GENERAL SUPPORT AND DEPOT MAINTENANCE REPAIR PARTS AND SPECIAL TOOLS LIST

Section I. INTRODUCTION

1-1. Scope.

This manual lists repair parts, special tools, and test and support equipment required for the performance of general support and depot maintenance of the Test Set, Navigational Computer-Control Indicator AN/ASM-386. Direct support maintenance is not applicable to this manual, although tabular headings indicate same for consistency with associated manuals.

1-2. General.

This Repair Parts and Special Tools list is divided into the following sections:

a. Repair Parts -- Section II. A list of repair parts authorized for the performance of maintenance at the general support and depot level in the same sequence as the Selection Work Sheet. Figure and item numbers are not in sequential order.

b. Special Tools, Test, and Support Equipment -Section III. A list of special tools, test, and support equipment authorized for the performance of maintenance at the general support and depot level.

c. Indices - Section IV. Conversion of numbers and indices is explained as follows:

(1) Index - Federal Stock Number Cross Reference to Index Number. A list of Federal stock numbers, in ascending numerical sequence, cross-referenced to the Repair Parts list index number.

(2) Index - Reference Number Cross-Reference to Figure and Item Number. A list of reference numbers (part numbers and manufacturers codes), in ascending alphanumeric sequence, cross-referenced to figure and item number.

(3) Index - Reference Designation Cross Reference to Index Number. A list of Reference Designations (RD), in ascending alphanumeric sequence, cross-referenced to the Repair Parts list index number.

(4) Index - Federal Stock Number Cross-Reference to Figure and Item Number. A list of Federal stock numbers, in ascending numerical sequence, cross-referenced to the illustration figure number and item number.

(5) Index - Figure and Item Number Cross Reference to Index Number. A list of figure and item numbers, each in ascending numerical sequence, cross-referenced to the Repair Parts list index numbers.

1-3. Explanation of Columns.

The following provides an explanation of columns in the tabular lists in Sections II and III.

a. Source, Maintenance, and Recoverability (SMR) Codes, Column 1.

(1) Source code, indicates the selection status and source for the listed item. Source codes are:

Code	Explanation
A	Applies to assemblies that are not procured or stocked as such but are made up of two or more units, each of which carry individual stock numbers and descriptions and are procured and stocked and can be assembled by units at indicated maintenance categories
AH	Applies to repair parts requiring assembly at category higher than authorized to replace the part
G	Applies to major assemblies that are procured with Procurement of Electronics and Missiles, Army (PEMA) funds for initial issue only to be used as exchange assemblies at Direct Support Unit (DSU) and General Support Unit (GSU) level. These assemblies will not be stocked above DSU and GSU level or returned to depot level

- P Applies to major parts which are stocked in **or supplied from the General Support Activity/Direct Support Activity (GSA/DSA), or Army supply** system, and authorized for use at indicated maintenance categories
- Xi Applies to repair parts which *are* not procured or stocked, the requirement for which will **be** supplied **by** the use of next higher assembly **or** component
- X2 Applies to repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain through cannibalization: if not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels

(2) Maintenance **code**, indicates the lowest category of maintenance authorized to install the listed item. The maintenance codes are:

Code	Explanation
D	Depot Support Maintenance
O	Organizational Maintenance
H	General Support Maintenance

(3) Recoverability code, indicates whether unservicable items should be returned for recovery or salvage. Items not coded are expendable. Recoverability codes are:

Code	Explanation
R	Applies to repair parts and assemblies which are economically repairable at DSU and GSU activities and normally are furnished <b>by</b> supply on an exchange basis
S	Applies to repair parts and assemblies which are economically repairable at DSU and GSU activities and which normally are furnished <b>by</b> supply on an exchange basis. When items are determined <b>by</b> a GSU to <b>be</b> uneconomically repairable, they will <b>be evacuated</b> to a depot for evaluation and analysis before final disposition
T	Applies to high dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities

b. The second line of column 1 is a cross-reference to the index number of the repair part as it appears in the Selection Work Sheet (SWS). The index number is explained as follows:

A001	Denotes original line entry in the SWS
A001M	“M” denotes a modified or changed line item in the SWS
A001A	“A” and other subsequent letters denotes additional line items in the SWS

c. Federal Stock Number, Column 2. This column indicates the Federal stock number assigned to the item and will **be** used for requisitioning purposes.

d. Description, Column 3. This column indicates the Federal item name of the item required. A part number or other reference number is followed by the applicable five-digit Federal supply code for manufacturers in parentheses.

e. **Unit of Measure** (U/M), Column 4. A two-character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based; e. g., EA (each).

f. Quantity Incorporated in Unit, Column 5. This column indicates the quantity of the item used in any one assembly. An “AR” appearing in this column in lieu of a quantity indicates that a definite quantity cannot **be** indicated; e. g., shims, spacers, etc.

g. 30-Day GS Maintenance Allowance, Column 7. Allowances in GS column are for GS maintenance only.

(1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. Items authorized for use as required **but** not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for GE level of maintenance will represent initial stockage for a 30-day period for the number of equipments supported.

(3) Determination of the total quantity of parts required for maintenance of more than 100 of these equipments can be accomplished **by** converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 **by** 1.50 or 60 parts required.

h. 1-Year Allowance Per 100 Equipments Contingency Planning Purposes, Column 8. This column indicates opposite the first appearance of each item the total quantity required for distribution and contingency planning purposes. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for 1 year.

i. Depot Maintenance Allowance Per Per 100 Equipments, Column 9. This column indicates opposite the first appearance of each item, the total quantity authorized for depot maintenance of 100 equipments. Subsequent appearances of the same item will have the letters "REF" in the allowance column.

j. Illustration, Column 10. This column indicates the figure number of the illustration in which the item is shown, and the number used to reference the item in the illustration.

k. Reference Designation. Column 11. This column indicates the reference designation symbol of each item in the equipment.

1-4. Special Information.

a. Repair parts mortality has been based on 100 equipments operating 65 hours a month for 1 year.

b. The basis of issue for authorized special tools, test **and** support equipment is the number of end items of equipment supported and the number of maintenance personnel allocated to perform the required maintenance operations as follows: Two sets of Special Tools and Test Equipment supporting twenty-three AN/ASN-86 Inertial Navigation Sets.

c. The following publications pertain to Test Set, Navigational Computer-Control Indicator AN/ASM-386 and its components.

TM 11-6625-2441-12	Operator's and Organizational Maintenance Manual for Test Set, Navigational Computer-Control Indicator AN/ASM-386
<b>TM 11-6625-2441-45</b>	General Support and Depot Maintenance Manual for Test Set, Navigational Computer-Control Indicator AN/ASM-386
TM 11-6625-2441-20P	Organizational Maintenance Repair Parts and Special Tools List Manual for Test Set, Navigational Computer-Control Indicator AN/ASM-386

d. **Items phantomd on illustrations** are not available as a separate item of supply. When need for such hardware exists, the repair part which is attached will be requisitioned.

1-5. How to Locate Repair Parts.

a. When the Federal stock number or reference number **is unknown:**

(1) First. Determine the assembly within which the repair part belongs.

(2) Second. Using list of illustrations, find the illustration covering the assembly to which the repair part belongs.

(3) Third. Identify the repair part on the illustration and note the figure and item number of the repair part.

(4) Fourth. Using the Figure **and** Item Number Cross Reference to Index Number index, locate the sequence index number of the repair part.

(5) Fifth. Refer to the index number in the Repair Parts list for the Federal stock number or reference number.

**b.** When the Federal stock number or reference number is known:

(1) First. Using either of the indices of Federal Stock Numbers, find the Federal stock number. These indices are in ascending numerical sequence by Federal stock number, cross-referenced to either the Repair Parts list index number, or to the illustration figure and item number.

(2) Second. Using the reference Number Cross-Reference to Index Number index, find the applicable index number. This index is as ending alphanumeric sequence by reference number, cross-referenced to the Repair Parts list index numeric.

(3) Third. Using the Repair Parts list, find the assembly of the repair part and the illustration figure and item number, or the index number, as referenced in the indices of Federal Stock Numbers or Reference Numbers.

**c.** When the RD is known:

(1) First. Using the Reference Designation Cross-Reference to Index Number index, find the index number. The next higher assembly of any component may be determined by using the RD Index. Identify the RD of the part in question and, by following the upward progression of this index, the sequence number of the next higher assembly part number may be identified. The RD is compiled as follows:

<u>  I  </u>	<u>  AI  </u>	<u>  AI  </u>	<u>  MP1  </u>
Unit No.	Assembly Letter and No.	Subassembly Letter and No.	Component Letter and No.

(2) Second. Using the Repair Parts list, find the assembly of the repair part and the illustration figure and item number.

**d.** When the Figure **and** Item Number are known:

(1) First. Using the Figure **and** Item Number Cross Reference to Index Number index, locate the sequence index number of the repair part.

(2) Second. Refer to the index number in the Repair Parts list for the Federal stock number or reference number.

1-6. Abbreviations. Not applicable.

1-7. Federal Supply Codes for Manufacturers.

Code	Manufacturer
