# SECTION I IDENTIFICATION AND DESCRIPTION

- 1. Test Instrument Identification. This bulletin provides instructions for the calibration of Multimeter Mercer, Model 83K. The manufacturer's manual was used as the prime data source in compiling these instructions. The equipment being calibrated will be referred to as the TI (test instrument) throughout this bulletin.
  - a. Model Variations. None.
- **b. Time and Technique**. The time required for this calibration is approximately 1 hour, using the dc and low frequency technique.
- **2.** Forms, Records, and Reports. Forms, records, and reports required for calibration personnel at all levels are prescribed by TB 750-25.
- **3.** Calibration Description. TI parameters and performance specifications which pertain to this calibration are listed in table 1.

	Accuracy: ± 3° of arc

# SECTION II EQUIPMENT REQUIREMENTS

- 4. Equipment Required. Table 2 identifies the specific equipment to be used in this calibration procedure. This equipment is issued with Secondary Transfer Calibration Standards Set AN/GSM-286. Alternate items may be used by the calibrating activity. The items selected must be verified to perform satisfactorily prior to use and must bear evidence of current calibration. The equipment must meet or exceed the minimum use specifications listed in table 2. The accuracies listed in table 2 provide a four-to-one ratio between the standard and TI.
- **5.** Accessories Required. The accessories required for this calibration are common usage accessories issued as indicated in paragraph 4 above and are not listed in this calibration procedure.

# SECTION III CALIBRATION PROCESS

#### 6. Preliminary Instructions

- a. The instructions outlined in paragraphs 6 and 7 are preparatory to the calibration process. Personnel should become familiar with the entire bulletin before beginning the calibration.
- **b**. Items of equipment used in this procedure are referenced within the text by common name as listed in table 2.
- **c**. Unless otherwise specified, verify the results of each test and, whenever the test requirement is not met, take corrective action before continuing with the calibration. Additional maintenance information is contained in the manufacturer's manual for this TI.
  - d. Unless otherwise specified, all controls and control settings refer to the TI.

#### 7. Equipment Setup

#### WARNING

HIGH VOLTAGE is used or exposed during the performance of this calibration. DEATH ON CONTACT may result if personnel fail to observe safety precautions. REDUCE OUTPUT(S) to minimum after each step within the performance check where applicable.

#### 8. Dc Voltage

#### a. Performance Check

- (1) Connect calibrator output to TI + and COM.
- (2) Set TI function/range switch to **0.25 DCV**.

#### TB 9-6625-2349-35

- (3) Set calibrator initial output for 250 mV. Adjust calibrator output controls for a 0.25 V dc TI indication. Calibrator control **Error** display will indicate within ±3 percent.
- (4) Repeat technique of (2) and (3) above for TI function/range switch and calibrator output settings listed in table 3. Calibrator control **Error** display will indicate within ±3 percent for each TI indication.
