TECHNICAL MANUAL

OPERATOR'S, ORGANIZATIONAL, DIRECT SUPPORT, AND GENERAL SUPPORT MAINTENANCE MANUAL TRANSMISSION/REFLECTION TEST SET HEWLETT-PACKARD MODEL 8502A

HEADQUARTERS, DEPARTMENT OF THE ARMY

3 JUNE 1985

5 SAFETY STEPS TO FOLLOW IF SOMEONE IS THE VICTIM OF ELECTRICAL SHOCK

1. DO NOT TRY TO PULL OR GRAB THE INDIVIDUAL
2. IF POSSIBLE, TURN OFF THE ELECTRICAL POWER
3. IF YOU CANNOT TURN OFF THE ELECTRICAL POWER, PULL, PUSH OR LIFT THE PERSON TO SAFETY USING A DRY WOODEN POLE OR A DRY ROPE OR SOME OTHER INSULATING MATERIAL
4. SEND FOR HELP AS SOON AS POSSIBLE
5. AFTER THE INJURED PERSON IS FREE OF CONTACT WITH THE SOURCE OF ELECTRICAL SHOCK, MOVE THE PERSON A SHORT DISTANCE AWAY AND IMMEDIATELY START ARTIFICIAL RESUSCITATION

TM 11-6625-3067-14

HEADQUARTERS
DEPARTMENT OF THE ARMY
Washington, DC, 3 June 1985

OPERATOR'S, ORGANIZATIONAL, DIRECT SUPPORT, AND GENERAL SUPPORT MAINTENANCE MANUAL

TRANSMISSION/REFLECTION TEST SET HEWLETT-PACKARD MODEL 8502A

SERIAL NUMBERS

This manual applies directly to HP Model 8502A with serial prefix numbers 1603A, 1616A, and 1918A.

For additional information about serial numbers, see INSTRUMENTS COVERED BY MANUAL in Paragraph 7.

REPORTING ERRORS AND RECOMM.ENDING IMPROVEMENTS

You can help improve this manual. If you find any mistakes or if you know of a way to improve the procedures, please let us know. Mail your letter, DA Form 2028 (Recommended Changes to Publications and Blank Forms), or DA Form 2028-2 located in the back of this manual direct to: Commander, US Army Communications-Electronics Command and Fort Monmouth, ATTN: AMSEL-ME-MP, Fort Monmouth, NJ 07703-5007.

In either case, a reply will be furnished direct to you.

APPENDICES

SECTION 0
INTRODUCTION

0-1. SCOPE

This manual describes Transmission/Reflection Test Set, HP Model 8502A and provides instructions for operation and maintenance.

0-2. CONSOLIDATED INDEX OF ARMY PUBLICATIONS AND BLANK FORMS

Refer to the latest issue of DA Pam 310-1 to determine whether there are new editions, changes or additional publications pertaining to the equipment.

0-3. MAINTENANCE FORMS, RECORDS, AND REPORTS

a. Reports of Maintenance and Unsatisfactory Equipment. Department of the Army forms and procedures used for equipment maintenance will be those prescribed by DA Pam 738-750, as contained in Maintenance Management Update.

b. Report of Packaging and Handling Deficiencies. Fill out and forward SF 364 (Report of Discrepancy (ROD)) as-prescribed in AR 735-11-2/DLAR 4140.55/ NAVMATINST 4355.73A/AFR 400-54/MCO 4430.3F.

c. Discrepancy in Shipment Report (DISREP)(SF 361). Fill out and forward Discrepancy in Shipment Report (DISREP)(SF 361) as prescribed in AR 55-38/ NAVSUPINST 4610.33C/AFR 75-18/MCO P4610.19D/DLAR 4500.15.

0-4. REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR)

If your equipment needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about your equipment. Let us know why you don't like the design. Put it on an SF 368 (Quality Deficiency Report). Mail it to Commander, US Army Communications-Electronics Command and Fort Monmouth, ATTN: AMSEL-ME-MP', Fort Monmouth, NJ 07703-5007. We'll send you a reply.

0-5. ADMINISTRATIVE STORAGE

Administrative storage of equipment issued to and used by Army activities will have preventive maintenance performed in accordance with the PMCS charts for storing. When removing the equipment from administrative storage the PMCS should be performed to assure operational readiness. Disassembly and repacking of equipment for shipment or limited storage is covered in paragraph 24.

0-6. DESTRUCTION OF ARMY ELECTRONICS MATERIEL

Destruction of Army electronics materiel to prevent enemy use shall be in accordance with TM 750-244-2.

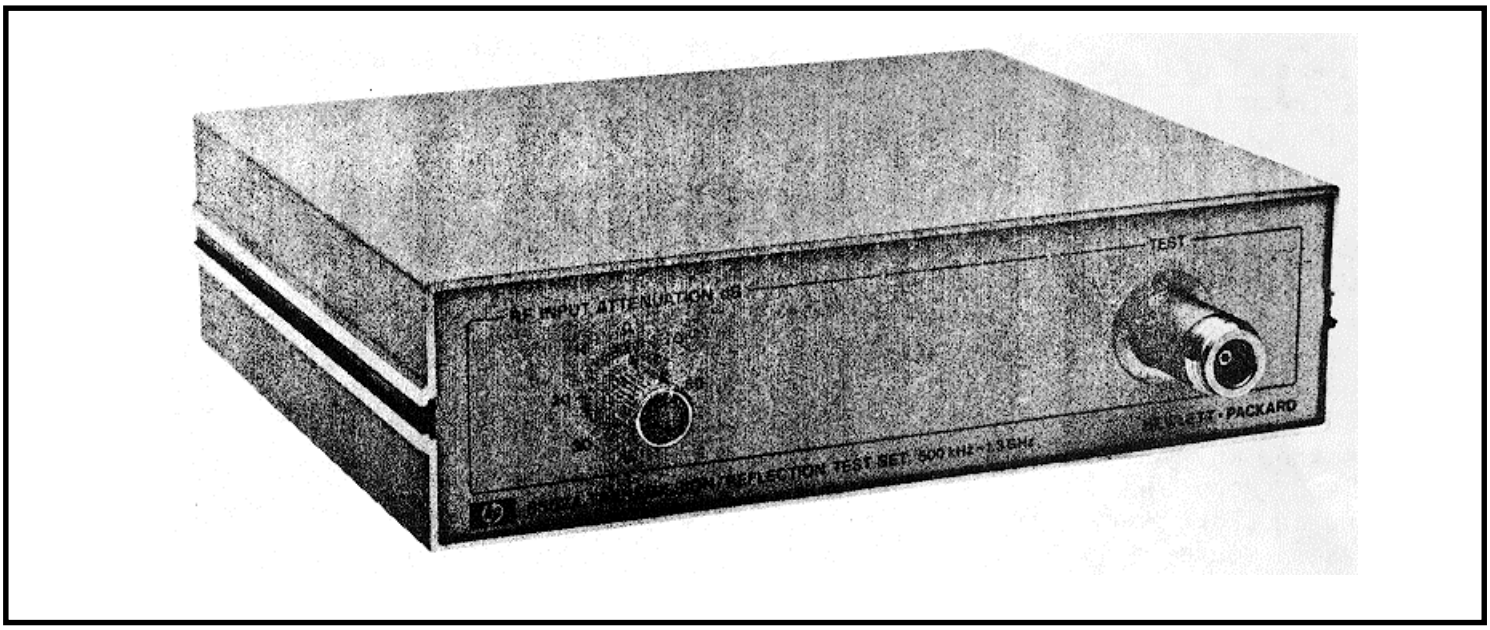

Figure 1. Model 8502A Transmission/Reflection Test Set

1. GENERAL INFORMATION

2. Introduction

3. This Operating and Service manual applies to the Hewlett-Packard Model 8502A Transmission/Reflection Test Set (Figure 1). It contains information necessary to operate, test, and service the HP Model 8502A

4. On the title page of this manual, below the manual part number, is a "Microfiche" part number. This number may be used to order a 4x 6inch microfilm transparency of this manual.

5. Description

6. The Hewlett-Packard Model 8502A Transmission/Reflection Test Set provides all of the RF hardware necessary to make simultaneous transmission and reflection measurements between 500 KHz and 1300 MHz. The test set consists of an RF power splitter to develop a reference or incident signal, a directional bridge to develop a reflected signal, and an attenuator to control the signal incident on the device under test.

7. Instruments Covered by Manual

8. Attached to the instrument is a serial number plate (Figure 2). The serial number is in two parts. The first four digits and the letter are the serial number prefix; the last five digits are the suffix. The prefix is the same for all identical instruments; it changes only when a change is made to the instrument. The suffix, however, is assigned sequentially and is different for each instrument. The contents of this manual apply to instruments with the serial number prefix(es) listed under SERIAL NUMBERS on the title page. If your instrument does not have a serial number prefix that is listed on the title page, refer to the manual changes supplement, or contact your nearest HP office for change information.

9. Input Level Caution

CAUTION

Do not apply signals greater than listed below or damage to the test set circuits may result. TEST port limits are +26 dBm and 30 Vdc. RF INPUT port limits are +30 dBm (1.0 watt) and 7.0 Vdc. BIAS INPUT port limits are 500 mA and 30 Vdc.

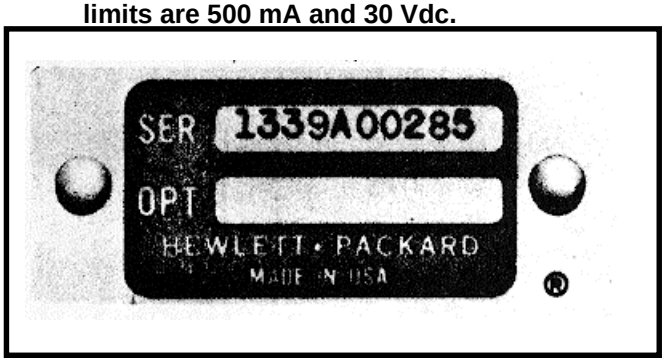

Figure 2. Serial Number Plate

10. Specifications

11. Instrument specifications are listed in Table 1. These specifications are the performance standards or limits against which the instrument may be tested. Table 2 lists supplemental characteristics. These are not specifications but are typical characteristics included as additional information for the user.

12. Equipment Available

13. Hewlett-Packard Cable Accessory Set 11851 A, shown in Figure 3, contains four doubleshielded and phase-matched cables for high accuracy measurements with the HP Model 8505A Network Analyzer and other instruments.

14. Recommended Test Equipment

15. Equipment required for performance testing and troubleshooting of the Hewlett-Packard Model 8502A Transmission/Reflection Test Set is listed in Table 3. Other equipment may be substituted if it meets or exceeds the critical specifications listed in the table.

Table 1. Model 8502A Specifications

SPECIFICATIONS
8502A TRANSMISSION/REFLECTION TEST SET

Frequency Range: 500 kHz to 1.3 GHz

Impedance: 50 ohms

Directivity: ⩾40 dB

Frequency Response:

Transmission:

Magnitude: ⩽±0.8 dB
** **Phase:** ⩽±8°

Reflection:

Magnitude: ⩽±1.5 dB from 0.5 to 1300 MHz
Phase: ⩽±15° from 0.5 to 1300 MHz

** **Phase:** ⩽±10° from 2 to 1300 MHz

Port Match:

Test Port Return Loss*:

⩾26 dB (⩽1.11 SWR) from 2 to 1300 MHz
⩾20 dB (⩽1.22 SWR) from 0.5 to 2 MHz

Test Port Open/Short Ratio:

Magnitude: ⩽±0.75 dB from 2 to 1000 MHz
Phase: ⩽±6° from 2 to 1000 MHz
Magnitude: ⩽±0.9 dB from 1000 to 1300 MHz
Phase: ⩽±7.5° from 1000 to 1300 MHz
Magnitude: ⩽±1.25 dB from 0.5 to 2 MHz
Phase: ⩽±10° from 0.5 to 2 MHz

Incident Port Return Loss*:

⩾25 dB (⩽1.12 SWR) from 2 to 1000 MHz
⩾23 dB (⩽1.15 SWR) from 0.5 to 1300 MHz

Reflection Port Return Loss*:

⩾25 dB (⩽1.12 SWR) from 2 to 1000 MHz
⩾23 dB (⩽1.15 SWR) from 0.5 to 1300 MHz

RF Input Port Return Loss*:

⩾23 dB (⩽1.15 SWR)

Maximum Operating Level: ⩽+20 dBm
TEST port: +26 dBm 30 Vdc Max
RF INPUT port: +30 dBm (1W) 7 Vdc Max
Bias: 30 Vdc 500 mA Max

Damage Level: >1 watt (+30 dBm) CW

Dimensions: 101 mm wide, 61.5mm high, 204mm deep (7-1/2" x 2-7/16" x 8")

Weight:
Net: 1.7 kg (3-3/4 lb.)
Shipping: 3.1 kg (7 lb.)

*Other ports terminated in 50 ohms ±10% tolerance.

**± degrees, specified as deviation from linear phase.

Table 2. Model 8502A Supplemental Characteristics

Test Port Return Loss: Typically 30 dB from 2 to 1300 MHz

Insertion Loss with Attenuator Set to Zero:

Input to Test Port: 13 dB

Input to Incident Port: 19 dB

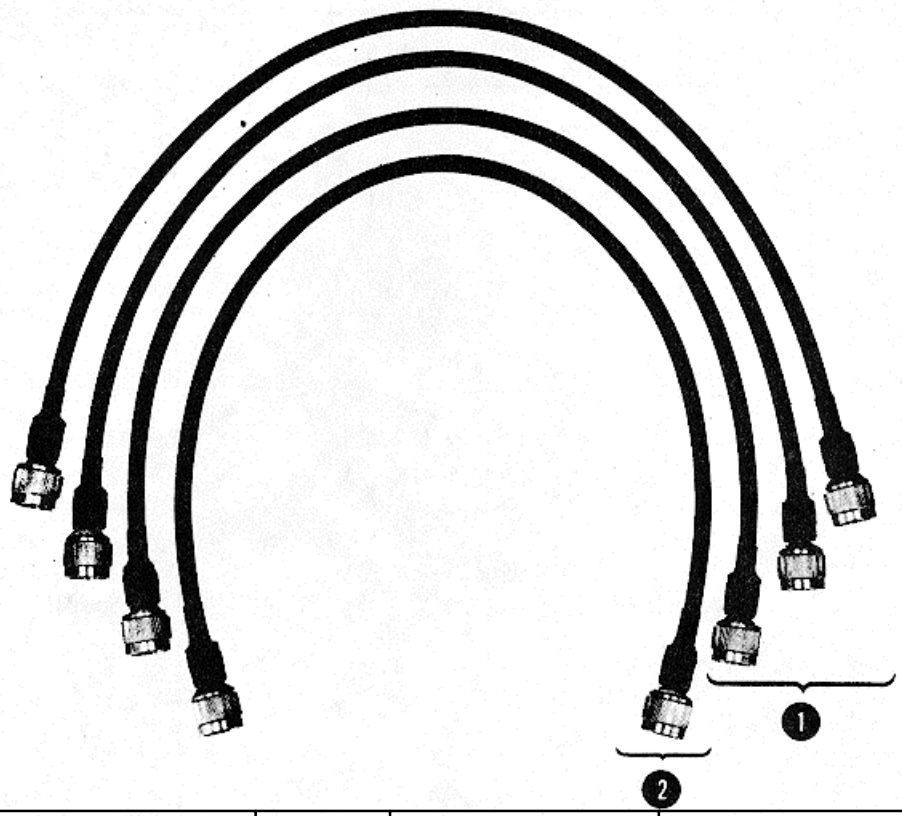
Input to Reflection Port with Short on Test Port: 19 dB

RF Attenuator Range: 0 to 70 dB in 10-dB steps

DC Bias Input Range: ±30 Vdc, ±200 mA; some degradation in RF specifications from 500 kHz to 100 MHz. 500 mA maximum.

RF Connectors: 50 ohm Type N Female

DC Bias Input Connector: Type BNC Female



Item	Name	Qty	HP Part No	Description
1	Cable Assembly Cable Assembly	3 1	8120-2292 8120-2793	Three 61 cm (24 in.) 50-ohm cables, phase matched to 4° at 1.3 GHz and one 86 cm (34 in.), with 50-ohm Type N Male connectors on each end.

Figure 3. HP Model 11851A Cable Accessory Set

16. INSTALLATION

17. Initial Inspection

18. Inspect the shipping container for damage.

If the shipping container or cushioning material is damaged, it should be kept until the contents of the shipment have been checked for completeness and the instrument has been checked mechanically and electrically. Procedures for checking electrical performance are given in Paragraph 35. If the contents of the shipment are incomplete or if the equipment is mechanically damaged, or does not pass the electrical performance test, notify the nearest Hewlett-Packard office. If, in addition, the shipping container is damaged or the cushioning material shows signs of stress, notify the carrier as well as the Hewlett-Packard office. Keep the shipping materials for the carrier's inspection. At Hewlett-Packard's option, the HP office may arrange for repair or replacement without waiting for claim settlement.

19. Preparation for Use

20. Mating Connectors

21. The connectors that mate with the HP Model 8502A ports are shown in Table 4. This table identifies each connector and gives the HP Part Number and part numbers of alternative sources.

Table 3. Recommended Test Equipment

Instrument	Critical Specifications	Recommended Model	Use*
Network Analyzer	Frequency Range: 0.5 - 1300 MHz	HP 8505A	P, T
Dual Directional Coupler	Frequency Range: 100 - 1300 MHz Directivity: ≥ 36 dB, 0.1 - 1 GHz ≥32 dB, 1.0 - 1.3 GHz	HP 778D, Opt. 012	P
Directional Bridge'	Frequency Range: 0.5 - 100 MHz Directivity: ≥40 dB, I - 100 MHz ≥30 dB, .5 - I MHz	HP 8721A	P
3-Way Power Splitter	Tracking between any two ports: ≤ 0.1 dB Magnitude ≤ 1.5° Phase ≥ 32 dB Output Source Match	HP 11850A	P
Termination (4 required)	Impedance: 50Ω with Type N male connector	HP 909A, Opt. 012	P
Termination [2]	Impedance: 5092 with Type N male SWR: ≤1.005	HP 909A, Opt. 012 and H69	P P
Short	Type N female Connector	HP 11511 A	P
Short	Type N male Connector	HP 11512A	P, T
Adapter (2 required)	Type BNC male to N male	HP 1250-1473	P
Adapter	Type N female to SMA female	Cablewave Systems No. 721	T
Adapter[4] (2 required)	Type N female to SMA male	Cablewave Systems No. 718	T
Cable	6 ft. 50Ω coaxial cable, Type R6-214, with Type N male connectors on both ends	HP 11500A	P
Cable (2 required)	6 ft. 50o coaxial cable, Type RG-214, with Type N male connector on one end and Type N female connector on the other end	HP 11501 A	P
Cable Set[3]	24 in. 50sf coaxial cable phase matched matched to a standard within ±2° at 1300 MHz with Type N male connectors on both ends	HP 11851A	P

*P = Performance; T = Troubleshooting

[1]This part is included in HP 11652A Transmission/Reflection Kit.

[2]These parts are included in HP 85032A 502 Type N Calibration Kit.

[3]These parts are included in HP 11851A RF Cable Kit.

4Part of HPI 1854A 50n BNC Accessory Kit

Table 4. Connectors that Mate with 8502A Ports

Connector	Industry Identification	HP Part Number	Alternate Sources and Part Numbers
J1	Type N male, UG-216/U	1250-0882	Bendix, No. 30481-2 Specialty Connectors, No. 25P117-2
J2 Bias	Type BNC male, UG-88/U	1250-0256	Amphenol, No. 31-202-1021

22. Operating Environment

23. The operating environment should be within the following limits:

a. Temperature: o0 C (+32° F) to **550** C (+131°F)
b. Humidity: <959% relative
c. Altitude (Barometric): <15,000 feet (4,600 meters)

24. Storage and Shipment

25. Environment

26. The Model 8502A should be stored in a clean, dry environment. The following environmental limitations apply to both storage and shipment:

a. Temperature: --40 C (-400 F) to +750 C (+1670 F)
b. Humidity: <95% relative
c. Altitude (Barometric): <50,000 feet (15,300 meters)

27. Packaging for Shipment

28. Original Type Packaging. Containers and materials identical with those used in factory packing are available through Hewlett-Packard offices. If the instrument is being returned to Hewlett-Packard for servicing, attach a tag indicating the type of service required, return address, model number and full serial number. Also, mark the container FRAGILE to assure careful handling. In any correspondence, refer to the instrument by the model number and full serial number.

29. Other Packaging. The following general instructions should be used for re-packaging with commercially available materials.

a. Wrap the instrument in heavy paper or plastic. If shipping to Hewlett-Packard office or service center, attach a tag indicating the type of service required, return address, model number, and full serial number.

b. Use a strong shipping container. A doublewall carton made of 350-pound test material is adequate.

c. Use enough shock-absorbing material (3 to 4-inch layer) around all sides of the instrument to provide firm cushion and prevent movement inside the container. Protect the front of the instrument with cardboard.

d. Seal the shipping container securely.

e. Mark shipping container FRAGILE to assure handling.

f. In any correspondence, refer to instrument by model number and full serial number.

30. OPERATION

31. Panel Features

32. Front and rear panel controls and connectors are illustrated and functionally described in Figure 4.

33. Incoming Inspection

34. The test given in Figure 5 is primarily designed to meet the needs of incoming inspection.

The test will prove that the HP Model 8502A Transmission/Reflection Test Set is functioning correctly, and tests that the most critical specification, directivity, is within the specification.

If a test for each detailed specification is required, then go to the performance test section beginning with Paragraph 35 and run each test.

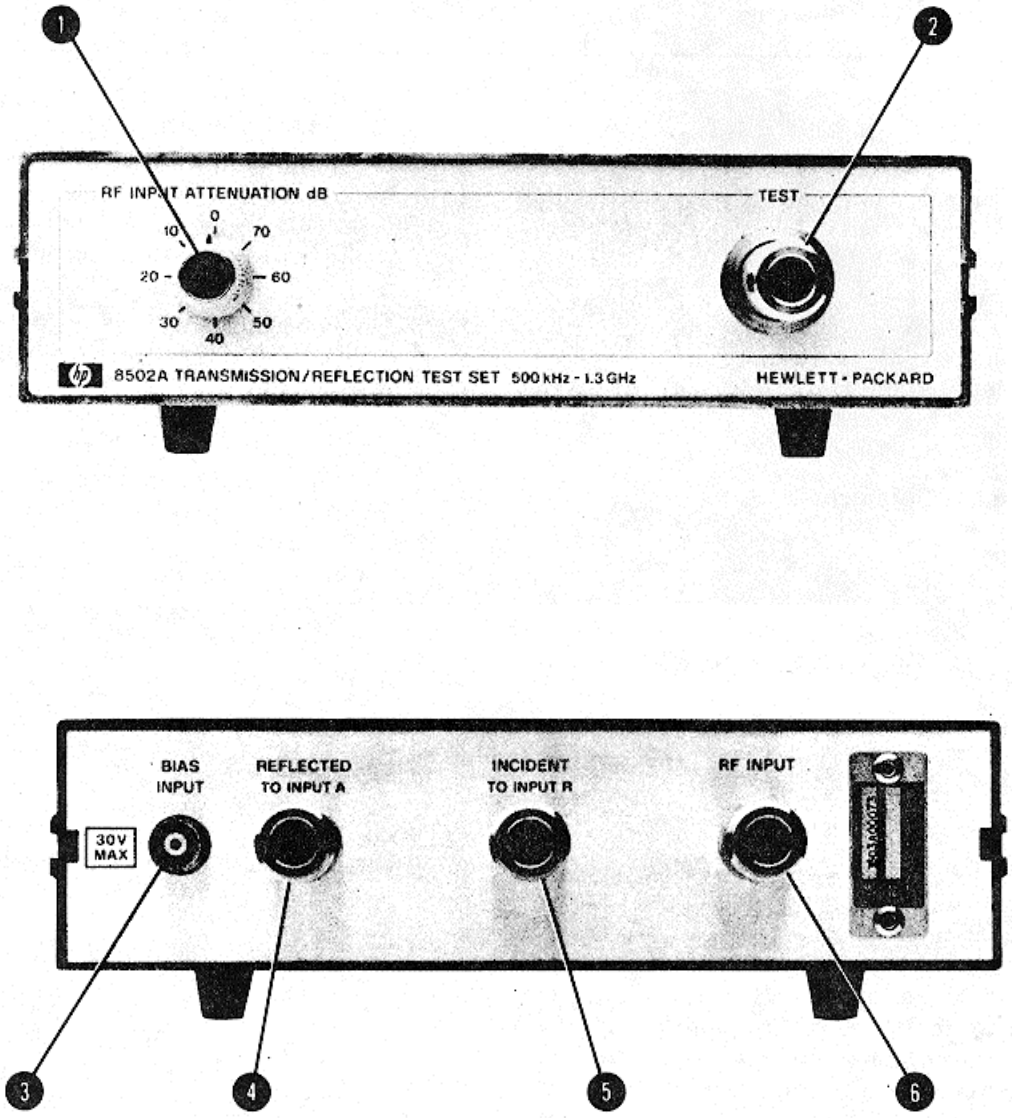


Figure 4. 8502A Front and Rear Panel Controls, Connectors and Case Bottom (1 of 2)

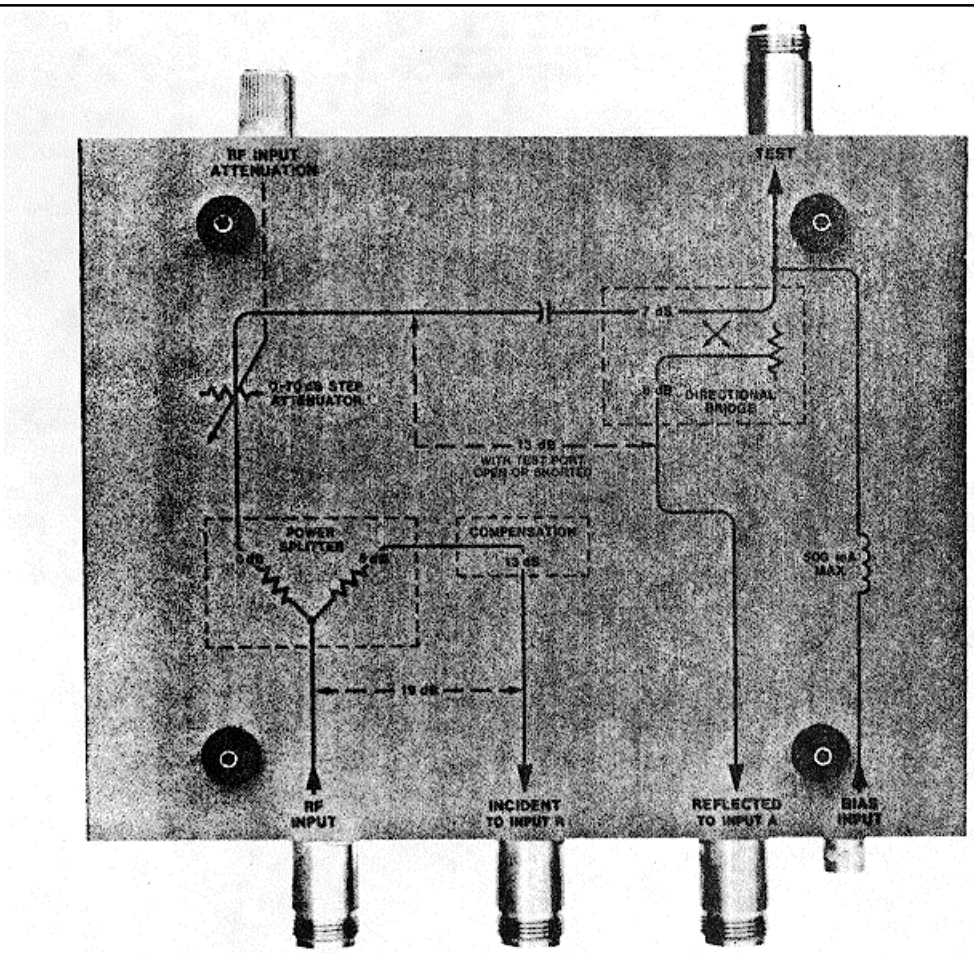


(1) RF INPUT ATTENUATION dB knob. Selects attenuation in test signal path.

(2) **TEST connector J1.** Provides mainline output signal to unit under test. Reflected signals from unit under test are also routed back through TEST port.

(3) **BIAS INPUT connector J2**. Provides means to bias center conductor of TEST port when bias required by unit under test.

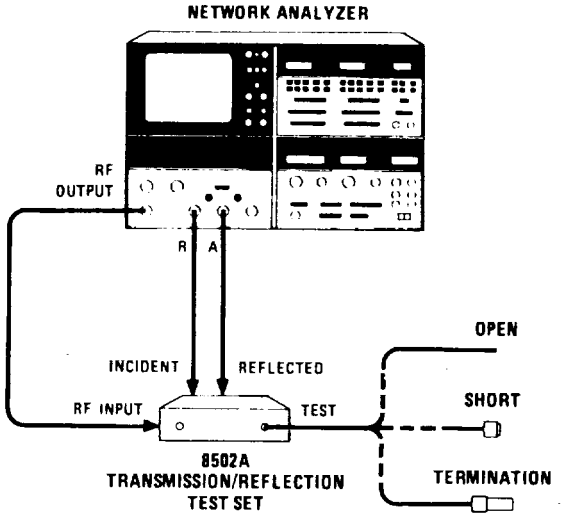
(4) **REFLECTED TO INPUT A connector J3.** Output signal from this port is proportional to the signal reflected back into the TEST port by the device under test.

(5) **INCIDENT TO INPUT R connector J4.** Output signal from this port is incident with main line signal and provides reference signal for ratio measurements.

(6) RF INPUT connector J5. Signal source connected to this port.

Figure 4. 8502A Front and Rear Panel Controls, Connectors and Case Bottom (2 of 2)

INCOMING INSPECTION TEST



EQUIPMENT:

Network Analyzer .....HP 8505A
Type N Male Short .....HP 11512A
50r2 Type N Male Termination with < 1.005 SWR* .....HP 909A
Option 012 and H69

*Part of IIP 85032A 50S Type N Calibration Kit.

PROCEDURE:

a. Set 8505A controls as follows:

A I Source/Converter:
OUTPUT LEVEL dBm ..... -10
OUTPUT LEVEL Vernier..... 0
INPUT LEVEL MAX ..... -10

A2 Frequency Control:
RANGE MHz ..... LIN .5 - 1300
MODE LIN FULL
WIDTH ..... START/STOP 1
SCAN TIME SEC 1-.1
TRIGGER ..... AUTO
MARKER Switch..... 1
MARKER Vernier..... Mid-range
FREQUENCY MHz START..... 0
FREQUENCY MHz STOP..... 1300

Figure 5. Incoming Inspection Test (1 of 3)

INCOMING INSPECTION TEST

PROCEDURE (Cont'd):

A3 Signal Processor:
Channel 1:
INPUT ..... A/R
MODE ..... MAG
SCALE/DIV ..... 20 dB
Channel 2:
MODE ..... OFF

Electrical Length:
MODE ..... OFF

b. Set 8502A RF INPUT ATTENUATION control to 0 dB.

c. Connect equipment as shown in test setup with TEST port open.

d. On 8505A CRT display, depress REF LINE POSN pushbutton. Adjust CH I control until trace is positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

e. Place 8505A Frequency Control MARKER I on center graticule.

f. To calibrate the system for directivity measurements, attach short directly to 8502A TEST port. On 8505A Signal Processor Channel I press DISPLAY MKR then ZRO pushbuttons to place marker on reference line and to zero digital readout.

NOTE

The termination must be properly seated in the connector with the tightening nut correctly aligned. If the termination is not properly seated, low directivity will be measured, and the measurement will not be repeatable.

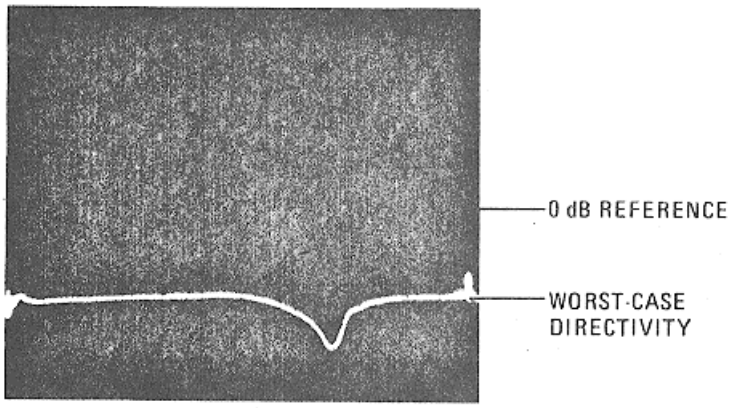
g. To measure the directivity of the 8502A, remove the short and replace it with a *50*Ω termination HP 909A, Option 012 and H69. The SWR of the termination must be <1.005 (>52 dB Return Loss).

(1) Move 8505A Frequency Control MARKER I control to worst-case directivity as indicated on CRT (the point closest to calibration line as shown in the waveform).

(2) Read worst-case directivity from 8505A Signal Processor Channel 1 digital display. The indication should be ≥40 dB below the 0 dB reference level (-40 dB or below).

Figure 5 . Incoming Inspection (2 of 3)

INCOMING INSPECTION TEST



NOTE

If the worst-case directivity appears to be less than 40 dB, then remove the termination. Observe the 8505A digital marker readings with the TEST port open, then shorted. The average value between the digital marker readings (open and shorted) is the true reference at that frequency. Replace the termination. The directivity is the difference between the true reference and the digital reading taken with the termination.

Figure 5. Incoming Inspection Test (3 of 3)

35. PERFORMANCE TESTS

36. Introduction

37. The procedures in this section test the electrical performance of the instrument using the specifications of Table 1 as the performance standards. All tests can be performed without access to the interior of the instrument. A simpler incoming inspection test is included in Paragraph 33.

38. The performance test procedures should be performed in the sequence given. If a function fails to operate, go to Paragraph 71, Troubleshooting to find which major assembly or cable has failed.

39. Equipment Required

40. Equipment required for the performance tests is listed in the Recommended Test Equipment in Table 3. Any equipment that satisfies the critical specifications given in the table may be substituted for the recommended model.

41. Test Record

42. Results of the performance tests may be tabulated on the Test Record at the end of the procedures (Table 6). The Test Record lists all of the tested specifications and their acceptable limits. Test results recorded at incoming inspection can be used for comparison in troubleshooting and after repairs.

PERFORMANCE TESTS

NOTE

Allow one hour warm-up time on 8505A Network Analyzer before making the Performance Tests.

43. DIRECTIVITY TEST

SPECIFICATION:

Directivity: >40 dB

DESCRIPTION:

Directivity is tested using the internal coupler to measure the reflection coefficient of a standard termination. 'The termination return loss is much greater than the directivity, therefore the resultant measurement is the approximate coupler directivity.

The Directivity Test has been used for the Incoming Inspection Test. The test setup, equipment and procedures needed to test the directivity specifications are found in Figure 5, Incoming Inspection Test.

44. TRANSMISSION FREQUENCY RESPONSE TEST

SPECIFICATION:

Transmission Frequency Response: $\underline{<+}$0.8 dB Mag
$\underline{<+}$8° Phase ($\underline{+}$ degress tested as deviation from linear phase)

44. TRANSMISSION FREQUENCY RESPONSE TEST (Cont'd)

DESCRIPTION:

The frequency response of the 8505A Network Analyzer System is first recorded with a grease pencil on the CRT display. The 8502A is connected and the transmission frequency response is superimposed over the reference grease pencil trace. The difference in the two traces is the transmission frequency response of the 8502A.

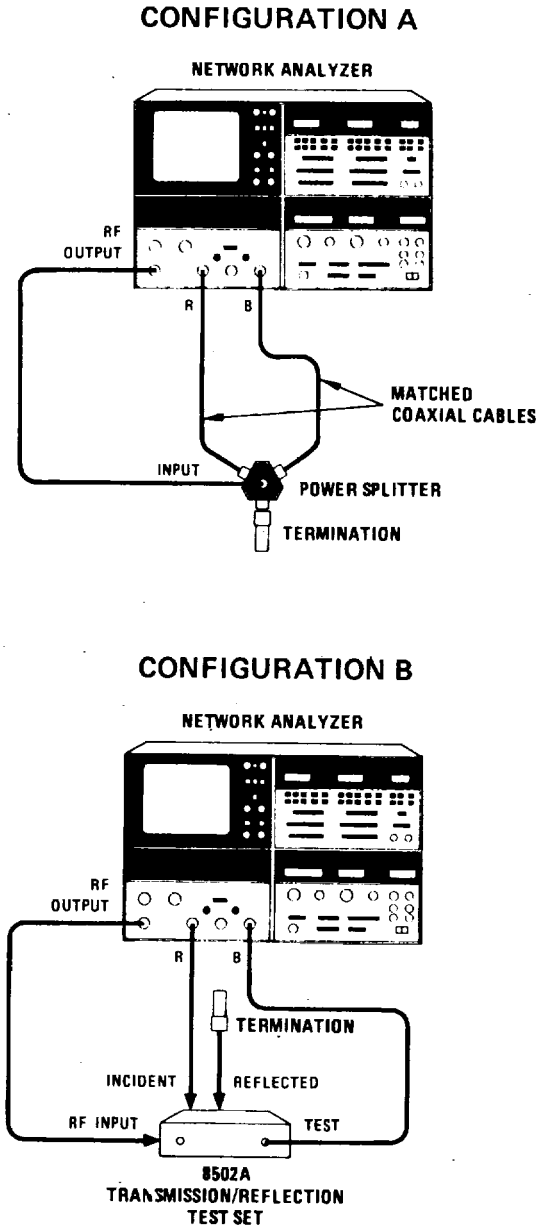


Figure 6. Transmission Frequency Response Test Setup

44. TRANSMISSION FREQUENCY RESPONSE TEST (Cont'd)

EQUIPMENT:

Network Analyzer	HP 8505A
3-Way Power Splitter	HP 11850A
5052 Type N Male Termination	HP 909A Option 012
Matched Type N Male Coaxial Cable Kit	HP 1851A

PROCEDURE:

a. Set 8505A controls as follows:

A1 Source/Converter:

OUTPUT LEVEL dBm	-10
OUTPUT LEVEL Vernier	0
INPUT LEVEL MAX	-10

A2 Frequency Control:

RANGE MHz	5-1300
MODE	LIN FULL
WIDTH	START/STOP 1
SCAN TIME SEC	1-1
TRIGGER	AUTO
MARKERS Switch	1
MARKER Vernier	Mid-range
FREQUENCY MHz START	0
FREQUENCY MHz STOP	1300
SCAN TIME SEC Vernier	Mid Position

A3 Signal Processor:

Channel 1:

INPUT	B/R
MODE	MAG
SCALE/DIV	.2 dB

Channel 2:

INPUT	B/R
MODE	PHASE
SCALE/DIV	90 DEG

Electrical Length:

INPUT	B
MODE	X10

Display Section:

BW	10 kHz
Video Filter	OFF

b. Connect equipment as shown in Figure 6, Configuration A.

44. TRANSMISSION FREQUENCY RESPONSE TEST (Cont'd)

c. On 8505A CRT display, depress REF LINE POSN pushbutton. Adjust CH I and CH 2 controls until traces are positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

d. On 8505A Signal Processor turn Channel 2 MODE switch to OFF.

e. To determine the magnitude frequency response of the Network Analyzer, place 8505A Frequency Control MARKER I on center graticule:

(1) On the 8505A Signal Processor Channel 1 press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

(2) Grease pencil the trace on the CRT.

f. To measure the transmission magnitude frequency response of the 8502A connect equipment as shown in Figure 6, Configuration B.

(1) Set 8502A RF INPUT ATTENUATION control to zero dB.

(2) On 8505A Signal Processor Channel 1 press REF OFFSET pushbuttons to center the display around the grease pencil magnitude trace.

(3) Measure the maximum difference between the grease pencil trace and the display trace (Figure 7). This measured value should be <0.8 dB.

g. To determine the phase frequency response of the Network Analyzer connect equipment as shown in Figure 6, Configuration A:

(1) Remove CRT grease pencil traces from previous test.

(2) Turn 8505A Signal Processor Channel I MODE switch to OFF and Channel 2 MODE switch to PHASE.

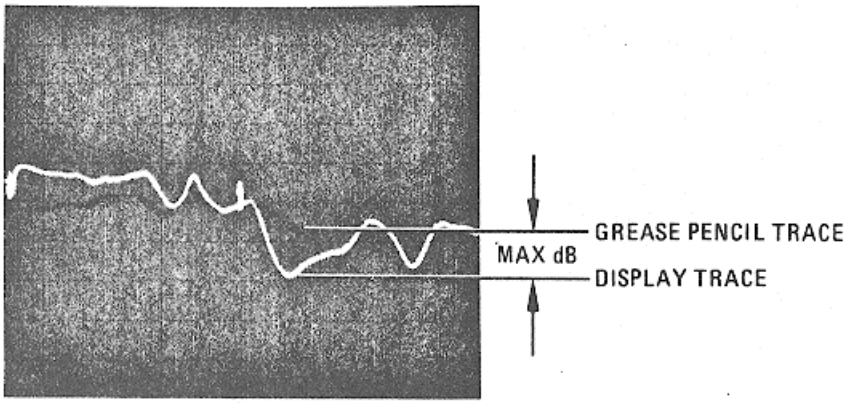

Figure 7. Transmission Frequency Response Magnitude

44. TRANSMISSION FREQUENCY RESPONSE TEST (Cont'd)

(3) On the 8505A Signal Processor Electrical Length, press the LENGTH pushbuttons and adjust VERNIER B control to display a horizontal trace on the CRT.

(4) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 2 DEG.

(5) On the 8505A Signal Processor Channel 2 press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

(6) Grease pencil the trace on the CRT.

h. To measure the transmission phase frequency response of the 8502A connect equipment as shown in Figure 6, Configuration B.

(1) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 90 DEG.

(2) On 8505A Signal Processor Electrical Length press the LENGTH pushbuttons and adjust VERNIER B control to display a horizontal trace on the CRT.

(3) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 2 DEG and repeat step h (2).

(4) On 8505A Signal Processor Channel 2 press MKR and ZRO pushbuttons.

(5) On 8505A Signal Processor Channel 2 press the REF OFFSET pushbuttons to center the display around the grease pencil phase trace.

(6) Measure the maximum difference between the grease pencil trace and the display trace (Figure 8). This measured value should be <8°.

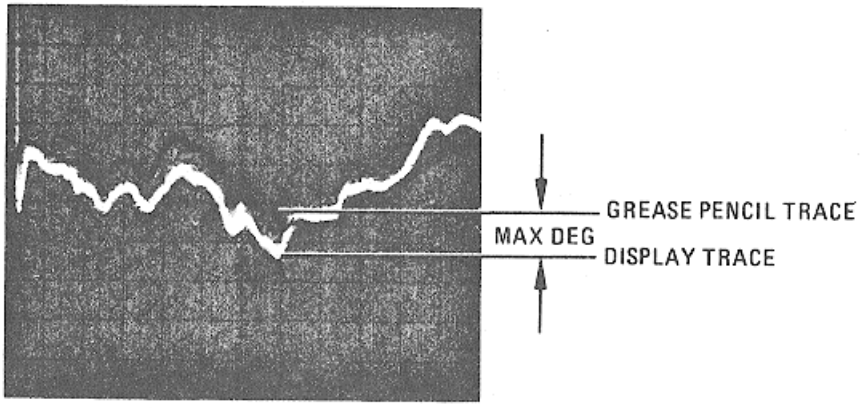

Figure 8. Transmission Frequency Response Phase

45. REFLECTION FREQUENCY RESPONSE TEST

SPECIFICATION:

≤±1.5 dB Mag from 0.5 to 1300 MHz
≤±15° Phase from 0.5 to 1300 MHz
≤±10° Phase from 2 to 1300 MHz

DESCRIPTION:

The reflection frequency response of the 8505A Network Analyzer system is first recorded with a grease pencil on the CRT display. The 8502A is connected and the reflection frequency response is superimposed over the reference grease pencil trace. The difference in the two traces is the reflection frequency response of the 8502A.

CONFIGURATION A

CONFIGURATION B

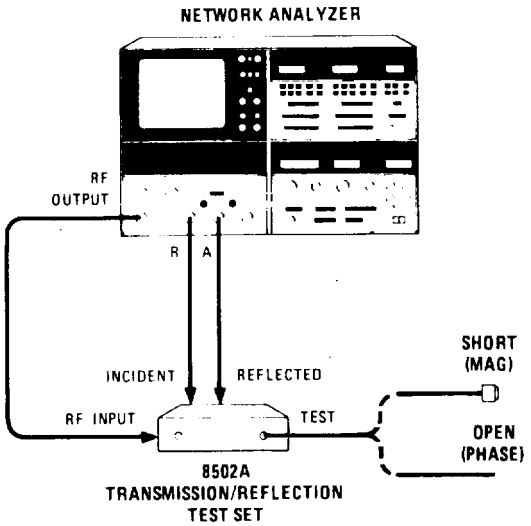

Figure 9. Reflection Frequency Response Test Setu4p (2 of 2)

EQUIPMENT

Network Analyzer	HP 8505A
3-Way Power Splitter	HP I 850A
5052 Type N Male Termination	HP 909A Option 012
Matched Type N Male Coaxial Cable Kit	HP 11851 A
Type N Male Short	HP 11512A

PROCEDURE:

a. Set 8505A controls as follows:

A1 Source/Converter:

OUTPUT LEVEL dBm	-10
OUTPUT LEVEL Vernier	0
INPUT LEVEL MAX	-10

45. REFLECTION FREQUENCY RESPONSE TEST (Cont'd)

A2 Frequency Control:

RANGE MHz	5 - 1300
MODE	LIN FULL
WIDTH	START/STOP 1
SCAN TIME SEC	1 --.01
TRIGGER	AUTO
MARKERS Switch	1
MARKER Vernier	Mid-range
FREQUENCY MHz START	0
FREQUENCY MHz STOP	1300

A3 Signal Processor:

Channel 1:

INPUT	A/R
MODE	MAG
SCALE/DIV	5 dB

Channel 2:

INPUT	A/R
MODE	PHASE
SCALE/DIV	90 DEG

Electrical Length:

INPUT	A
MODE	X1

b. Connect equipment as shown in Figure 9, Configuration A.

c. On 8505A CRT display, depress REF LINE POSN pushbutton. Adjust CH I and CH 2 controls until traces are positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

d. On 8505A Signal Processor turn Channel 2 MODE switch to OFF.

e. To determine the magnitude frequency response of the Network Analyzer move 8505A Frequency Control MARKER I to center graticule:

(1) On the 8505A Signal Processor Channel I press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

(2) Grease pencil the trace on the CRT.

f. To measure the reflection magnitude frequency response of the 8502A connect equipment as shown in Figure 9, Configuration B with TEST port shorted.

(1) Set 8502A RF INPUT ATTENUATION control to 0 dB.

(2) On 8505A Signal Processor Channel 1 press REF OFFSET pushbuttons to center the display around the grease pencil magnitude trace.

45. REFLECTION FREQUENCY RESPONSE TEST (Cont'd)

(3) Measure the maximum difference between the grease pencil trace and the display trace (Figure 10). This measured value should be 1.5 dB for the entire 0.5 to 1300 MHz frequency range.

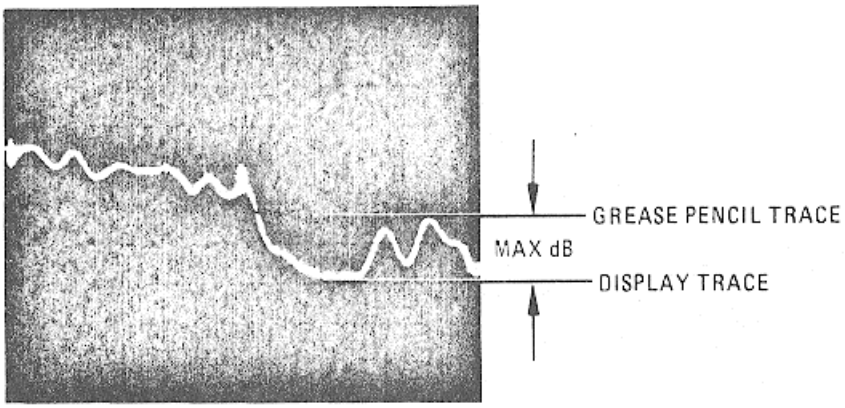

Figure 10. Reflection Frequency Response Magnitude

g. To determine the phase frequency response of the Network Analyzer for the full 0.5 to 1300 MHz frequency range connect equipment as shown in Figure 9, Configuration A:

(1) Remove CRT grease pencil trace from previous test.

(2) Turn 8505A Signal Processor Channel 1 MODE switch to OFF and Channel 2 MODE switch to PHASE.

(3) On the 8505A Signal Processor Electrical Length, press the LENGTH pushbuttons and adjust VERNIER A control to display a horizontal trace on the CRT.

(4) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 5 DEG and repeat step g (3).

(5) On the 8505A Signal Processor Channel 2 press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

(6) Grease pencil the trace on the CRT.

h. To measure the reflection phase frequency response of the 8502A connect equipment as shown in Figure 9, Configuration B with TEST port open.

(1) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 90 DEG.

(2) On 8505A Signal Processor ELECTRICAL LENGTH press the LENGTH pushbuttons and adjust VERNIER A control to display a horizontal trace on the CRT.

(3) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 5 DEG and repeat step h (2).

(4) On 8505A Signal Processor Channel 2 press MKR and ZRO pushbuttons.

PERFORMANCE TESTS

45. REFLECTION FREQUENCY RESPONSE TEST (Cont'd)

(5) On 8505A Signal Processsor Channel 2 press the REF OFFSET pushbuttons to center the display around the grease pencil phase trace.

(6) Measure the maximum difference between the grease pencil trace and the display trace (Figure 11). This measured value should be 6<15° for the entire 0.5 to 1300 MHz frequency range.

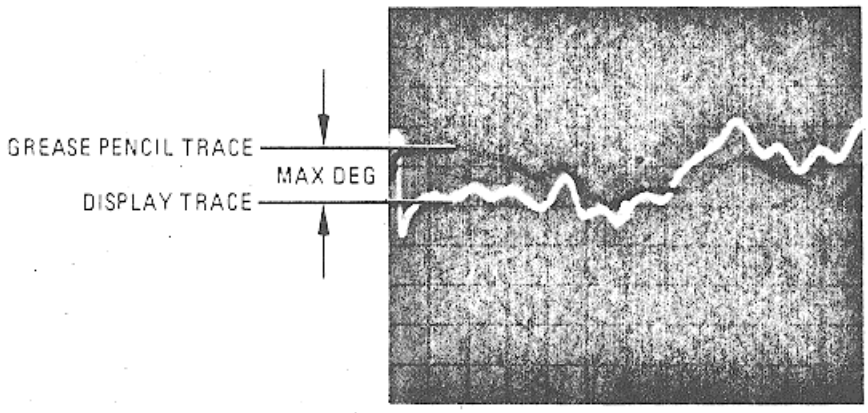

Figure 11. Reflection Frequency Response Phase

i. To determine the phase frequency response of the Network Analyzer for the 2 to 1300 MHz frequency range, connect equipment as shown in Figure 9, Configuration A:

(1) Remove CRT grease pencil trace from previous test.

(2) On 8505A Frequency Control set MODE switch to LIN EXPAND.

(3) Set 8505A Frequency Control FREQUENCY MHz START control to 2 and FREQUENCY MHz STOP control to 1300.

(4) Set 8505A Signal Processor Channel 2 SCALE/DIV switch to 90 DEG.

(5) Repeat steps g (3) through g (6).

j. To measure the reflection phase frequency response of the 8502A connect equipment as shown in Figure 9, Configuration B with TEST port open.

(1) Repeat steps h (1) through h (5).

(2) Measure the maximum difference between the grease pencil trace and the display trace (Figure 11). This measured value should be $\leq$ 10° for the 2 to 1300 MHz frequency range.

(3) Remove grease pencil trace from CRT.

46. TEST PORT OPEN/SHORT RATIO TEST

SPECIFICATION:

Test Port Open/Short Ratio:
< ± 0.9 dB Mag and < ± 7.5° Phase from 1000 to 1300 MHz
< ± 0.75 dB Mag and < ± 6° Phase from 2 to 1000 MHz
< ± 1.25 dB Mag and < ± 10° Phase from 0.5 to 2 MHz

DESCRIPTION:

Magnitude open/short ratio and Phase open/short ratio for frequencies above 2 MHz are measured using the reflections generated by a short through a 6-ft. coaxial cable which is connected to the 8502A TEST port. Peak-to-peak readings are taken from the CRT trace to determine the actual open/short ratio while the effect of the return loss of the cable used is accounted for. To compensate for the added line length on the 8502A TEST port, a 12-ft. coaxial cable is connected from the 8502A INCIDENT port to the 8505A R Channel. For frequencies below 2 MHz, the TEST port is directly shorted, then opened, and this ratio is read directly from the CRT trace.

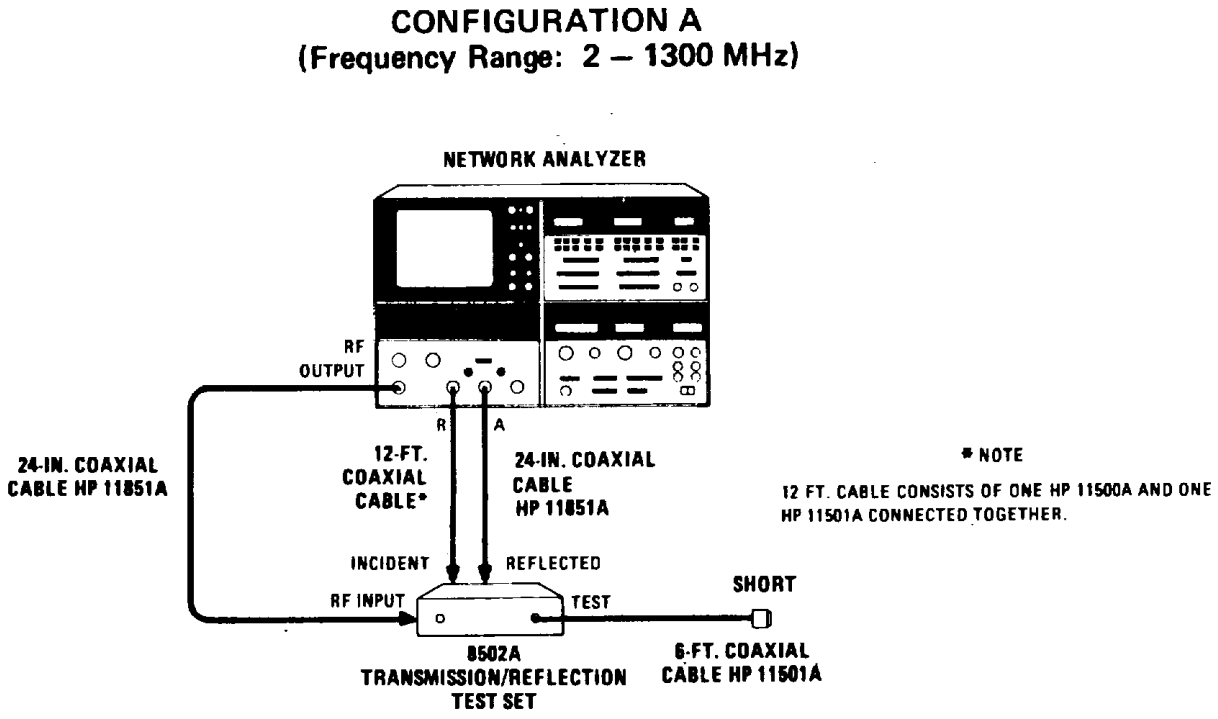

Figure 12. TEST Port Open/Short Ratio Test (1 of 2)

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

CONFIGURATION B
(Frequency Range: 0.5 — 2 MHz)

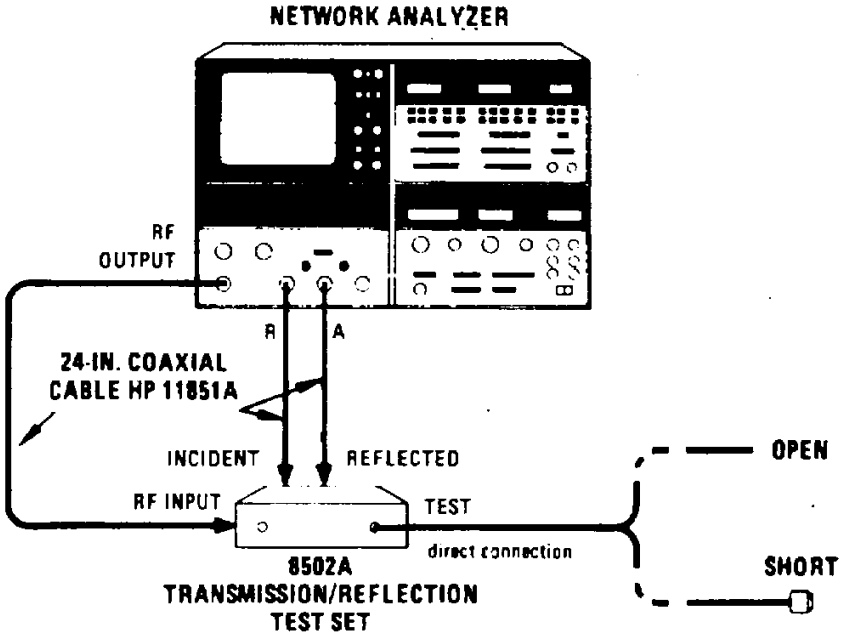

Figure 12. TEST Port Open/Short Ratio Test (2 of 2)

EQUIPMENT:

Network Analyzer	HP 8505A
Type N Male Short	HP 11512A
6-Ft. Coaxial Cable, Type RG-214, with Type N Male Connector on One End and Type N Female Connector on the Other end (2 required)	HP 11501 A
6-Ft. Coaxial Cable, Type RG-214, with Type N Male Connectors on Each End	HP 11500A
24-In. *5052* Matched Coaxial Cable with Type N Male Connectors on Each End (3 required)	HP 11851A

PROCEDURE:

a. Set 8505A controls as follows:

All Source/Converter:

OUTPITT LEVEL dBm	-10
OUTPUJT LEVEL Vernier	.0
INPUPT LEVEL MAX	-10

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

A2 Frequency Control:
- RANGE MHz ..... .5 — 1300 MHz
- MODE ..... LIN EXPAND
- WIDTH ..... START/STOP
- SCAN TIME SEC ..... 1 —.1
- TRIGGER ..... AUTO
- FREQUENCY MHz START 1000
- FREQUENCY MHz STOP 1300
- MARKER Vernier ..... Clockwise

A3 Signal Processor:

Channel 1:
- INPUT ..... A/R
- MODE ..... MAG
- SCALE/DIV ..... .5 dB

Channel 2:
- INPUT ..... A/R
- MODE ..... PHASE
- SCALE/DIV ..... 5 DEG

Electrical Length:
- INPUT ..... A
- MODE X10

b. Set 8502A RF INPUT ATTENUATION control to 20 dB.

c. Connect equipment as shown in Figure 12, Configuration A.

d. On 8505A CRT display, depress REF LINE POSN pushbutton. Adjust CH 1 and CH 2 controls until traces are positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

e. On 8505A Signal Processor turn Channel 2 MODE switch to OFF.

f. To measure the TEST port open/short magnitude ratio between 1000 and 1300 MHz move 8505A Frequency Control MARKER I to center graticule.

(1) On the 8505A Signal Processor Channel 1 press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

(2) Measure the maximum peak-to-peak variation on the display (Figure 13) and record the results:

Magnitude: 1000 to 1300 MHz = _____ dB

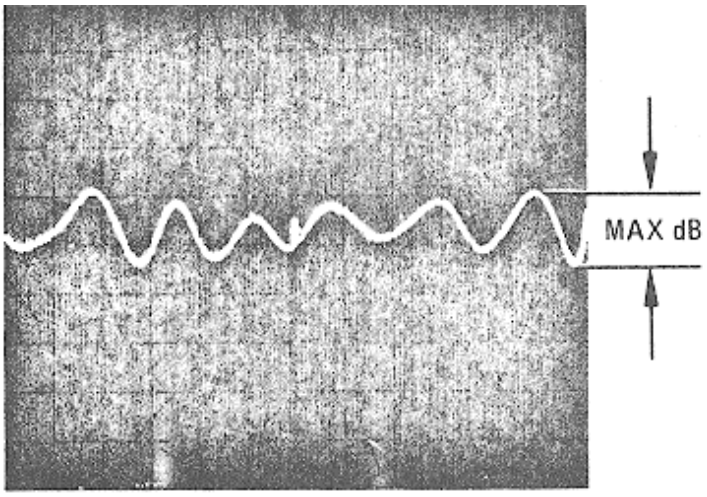

Figure 13. TEST Port Open/Short Ratio Magnitude >2 MHz

NOTE

If a peak-to-peak measurement is made in an area where there is some slope, a corrected reading can be obtained by connecting two adjacent upper peaks with a dotted line. Extend a vertical line up from the lower peak until it intersects the dotted line. This constructed vertical line is the averaged or corrected peak-to-peak measurement to be used (Figure 14). Avoid making peak-to-peak measurements at extreme slope changes.

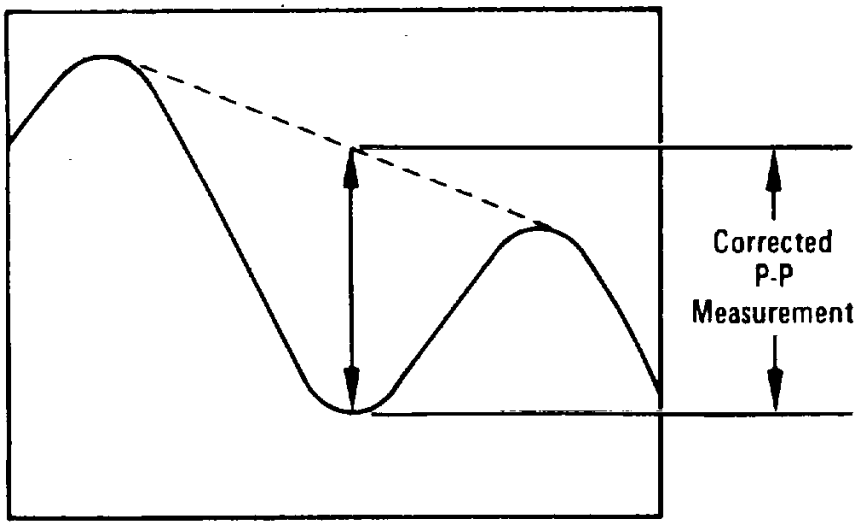

Figure 14. Slope Peak-To-Peak Measurement

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

g. Calculate the actual maximum open/short magnitude ratio for the 1000 to 1300 MHz frequency range by dividing the measured value (recorded previously) by the reflection coefficient of the test cable used (Table 5, Column 1000 MHz), or:

$$\frac{\text{MEASURED VALUE dB}}{\text{REFLECTION COEFFICIENT OF TEST CABLE}} = \text{ACTUAL OPEN/SHORT RATIO MAGNITUDE}$$

The actual open/short ratio magnitude for 1000 to 1300 MHz should be <1.8 dB (< ± -.9 dB).

Table 5. Loss of Typical Coaxial Cable Used for 6-Ft. "Test" Cable

Cable Type	600 MHz	1000 MHz
	ρ for 12-Ft. (out & back)	ρ for 12 Ft. (out & back)
RG-214/u	0.91	0.88
RG-58/u	0.91	0.88
RF-218/u	0.96	0.95

h. To measure the TEST port open/short phase ratio between 1000 and 1300 MHz:

(1) Set 8505A Signal Processor Channel 1 MODE switch to OFF and Channel 2 MODE switch to PHASE.

(2) On 8505A Signal Processor Channel 2 press DISPLAY MKR and ZRO pushbuttons to place marker on reference line and to zero digital readout.

(3) On 8505A Signal Processor ELECTRICAL LENGTH, press the LENGTH pushbuttons and adjust VERNIER A control to display a horizontal trace on the CRT. If necessary you can change 8505A Signal Processor Channel 2 SCALE/DIV switch to a lower sensitivity to position trace to a horizontal position, then return it to PHASE 5 DEG setting before going on with test.

(4) On 8505A Signal Processor Channel 2, press REF OFFSET pushbuttons to move trace to a readable position on the CRT.

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

(5) Measure the maximum peak-to-peak variation on the display (Figure 15) and record the results (See Figure 14):

PHASE: 1100 to 1300 MHz = _____ DEG

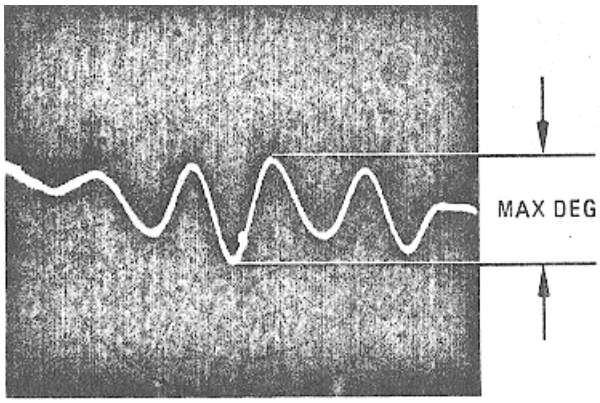

Figure 15. TEST Port Open/Short Ratio Phase >2 MHz

i. Calculate the actual maximum open/short ratio phase for the 1000 to 1300 MHz frequency range by dividing the measured value (recorded above) by the reflection coefficient of the test cable used (Table 5, Column 1000 MHz), or:

$$\frac{\text{MEASURED VALUE DEG}}{\text{REFLECTION COEFFICIENT}} = \text{ACTUAL OPEN/SHORT RATIO PHASE OF TEST CABLE}$$

The actual open/short ratio phase for 1000 to 1300 MHz should be < 15° (< ± 7.5°).

j. To measure the TEST port open/short magnitude ratio between 2 and 1000 MHz:

(1) Set 8505A Frequency Control FREQUENCY MHz START control to 2 and FREQUENCY MHz STOP control to 1000.

(2) Set 8505A Signal Processor Channel 2 MODE switch to OFF and Channel 1 MODE switch to MAG.

(3) Repeat step f except that the measured value for the frequency range 2 to 1000 MHz = _____ dB.

(4) To calculate the actual open/short magnitude for the 2 to 1000 MHz frequency range, repeat step g except use the 600 MHz column in Table 5 to find the reflection coefficient of the test cable used. The actual open/short ratio magnitude for 2 to 1000 MHz should be 6 < 1.5 dB(< ± .75 dB).

46. TEST PORT OPEN/SHORT RATIO (Cont'd)

k. To measure the TEST port open/short ratio phase between 2 and 1000 MHz:

(1) Repeat step h except that the measured value for the frequency range 2 to 1000 MHz = _____ dB.

(2) To calculate the actual open/short ratio phase for 2 to 1000 MHz frequency range, repeat step i except use the 600 MHz column in Table 5 to find the reflection coefficient of the test cable used. The actual open/short ratio phase for 2 to 1000 MHz should be < 12° (<± 6°).

l. To measure magnitude and phase open/short ratios below 2 MHz connect equipment as shown in Figure 12, Configuration B with TEST port open.

(1) Set 8505A Frequency Control RANGE MHz switch to .5 — 13.

(2) Set 8505A Frequency Control FREQUENCY MHz START control to 00.50 and FREQUENCY MHz STOP control to 02.00.

(3) Set 8505A Signal Processor Channel 2 MODE switch to PHASE.

(4) On 8505A CRT display, depress REF LINE POSN pushbutton. Adjust CH 1 and CH 2 controls until traces are positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

(5) On 8505A Signal Processor Channel 1 and Channel 2 press MKR then ZRO pushbuttons to bring trace to on-screen position.

(6) On 8505A Frequency Control set Frequency Counter MHz MARKER 1 to beginning of sweep on CRT.

(7) On 8505A Signal Processor Channel 1 and Channel 2 press MKR then ZRO pushbuttons to place marker on reference line and to zero digital readout.

(8) Set 8505A Signal Processor Channel 2 MODE switch to OFF.

m. To measure the TEST port open/short ratio magnitude between 0.5 and 2 MHz:

(1) Attach short directly to TEST port.

(2) 8505A Signal Processor Channel 1 MKR digital display should indicate < 2.50 dB (<± 1.25 dB).

n. To measure the TEST port open/short ratio phase between 0.5 and 2 MHz:

(1) Remove the short from the 8502A TEST port.

(2) Set 8505A Signal Processor Channel 1 MODE switch to OFF and Channel 2 MODE switch to PHASE.

46. TEST PORT OPEN/SHORT RATIO TEST (Cont'd)

(3) On 8505A Signal Processor Electrical Length, press the LENGTH pushbuttons and adjust A VERNIER A control to display a horizontal trace on the CRT. If necessary, change 8505A Signal Processor Channel 2 SCALE/DIV switch to a lower sensitivity to position trace to a horizontal position, then return it to PHASE 5 DEG setting before going on with test.

(4) On 8505A Signal Processor Channel 2 press MKR then ZRO then DISPLAY REF pushbuttons.

(5) On 8505A Signal Processor Channel 2 press REF OFFSET pushbuttons to indicate +180 DEG on digital display.

(6) On 8505A Signal Processor Channel 2 press DISPLAY MKR pushbutton.

(7) Attach short directly to 8502A TEST port.

(8) Digital display should indicate < 20° (< ± 10°).

47. TEST PORT RETURN LOSS TEST

SPECIFICATION:

TEST port return loss: > 26 dB from 2 to 1300 MHz
> 20 dB from 0.5 to 2 MHz

DESCRIPTION:

Perform the Directivity (Incoming Inspection Test, Figure 5) and the Open/Short Ratio (Paragraph 46) Tests. These two tests confirm that the TEST port Return Loss of the 8502A is within specification. If a more direct and accurate test is required for the TEST port Return Loss specification, refer to the 8507A Accuracy Enhancement Program (AIM) procedure for the method of making an error-corrected return loss measurement. An 8542B Automatic Network Analyzer may also be used to make this measurement between 100 and 1300 MHz.

48. PORT RETURN LOSS TESTS

SPECIFICATIONS:

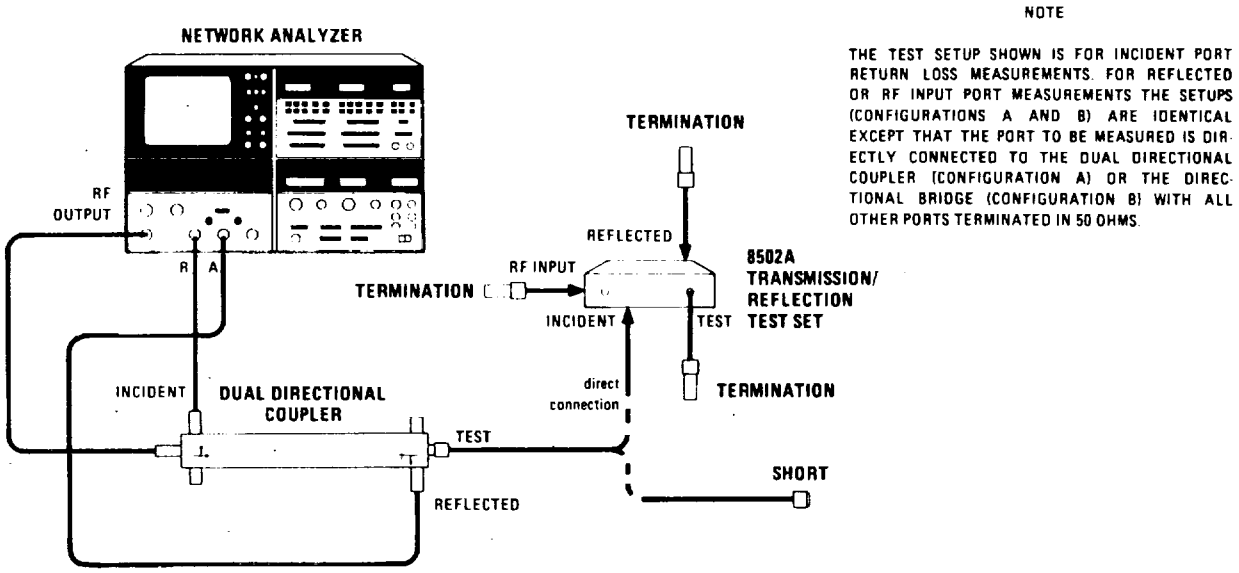
INCIDENT Port Return Loss:	> 23 dB from 1000 — 1300 MHz > 25 dB from 100 — 1000 MHz > 25 dB from 2 — 100 MHz > 23 dB from 0.5 — 2 MHz
REFLECTED Port Return Loss:	> 23 dB from 1000 — 1300 MHz > 25 dB from 100 — 1000 MHz > 25 dB from 2 — 100 MHz > 23 dB from 0.5 — 2 MHz
RF INPUT Port Return Loss:	> 23 dB from 100 — 1300 MHz > 23 dB from 0.5 — 100 MHz

DESCRIPTION:

The system is calibrated by shorting or opening the main line TEST port of the Directional Coupler to establish a 0 dB reference line on the CRT display. The INCIDENT, REFLECTED or RF INPUT port of the 8502A is then connected in place of the short to the Dual Directional Coupler or Directional Bridge with all other ports terminated in 50 ohms. The Return Loss is measured directly with the 8505A MARKER digital display and the CRT trace. When using this method to measure Return Loss, ambiguity due to "imperfect" directivity of the directional device is introduced. The ambiguity of the measurement may be as great as ± 2 dB. If a more direct and accurate test is required to the port Return Loss specifications, refer to the 8507A Accuracy Enhancement Program (AIM) procedure for the method of making an error-corrected Return Loss measurement.

48. PORT RETURN LOSS TESTS (Cont'd)

CONFIGURATION A
(Frequency Range: 100 — 1300 MHz)



CONFIGURATION B
(Frequency Range: 0.5 – 100 MHz)

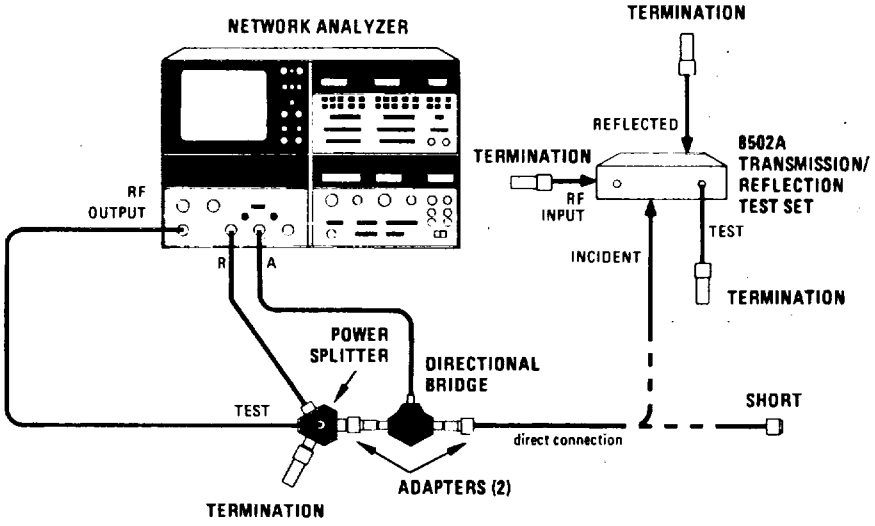


Figure 16. INCIDENT, REFLECTED, and RF INPUT Port Return Loss Test Setups

48. PORT RETURN LOSS TESTS (Cont'd)

EQUIPMENT:

Network Analyzer	HP 8505A
Dual Directional Coupler	HP 778D
Directional Bridge *	HP 8721A
3-Way Power Splitter	HP 11850A
Type N Female Short	HP 11511A
50Ω Type N Male Termination (4 required)	HP 909A Option 012
Type N Male to BNC Male Adapter (2 required)	HP 1250-1473 *

*Part of HP 11652A Transmission/Reflection Kit.
**Part of HP 11854A 50Ω BNC Accessory Kit.

PROCEDURE:

a. Set 8505A controls as follows:

A1 Source/Converter

OUTPUT LEVEL dBm	-10
OUTPUT LEVEL Vernier	0
INPUT LEVEL MAX	-10

A2 Frequency Control

RANGE MHz	0.5 — 1300 MHz
MODE	LIN EXPAND
WIDTH	START/STOP 1
SCAN TIME SEC	.1 — .01
VERNIER	Counterclockwise
TRIGGER	AUTO
MARKERS Switch	1
FREQUENCY MHz START	100
FREQUENCY MHz STOP	1300
MARKER 1	1000

A3 Signal Processor:

Channel 1:

INPUT	A/R
MODE	MAG
SCALE/DIV	20 dB

Channel 2:

MODE	OFF

Electrical Length:

MODE	OFF

b. Set 8502A RF INPUT ATTENUATION control to 20 dB.

c. For INCIDENT port return loss measurements connect equipment as shown in Figure 16, Configuration A with no connection to mainline TEST port of Directional Coupler.

48. PORT RETURN LOSS TESTS (Cont'd)

d. On 8505A display, depress REF LINE POSN pushbutton. Adjust CH 1 control until trace is positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

e. Set 8505A Frequency Control MARKERS switch to 2.

f. Place 8505A Frequency Control MARKER 2 on center graticule.

g. To calibrate the system for Return Loss measurement, attach short directly to Dual Directional Coupler mainline TEST port. On 8505A Signal Processor Channel 1, press DISPLAY MKR then ZRO pushbuttons to place MARKER 2 on reference line and to zero digital readout.

h. To measure the INCIDENT port return loss for the frequency range 1000 to 1300 MHz:

(1) Remove short and connect Dual Directional Coupler directly to 8502A INCIDENT port with RF INPUT, REFLECTED, and TEST ports terminated.

(2) Move 8505A Frequency Control MARKER 2 control to worst-case, Return Loss between 1000 and 1300 MHz as indicated on CRT. (This is the point closest to calibration line right of 1000 MHz MARKER I as shown in Figure 17.)

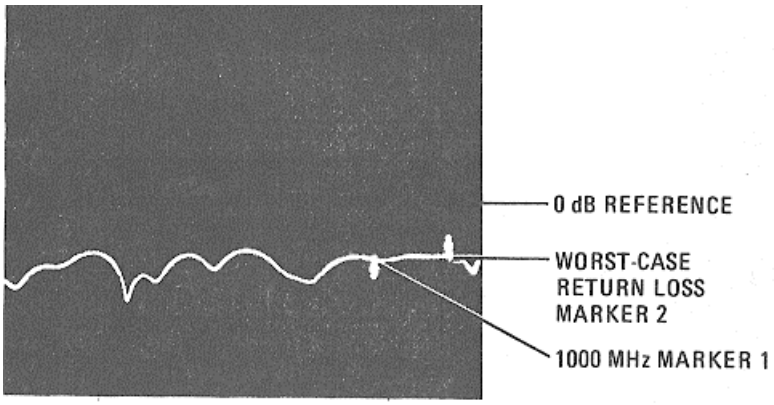

Figure 17. INCIDENT Port Return Loss (1000 to 1300 MHz)

(3) Read worst-case Return Loss from 8505A Signal Processor Channel 1digital display. The indication should be >23 dB below the zero dB reference level for the frequency range 1000 to 1300 MHz.

i. To measure the INCIDENT port Return Loss for the frequency range 100 to 1000 MHz:

(1) Move 8505A Frequency Control MARKER 2 control to worst-case Return Loss between 100 and 1000 MHz as indicated on CRT. (The point closest to calibration line to left of 1000 MHz MARKER as shown in Figure 18.)

48. PORT RETURN LOSS TESTS (Cont'd)

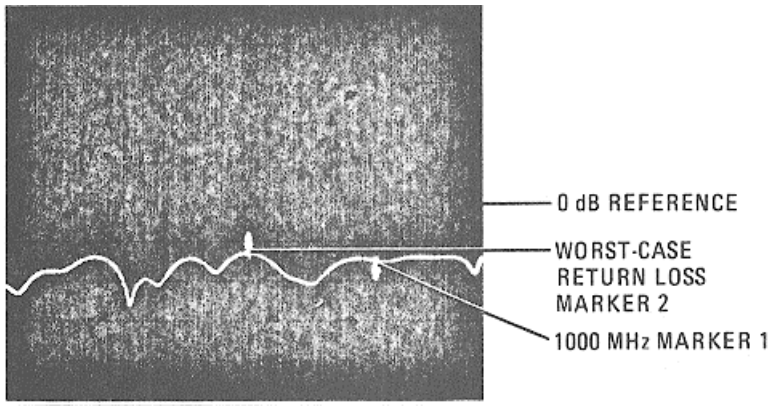

Figure 18. INCIDENT Port Return Loss (100 to 1000 MHz)

(2) Read worst-case Return Loss from 8505A Signal Processor Channel 1 digital display. The indications should be >25 dB below the zero dB reference level for the frequency range 100 to 1000 MHz.

j. To determine the INCIDENT port Return Loss for the frequency range 2 to 1000 MHz connect equipment as shown in Figure 16, Configuration B with LOAD port on Directional Bridge shorted. Set 8505A Frequency Control RANGE MHz switch to .5 — 130. Adjust FREQUENCY MHz START control to 002.0 and FREQUENCY MHz STOP control to 100.0.

k. To calibrate the system for Return Loss measurements:

(1) On 8505A CRT display, push REF LINE POSN pushbutton and adjust CH 1 control until trace is positioned to center of screen. Press REF LINE POSN pushbutton again to return system to normal operation.

(2) Set 8505A Frequency Control MARKERS switch to 1 and adjust MARKER 1 control to center graticule.

(3) On 8505A Signal Processor Channel I press DISPLAY MKR and ZRO pushbuttons to place MARKER 1 on reference line and to zero digital readout.

l. To measure the INCIDENT port Return Loss for 2 to 100 MHz:

(1) Connect 8502A INCIDENT port directly to Directional Bridge LOAD Port with TEST, RF INPUT, and REFLECTED ports terminated.

(2) Move 8505A Frequency Control MARKER 1 control to worst-case Return Loss between 2 and 100 MHz as indicated on CRT. (This is the point closest to calibration line as shown in Figure 19.)

48. PORT RETURN LOSS TESTS (Cont'd)

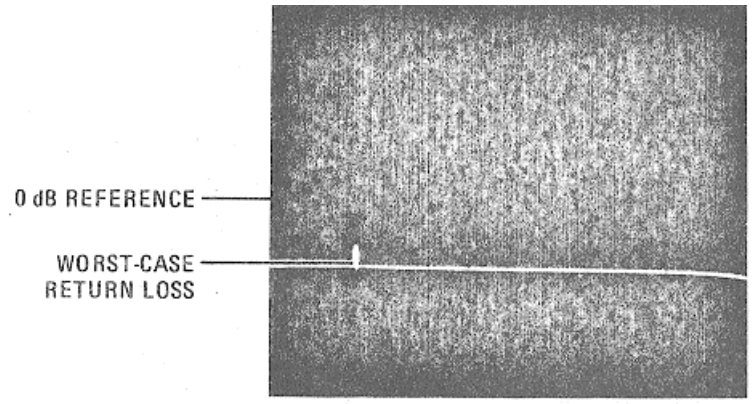

Figure 19. INCIDENT Port Return Loss (2 to 100MHz)

(3) Read worst-case Return Loss from 8505A Signal Processor Channel I digital display. The indications should be > 25 dB below the zero dB reference level for the frequency range 2 — 100 MHz.

m. To determine INCIDENT port Return Loss for the frequency range 0.5 to 2 MHz:

(1) Set 8505A Frequency Control RANGE MHz switch to .5 to 13. Adjust FREQUENCY START control to 00.50 and FREQUENCY STOP control to 02.00.

(2) Repeat steps k through I except that the indication should be >-23 dB below the zero dB reference level for the frequency range).5 to 2 MHz (Figure 20).

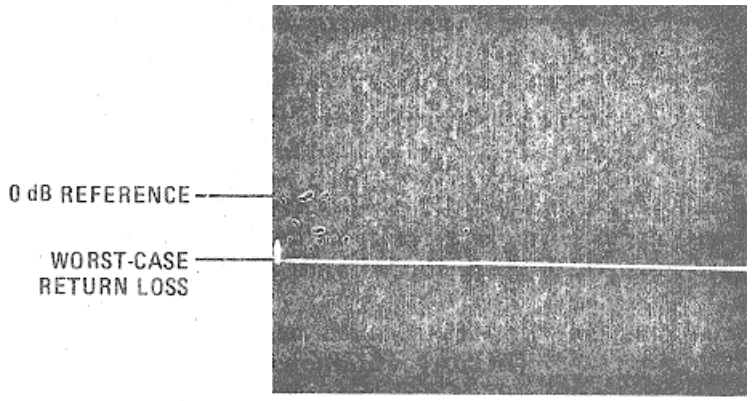

Figure 20. INCIDENT Port Return Loss (0.5 to 2 MHz)

48. PORT RETURN LOSS TESTS (Cont'd)

n. For REFLECTED port Return Loss measurements repeat steps a - m, except directly connect the REFLECTED port to the Dual Directional Coupler (Figure 16, Configuration A) or the Directional Bridge (Figure 16, Configuration B) with RF INPUT, INCIDENT, and TEST ports terminated in 50 ohms. The worst-case Return Loss measurements should be:

> 23 dB from 1000 — 1300 MHz
> 25 dB from 100 — 1000 MHz
> 25 dB from 2 — 100 MHz
> 23 dB from 0.5 — 2 MHz

o. For RF INPUT port Return Loss measurements repeat steps a - m, except directly connect the RF INPUT port to the Dual Directional Coupler (Figure 16, Configuration A) or the Directional Bridge (Figure 16, Configuration B) with REFLECTED, INCIDENT, and TEST ports terminated in 50 ohms. The worst-case Return Loss measurements should be:

> 23 from 100 — 1300 MHz
> 23 from 0.5 — 100 MHz

49. ADJUSTMENTS

50. No adjustments are necessary for the HP Model 8502A Transmission/Reflection Test Set.

51. REPLACEABLE PARTS

52. Replaceable parts are listed in Table 7 and identified in Figure 21. Parts of Type N Connector Assembly (J3, J4, and J5) are shown in Figure 22. 8502A attaching hardware (screws, washers, etc.) is listed and identified in Figure 23.

53. Ordering Instructions

54. To order a part listed in Table 7 or Figure 23, quote the Hewlett-Packard part number, indicate quantity desired, and address the order to the nearest Hewlett-Packard office. Do not try to replace any parts not listed.

The 50-ohm Bridge/Power Splitter Assembly A1 and the Input Step Attenuator Assembly A2 are not field repairable and each must be replaced as an assembly.

Table 7. 8502A Replaceable Parts

Reference Designation	HP Part Number	Qty	Description

55. SERVICE

56. Module Exchange Program

57. Factory repaired exchange modules are available for modules that are not field-repairable. In addition, repaired exchange modules are available for major sub-assemblies as an alternate method of repair. The factory repaired modules are available at a considerable savings in cost over the cost of a new model.

58. Those exchange modules should be ordered from the nearest Hewlett-Packard Sales/Service office using the part numbers in Table 7, Replaceable Parts.

59. Case Disassembly

60. Place the HP Model 8502A top side down on a flat surface. Squeeze top and bottom of case together by applying pressure at end being opened. Using a small screw driver, push each "zipper" lock toward the rear panel (Figure 24) until you are able to grasp it firmly with your thumb and index finger. Pull the "zippers" from the 8502A case, then lift the case bottom from the instrument.

61. To reassemble the HP Model 8502A, replace the case bottom and squeeze top and bottom of case, together at end being "zipped." Slide the "zippers" into their slots from the rear panel toward the front panel.

62. Step Attenuator and Directional Bridge Removal Procedure

63. Disassemble case as described in Paragraph 59 and proceed as follows:

a. Remove attenuator knob using a .050 Allen wrench.

b. Remove RF connector body (outer shell) and dress washer from TEST port using a special 9/16 open-end wrench (HP Part Number 8710-0877).

c. Remove four pozi-drive screws from Main Deck (MP7).

d. Remove cables W1, W2, and W3 from Directional Bridge A1. (See Figure 21.) Use 5/16 open-end wrench to loosen cable connectors.

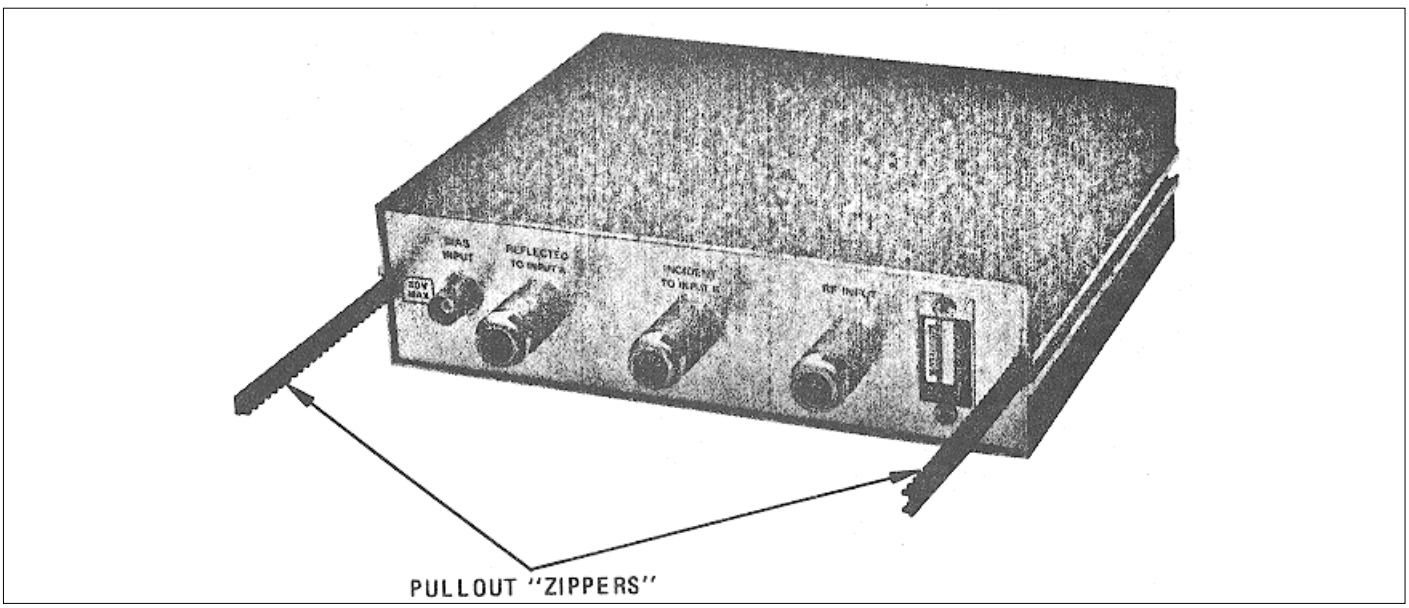

Figure 24. Model 8502A Case Disassembly

APPENDIX B

COMPONENTS OF END ITEM LIST

Section I. INTRODUCTION

B-1. Scope

The appendix lists integral components of and basic issue items for Transmission/Reflection Test Set, HP Model 8502A to help you inventory items required for safe and efficient operation.

B-2. General

This components of End Item List is divided into the following sections:

a. Section II. Integral Components of the End Item. These items, when assembled, comprise the Transmission/Reflection Test Set, HP Model 8502A and must accompany it whenever it is transferred or turned in. The illustrations referenced will help you identify these items.

b. Section III. Basic Issue Items. Not applicable.

B-3. Explanation of Columns

a. Illustration. This column is divided as follows:

(1) Figure number. Indicates the figure number of the illustration on which item is shown.

(2) Item number. The number used to identify item called out in the illustration.

b. National Stock Number. Indicates the National Stock Number assigned to the item and which will be used for requisitioning.

c. Description. Indicated the Federal item name and, if required, a minimum description to identify the item. The part number indicated the primary number used by the manufacturer, which controls the design and characteristics of the item by means if its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items. Following the part number, the Federal Supply Code for Manufacturers (FSCM) is shown in parentheses.

d. Location. The physical location of each item listed is given in the column. The lists are designed to inventory all items in one

area of the major item before moving in to an adjacent area.

e. Usable on Code. Not applicable.

f. Quantity Required (Qty Reqd). This column lists the quantity of each item required for a complete major item.

g. Quantity. This column is left blank for use during the inventory. Under the Revd column, list the quantity you actually receive on your major item. The Date columns are for your use when you inventory the major item.

SECTION II. INTEGRAL COMPONENTS OF END ITEM

APPENDIX D

MAINTENANCE ALLOCATION

Section I. INTRODUCTION

D-1. General

This appendix provides a summary of the maintenance operations for Transmission/Reflection Test Set HP Model 8502A. It authorizes categories of maintenance for specific maintenance function on repairable items and components and the tools and equipment required to perform each function. This appendix may be used as an aid in planning maintenance operations.

D-2. Maintenance Function

Maintenance functions will be limited to and defined as follows:

a. Inspect. To determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination.

b. Test. To verify serviceability and to detect incipient failure by measuring the mechanical or electrical characteristics of an item and comparing those characteristics with prescribed standards.

c. Service. Operations required periodically to keep an item in proper operating conditions; ie., to clean (decontaminate), to preserve, to drain, to paint, or to replenish fuel, lubricants, hydraulic fluids, or compressed air supplies.

d. Adjust. To maintain, within prescribed limits, by bringing into proper or exact position, or setting the operating characteristics to specified parameters.

e. Aline. To adjust specified variable elements of an item to bring about optimum or desired performance.

f. Calibrate. To determine and cause corrections to be made or to be adjusted in instruments or test measuring and diagnostics equip-

ments use in precision measurement. Consists of comparison of two instruments, one in which is a certified standard of known accuracy of the instrument being compared.

i. Install. The act of emplacing, seating, or fixing into position an item, part, module (component or assembly) in a manner to allow the proper functioning of the equipment or system.

h. Replace. The act of substituting a serviceable like type part, subassembly, or module (component or assembly) for an unserviceable counterpart.

i. Repair. The application of maintenance services (inspect, test, service, adjust, aline, calibrate, replace) or other maintenance actions (welding, grinding, riveting, staightening, facing, remachining, or resurfacing) to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system. This function does not include the trial and error replacement of running spare type items such as fuses, lamps, or electron tubes.

j. Overhaul. That maintenance effort (service/action) necessary to restore an item to a completely serviceable/operational condition as prescribed by maintenance standards (i.e., DMWR) in appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to like new condition.

k. Rebuild. Consists of thise services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of materiel maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (hours, miles, etc.) considered in classifying Army equipments/components.

D-3. Column Entries

a. Column 1, Group Number. Column 1 lists group numbers, the purpose of which is to indentify components, assemblies, subassemblies,

and modules with the next higher assembly.

b. Column 2, Component/Assembly. Column 2 contains the noun names of components, assemblies, subassemblies, and modules for which maintenance is authorized,

c. Column 3, Maintenance Functions. Column 3 lists the functions to be performed on the item listed column 2. When items are listed without maintenance functions, it is solely for purpose of having the group numbers in the MAC and RPSTL coincide.

d. Column 4, Maintenance Category. Column 4 specifies, by the listing of a "work time" figure in the appropriate subcolumn(s), the lowest level of maintenance authorized to perform the function listed in column 3. This figure represents the active time required to perform that maintenance function at the indicated category of maintenance. If the number or complexity of the tasks within the listed maintenance function vary at different maintenance categories, appropriate "work time" figures will be shown for each category. The number of task-hours specified by the "work time" figure represents the average time required to restore an item (assembly, subassembly, components, module, end item or system) to a serviceable condition under typical field operating conditions. This time includes preparation time, troubleshooting time, and quality assurance/quality control time in addition to the time required to perform the specific tasks indentified for the maintenance function authorized in the maintenance allocation chart. Subcolumns of column 4 are as follows:

C - Operator/Crew
O - Organizational
F - Direct Support
H - General Support
D- Depot

e. Columns 5, Tools and Equipment. Column 5 specifies by code, those common tools sets (not individual tools) and special tools, test, and support equipment required to perform the designated function.

f. Column 6, Remarks. Column 6 contains as alphabetic code which leads to the remark in section IV, Remarks, which is pertinent

to the item opposite the particular code.

D-4. Tool and Test Equipment Requirements (Sec III)

a. Tool and Test Equipment Reference Code. The numbers in this column coincide with the numbers used in the tools and equipment column of the MAC. The numbers indicate the applicable tool or test equipment for the maintenance functions.

b. Maintenance Category. The codes in this column indicate the maintenance category allocated the tool or test equipment.

c. Nomenclature. This column lists the noun name and nomenclature of the tools and test functions.

d. National/NATO Stock Number. This column lists the National/ NATO Stock Number of the specific tool or test equipment.

e. Tool number. This column lists the manufacturer's part number of the tool followed by the Federal Supply Code for manufacturers (5 digit) in parentheses.

D-5. Remarks (Sec IV)

a. Reference Code. This code refers to the appropriate item in section II, column 6.

b. Remarks. This column provides the required explanatory information necessary to clarify items appearing in section II.

MANUAL IDENTIFICATION
Model Number: 8502A
Date Printed: OCTOBER 1979
Part Number: 08502-90001

This supplement contains important information for correcting manual errors and for adapting the manual to instruments containing improvements made after the printing of the manual.

To use this supplement, make all ERRATA corrections and all appropriate serial number related changes indicated in the tables below.

SERIAL PREFIX OR NUMBER	MAKE MANUAL CHANGES
2025A and 2028A	1

SERIAL PREFIX OR NUMBER	MAKE MANUAL CHANGES

►NEW ITEM

ERRATA

►Page 2, Table 1:
Under Port Match: Change "Test Port Return Loss*:" to "Test Port Equivalent Source Match (Ratio Mode)*:".

►Page 28, PERFORMANCE TESTS:
Change test heading 47 to read: TEST PORT EQUIVALENT SOURCE MATCH (RATIO MODE).

NOTE

Manual change supplements are revised as often as necessary to keep manuals as current and accurate as possible. Hewlett-Packard recommends that you periodically request the latest edition of this supplement. Free copies are available from all HP offices. When requesting copies, quote the manual identification information from your supplement, or the model number and print date from the title page of the manual.

- Page 38,' Table 7:
  Change A2 (first listing) to HP Part Number 5086-7363, CD9.
  Change A2 (second listing) description to: "Restored 5086-7363, Requires Exchange".

CHANGE 1

Page 38, Table 7:
Change MP6 to 08502-00013, CD4.
Change MP7 to 08502-00012, CD3.

By Order of the Secretary of the Army:

JOHN A. . WICKHAM JR.
General, United States Army
Chief of Staff

Official:

DONALD J. DELANDRO
Brigadier General, United States Army
The Adjutant General

Distribution:

To be distributed in accordance with special list.

e. Carefully slide Main Deck assembly out far enough to clear the three RF cables and turn it over.
f. Remove four pozi-drive screws from Directional Bridge A1 and two pozi-drive screws from Step Attenuator A2.
g. Carefully remove Main Deck with Front panel attached and set aside.
h. remove cables W4 and W5 from Directional Bridge A1 and Step Attenuator A2. (see Figure 21.)
i. If replacing Directional Bridge A1, unsolder bias input lead at terminal on A1.

64. Step Attenuator and Directional Bridge Installation Procedure

65. This procedure assumes that the 8502A has been disassembled as described in Paragraph 63. To reassembly 8502A, proceed as follows:
a. Connect cable W4 (longest of the two U-shaped cables) to connector farthest from control shaft on Step Attenuator A2. Do not tighten connection.
b. Connect cable W5 go connector closest to control shaft on Step Attenuator A2. Do no tighten connection.
c. Connect cables W4 and W5 to Directional Bridge A1 with control shaft of Step Attenuator and TEST port (J1) of Directional Bridge facing the same direction. Tighten the four connectors on W4 and W5 with fingers only.
d. Position Main Deck over top of A1/A2 assemblies and align Step Attenuator mounting holes on Main Deck. Fasten Step Attenuator using two 4-40 screws (HP Part Number 2200-0105) and two flat washers (HP Part Number 3050-0105). Make certain that bias input lead is not pinched between Step Attenuator and Main Dec.
e. Install dress washer and RF connector body (outer shell) on TEST port and tighten with special 9/16 open-end wrench.
f. Loosely fasten Directional Bridge to Main Deck using four 6-32 screws (HP Part Number 2360-0331) and four flat washers (HP Part Number 2190-0815).
g. With thumb on end of TEST port and fingers at rear edge of Main Deck, apply a squeezing force to make certain that Front Panel is held tightly against Main Deck. Tighten Directional Bridge mounting screws while still squeezing.
h. Turn Main Deck assembly over and carefully slide it into the 8502A top case (upside down on flat surface).
i. Connect cables W1, W2, and W3 to Directional Bridge A1. (See Figure 21).
j. Carefully tighten all RF connectors on A1 and A2 assemblies using a 9/16 open-end wrench.

Avoid damaging connectors. Tighten connect nuts until snug; do NOT overtighten

k. Fasten Main Deck to 8502A case using four 4-40 screws (HP Part Number 2200-0103) and four flat washers (HP Part Number 3050-0105). Make certain that bias input lead is not pinched between main Deck and case.
l. Solder bias input lead to terminal on Directional Bridge (feed-through capacitor) if not already connected.
m. Install knob on front-panel RF INPUT ATTENUATION dB control. If position of control is unknown, tighten one set screw in knob and rotate control to fully clockwise position. Loosen set screw and set knob.
n. To reassemble 8502A case, refer to Paragraph 61.

69. The reflected signal from the unit under test is transmitted back through the 8502A TEST port and is coupled by an internal directional bridge to the REFLECTION port of the 8502A. This reflected current contains information such as source match, return loss, etc., of the unit under test.
70. A DC BIAS INPUT port can provide bias to the unit under test when bias is needed by coupling a DC signal to the center conductor of the TEST port.

71. Troubleshooting

72. A troubleshooting flow diagram (Figure 26) provides a step-by-step procedure to isolate the cause of malfunction and identify the defective assembly or component. An equivalent circuit diagram (Figure 27), and major assemblies locator (Figure 28), aid in troubleshooting to the component level.
73. After the defective component or assembly has been repaired or replaced, perform the incoming inspection test in Paragraph 33 (Figure 5) to confirm that the Model 8502A is again functioning properly.
74. test equipment and accessories required to troubleshoot and maintain the Model 8502A are listed in Table 3. If the equipment listed is not available, equipment that meets the minimum specifications shown may be substituted.
