SECTION I

INTRODUCTION

1-1. Scope

This manual contains a list of items categorized as a "Fixed Station Installation." **Maintenance** functions have been authorized to **site at organizational** through general support and depot maintenance. Command Signal Decoder KY-681/GGC is used by electronics service organizations organized to the theater communications. Those repair parts authorized up to and including general support maintenance are to be stocked by the organization operating this equipment ; therefore, a separate display of organizational and direct support repair parts would be repetitious.

NOTE

No special tools, test and support equipment are required.

1-2. General

This Repair Parts List is divided into the following sections :

a. Repair Parts, Section II. A list of repair parts authorized for the performance of maintenance at the direct support, general support, and depot level.

b. Index-Federal Stock Number and Reference Number Cross-Reference to Item Sequence Number, Section III. A list of Federal stock numbers in ascending numerical sequence, followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the item sequence number.

c. Index-Reference Designation Cross-Reference to Item Sequence Number, Section IV. A list of **reference designations in alpha-numeric sequence cross-referenced to the item sequence number.**

1-3. Explanation of Columns

The following provides an explanation of columns in the tabular lists.

a. Source, Maintenance, and Recoverability Codes (SMR) Column. The first line in this column lists the applicable SMR codes for the part.

Listed in ascending order, directly below the SMR codes, is the index number assigned to the repair part.

(1) Source codes indicate the selection status and source for the listed items. Source codes are-

- | | Explanation |
|----------|--|
| P | Repair parts which are stocked in or supplied from the GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories. |
| P2 | Repair parts which are procured and stocked for insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system. |
| P9 | Assigned to items which are NSA design controlled : Unique repair parts, special tools, test, measuring and diagnostic equipment which are stocked and supplied by the Army COMSEC logistic system, and which are not subject to the provisions of AR 380-41. |
| P10 | Assigned to items which are NSA design controlled: Special tools, test, measuring and diagnostic equipment for COMSEC support, which are accountable under the provisions of AR 380-41, and which are stocked and supplied by the Army COMSEC logistic system. |
| M | Repair parts which are not procured or stocked, but are to be manufactured at indicated maintenance levels. |
| A | Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately, and can be assembled to form the required assembly at indicated maintenance categories. |
| X | Parts and assemblies which are not procured or stocked and the mortality of which normally is below that of the applicable end item or component. The failure of such part or assembly should re- |

Code	Explanation
	sult in retirement of the end item from the supply system.
X1-	Repair parts which are not procured or stocked. The requirement for such items will be filled by use of the next higher assembly or component.
X2-	Repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain same through cannibalization. Where such repair parts are not obtainable through cannibalization, requirements will be requisitioned, with accompanying justification through normal channels.
C-	Major assemblies that are procured with PEMA funds for initial issue only as exchange assemblies at direct support unit and general support unit level. These assemblies will not be stocked above direct support and general support level or returned to depot supply level.

(2) Maintenance code indicates the lowest category of maintenance authorized to install the listed item. The maintenance level codes are-

Code	Explanation
H.....	General support maintenance
D.....	Depot maintenance

(3) Recoverability code indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are expendable. Recoverability codes are-

cod8	Explanation
R-	Repair parts and assemblies which are economically repairable at direct support unit and general support unit activities and are normally furnished by supply on an exchange basis.
S-	Repair parts and assemblies which are economically repairable at direct support unit and general support unit activities and which normally are furnished by supply on an exchange basis. When items are determined by a general support unit to be uneconomically repairable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T	High dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.

Code	Explanation
U-	Repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, or high dollar value, reusable casings, or castings.
b.	Federal Stock Number Column. This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.
c.	<i>Description Column.</i> The dots indicate the indenture code of the listed item; i.e., no dots = A (or end item), . = B, . . = C, etc. This is followed by the Federal item name and any additional description of the item required. A part number or other reference number, is followed by the applicable five-digit Federal supply code for manufacturers in parentheses. The Federal supply code is followed by the reference designation, if applicable.
d.	Unit of Measure (U/M) Column. A two-character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based; e.g., ft., ea., pr., etc.
e.	<i>Quantity Incorporated in Unit Column.</i> This column indicates the quantity of the item used in the assembly. Subsequent appearances of the same item in the same assembly are indicated by the letter "REF".
f.	SO-Day DS/GS Maintenance Allowances Column.

NOTE

Allowances in General Support columns are for General Support **Maintenance** only.

(1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. **Items authorized for use as required, but not for initial stockage, are identified with an asterisk in the allowance column.**

(2) **The quantitative allowance for direct support/general support levels of maintenance will represent initial stockage for a 30-day period for the numbers of equipment supported.**

(3) **Determination of the total quantity of parts required for maintenance of more than 100 of these equipments can be accomplished by con-**

verting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example: Authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts authorized.

g. 1-Year Allowance per 1 GO Equipments/Contingency Planning Purposes Column. This column indicates, opposite the first appearance of each item, the total quantity required for distribution and contingency planning purposes. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for 1 year.

h. Depot Maintenance Allowances per 100 Equipments Column. This column indicates the total quantity of each item authorized for depot maintenance of 100 equipments. Subsequent appearances of the same item will have the letters "REF" in the allowance column.

i. Illustrations Column.

(1) Figure number column. Indicates the figure number of the illustration in which the item is shown.

(2) Item number or reference designation column. Indicates the item number used to identify the item in the illustration.

1-4. General Information

a. The following publication pertains to the KY-681/GGC and its components :

TM-11-5895-742-14 Operation and Maintenance Instructions: Identification Table of Parts and Illustrated Parts Breakdown for Command Signal Decoder KY-681/GGC.

b. Repair parts mortality is computed from failure rates derived from experience factors with the individual parts in a variety of equipments. Variations in the specific application and periods of use of electronic equipment, the fragility of electronic piece parts, plus intangible material and quality factors intrinsic to the manufacture of electronic parts, do not permit mortality to be based on hours of end item use. However, long periods of continuous use under adverse conditions are likely to increase repair parts mortality.

1-5. Location of Repair Parts

a. When Federal stock number or reference number is unknown:

(1) **First. Find** the illustration covering the assembly **group to** which the repair part belongs.

(2) **Second.** Identify the repair part on the illustration and note the complete reference designation.

(3) **Third.** Using the Reference Designation Cross-Reference to Item Sequence Number Index (sec. IV) find the reference designation and note the item sequence number listed.

(4) **Fourth.** Locate the item sequence number in the Repair Parts List (sec. II).

b. When Federal stock number or reference number is known:

(1) **First.** Using the Index of Federal Stock Numbers and Reference Numbers (sec. III), find the pertinent Federal stock number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in alphanumeric sequence, cross-referenced to the item sequence number.

(2) **Second.** Note the item sequence number shown opposite the Federal stock number or reference number.

(3) **Third.** Locate the item sequence number in the Repair Parts List (sec. II).

1-6. Federal Supply Codes for Manufacturers

04713	Motorola Semiconductor Products Inc.
06751	Components Inc., Semcor Div.
07263	Fairchild Camera and Instrument Corp., Semiconductor Div.
18324	Signetics Corp.
27014	National Semiconductor Corp.
56289	Sprague Electric Co.
61007	Tubular Rivet and Stud Div.
71590	Globe-Union, Inc.
81312	Winchester Electronics Div.
81349	Military Specifications
82567	Reeves Hoffman
83508	Grant Pulley and Hardware Co.
96906	Military Standards
98230	National Security Agency

1-7. Reporting of Equipment Publication Improvements

The reporting of errors, omissions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to Publications) and forwarded direct to Commanding General, US Army Electronics Command, ATTN: AMSEL-ME-MA-C, Fort Monmouth, N.J., 07703.
