**REPORTING OF ERRORS**

You can improve this manual by recommending improvements using DA Form 2028-2 located in the back of the manual. Simply tear out the self-addressed form, fill it out as shown on the sample, fold it where shown, and drop it in the mail.

If there are no blank DA Forms 2028-2 in the back of your manual, use the standard DA Form 2028 (Recommended Changes to Publications and Blank Forms) and forward to the Commander, US Army Communications and Electronics Materiel Readiness Command, ATTN: DRSEL-ME-MQ, Fort Monmouth, NJ 07703.

In either case a reply will be furnished direct to you.

This manual is an authentication of the manufacturer's commercial literature which, through usage, has been found to cover the data required to operate and maintain this equipment. Since the manual was not prepared in accordance with military specifications, the format has been structured to consider levels of maintenance.

EL6A1001

Figure 1-1. Current Meter, ME-511/U.

**SECTION I  
GENERAL**

**1-1. Scope**

This manual describes Current Meter, ME-51 I /U (Weston Model 931-2902001, (fig. 1-1) and provides maintenance instructions, testing procedures, calibration instructions, and replacement parts list. The meter specifications are listed in Table 1-1.

**1-2. Indexes of Publications**

a. *DA Pam 3104.* Refer to the latest issue of the DA Pam 310-4 to determine whether there are new editions, changes, or additional publications pertaining to the equipment.

b. *DA Pam 3107.* Refer to DA Pam 310-7 to determine whether there are modification work orders (MWO's) pertaining to the equipment.

**1-3. Forms and Records**

a. *Reports of Maintenance and Unsatisfactory Equipment.* Maintenance forms, records, and reports which are to be used by maintenance personnel at all levels of maintenance are listed in and prescribed by TM 38-750.

b. *Report of Packaging and Handling Deficiencies.* 364 (Report of Discrepancy (ROD) as prescribed in AR 735-11-2/DLAR 4140. 55/ NAVMATINST 4355. 73/AFR 400-54/MCO 4430. 3E.

c. *Discrepancy in Shipment Report (DISREP) (SF 361).* Fill out and forward Discrepancy in Shipment Report (DISREP) (SF 361) as prescribed in AR 55-38/ NAVSUPINST 4610. 33B/AFR 75-18/MCO 4610. 19C and DLAR 4500. 15.

**1-4. Reporting of Equipment Improve-**

**ment Recommendations (EIR)**

EIR's will be prepared using DA Form 2407, Maintenance Request. Instructions for preparing EIR's are provided in TM 38-750, The Army Maintenance Management System. EIR's should be mailed directly to Commander, US Army Communications and Electronics Materiel Readiness Command, ATTN: DRSEL-ME- MQ, Fort Monmouth, NJ 07703. A reply will be furnished directly to you.

**1-5. Administrative Storage.**

Administrative storage of equipment issued to and used by the Army activities shall be in accordance with TM 740-90-1.

**1-6. Destruction of Army Electronics**

Materiel Destruction of Army electronics materiel to prevent enemy use shall be in accordance with TM 750-244-2.

*Table 1-1. Current Meter ME-511/U specifications*

| Parameter                    | Specifications   |
|------------------------------|--|
| Range                        | 0 to 5/20/50 Amperes, DC   |
| Scale                        | 0 to 5/20/50 Amperes, DC   |
| Scale length                 | 4. 04 inches   |
| Mechanism full scale current | 5 Milliampers  |
| Accuracy                     | 0 5% of full scale deflection (with instrument scale in horizontal position) |

## SECTION II DESCRIPTION AND DATA

---

### 2.1. Purpose and Use

Current Meter ME-5 11 /U provides a means of checking amperes in direct-current circuits.

### 2.2. Description

Current Meter ME-Si1/U, known commercially as Weston, Model 931-2902991, or part number 260482, is a self shielded permanent magnet moving coil type cur-

rent meter with a molded bakelite case which measures 3 1/4 x 5 x 5/4 inches. It is equipped with a hand calibrated mirror scale and knife edge pointer to eliminate parallax errors.

### 2.3. Specifications

Complete specifications of Current Meter ME-511/U are contained in Table 1-1.

2-1/(2-2 Blank)

### SECTION III

## SERVICE UPON RECEIPT AND INSTALLATION

---

### 3.1. Packaging Data

a. Current Meter ME-S I1/U may arrive packed for either domestic or overseas shipment.

b. When ME-SI /U is packed for overseas shipment, the current meter is placed in the carrying case with the connecting test leads. The equipment, in its carrying case, is placed in a corrugated carton. The carton is sealed with gummed tape. The boxed equipment is then placed in a moisture-vaporproof barrier, which is heatsealed, and this package is placed in a waterproof corrugated carton. The Technical Manual is placed under the lid and the carton is sealed with waterproof tape.

### 3-2. Unpacking

a. For unpacking overseas shipment equipment proceed as follows:

(1) Open the outer corrugated carton and break the sealed moisture-vaporproof barrier. Lift out the inner corrugated carton.

(2) Open the inner corrugated carton. Remove the equipment in its carrying case and place it near its final location. Mark or put identifying tags on the connecting

test leads if leads are to be stored in a lead cabinet or storage location apart from the current meter.

b. The current Meter may be received in a domestic package. The instructions in A above also apply to unpacking domestic shipments. If a heavy wrapping paper has been used, remove it carefully and take out the components.

### 3.3. Checking Unpacked Equipment

a. Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on shipping form SF-364 (para 1-3 b).

b. Check the equipment for completeness against the packing slip. Report all discrepancies in accordance with paragraph 1-3. The equipment should be placed in service even though a minor part that does not affect proper functioning is missing.

c. After the equipment has been thoroughly checked, clean all items with a soft cloth. Apply the minimum amount of pressure with the cloth while cleaning the meter glass. Check to see if knurled terminal fasteners are secured in order to prevent loss.

3-1/(3-2 Blank)

## SECTION IV OPERATING INSTRUCTIONS

---

### 4-1. Treatment and Use

This instrument is to be treated with the same care and respect given all standard pieces of laboratory equipment. It is calibrated for use in the horizontal position and will provide accurate readings to within 0.5% of full scale deflection when used in that position. It may be used in a vertical position of 0.5% accuracy is not required.

### 4-2. Zero Adjustment

Before using the ammeter check the pointer indication to assure that it is exactly on the zero mark. If it is not, adjust to zero by turning the zero adjuster screw located on the case front just below the window.

### 4.3. Operation

Check the function switch and compare each switch setting with the identification of each binding post. Review the ammeter internal wiring diagram (figure).

### 4.4. Test Leads and Binding Posts

a. Always use the leads manufactured for this equipment. Proper leads will prolong the life of the binding posts and will insure safe connection in each equipment setup.

b. Apply sufficient pressure while tightening binding posts when leads are being attached but do not over-tighten or damage to the binding post may occur.

4-1/(4-2 Blank)

## SECTION V MAINTENANCE INSTRUCTIONS

### 5.1. Cleaning

Periodic lubrication or cleaning of this current meter is not required.

### 5.2. Test Procedures

The following tests are listed to assist in determining the probable cause for calibration error. Conduct the tests at ambient room temperature 25°C (77°F).

#### a. Balance Test.

(1) Place the current meter in a horizontal position on the test bench and adjust the pointer to the zero mark.

(2) Lift the current meter to the vertical position and tilt it approximately 60 degrees to the left and then to the right observing the motion of the pointer. If the position of the pointer varies by more than 0.2% of the scale length from the initial reading in either of the positions mentioned it will be necessary to rebalance the moving element assembly. Rebalancing the moving element should be done only by a skilled instrument repairer with the special tools necessary for moving the threaded weights on the three arms of the moving element.

b. Zero Correction Test. Carefully turn the zero adjuster screw completely around in both directions. The pointer must deflect evenly and approximately 5% of the scale length to each side of the zero mark.

### 5.3. Defective Series Resistors

Detailed instructions for replacing the series resistors R1 and R2 (figure 5-1) are not necessary due to the simplex design of this current meter. Refer to Section VII for part number and description of common parts and resistors.

Figure 5-1. Current Meter ME-511/U, internal wiring diagram.

A1 - Instrument Mechanism Assembly (Resistance 3.5 ohms)

E1 - Mechanism Top Bridge Terminal

E2 - Negative Binding Post (-)

E3 - Binding Post (50)

E4 - Binding Post (20)

E5 - Binding Post (5)

R1 - Series Resistor, 9 ohms (unadjusted)

R2 - Shunt Resistor Assy

**SECTION VI  
CALIBRATION CHECK**

**6.1. Calibration Check**

**NOTE**

Calibration in accordance with TB 43-180 is to be performed by the TMDE Calibration and Repair Support Center using instructions and designated calibration equipment contained in pamphlet AMCC number 274.

The following calibration check is to be used by maintenance shop personnel after major parts replacement, repair, or overhaul.

- a. Connect the current meter in the circuit as shown in figure 61.
- b. Apply current and check each cardinal point on the scale from 0 to top scale mark on each range.

*Figure 6-1. Calibration circuit, equipment setup.*

- c. Each indication must be accurate to within 0.5% of full scale deflection when tested in the horizontal position.
- d. the indications are not within the accuracy limits, refer to the following trouble shooting chart and test procedures to determine the probable cause of calibration error.

*Trouble Shooting Chart*

| TROUBLE   | PROBABLE CAUSE  | REMEDY  |
|---|---|---|
| FRICTION  | Damaged pivots or jewel screws.<br>Foreign particle in air gap.<br>Fuzz on moving coil.<br>Moving coil touching core.                                     | Replace pivots or jewel screws.<br>Remove particle.<br>Remove fuzz.<br>Readjust jewel screws for proper moving coil clearance.<br>Replace moving coil if it is bent or distorted.   |
| NO INDICATION<br>VARIABLE READING                           | Distorted spring.<br>Jewel screws too tight<br>Open moving coil.<br>Poor solder connection.<br>Poor connections.<br>Frinction. Loose balance weight.      | Realign spring with fine tweezers or replace it entirely.<br>Readjust jewel screws.<br>Replace moving coil.<br>Resolder connection.<br>Tighten or resolder connections.<br>See FRICTION section above.<br>Replace balance weight and rebalance. |
| INDICATES LOW   | Distorted spring in moving element.<br>Friction.<br>Loose connections.<br>Spring test too high.<br>Shorted turns on moving coil or incorrect moving coil. | Realign spring with fine tweezers or replace it entirely.<br>See FRICTION above.<br>Tighten or resolder connections.<br>Replace springs.<br>Replace moving coil.  |
| INDICATES HIGH  | Faulty or incorrect resistance.<br>Insufficient magnet strength.<br>Spring test too low.<br>Incorrect moving coil.<br>Excessive magnet strength.          | Replace resistor.<br>Recharge and treat magnet.<br>Replace springs.<br>Replace moving coil.<br>Treat magnet.  |
| INSUFFICIENT ZERO CORRECTION<br>CALIBRATION ERROR IN EXCESS | Defective resistor.<br>Bridge abutment not adjusted properly.<br><br>Moving element poorly balanced.<br>Distorted spring.                                 | Replace resistor.<br>Adjust bridge abutment.<br><br>Rebalance moving element.<br>Realign spring with fine tweezers or replace it entirely.  |

**NOTE**

Some Current Meters ME-511/U are transported to each job site in a leather carrying case. Connection test leads may also be packed in the carrying case. Annotate the Maintenance

Request Form DA 2407 accompanying the Current Meter for maintenance or calibration "With case and leads" or "Without case and leads" so as to avoid confusion when the Current Meter is returned to the user; upon completion of service.

**SECTION VII  
REPLACEMENT PARTS**

**7.1. Ordering Information**

a. To order a part listed in the replacement parts table, note the Weston part number and then order by

exception data through ordering channels.

b. Refer to the following table for part number, description, and quantity per assembly.

*Replacement Parts Lost of Peculiar Parts  
Model 931 Triple Range Ammeter  
0 to 5/20/50 AMPS DC*

**NOTE**

In order to formulate the complete parts list for this range ammeter insert the following line information into the common parts listing. Upon transposition, the common parts listing will become a complete and specific replacement parts list.

| ITEM NO. | PART NUMBER | DESCRIPTION   | QTY PER ASSY |
|----------|-------------|---|--------------|
| 1        | 260482      | AMMETER, DC, Triple range, 0 to 5/20/50 Amps, Model 931 | -            |
| 29       | 190316-901  | Resistor, WW, 9 ohms unadjusted                         | 1            |
| 40       | 75216-001   | Shunt Assy, R2  | 1            |
| 43       | 10063-901   | Mark, Engraved, 5                                       | 1            |
| 44       | 10067-901   | Mark, Engraved, 20                                      | 1            |

## APPENDIX B MAINTENANCE ALLOCATION

### Section I. INTRODUCTION

#### B-1. General

This appendix provides a summary of the maintenance operations for the ME-511 /U. It authorizes categories of maintenance for specific maintenance functions on repairable items and components and the tools and equipment required to perform each function. This appendix may be used as an aid in planning maintenance operations.

#### B-2. Maintenance Function

Maintenance functions will be limited to and defined as follows:

*a. Inspect.* To determine the serviceability of an item by comparing its physical, mechanical, and/ or electrical characteristics with established standards through examination.

*b. Test.* To verify serviceability and to detect incipient failure by measuring the mechanical or electrical characteristics of an item and comparing those characteristics with prescribed standards.

*c. Service.* Operations required periodically to keep an item in proper operating conditions, i. e. , to clean (decontaminate), to preserve, to drain, to paint, or to replenish fuel, lubricants, hydraulic fluids, or compressed air supplies.

*d. Adjust* To maintain, within prescribed limits, by bringing into proper or exact position, or by setting the operating characteristics to the specified parameters.

*e. Align.* To adjust specified variable elements of an item to bring about optimum or desired performance.

*f. Calibrate.* To determine and cause corrections to be made or to be adjusted on instruments or test measuring and diagnostic equipments used

in precision measurement. Consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.

*g. Install.* The act of emplacing, seating, or fixing into position an item, part, module (component or assembly) in a manner to allow the proper functioning of the equipment or system.

*h. Replace.* The act of substituting a serviceable like type part, subassembly, or module (component or assembly) for an unserviceable counterpart.

*i. Repair.* The application of maintenance services (inspect, test, service, adjust, align, calibrate, replace) or other maintenance actions (welding, grinding, riveting, straightening, facing, remachining, or resurfacing) to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.

*j. Overhaul.* That maintenance effort (service/ action) necessary to restore an item to a completely serviceable/operational condition as prescribed by maintenance standards (i.e., DMWR) in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.

*k. Rebuild.* Consists of those services actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of materiel maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (hours, miles, etc. ) considered in classifying Army equipments/components.

**B-3. Column Entries**

a. *Column 1, Group Number.* Column 1 lists group numbers, the purpose of which is to identify components, assemblies, subassemblies, and modules with the next higher assembly.

b. *Column 2, Component/Assembly.* Column 2 contains the noun names of components, assemblies, subassemblies, and modules for which maintenance is authorized.

c. *Column 3, Maintenance Functions.* Column 3 lists the functions to be performed on the item listed in column 2. When items are listed without maintenance functions, it is solely for purpose of having the group numbers in the MAC and RPSTL coincide.

d. *Column 4, Maintenance Category.* Column 4 specifies, by the listing of a "worktime" figure in the appropriate subcolumn(s), the lowest level of maintenance authorized to perform the function listed in column 3. This figure represents the active time required to perform that maintenance function at the indicated category of maintenance. If the number or complexity of the tasks within the listed maintenance function vary at different maintenance categories, appropriate "worktime" figures will be shown for each category. The number of task-hours specified by the "worktime" figure represents the average time required to restore an item (assembly, subassembly, component, module, end item or system) to a serviceable condition under typical field operating conditions. This time includes preparation time, troubleshooting time, and quality assurance/quality control time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the maintenance allocation chart. Subcolumns of column 4 are as follows:

- C - Operator/Crew
- O - Organizational
- F - Direct Support
- H - General Support
- D - Depot

e. *Column 5, Tools and Equipment.* Column 5 specifies by code, those common tool sets (not individual tools) and special tools, test, and support equipment required to perform the designated function.

f. *Column 6, Remarks.* Column 6 contains an alphabetic code which leads to the remark in section IV, Remarks, which is pertinent to the item opposite the particular code.

**B-4. Tool and Test Equipment Requirement (sect III)**

a. *Tool or Test Equipment Reference Code.* The numbers in this column coincide with the numbers used in the tools and equipment column of the MAC. The numbers indicate the applicable tool or test equipment for the maintenance functions.

b. *Maintenance Category.* The codes in this column indicate the maintenance category allocated the tool or test equipment.

c. *Nomenclature.* This column lists the noun name and nomenclature of the tools and test equipment required to perform the maintenance functions.

d. *National/NATO Stock Number.* This column lists the National/NATO stock number of the specified tool or test equipment.

e. *Tool Number.* This column lists the manufacturer's part number of the tool followed by the Federal Supply Code for manufacturers (5-digit) in parentheses.

**B-5. Remarks (sect IV)** Not applicable.
