V. FEDERAL STOCK NUMBER AND REFERENCE INDEX	53	

Section I.

INTRODUCTION

1. Scope

This manual lists repair parts, special tools, test and support equipment required for the performance of organizational maintenance of the mobile substation.

2. General

This Repair Parts and Special Tools List is divided into the following sections:

a. *Prescribed Load Allowance (PLA) - Section II.*

b. *Repair Parts Section III.* A list, in figure and item number sequence, of repair parts authorized the organization's level for the performance of maintenance, including those items which must be removed for replacement of the authorized item. Items, except kits and sets, are listed by assembly group in top down breakdown sequence. Repair parts kits and sets are listed separately as Group 07 at the end of the Repair Parts List without regard to the assembly group to which they belong. Components of the kits and sets are listed in their proper sequence in the assembly group to which they belong are referenced to the FSN of the kit or set.

c. *Special Tools, Test and Support Equipment - Section IV. (Not applicable.)*

d. *Federal Stock Number and Reference Number Index - Section V.* A list of Federal Stock Numbers in ascending numerical sequence followed by a list of reference numbers in alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

NOTE

Items not illustrated are cross-referenced to group number

3. Explanation of Columns

The Following provides an explanation of columns in the tabular lists in sections II, III, and IV:

a. *Source, Maintenance, and Recoverability Codes (SMR):*

(1) Source code indicates the source for the listed item. Source Codes are:

Code	Explanation
P	Repair Parts, special Tools and Test Equipment supplied from GSA/DSA, or Army Supply System, and authorized for use at indicated maintenance levels.
P2	Repair Parts, Special Tools and Test Equipment which are procured and stocked for insurance purposes because combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.
P9	Assigned to items which are NSA design controlled: unique repair parts, special tools, test, measuring, and diagnostic equipment which are stocked and supplied by the Army COMSEC Logistic System and which are not subject to the provisions of AR 380-41.
P10	Assigned to items which are NSA design controlled: special tools, test, measuring, and diagnostic equipment for COMSEC support which are accountable under the provisions of AR 380-41 and which are stocked and supplied by the Army COMSEC Logistic System.
M	Repair parts, Special Tools and Test Equipment which are not procured or stocked as such in the supply system but are to be manufactured at indicated maintenance levels.
A	Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock number and descriptions, are procured and stocked separately and can be assembled to form the required assembly at indicated maintenance levels.
X	Parts and assemblies that are not procured or stocked because the failure rate is normally below that of the applicable end item or component. The failure of such part or assembly should result in retirement of the end item from the supply system.
X1	Repair parts which are not procured or stocked. The requirement for such item will be filled by the next higher assembly or component.
X2	Repair Parts, Special Tools and Test Equipment which are not stocked and have no foreseeable mortality. The indicated maintenance level requiring such repair indicated maintenance level requiring such repair parts will attempt to obtain the parts through cannibalization or salvage. The item may be requisitioned with except date, from the end item manager for immediate use.
G	Major assemblies that are procured with PCMA funds for initial issue only as exchange assemblies at D1 and GS level. Those assemblies will not be stocked above the D1 and GS level or returned to depot supply level.

NOTE

Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded XI and aircraft support items are restricted by AR 700-42.

(2) Maintenance code indicates the lowest level of maintenance authorized to install the repair part/and /or use the special tool or test equipment for each applicable action. Capabilities of higher maintenance levels are considered equal or better. Maintenance Codes are:

Code	Explanation
C.....	Crew/Operator
O.....	Organizational maintenance.

(3) Recoverability code indicates whether unserviceable items should be returned for recovery of salvage. Items not coded are nonrecoverable. Recoverability codes are:

Code	Explanation
R	Repair parts assembly and components), special tools and test equipment which are considered economically repairable at direct and general support maintenance.
S	Repair parts, Special Tools, and Test Equipment and assemblies which are economically repairable at DSU and GSU activities and which are economically repairable at DSU and GSU activities and which normally are furnished by supply on an exchange basis. When items are determined by a GSU to be uneconomically repairable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T	Higher dollar value recoverable repair parts, special tools and test equipment which are subject to special handling and are issued on an exchange basis. Such items will be repaired or overhauled at depot maintenance activities only. No repair will be accomplished at lower levels.
U	Repair Parts, Special Tools and Test Equipment specifically selected for salvage by reclamation units because of their precious metal content, critical materials, high dollar value or reusable casings or castings.

b. *Federal Stock Number.* This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. *Description.* Indicates the Federal item name and a minimum description required to identify the item. The last line indicates the reference number followed by the applicable Federal Supply Code for manufacturer (FSCM) in parentheses. The FSCM is used as an element in item identifi-

fication to designate manufacturer or distributor or Government agency, etc., and is identified in SB 708-42. Items that are included in kits and sets are listed below the name of the kit or set with quantity of each item in the kit or set indicated in front of the item name.

d. *Unit of Measure (U/M).* Indicates the standard or basic quantity by which the listed item is used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation, e.g., ea, in, pr, etc., and is the basis used to indicate quantities and allowances in subsequent columns.

e. *Quantity Incorporated in Unit.* Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for an assembly group, or an assembly. A "V" appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, e.g., shims, spacers, etc.

f. *Fifteen-Day Organizational Maintenance Allowances*

(1) Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The allowance columns are divided into four subcolumns. Indicated in each subcolumn is the total quantity of special tools authorized for the number of equipment supported: (Not applicable.)

g. *Illustration.* This column is divided as follows:

(1) *Figure number.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item number.* Indicates the callout number used to reference the item on the illustration.

4. Special Information

a. Usable on codes are included in Column (3). Uncoded items are applicable to all models and/or serial number range. (Not applicable).

b. Parts which require manufacture or assembly at a category higher than that authorized for installation will indicate in the source column the higher category.

c. The following publications pertain to the mobile substation and its components:

TM 5-6120-250-12 Operator and Organizational Maintenance Manual

LO 5-6120-250-12 Lubrication Order.

d. The illustrations in this manual are identical to the applicable illustrations published in the -34P, Direct and General Support Maintenance Repair Parts and Special Tools List Manual (Including depot maintenance repair part; and special tools, and the figure numbers are the same as appear in that manual. The -34P illustrations are given for a better understanding of the parts relationship, however, only those parts assigned maintenance code "O" are listed in the tabular list. Only illustrations containing organizational authorized items appear in this manual.

5. How to Locate Repair Parts

a. When Federal Stock Number or Reference Number is unknown:

(1) *First.* Using the table of contents determine the assembly group within which the repair part belongs. This is necessary since illustrations are prepared for assembly groups, and listings are divided into the same groups.

(2) Second. Find the illustration covering the assembly group to which the repair part belongs.

(3) *Third.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) *Fourth.* Using the Repair Parts Listing, find the assembly group to which the repair part belongs and locate the illustration figure and item number noted on the illustration.

b. When the Federal Stock Number or

Reference Number is known:

(1) *First.* Using the Index of Federal Stock Number and Reference Numbers find the pertinent Federal Stock Number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in ascending alphanumeric sequence, cross-referenced to the illustration figure number and item number.

(2) Second. Using the repair Parts Listing, find the assembly group of the repair part and the illustration figure number and item number referenced in the index of Federal stock Numbers and Reference Numbers.

6. Abbreviations

ASSY	ASSEMBLY
EA.....	EACH
G.....	GALLON
HEX.....	HEXAGON
HD.....	MEAD
I.D.....	INSIDE DIAMETER
IN.....	INCH
LG.....	LONG
STL.....	STEEL
STN.....	STAINLESS
THK	THICK

7. Recommendations for Maintenance Publications Improvements

You can improve this manual by calling attention to errors and by recommending improvements, using DA Form 2028 (Recommended Changes to Publications) or by letter, and mailing directly to Commanding General, U. S. Army Mobility Equipment Command, ATTN: AMSME-MPP, 4300 Goodfellow Boulevard, St. Louis, Missouri 63120. A reply will be furnished directly to you.
