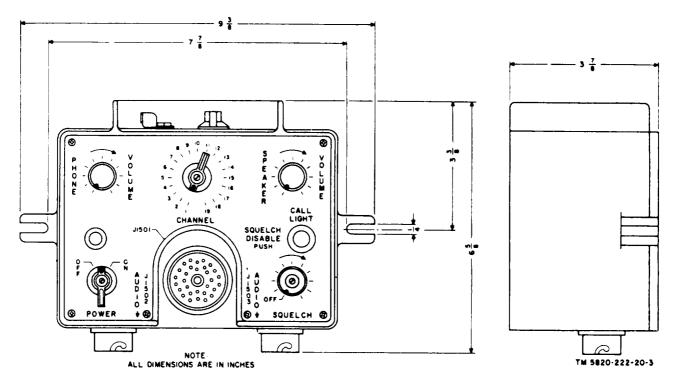

Figure 7. Radio Set Control C-1439/U, outline and mounting dimensions,

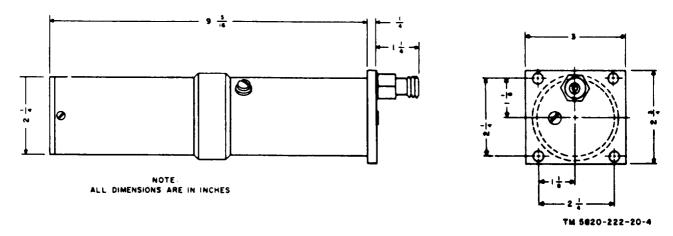

Figure 8. Antenna AT-803/VR, outline and mounting dimensions.

- (6) Tighten the locking nut on each gland to provide a watertight seal,
- (7) Replace the cover plate on the terminal box.
- (8) Spot and drill the eight mounting holes, Allow for minimum clearance (fig. 6).
- (9) Remove paint as necessary to provide proper grounding to the vehicle frame. Insert the mounting bolts, place the ground straps under the

- closest bolt, and fasten securely to the vehicle
- b. Receiver-Transmitter 2648/VRC-24.
  - (1) Slide the OA-2648/VRC-24 onto the upper tray of the mounting. Make sure that plug P1, on the rear of the RT-323/VRC-24 case, mates properly with J1701 at the rear of the mounting.
  - (2) Fasten the clamps on the front of the

mounting and tighten the thumbscrews securely.

Caution: Do not use a wrench on the thumbscrews. Tighten them securely by hand.

- c. Radio Set Control C-1439/U.
  - (1) Use the radio set control (fig. 7) as a template to spot the mounting holes.
  - (2) Drill the mounting holes and bolt the radio set control in place in the vehicle.
- d. Antenna AT-803/VR, An antenna adapter plate and mounting hardware are part

of an installation unit that is to be ordered for the particular vehicle in which the radio set is to be installed. When installing the antenna, follow the directions that are packed with the installation unit. Mounting dimensions are shown in figure 8.

# 6. Radio Set AN/VRC-24 Cable Connections

After installing the components, connect them as shown in the cording diagram, figure 3, TM 11-5820-222-10. The cable connections are listed in the following chart,

|   | M                  | Length | Conr   | ects  |
|---|--------------------|--------|--|---|
| Cable   | Number<br>required | (ft)   | from   | To  |
| Electrical Special Purpose<br>Cable Assembly<br>CX-4630/U   | 1                  | 10     | Soldered connections to TB1701 and TB1702 at rear of mounting, | Radio set control receptacle J1501.   |
| Electrical Power Cable Assembly CX-4620/U   | 1                  | 8      | TB1703 at rear of mounting.                                    | 26-volt dc power source.  |
| Electrical Special Purpose<br>Cable Assembly<br>CX-4498/U (supplied<br>with vehicle installation<br>unit) | 1                  |        | Soldered connections to TB1701 and TB1702 at rear of mounting. | AF amplifier AM-65/GRC, RT-70 POWER and AUDIO receptacles (part of retransmission equipment). |
| Radio Frequency Cable Assembly CG-1650/U  | 1                  | 6      | ANT connector on receiver-transmitter front panel.             | Antenna AT-803/VR.  |

#### 7. Installation of Radio Set AN/TRC-68

The AN/TRC-68 is intended for vehicular mounting when a 115- or 230-volt alternating current (at) power source is available or for fixed station installation in an equipment rack.

- a. Vehicular or Shelf Installation. Follow the procedures outlined below for all vehicular and shelf installations of the AN/TRC-6K For specific procedures, refer to the instructions furnished with the installation unit for the particular vehicle in which the equipment is to be installed.
  - (1) Spot and drill the four receivertransmitter group mounting holes on the vehicle or shelf surface, Dimensional data are shown in figure 9.
  - (2) Remove the watertight cover plates from the louvered vents on the sides of the case and install them in the storage spaces directly above the vents.
  - (3) Remove the RT-441/TRC-68 and the

- power supply from the case (para. 16c(1) and 16d(1)).
- (4) Align the case and mounting with the four drilled mounting holes on the shock mounts from below the mounting surface and tighten them.
- (5) Replace the RT-441/TRC-68 in the case (para. 16c(2)).
- (6) Check the positions of AC LINE VOLTAGE SELECTOR switches S1801, S1802, and S1803. These switches are located in the right front corner of the power supply chassis (fig. 10). Set the switches for 115- or 230-volt ac operation, depending on the output voltage of the available ac power source. Remove the switch guard to set the switches.
- (7) Check the MAIN AC, T1801 PRI, and T1802 PRI fuseholders on the power supply front panel for the proper size fuses for the available ac power source. The proper fuses to be used

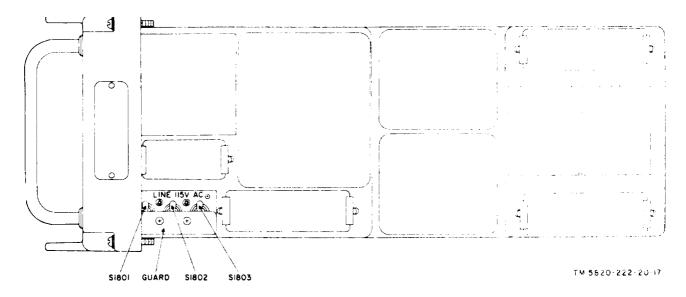

Figure 10. Power Supply PP-1494/U, top view.

- for 115- or 230-volt ac operation marked above the fuseholders.
- (8) Replace the power supply in the case (para. 16d(2)).
- (9) Install the radio set control as directed in paragraph 5c.
- (lo) Connect Connector Adapter UG 565A/U to the ANT connector on the RT-441/TRC-68 front panel.
- (11) Install Control Group AN/GRA-6 as directed in TM 11-284, paragraph 38 or TM 11-5038, chapter 2.

b. Rack Installation. Exact procedures for installing the AN/TRC-68 in an equipment rack depend on the type of rack and the amount of rack space available. General procedures which may be followed are listed below.

- (1) Remove the three eyebolts on the top of the AN/TRC-68 case (fig, 9). Insert a bar through an eyebolt, turn it counterclockwise and remove the eyebolt.
- (2) Spot and drill the mounting holes on the rack for the mounting brackets

- on each side of the case. Dimensional data are shown in figure 9.
- (3) Remove the RT-441/TRC-68 and the power supply from the case (para. 16c(1) and 16d(1)).
- (4) Remove the watertight cover plates from the louvered vents on the sides of the case and install them in the storage spaces directly above the vents.
- (5) Slide the case onto the rack, align the mounting brackets with the mounting holes and bolt the case to the rack,
- (6) Follow the procedures described in a (5) through (11) above to complete the installation.

# 8. Radio Set AN/TRC-68 Cable Connections

After installing the components (para. 7a or b), connect them as shown in the cording diagram, figure 4, TM 11-5820-222-10. The cable connections are listed in the following chart.

|   | I                  |                | Cenn                                 | 0(1)                                   |
|---|--------------------|----------------|--------------------------------------|--|
| Cebie   | Number<br>required | Length<br>(ft) | From                                 | Te                                     |
| Electrical Power Cable<br>Assembly CX-4881/U                | 1                  | 25             | AC POWER receptacle at rear of case. | 115- or 230-volt ac power source.      |

#### 9. Initial Adiustment of Equipment

After the AN/VRC-24 or AN/TRC-68 is installed and connected, perform the actions listed in the equipment performance checklist (para. 14b) to make a complete check of the

equipment before releasing it for routine op. eration. If abnormal indications are noted, perform the corrective measures listed. Procedures for presetting channel frequencies are described in paragraph 22, TM 11-5820-222-10. No other initial adjustments are necessary.

#### CHAPTER 2

#### MAINTENANCE INSTRUCTIONS

#### Section I. MAINTENANCE

# 10. Scope of Second Echelon Repairman's Maintenance Duties

Following is a list of maintenance duties performed by the second echelon repairman,

- a. Replacement of defective fuses and lamps.
  - b. Preventive maintenance (para. 12),
  - c. Visual inspection (para, 13).
- d. Troubleshooting using equipment performance checklist (para. 14).
  - e. Removal and replacement (para. 16),
  - f. Tube testing and replacement (para. 17).

# 11. Tools, Materials, and Test Equipment Required

The tools, materials, and test equipment required for second echelon repairman's maintenance are listed below.

- a. Tools. Tool Equipment TE-41.
- b. Materials.
  - (1) Dry lint-free cloth.
  - (2) Cleaning Compound (Federal stock No. 7930-395-9542).
  - (3) Sandpaper, No. 000.
  - (4) Small soft-bristled dry brush.
- c. Test Equipment.
  - (1) Multimeter TS-352/U.
  - (2) Electron Tube Test Set TV-7/U.

# 12. Second Echelon Repairman's Preventive Maintenance

a. DA Form 11-298. DA Form 11-238 (fig. 11 and 12) is a preventive maintenance checklist to be used by the second echelon repairman, Items not applicable to the equipment are lined out in the figures. References in the ITEM block in the figures are to paragraphs that contain additional maintenance informa-

tion pertinent to the particular item. Additional preventive maintenance information concerning items 1 through 12 on DA Form 11-238 will be found in the preventive maintenance portion of TM 11 5820 222 10. Instructions for the use of the form appear on the form.

- b. Preventive Maintenance Techniques. The following techniques are to be used when performing preventive maintenance,
  - (1) Use No. 000 sandpaper to remove corrosion.
  - (2) Use a clean, dry lint-free cloth or a dry brush for cleaning, Use the dry brush to remove dust particles and the dry cloth to wipe off dirt film.
  - (3) When cleaning electrical contacts, use a cloth or brush moistened with cleaning compound. When the contacts are clean, wipe them dry with a dry lint-free cloth.

Warning: Cleaning compound is flammable and its fumes are toxic., Do not use near flame; provide adequate ventilation.

(4) If available, dry compressed air may be used, at a line pressure not exceeding 60 pounds per square inch, to remove dust from inaccessible places.

Caution: When using compressed air, always direct the first blast from the air line toward the floor. Condensed moisture, which may affect the equipment, is thus cleared from the air line. Be careful when using corn. pressed air for cleaning; the equipment may become damaged by the air blast.

#### Section II. TROUBLESHOOTING

#### 13. Visual Inspection

a. Before operating the equipment for troubleshooting purposes, inspect it for obvious defects. Failure of the equipment to operate properly may be caused by one or more of the following faults:

- (1) Burned-out fuse.
- (2) Defective tube (cracked envelope or

- filaments not lighted).
- (3) Blistered or discolored resistor (caused by overheating).
- (4) Loose cable connectors between subunits.
- (5) Line or battery voltage not connected.
- (6) Grounded or broken antenna or antenna connecting cable.

b. When the equipment fails to operate properly, a visual inspection of the equipment for the above possible faults will save repair time and may also avoid further damage to the equipment. If possible, obtain information from the operator regarding the performance of the equipment at the time the failure occurred.

#### 14. Equipment Performance Checklist

a. General, When a visual inspection does not indicate the cause of equipment failure, the second echelon repairman can make additional checks to locate the trouble. The equipment performance checklist is provided to help the repairman sectionalize and localize the trouble. The Action column lists the switch and control settings to be made on the com-

ponent in the Unit column for each step. The Normal indiacation column lists the normal visible and audible signs that the repairman should expect during each step. When abnormal indications are noted, the repairman should perform the recommended corrective measures listed in the Corrective measures column. For some steps, the normal indications and corrective measures differ for the AN/VRC-24 and AN/TRC-68. In these instances, the appropriate step is divided into substeps a and b. Substeps a apply only to components of the AN/VRC-24 and substeps b apply to components of the AN/TRC-68. The Corrective measures column lists only those corrective measures that the second echelon repairman can perform without turning the equipment in for higher echelon repair. Perform the corrective measures in the order that they are listed. Refer to paragraph 17 for tube testing and replacement procedures. if higher echelon repair is required, note on the repair tag how the equipment performed and what corrective measures were taken.

b. Checklist. Follow the steps as outlined in the checklist.

|                   | Stop | Unit                     | Action   | Normal<br>indication | Corrective<br>measures |

|                            |      |                          |   |  | Higher echelon repair required.  |

|                  | Stop | Unit              | Action                     | Normal<br>indication  | Corrective<br>measures  |
|------------------|------|-------------------|----------------------------|---|---|
| S<br>T<br>O<br>P | 29   | Radio set control | Turn POWER control to OFF. | CALL LIGHT and dial lamps not lighted and rushing noise not heard in headset or loudspeaker.              | If radio set does not<br>turn off, turn POWER<br>switch on receiver-<br>transmitter fron panel<br>to OFF.   |
|                  |      |                   |                            | AN/VRC-24: Dynamotor and case blower stop.  AN/TRC-68: Blowers stop and power supply POWER lamp goes out. | Check proper seating of CX-4630/U (AN/VRC-24) or CX-4882/U (AN/TRC-68) plugs in receptacles.  If radio set does not turn off with action of front panel POWER switch, refer to corrective measures in step 20a (AN/VRC-24) or step 20b (AN/TRC-68). |

# 15. Supplementary Equipment Performance Checklist Information

Subparagraphs a through d below contain second echelon troubleshooting procedures for Radio Set AN/VRC-24 or AN/TRC-68 when the equipment is used with coding, retransmit, or external interphone equipment.

- a. General Procedure.
  - (1) Check external equipment by substitution or by using the equipment performance checklist in the applicable technical manual.
  - (2) Use the equipment performance checklist (para. 14) to correct any abnormal indications on the AN/VRC-24 or AN/TRC-68.
- b. Broadband Trouble Sectionalization.
  - (1) When the broadband signals cannot be transmitted, check the following:
    - (a) Remove tile receiver-transmitter from its case (RT-323 VRC-24, para. 16a or RT-441 TRC-68, para. 16c) and make certain that S801 (NOR-BB switch on chassis rear, fig. 14) is on BB.
    - (b) Check V802 through V808 (left side view, fig. 13).
    - (c) Higher echelon repair required.
  - (2) When broadband signals cannot be received, check the following:
    - (a) Check V802 (left side view, fig. 13).

- (b) Check V804 through V808 (left side view, fig. 13).
- (c) Check V501 through V504 (bottom view, fig. 13).
- (d) Higher echelon repair required.
- (3) When the broadband coder cannot be keyed by the RT-323 VRC-24 or RT-441 TRC-68, be sure that S801 is on BB (fig. 14) and proceed as follows:
  - (a) Depress the microphone push-totalk switch and check for continuity from terminal C of the BROAD BAND receptacle on the front pane to ground, If terminal C is not grounded, check V802 through V808 (left side view, fig. 13).
  - (b) If terminal C is grounded, check the broadband coder.
- c. Radio Set AN/VRC-24 Retransmit Trouble Sectionalization.
  - (1) When the RT-323VRC-24 does not key Receiver-Transmitter RT-66 CRC, RT-67 GRC, or RT-68 GRC for retransmission, check wiring continuity from mounting to CX-4498/U and CX-4630/U plugs (para, 5a (5)).
  - (2) When the RT-323/VRC-24 does not modulate Receiver-Transmitter RT-66/GRC, RT-67/GRC, or RT-68/GRC for retransmission, check the following:

- (a) Check V804 through V808 (left side view, fig. 13).
- (b) Check wiring continuity from mounting to CX-4498/U and CX-4630/U plugs (para. 5a(5)).
- (3) When there is no interphone operation at the radio set control, check the following:
  - (a) Check the position of the radiointerphone switch on the radio set control. The radio-i nterphone switch must be set on RAD-INT or INT for interphone communications,
  - (b) Check wiring continuity from mounting to CX-4498/U and CX-4630/U plugs (para. 5a (5)).
- (4) When Receiver-Transmitter RT-66/GRC, RT-67/GRC, or RT-68/GRC does not key and 'or modulate the RT-323/VRC-24, check wiring continuity from mounting to CX 4498/U and CX 4630/U plugs (para. 5a(5)).
- d. Radio Set AN/TRC-68 Remote Operation Trouble Sectionalization. Check Local Control C-434 GRC by connecting the remaining connector plug (SET I or SET II) to the AUDIO receptacle on the RT 441/TRC-68 front panel or the radio set control and setting the proper switch on the C-434 GRC. If normal operation is restored, check that portion of the C-434 GRC that relates to the originally connected plug, If operation remains abnormal, check the C-434 GRC by using the applicable portion of the equipment performance checklist in TM 11-5038.

#### 16. Removal and Replacement

When the radio set fails to operate properly, refer to the equipment performance checklist (para. 14). Check all cables and connectors and the power source before attempting removal of electron tubes. Proper use of the equipment performance checklist will localize the trouble and ellminate unnecessary component replacement. Use the procedures described below to remove and replace units of the radio set during troubleshooting of the equipment.

- a. Receiver-Transmitter RT-323/VRC-24 and Case CY-2557/VRC-24.
  - (1) Removal.

- (a) Rotate the two thumbscrews below the RT-323/VRC-24 front panel counterclockwise until the case rear plugs are ejected from the receptacles on the mounting.
- (b) Lower the clamps which engage the pins on the lower edge of the front panel.
- (c) Slide the case and the RT-323/VRC-24 straight off the mounting.
- (d) Remove the RT-323/VRC-24 from its case by loosening the captive screw at each corner of the front panel, For maintenance purposes, connect Electrical Special Purpose Cable Assembly CX-4884/U to plug P1 at the rear of the RT-323/VRC-24 and J1701 on the mounting.

#### (2) Replacement.

- (a) Remove the CX-4884 U (if connected), slide the RT-323/VRC-24 back into its case, and tighten the captive screw at each corner of the front panel.
- (b) Slide the case straight onto the mounting. Be sure the plugs on the rear of the case mate properly with the receptacles at the rear of the mounting.
- (c) Swivel the clamps up to engage the pins on the lower edge of the front panel.
- (d) Rotate the thumbscrews clockwise to inject the rear plugs into the receptacles on the mounting and tighten the thumbscrews securely.

#### b. Mounting MT-1436/U.

#### (1) Removal.

- (a) Remove the RT-323/VRC-24 and its case from the mounting (a (1) above ).
- (b) Remove the eight screws and lockwashers that fasten the lower plate of the mounting to the vehicle mounting surface,
- (c) Remove the terminal box cover plate on the rear of the mounting and loosen the locking nuts on the three watertight glands (fig, 5).
- (d) Disconnect the two CX-4629/U conductors from the negative and

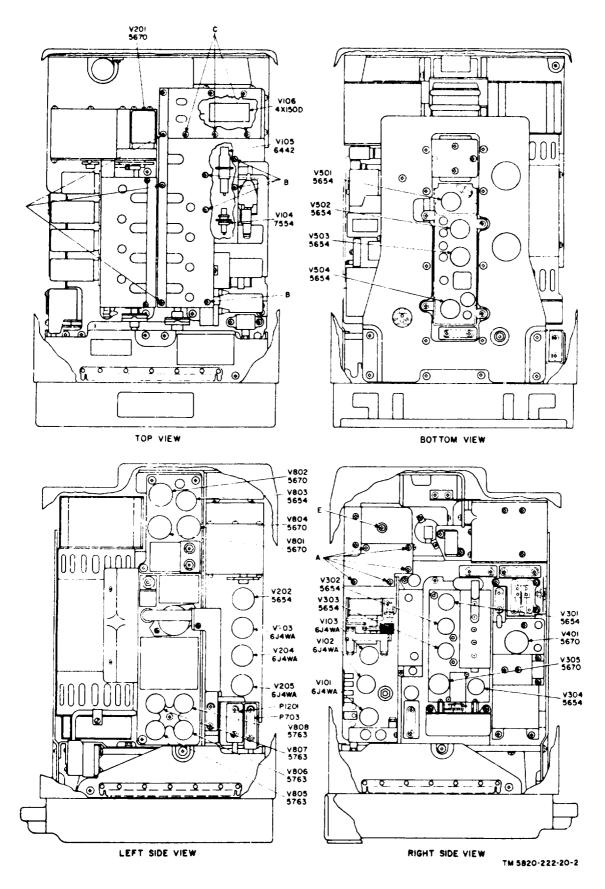

Figure 13. Receiver-Transmitter RT-323/VRC-24 or RT-441/TRC-68 tube and tube enclosure retaining hardware location.

- positive terminals of TR1703.
- (e) Unsolder the CX-4630/U conductors and the CX-4498/U conductors (if connected) from the terminals of TB1701 and TR17W and from ground lug E1703, Label each conductor with the proper terminal connection,
- (f) Remove the CX-4498/U, CX-4629/U, and CX-4630 U from the terminal box.

#### (2) Replacment.

- (a) Insert the CX-4630 U through the front of the larger gland on the right side of the terminal box (fig. 3).
- (b) Insert the single end of the CX-4498 U (used with retransmission equipment) through the front of the large gland on the right side of the terminal box.
- (c) Connect the labeled conductors to the proper terminals on TB1701 and TR1702 and ground lug E1703. If the conductors are not labeled, refer to the charts in paragraph 5a(3) and (4) for proper terminal connections.
- (d) Solder the connections to TB1701, TB1702, and E1703.
- (e) Insert the CX-4629/U through the front of the smaller gland just to the right of center in the terminal box. Connect the center conductor to the positive terminal and the outer shield to the negative terminal of TR1703.
- (f) Tighten the locking nuts on the glands to provide a watertight seal.
- (g) Replace the cover plate on the terminal box.
- (h) Align the lower plate of the mounting with the eight mounting holes and replace the eight bolts and lockwashers and tighten securely.
- (i) Replace the RT-323/VRC-24 and its case on the upper tray of the mounting (a(2) above).

#### c. Receiver-Transmitter RT-441/TRC-68.

#### (1) Removal.

(a) Loosen the captive screw at each

- corner of the front panel.
- (b) Loosen and drop the lug at the center of the lower edge of the front panel.
- (c) Slide the RT-441 TRC-68 straight out of the case. For maintenance purposes, connect Electrical Special Purpose Cable Assembly CX 4884 U between plug P1 on the rear of the RT-441 TRC-68 and the mating receptacle on the inside of the case.

#### (2) Replacement.

- (a) Remove the CX-4884/U (if connected) and slide the RT-441 TRC-68 straight into the case. Be sure plug P1 on the rear of the RT-441 TRC 68 mates properly with the corresponding receptacle on the inside of the case.
- (b) Lift and center the lug on the lower edge of the front panel and tighten the lug.
- (c) Tighten the captive screw at each corner of the front panel.

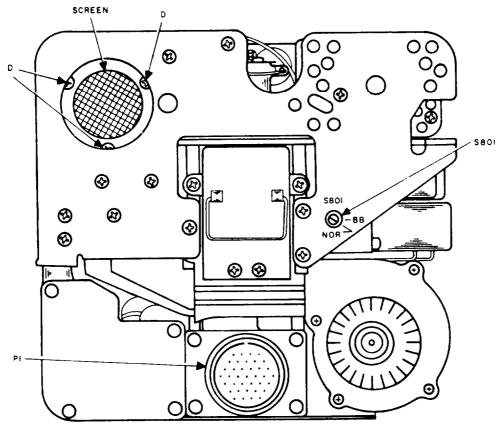

#### d. Power Supply PP-1494/U.

#### (1) Removal.

- (a) Loosen the captive screw at each corner of the power supply.
- (b) Loosen and drop the lug at the lower edge of the power supply.
- (c) Slide the power supply straight out of the case. For maintenance purposes, connect Electrical Special Purpose Cable Assembly cx-4883 U between the plug on the rear of the power supply and the mating receptacle on the inside of the case.

#### (2) Replacement.

- (a) Disconnect the CX-4883/U (if connected) and slide the power supply straight into the case. Be sure the plug on the rear of the power supply mates properly with the receptacle on the inside-of the case.
- (b) Lift and center the lug at the bottom of the power supply and tighten the lug.
- (c) Tighten the captive screw at each corner of the power supply.

TM 5820-222-20-14

Figure 14. Receiver-Transmitter RT-323/VRC-24 or RT-441/ TRC-68, rear view.

#### 17. Tube Test and Replacement

When the radio set fails to operate properly, check all cabling, connections, and the power source before removing any tubes. Use the equipment performance checklist (para. 14) to isolate the trouble. Perform the corrective measures for the abnormal indications noted and where possible tube failure is indicated, use the following procedure.

Caution: Do not rock or rotate a tube when removing it from a socket; pull it straight out with a tube puller.

a. Tube Testing with Electron Tube Test Set TV-7/U. Remove and test one tube at a time Discard a tube only if its defect is obvious or if the tube tester shows it to be defective. Do not discard a tube that tests at or near its minimum test limit on the tube tester. Put back the original tube, or insert a new one if required, before testing the next one.

Note. Tubes V104, V105, and V106 are checked by substitution only.

- b. Tube Substitution Method. Replace a suspected tube with a new tube. If the radio set still fails to operate properly, remove the new tube and put back the original tube. Repeat this procedure with each suspected tube until the defective tube is located.
- c. Tube Removal and Replacement. Tube locations are shown in figure 13. All tubes except V104, V105, and V106 are easily reached once the RT-323/VRC-24 or RT-441/TRC-68 is removed from its case (para. 16). Remove a tube shield by pressing downward on the tube shield, turning it slightly counterclockwise and lifting it up.
  - (1) Removal and Replacement of V104 and V105 (fig. 13).
    - (a) Remove the five screws (A) on the right side and to the rear of the chassis.
    - (b) Remove the five screws (B) on the top of the chassis.
    - (c) Loosen the six screws (C) on the top of the chassis.

- (d) Pull the larger shield away from the edges that contain the loosened screws.
- (e) Pull V104 and V105 out of the clamps with long-nosed pliers.

Note. Tubes V104 and V105 can be checked by substitution only The filament cap on V105 must be used with the replacement tube,

Caution: Insert V104 so that the filament pins contact the filament clips on the socket.

- (f) Seat the replacement tube securely in the clamps.
- (g) Slide the shield under the two edges that contain the six loosened screws(C) on the top of the chassis.
- (h) Insert the five screws (B) in, the top and the five screws (A) (on the right side of the chassis. Tighten all screws.
- (2) Removal anad replacement of V106.
  (a) Loosen the three screws that fasten
- (a) Loosen the three screws that fasten the screen at the rear of the chassis (D, fig. 14).

- (b) Turn the screen counterclockwise and remove,
- (c) Loosen the V106 tube clamp by inserting a screwdriver through tile cutout on the right side and to the rear of the chassis (E, fig, 13) and loosening the clamp screw.
- (d) Use a 4X150 tube puller to pull V106 straight out of its socket.

  Note Tube Vl06 is checked by substitution only.
- (t) Insert the replacement tube and tighten the clamp screw (E, right side view, fig. 13).
- (f) Replace the screen and tighten the retaining screws (D, fig. 14),

Note The radio set may be detuned slightly when tubes are replaced (especially n oscillator, rf amplifier, and intermediate frequency (if) amplifier stages) because interelectrode capacitances vary for different tubes of the same type number. Although the radio set may be made operational by the replacement of tubes, turn the equipment in to third echelon maintenance for realignment, whenever possible, to obtain peak performance.

#### **CHAPTER 4**

#### SHIPMENT AND LIMITED STORAGE

#### 18. Disassembly of Equipment

- a. Radio Set AN/VRC-24.
  - (1) Disconnect the loudspeaker and microphone from the AUDIO receptacles on the front panel or the radio set control.
  - (2) Disconnect the CX-4630/U plug from J1501 on the radio set control. Do not unsolder the cable from the mounting unless necessary,
  - (3) Disconnect the CX-4629/U from the vehicle battery Do not disconnect the cable from the mounting unless necessary.
  - (4) Disconnect the CG-1650, U from the ANT connector from the antenna.
  - (5) Disconnect the CX-4498/U (if used with retransmission equipment) from the RT-70 POWER and AUDIO receptacles on AF Amplifier AM-65/GRC (part of Radio Sets AN/GRC-3 through --8), Do not unsolder the cable from the mounting unless necessary.
  - (6) To remove the cables from the mounting (fig. 5), remove the cover plate on the terminal box at the rear of the mounting and loosen the locking nuts on the three glands. Unsolder the conductors one at a time and label each lead with the terminal number of the terminal board as each conductor is removed. Remove the cables from the mounting,
  - (7) Coil all cables neatly and secure the coils with twine or tape.
  - (8) Unbolt and remove the radio set control from the vehicle mounting surface,
  - (9) Turn the thumbscrew counterclockwise to release the clamps on the lower edge of the front panel of the receiver-transmitter and slide the equipment off the upper tray of the mounting.
  - (10) Remove the eight bolts that fasten the mounting to the vehicle mounting surface and remove the mounting.

- (11 ) Remove the four bolts that fasten the antenna to the vehicle and remove the antenna.
- (12) Place all mounting hardware in small bags or envelopes and fasten them securely to the components with which the hardware is used.
- b. Radio Set AN/TRC-68.
  - (1) Disconnect the loudspeaker, headset, and microphone from the AUDIO receptacles on the front panel or the radio set control.
  - (2) Disconnect Connector Adapter UG-565A/U and the antenna cable from the ANT connector on the front panel. Disconnect the antenna cable from the adapter,
  - (3) Disconnect the CX-4882/U from J1501 on the radio set control and from the REMOTE receptacle on the rear of the AN/TRC-68 case.
  - (4) Disconnect the CX-4881/U from the ac power source and from the AC POWER receptacle on the rear of the . AN/TRC-68 case.
  - (5) Disconnect the Local Control C-434/GRC connectors from the AN/TRC-68 (if connected).
  - (6) Coil all cables neatly and secure with twine or tape.
  - (7) Remove the radio set control from its mounting surface.
  - (8) Remove the bolts which fasten the shock mounts to the mounting surface and the mounting brackets to the rack (rack installation).
  - (9) Remove the watertight cover plates from their storage positions on the sides of the case and mount them on the louvered vents.
  - (10) Place all mounting hardware in small bags or envelopes and fasten them securely to the components with which the hardware is used.

# 19. Repackaging Equipment for Shipment or Limited Storage

The exact procedure for repackaging de-

pends on the material available and the conditions under which the equipment is to be shipped or stored. Adapt the procedures below whenever possible. The information concerning the original packaging (para. 3) will also be helpful. Use the original cartons, pads, and boxes if available.

Note. Tighten all front panel retaining screws before beginning repackaging procedures,

- a. Packaging. The items of Radio Set AN/VRC-24 or AN/TRC-68 are to be packaged as outlined below.
  - (1) Receiver-transmitter groups and mountings. Cushion the receiver-transmitter groups and mountings on all surfaces with pads of corrugated cardboard. Secure the pads to the equipment with adhesive tape. Wrap each cushioned group and mounting with two thicknesses of ('corrugated cardboard and secure each wrap with adhesive tape.
  - (2) Radio set control. Cushion and wrap the radio set control the same as in (1) above,
  - (3) Accessory components.
    - (a) AN/VRC-24, Coil all cables neatly

- and secure with twine or adhesive tape Package the antenna, loud-speaker, mocroophone and running spares to insure mechanical and physical protection. Use filler material to cushion each item as required, Wrap the technical manuals in waterproof paper and seal the seams with waterproof tape.
- (b)) AN/TRC-68. Place the accessory components into the accessory case in their original positions (TM 11 5820 22210, fig. 8). Cushion the accessory case on (all sides with pads of corrugated cardboard and secure the pads to the case with adhesive tape.
- b. Packing. Pack the components of the AN/VRC-24 and AN/TRC-68 in wooden boxes the same as in the original packing (para. 2). If the original wooden boxes are not available, construct new boxes large enough to allow l-inch clearance on all sides, Line the inside of each box with waterproof paper and corrugated cardboard. Place the wrapped equipment in the boxes and nail on the box lids.

#### APPENDIX II

#### MAINTENANCE ALLOCATION

#### Section I. INTRODUCTION

#### 1. General

- a. The maintenance allocation chart in Section II assigns maintenance functions and,repair operations to be performed by the lowest appropriate maintenance echelon.
- b. Columns in the maintenance allocation chart are as follows:
  - (1) Part or component. This column shows only the nomenclature or standard item. Additional descriptive data are included only where clarification is necessary to identify the part. Components and parts comprising a major end item are listed alphabetically. Assemblies and subassemblies are in alphabetical sequence with their components listed alphabetically immediately below the assembly listing.
  - (2) Maintenance function. This column indicates the various maintenance functions allocated to the echelon capable of performing the operations.
    - (a) Service. To clean, to preserve, and to replenish fuel and lubricants.
    - (b) *Adjust*. To regulate periodically to prevent malfunction.
    - (c) *Inspect*, To verify serviceability and to detect incipient electrical or mechanical failure by scrutiny.
    - (d) Test. To verify serviceability and to detect incipient electrical or mechanical failure by use of special equipment such as gages, meters, etc.
    - (e) *Replace*. To substitute serviceable assemblies, subassemblies, and parts for unserviceable components.
    - (f) Repair. To restore to a serviceable condition by replacing unserviceable parts or by any other action required utilizing tools, equipment, and skills available, to include welding, grinding, riveting, straightening, adjusting, etc.

- (g) Align. To adjust two or more components of an electrical system so that their functions are properly synchronized.
- (h) *Calibrate*. To determine, check, or rectify the graduation of an instrument, weapon, or weapons system, or components of a weapons system.
- (i) Rebuild. To restore to a condition comparable to new by disassembling the item to determine the condition of its component parts and reassembling it by using serviceable, rebuilt, or new assemblies, subassemblies, and parts.
- (3) *lst*, 2d, 3d, 4th, 5th echelon.The symbol X indicates the echelon responsible for performing that particular maintenance operation, but does not necessarily indicate that repair parts will be stocked at that level, Echelons higher than the echelon marked by X are authorized to perform the indicated operation,
- (4) Tools required. This column indicates codes assigned to each individual tool equipment, test equipment, and maintenance equipment referenced. The grouping of codes in this column of the maintenance allocation chart indicates the tool, test, and maintenance equipment required to perform the maintenance function.
- (5) Remarks. Entries in this column will be utilized when necessary to clarify any of the data cited in the preceding columns.
- c. Columns in the allocation of tools for maintenance functions are as follows:
  - (1) Tools required for maintenance functions. This column lists tools, test, and maintenance equipment required to perform the maintenance functions.

- (2) 1st, 2d, 3d, 4th, 5th echelon. A dagger (t) indicates the echelons allocated the facility,
- (3) Tool code. This column lists the tool code assigned.
- (4) Remarks. Entries in this column are used to clarify data in the other columns.

#### 2. Maintenance by Using Organizations

When this equipment is used by signal service organizations organic to theater headquarters or communication zones to provide theater communications, those maintenance functions allocated up to and including fourth echelon are

authorized to the organization operating this equipment.

#### 3. Mounting Hardware

The basic entries of the maintenance allocation chart do not include mounting hardware such as screws, nuts, bolts, washers, brackets, clamps, etc.

#### 4. Comments or Suggestions

Any comments concerning omissions and discrepancies in this appendix will be prepared on DA Form 2028 and forwarded direct to Commanding Officer, U. S. Army Signal Equipment Support Agency, Fort Monmouth, N. J., ATTN:SIGFM/ES-ML.
