SECTION III.	Special Tools List (Not applicable)	
SECTION IV.	National Stock Number and Part Number Index .....	136

**SECTION I  
INTRODUCTION**

**1. Scope**

This manual lists spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE), and other special support equipment required for performance of organizational, direct support, and general support maintenance of the ES-38B and ES-38C. It authorizes the requisitioning and issue of spares and repair parts as indicated by the source and maintenance codes.

**2. General**

This Repair Parts and Special Tools List is divided into the following sections:

a. Section II. Repair Parts List. A list of spares and repair parts authorized for use for the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in numeric sequence, with the parts in each group listed in figure and item number sequence.

b. Section III. Special Tools List. Not applicable.

c. Section IV. National Stock Number and Part Number Index. A list, National item identification number (NIIN) sequence, of National stock numbers (SN) appearing in the listing, followed by a list, in alphanumeric sequence, of all part numbers appearing in the listings. National stock numbers and part numbers are cross referenced to each illustration figure and item numbers appearance.

**3. Explanation of Columns**

a. Illustration. This column is divided as follows:

(1) Figure number. Indicates the figure number of the illustration on which the item is shown.

(2) Item number. The number used to identify item called out in the illustration.

(b) Source, Maintenance, and Recoverability (SMR) Codes.

(1) Source code. Source codes indicate the manner of acquiring support items for maintenance, repair, overhaul of end items. Source codes are entered in the first and second position of the Uniform SMR Code format as follows:

Code	Definition
PA	Item procured and stocked for anticipated or known usage.

PD—Support item, excluding support equipment procured for initial issue or outfitting and stocked only for subsequent or additional initial issues or outfittings. Not subject to automatic replenishment.

AF—Item to be assembled direct support maintenance level.

AH—Item to be assembled at general support maintenance level.

Code	Definition
AD	Item to be assembled at depot maintenance level.
XA	Item is not procured or stocked because requirement of the item will result in the replacement of the next higher assembly.
XD	A support item that is not stocked. When required, item will be procured through normal supply channels.

**NOTE**

Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded XA and aircraft support items restricted by AR 700-42.

(2) Maintenance code. Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the Uniform SMR Code format as follows:

(a) The maintenance code entered in the third position will indicate one of the following levels of maintenance:

Code	Application/Explanation
O	Support item is removed, replaced, used at the organizational level.
F	Support item removed, replaced, used at the direct support level.
H	Support item removed, replaced, used at the general support level.
D	Support items that are removed, replaced, used at depot, mobile depot, specialized repair activity only.

(b) The maintenance code entered in the fourth position indicates whether the item is to be repaired and identifies the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance function). This position will contain one of the following maintenance codes:

Code	Application/Definition
F	The lowest maintenance level capable of complete repair of the support item is the direct support level.
H	The lowest maintenance level capable of complete repair of the support item is the general support level.
D	The lowest maintenance level capable of complete repair of the support item is the depot level.
Z	Nonreparable. No repair is authorized.

(3) Recoverability codes. Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered

in the fifth position of the Uniform SMR Code format as follows:

Recoverability codes	Definition
Z --Nonreparable item.	When unserviceable, condemn and dispose at the level indicated in position 3.
F --Reparable item.	When uneconomically reparable, condemn and dispose at the direct support level.
H --Reparable item.	When uneconomically reparable, condemn and dispose at the general support level.
D --Reparable item.	When beyond lower level repair-capability return to depot. Condemnation and disposal not authorized below level.
L --Reparable item.	Repair, condemnation, and disposal not authorized below depot/specialized repair activity, level.
c. National Stock Number. Indicates the National stock number assigned the item and will be used for requisitioning purposes.	
d Part Number. Indicates the primary number used by-the manufacturer (individual, company, firm, corporation , or Government activity),which controls the design and characteristics of the item by means of its engineering, drawings, specifications, standards, and inspection requirements to identify an item or range of items.	

**NOTE**

When a stock numbered item is requisitioned, the repair part received may have a different part number than the part being replaced.

e. Federal Supply Code for Manufacturer (FSCM). The FSCM is a 5-digit numeric code listed m SB 708-42 which is used to identify the manufacturer, distributor, or Government agency, etc.

f. Description. Indicates the Federal item name and, if required, a minimum description to identify the item.

g. Unit of measure (UIM). Indicates the standard of the basic quality of the listed item as used in performing the actual maintenance function. This measure is expressed by a two character alphabetical abbreviation, (e.g., ea, in, pr, etc). When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required unit of measure will be requisitioned.

h. Quantity Incorporated in Unit. Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared functional group, subfunctional group, or an assembly.

**4. Special Information**

a. Detail assembly instructions for items source coded to be assembled are found in TM 11-6740-282-35. Assembly components are listed immediately following the item to be assembled.

b .The following publication pertain to the ES-38B

and ES-38C and their components:

**5. How to Locate Repair Parts**

a. When National stock number or part number is unknown.

(1) First. Using the table of contents, determine the functional group within which the item belongs. This is necessary since Illustrations are prepared for functional groups and listings are divided into the same groups.

(2) Second. Find the illustration covering the functional group to which the item belongs.

(3) Third. Identify the item on the illustration and note the illustration figure and item number of the item.

(4) Fourth. Using the Repair Parts Listing, find the figure and item number noted on the illustration.

b. When National stock number or part number known.

(1) First. Using the Index of National Stock Numbers and Part Numbers, find the pertinent National stock number or part number. This index is in sequence followed by a list of part numbers in alphameric sequence, cross-referenced to the illustration figure number and number.

(2) Second. After finding the figure and item number, locate figure and item number in the repair parts list.

**6. Abbreviations**

Not applicable.
