REPORTING OF ERRORS

You can improve this manual by recommending improvements using DA Form 2028-2 (Test) located in the back of the manual. Simply tear out the self-addressed form, fill it out as shown on the sample, fold it where shown, and drop it in the mail.

If there are no blank DA Forms 2028-2 (Test) in the back of your manual, use the standard DA Form 2028 (Recommended Changes to Publications and Blank Forms) and forward to the Commander US Army Electronics Command, ATTN: DRSEL-MA-Q, Fort Monmouth, NJ 07703

In either case a reply will be furnished direct to you.

SECTION I

INTRODUCTION

1. Scope

This manual lists repair parts required for the performance of organizational, direct support, and general support maintenance of the Recorder, Thermal Oscillograph AN/USM-365(V)1.

2. General

This Repair Parts and Special Tools List is divided into the following sections.

a Section II Repair Parts *List*. A list of repair parts authorized for use in the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts list are composed of functional groups in ascending numerical sequence, with the parts in each group listed in figure and item number sequence. Bulk materials are listed in NSN sequence.

b Section III Special Tools *List*. Not applicable

c Section IV National Stock Number and Part Number Index A list, in ascending numerical sequence, of all National stock numbers appearing in the listings, followed by a list, in alphanumeric sequence, of all part numbers appearing in the listings. National stock number and part numbers are cross-referenced to each illustration figure and item number appearance.

3. Explanation of Columns

The following provides an explanation of columns found in the tabular listings.

a *Illustration* This column is divided as follows

(1) Figure *number* Indicates the figure number of the illustration in which the item is shown.

(2) Item *number* The number used to identify each item called out in the illustration.

b *Source, Maintenance, and Recoverability Codes (SMR)*

(1) *Source code* Source codes are assigned to support items to indicate the manner of acquiring support item for maintenance, repair, or overhaul of end items. Source codes are entered in the first and second positions of the Uniform SMR Code format as follows:

Code	Definition
------	------------

PA - Item procured and stocked for anticipated or known usage

MD - Item to be manufactured or fabricated at the depot maintenance level

<i>Code</i>	<i>Definition</i>
AI-I	Item to be assembled at general support maintenance level.
XA	Item is not procured or stocked because the requirements for the item will result in the replacement of the next higher assembly.
XD-A	Support item that is not stocked. When required, item will be procured through normal supply channels.

NOTE

Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded XA, XD, and aircraft support items as restricted by AR 700-42.

(2) *Maintenance code*. Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the Uniform SMR Code format as follows:

(a) The maintenance code entered in the third position will indicate the lowest maintenance level authorized to remove, replace, and use the support item. The maintenance code entered in the third position will indicate one of the following levels of maintenance-

Code Application/Explanation
O-Support item is removed, replaced, used at the organizational level.

H-Support item is removed, replaced, used at the general support level.

D-Support items that are removed, replaced, used at depot, mobile depot, specialized repair activity only.

(b) The maintenance code entered in the fourth position indicates whether the item is to be repaired and identifies the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance functions). This position will contain one of the following maintenance codes:

Code Application/Explanation
H-The lowest maintenance level capable of complete repair of the support item is the general support level

D-The lowest maintenance level capable of complete repair of the support item is the depot level, performed by depot.

Z-Nonrepairable No repair is authorized

(3) **Recoverability** code Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the Uniform SMR Code format as follows:

Recoverability
codes Definition

Z- Nonreparable item When unserviceable, condemn and dispose at the level indicated in position 3

H - Reparable item When uneconomically reparable, condemn and dispose at the general support level

D - Reparable item When beyond lower level repair capability, return to depot. Condemnation and disposal not authorized below depot level

L- Reparable item Repair, condemnation, and disposal not authorized below depot/specialized repair activity level

c **National Stock Number** Indicates the National stock number assigned to the item and will be used for requisitioning purposes

d. **Part Number** Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications standards, and inspection requirements, to identify an item or range of items.

NOTE

When a stock-numbered item is requisitioned, the repair part received may have a different part number than the part being replaced

e **Federal Supply Code for Manufacturer (FSCM)** The FSCM is a 5-digit numeric code listed in SB 708-42 which is used to identify the manufacturer, distributor, or Government agency, etc

f **Description** Indicates the Federal item name and, if required, a minimum description to identify the item

g **Unit of Measure (U/M)** Indicates standard of the basic quantity of the listed item used in performing the actual maintenance. This measure is expressed by a two character alphabetical abbreviation (e.g., ea, in, pr, etc.). When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required units of measure will be requisitioned

h **Quantity Incorporated in Unit** Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for a functional group, subfunctional group, or an assembly

4 Special Information

a Detailed manufacturing instructions for items source coded to be manufactured or fabricated are found in TM 11-6625-2507-14. Bulk materials required to manufacture items are listed in the Bulk Material Group of this manual

b Detailed assembly instructions for items source coded to be assembled are found in TM 11-6625-2507-14. Assembly components are listed immediately following the item to be assembled

c The following publication pertains to the AN/USM-365(V)1 and its components

TM 11-6625-2507-14, Recorder, Thermal Oscillograph AN/USM-365 365(V)1 (FSN 6625-230-3835)

5 How to Locate Repair Parts

a When National stock number or part number is unknown

(1) *First* Using the table of contents, determine the functional group or subgroup within which the repair part belongs. This is necessary since illustrations are prepared for functional groups or subgroups, and listings are divided into the same groups

(2) *Second* Find the illustration covering the functional group or subgroup to which the repair part belongs

(3) *Third* Identify the repair part on the illustration and note the illustration figure and item number of the repair part

(4) *Fourth* Using the Repair Parts Listing, find the figure and item number noted on the illustration

b When National stock number or part number is known

(1) *First* Using the Index of National Stock Numbers and Part Numbers, find the pertinent National stock number or part number. This index is in ascending NSN sequence followed by a list of numbers in ascending alphanumeric sequence, referenced to the illustration figure number and item number

(2) *Second* After finding the figure and item number locate the figure and item number in the repair parts list

PAGE NO.	PARA. GRAPH	FIGURE NO.	TABLE NO.	
2-25	2-28			<p>Recommend that the installation antenna alignment procedure be changed throughout to specify a 2° IFF antenna lag rather than 1°.</p> <p>REASON: Experience has shown that with only a 1° lag, the antenna servo system is too sensitive to wind gusting in excess of 25 knots, and has a tendency to rapidly accelerate and decelerate as it hunts, causing strain to the drive train. Hunting is minimized by adjusting the lag to 2° without degradation of operation.</p>
3-10	3-3	3-1		<p>Item 5, Function column. Change "2 db" to "3db."</p> <p>REASON: The adjustment procedure for the TRANS POWER FAULT indicator calls for a 3 db (500 watts) adjustment to light the TRANS POWER FAULT indicator.</p>
5-6	5-8		F03	<p>Add new step f.1 to read, "Replace cover plate removed in para. 1, above."</p> <p>REASON: To replace the cover plate.</p> <p>Zone C 3. On J1-2, change "+24 VDC to "+5 VDC."</p> <p>REASON: This is the output line of the 5 VDC power supply. + 24 VDC is the input voltage.</p>
