SECTION I  
INTRODUCTION

1-1. Scope

This manual lists repair parts required for the performance of general support and depot maintenance of Card Reader Unit RP-165/F. A-10(V).

1-2. General

This repair parts list is divided into the following sections :

a. Repair *Parts List-Section II*. A list of repair parts authorized at the general support and depot levels for the performance of maintenance. The list also includes parts which must be removed for the replacement of the authorized parts. Parts lists are composed of functional groups in ascending numerical sequence.

b. *Special Tools List-Section III*. A list of special tools, test and support equipment authorized for the performance of maintenance at general support and depot levels.

c. *Federal Stock Number and Reference Number Index-Section IV*. A list, in ascending numerical sequence, of all Federal stock numbers appearing in the listings with figure numbers, followed by a list, in alphanumeric sequence, of all reference numbers appearing in the listings.

1-3. Explanation of Columns

The following provides an explanation of columns found in the tabular listings.

a. *Source, Maintenance, and Recoverability Codes (SMR)*.

(1) *Source code*. Indicates the source for the listed items. Source codes are—

<i>Code</i>	<i>Explanation</i>
P	Repair parts, special tools, and test equipment supplied from the GSA/DSA or Army supply system and authorized for use at indicated maintenance categories.
P2	Repair parts, special tools, and test equipment which are procured and stocked for

<i>Code</i>	<i>Explanation</i>
-------------	--------------------

insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.

P9--Assigned to items which are NSA design controlled: unique repair parts, special tools, test, measuring, and diagnostic equipment which are stocked and supplied by the Army COMSEC logistic system and which are not subject to the provisions of AR 380-41.

P10--Assigned to items which are NSA controlled : special tools, test, measuring, and diagnostic equipment for COMSEC support which are accountable under the provisions of AR 389-41 and which are stocked and supplied by the Army COMSEC logistic system.

**M**—Repair parts, special tools, and test equipment which are not procured or stocked as such in the supply system but are to be manufactured at indicated maintenance levels.

**A**—Assemblies which are not procured or stocked as such but are made of two more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately, and can be assembled to form the required assembly at indicated maintenance categories.

**X**—Parts and assemblies that are not procured or stocked because the failure rate is normally below that of the applicable end item or component. The failure of such part or assembly should result in retirement of the end item from the supply system.

**X1**—Repair parts which are not procured or stocked. The requirement for such items will be filled by the next higher assembly or component.

**X2**—Repair parts, special tools, and test equip-

<i>Code</i>	<i>Explanation</i>
	ment which are not stocked and have no foreseen mortality. The indicated maintenance category requiring such repair parts will attempt to obtain the parts through cannibalization or salvage. The item may be requisitioned, with exception data, from the end item manager for immediate use.
G-	Major assemblies that are procured with PEMA funds for initial issue only as exchange assemblies at DS and GS level. These assemblies will not be stocked above DS and GS level or returned to depot supply level.

**NOTE**

Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded XI and aircraft support items as restricted by AR 700-42.

(2) *Maintenance code.* Indicates the lowest category of maintenance authorized to install the **repair part** and/or use the special tool or test equipment for each application. Capabilities of **higher** maintenance categories are considered equal or better. Maintenance codes are—

<i>Code</i>	<i>Explanation</i>
<b>C</b>	<b>Crew/operator</b>
<b>O</b>	<b>Organizational maintenance</b>
<b>F</b>	<b>Direct support maintenance</b>
<b>H</b>	<b>General support maintenance</b>
<b>D</b>	<b>Depot maintenance</b>

(3) *Recoverability code.* Indicates whether **unserviceable** items should be returned for **recovery or salvage**. Items not coded are nonrecoverable. Recoverability codes are—

<i>Code</i>	<i>Explanation</i>
<b>R</b> —	Repair parts (assemblies and components), special tools, and test equipment which are considered economically reparable at direct and general support maintenance levels. When the item is no longer economically reparable, it is normally disposed of at the GS level. When supply considerations dictate, some of these repair parts may be listed for automatic return to supply for depot level repair as set forth in AR 710-1. When so listed, they will be replaced by supply on an exchanged basis.
<b>S</b> —	Repair parts, special tools, and test equipment, and assemblies which are economically reparable at DS and GS activities and which normally are fur-

<i>Code</i>	<i>Explanation</i>
	<b>nished by supply on an exchange basis.</b> When items are determined by a GSU to be uneconomically reparable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T-	High-dollar value recoverable repair parts, special tools, and test equipment which are subject to special handling and are issued on an exchange basis. Such items will be repaired or overhauled at depot maintenance activities only. No repair may be accomplished at lower levels.
U-	Repair parts, special tools, and test equipment specifically selected for salvage by reclamation units because of precious metal content, critical materials, high-dollar value, or reusable casings or or castings.

*b. Federal Stock Number.* Indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

*c. Description.* The dots indicate the indenture code of the listed item, for *example*, no dots =A (**end item**), • =B, •• =C, etc. This is followed by the Federal item name and a minimum description required to identify the item. The last line indicates the reference number followed by the applicable Federal supply code for manufacture (FSCM) in parentheses. The FSCM is used as an element in item identification to designate **manufacturer or distributor or Government agency, etc., and is identified in SB 708-42.**

*d. Unit of Measure (U/M).* Indicates the standard or basic quantity by which the listed item is used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation, e.g., ea, in, pr, etc., and is the basis used to indicate quantities and allowances in subsequent columns. When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required units of measure will be requisitioned.

*e. Quantity Incorporated in Unit.* Indicates the quantity of the item used in the breakout shown on the figure, which is prepared for a functional group, subfunctional group, or an assembly.

*f. Allowances (30 Day DS/GS Maintenance, 1 Year per 100 Equipments/Contingency Planning, and Depot Maintenance)* Items authorized for requisition as required are identified by an asterisk in the allowance column.

*g. Illustration.* This column is divided as follows:

(1) **Figure number.** Indicates the figure number on which the item is shown.

(2) **Item number.** Indicates the callout number used to reference the item on the illustration.

#### 1-5. How to Locate Repair Parts

a. When Federal stock number or reference number is unknown-

(1) **First.** Find the illustration covering the functional group to which the repair part belongs.

(2) **Second.** Identify the repair part on the illustration and note the item number of the repair part.

(3) **Third.** Using the repair parts listing, find the functional group to which the repair part belongs and locate the figure number and item number notes on the illustration.

b. When Federal stock number of reference number is known-

(1) **First.** Using the index of Federal stock number and reference number, find the pertinent Federal stock number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in ascending alphanumeric sequence, cross-referenced to the figure number and item number.

(2) **Second.** Using the repair parts listing, find the functional group of the repair part and the figure number and item number referenced in the index of Federal stock numbers and reference numbers.

(3) **Third.** When the repair part is not il-

**lustrated, scrutinize the repair parts list and find the Federal stock number or reference number in the breakdown of repair parts shown for the functional group.**

**1-6. Recommendations for Maintenance Publication Improvements**

**The reporting of errors, omissions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to Publications) and forwarded direct to Commander, US Army Electronics Command, ATTN: AMSEL-MA-C, Fort Monmouth, N.J. 07703. NAVSHIPS 5600/2 (REV 10-76 formerly**

**NAVSHIPS 4914) and forwarded to : Commander, Naval Electronics Systems Command, ATTN: 041.3, Washington, D. C. 20360. Publications Improvement Report (AFTO Forms 22) approved by the quality control organization will be submitted directly to the AFLC activity indicated in the storage and issue (STG and Issue) column of NI and RTS. Reports will be addressed, as appropriate for the attention of Directorate of Materiel Management (D/MM), Technical Order System Branch (MMST) at Air Materiel Areas (AMAS), or the Technical Systems Branch (MMOMP) at AFLC. Exceptions are indicated in paragraphs 8-28 through 8-32, 8-35, 8-41 and 8-42 in TO 00-5-1.**
