CALIBRATION PROCEDURE FOR TRUE RMS VOLTMETER ME-545/G (RACAL-DANA, MODEL 5002)

Headquarters, Department of the Army, Washington, DC 3 November 2006

Distribution Statement A: Approved for public release; distribution is unlimited.

TB 9-6625-2193-35, 18 February 2004, is changed as follows:

1. Remove old pages and insert new pages as indicated below. New or changed material is indicated by a vertical bar in the margin of the page.

Remove Pages 5 and 6

Insert Pages 5 and 6

2. File this change sheet in front of the publication for reference purposes.

By Order of the Secretary of the Army:

PETER J. SCHOOMAKER General, United States Army Chief of Staff

Official

JOYCE E. MORROW

Administrative Assistant to the

Secretary of the Army

REPORTING OF ERRORS AND RECOMMENDING IMPROVEMENTS

You can improve this manual. If you find any mistakes or if you know of a way to improve these procedures, please let us know. Mail your letter or DA Form 2028 (Recommended Changes to Publications and Blank Forms) directly to: Commander, US Army Aviation and Missile Command, AMSAM-MMC-MA-NP, Redstone Arsenal, AL 35898-5000. A reply will be furnished to you. You may also provide DA Form 2028 information to AMCOM via e-mail, fax, or the World Wide Web. Our fax number is DSN 788-6546 or Commercial 256-842-6546. Our e-mail address is 2028@redstone.army.mil. Instructions for sending an electronic 2028 may be found at the back of this manual. For the World Wide Web, use https://amcom2028.redstone.army.mil.

This bulletin supersedes TB 9-6625-2193-35, dated 19 May 1992.

SECTION I IDENTIFICATION AND DESCRIPTION

- 1. Test Instrument Identification. This bulletin provides instructions for the calibration of True RMS Voltmeter ME-545/G (Racal-Dana, Model 5002). The manufacturer's manual and purchase specifications were used as the prime data sources in compiling these instructions. The equipment being calibrated will be referred to as the TI (test instrument) throughout this bulletin.
 - a. Model Variations. None.
- **b. Time and Technique**. The time required for this calibration is approximately 1.5 hours, using the dc and low frequency technique.

2. Forms, Records, and Reports

- **a**. Forms, records, and reports required for calibration personnel at all levels are prescribed by TB 750-25.
- **b**. Adjustments to be reported are designated (R) at the end of the sentence in which they appear. When adjustments are in tables, the (R) follows the designated adjustment. Report only those adjustments made and designated with (R).
- **3.** Calibration Description. TI parameters and performance specifications which pertain to this calibration are listed in table 1.

²Accuracy based on purchase specifications and does not agree with manufacturer's specifications.

³Volts-hertz product not to exceed 1 x 10⁸.

SECTION II EQUIPMENT REQUIREMENTS

- **4. Equipment Required.** Table 2 identifies the specific equipment to be used in this calibration procedure. This equipment is issued with Secondary Transfer Calibration Standards Set AN/GSM-286. Alternate items may be used by the calibrating activity. The items selected must be verified to perform satisfactorily prior to use and must bear evidence of current calibration. The equipment must meet or exceed the minimum use specifications listed in table 2. The accuracies listed in table 2 provide a four-to-one ratio between the standard and TI.
- **5.** Accessories Required. The accessories required for this calibration are common usage accessories issued as indicated in paragraph 4 above and are not listed in this calibration procedure.

SECTION III CALIBRATION PROCESS

6. Preliminary Instructions

- a. The instructions outlined in paragraphs 6 and 7 are preparatory to the calibration process. Personnel should become familiar with the entire bulletin before beginning the calibration.
- **b**. Items of equipment used in this procedure are referenced within the text by common name as listed in table 2.
- c. Unless otherwise specified, verify the results of each test and, whenever the test requirement is not met, take corrective action before continuing with the calibration. Additional maintenance information is contained in the manufacturer's manual for this TI.
- **d**. When indications specified in paragraph 8 are not within tolerance, perform power supply check prior to making adjustments. If adjustments are made, repeat paragraph 8. Do not perform power supply check if parameter is within tolerance.
 - e. Unless otherwise specified, all controls and control settings refer to the TI.

7. Equipment Setup

WARNING

HIGH VOLTAGE is used or exposed during the performance of this calibration. DEATH ON CONTACT may result if personnel fail to observe safety precautions. REDUCE OUTPUT(S) to minimum after each step within the performance check where applicable.

- **a.** Remove protective cover from TI only when necessary to make adjustments. Replace cover after completing the adjustments.
- **b.** Connect to an appropriate ac voltage source and press LINE switch to ON. Allow at least 30 minutes for warm-up.
 - **c**. Set front panel **ISOLATE** switch to **ISOLATE**.
 - **d**. Press **RECALL** key, then press **0** key twice.
 - e. Press **SHIFT** and **FILTER** keys to **ON**.

8. Voltage Accuracy

a. Performance Check

- (1) Connect calibrator **OUTPUT** terminals to ratio transformer **INPUT** and ratio transformer **OUTPUT** to TI **INPUT** terminals.
 - (2) Set ratio transformer dial settings to .0010000.
- (3) Set TI and calibrator output as indicated in table 3. TI will indicate within the specified limits, if not perform indicated adjustments in table 3.

- (4) Connect TI **INPUT** to calibrator **WIDEBAND** output and press calibrator **W BND** pushbutton.
- (5) Set calibrator for an initial 316 μ V, 1 kHz wideband output. Adjust calibrator for a TI indication equal to value recorded in table 3 for 316 μ V (1 kHz) to establish a 1 kHz reference. Press calibrator **NEW REF** pushbutton.
- (6) Set calibrator frequency to 500 kHz, then readjust amplitude for TI reference established in (4) above. If calibrator **Error** display readout does not indicate within $\pm 5\%$, perform **b** below.
- (7) Repeat technique of (5) above for remaining frequencies listed for the $316.2~\mu V$ range in table 4. Calibrator **Error** display indication will be within the limits specified.
- (8) Repeat technique of (4) through (6) above for remaining calibrator initial voltage and frequencies listed in table 4.

b. Adjustments.

- (1) Set calibrator output for an initial 1.000V, 1kHZ wideband output. Adjust calibrator for TI indication equal to the value recorded in table 3 for 1.000V, 1kHz, to establish a 1 kHz reference. Press calibrator **NEW REF** pushbutton.
- (2) Set calibrator frequency to 10 MHz and adjust A3C33 fig. 2 for value recorded in table 3 for 1.000V, 1 kHz. Repeat steps **8 a** (4) through (6) above (R).

¹Repeat technique of (4) above to establish 1 kHz reference.

9. Power Supply

NOTE

Do not perform power supply check if all other parameters are within tolerance.

- a Connect digital multimeter positive lead to TP16 and negative lead to TP1 (fig. 1). If digital multimeter does not indicate $+15.0~(\pm0.5)~V$, adjust R44 (fig. 3) for a +15.0~V indication (R).
- **b.** Move positive lead to TP2 (fig. 1). If digital multimeter does not indicate -15.0 (± 0.5) V, adjust R49 (fig. 3) for a -15.0 V indication (R).
 - c. Move positive lead to TP3 (fig. 3). Digital multimeter will indicate + 5.0 (\pm 0.25) V.

- **d.** Move positive lead to pin 1 of R34 (fig. 3). Digital multimeter will indicate +9.3 (±1.0) V.
 - e. Move positive lead to TP10 (fig. 3). Digital multimeter will indicate $\pm 4.9 ~(\pm 0.4)~V$.

10. Final Procedure

- a. Deenergize and disconnect all equipment.
- **b**. Annotate and affix DA label/form in accordance with TB 750-25.
