CIRCUIT CARD ASSEMBLY, DRUM CONTROLLER, PL-1384/UYQ  
ILLUSTRATED PARTS BREAKDOWN

SECTION I

INTRODUCTION

**1-1 GENERAL.** This Illustrated Parts Breakdown (IPB) Technical Manual (TM) lists and describes the items necessary for the support of the Circuit Card Assembly, Drum Controller, PL-1384/UYQ, 103945, a separate individual assembly used in conjunction with one or more Automated Communication Terminal configurations of the General Communications Network. The manual is divided into four sections: Section I, Introduction; Section II, Group Assembly Parts List (GAPL); Section III, Numerical Index; and Section IV, Reference Designation Index. It is used for requisitioning, storing, issuing and identifying parts. It is also used to illustrate assembly and disassembly relationships.

**1-2 SCOPE** This IPB TM reflects the listing of repair parts and/or assemblies. Under certain conditions, when ordering replacement parts, only a complete assembly or subassembly may be obtainable. Although the part or parts necessary are separately listed in the GAPL (Section II), and are under the specific assembly or subassembly, they cannot be obtained alone; i.e., Electrical Power Cable Assembly, Part No. 103207 (in the Expanded Power Supply Chassis - No. 103039-01).

**1-3 GROUP ASSEMBLY PARTS LIST.** This section contains the complete group assembly parts list separated into figures by main groups, or assemblies, and keyed to the associated illustration by figure and index numbers. The GAPL listing may be arranged in either seven or eight columns: Figure and Index Number; Reference Designation column alone or with a separate Locator column; Description of Item; Part Number; (Manufacturer's) Code Identification Number; Units per Assembly; and Usable on Code column.

**1-3.1 Figure and Index Number Column** The first item in the figure and index number column is the figure number of the illustration of the assembly listed. The figure number is not repeated thereafter except with the first item of listings continued on succeeding pages. The second number is the index number to key the part to the illustration callout. Identical parts occurring in the same general location on the equipment are illustrated and indexed but once. The relation of each part to its Next Higher Assembly (NHA) or main group is shown either by indention or by figure cross-reference note. However, since certain (particular) illustrations may be delineated by a grid pattern, certain index numbers (callouts) may be used to indicate the location of different components (more than one) within a particular grid subdivision. In other illustrations, multiple use of the same index callout number may be used; these illustrations may not necessarily have a grid pattern incorporated.

**1-3.2 Reference Designation Column.** This column contains all reference designations used in this IPB and assigned in the unit.

## 1-3.3 Locator Column.

or figure represents a circuit card or similar assembly which is subdivided by a grid pattern (usually delineated on the card assembly by the manufacturer). The alphanumeric code used in this column delineates the close location of the particular component(s). Where a letter may be absent in the code, this indicates an opted choice on the part of the designer to obviate possible error in identification. When both a letter and number code is absent, or a reference designation (sequential) is missing, this will indicate that either the component is not used or the particular grid space remains devoid of components.

1-3.4 Description Column. The names used are the same as those assigned on the manufacturing drawings or in the Defense Supply Agency Cataloging Handbook H6. Attaching parts are listed immediately below the items to which they attach. The relation of each part to its next higher assembly is either shown by indentation or cross reference. Where a descriptor declares "SAME AS xxx," this indicates that this line item is identical to its first appearance entry in the GAPL.

1-3.4.1 Indentation. Parts listed in this column are indented to indicate item relationship or NHA. The nomenclature of each assembly is followed in the list (except for attaching parts) by the nomenclature of its components indented one column to the right. This indentation indicates the relationship of the component to the assembly. To determine the next higher assembly of a part or assembly, note the column in which the first word of the nomenclature appears. The first item directly above, which appears one column to the left, is the NHA (except for attaching parts).

1-3.4.2 Cross-Reference The notation ("See Fig. for det breakdown") following the description of a part indicates that further breakdown of the part will be shown on the figure noted. The notation ("See Fig. for NH.") following the description of a part indicates that the correct assembly relationship of the part will be shown on the figure and index number noted.

## 1-3.5 Part Number Column.

1-3.5.1 Part numbers used in this column are selected according to the following order of preference: military standards, design activity numbers and vendor numbers. When a vendor's number is used and an alternate source is known, the alternate vendor and part number is also listed.

1-3.5.2 The part numbers in this manual have been converted by deleting all dashes and spaces between alphabetic and numerical characters. Further, all diagonals (/) denoting fractions in part numbers have been converted to dashes (-) and diagonals between alphabetic and numerical characters have been deleted.

1-3.6 Code Identification Column. The codes listed in this column comprise a five-digit code of the actual manufacturer. This is obtained in accordance with the Federal Supply Code for Manufacturer's Cataloging Handbooks H4-1 and H4-2 and any amendments thereto. Where a coded identification number is NOT

entered, the individual items responsibility remains that of prime contractor 52483, GTE Information Systems. An alpha numerical listing of the applicable manufacturer's codes for this IPB technical manual is included at the end of Section I, see Table 1-1.

1-3.7 Units Per assembly Column. The quantity shown in this column represents the units required for one next higher assembly or subassembly. The notation "REF" (reference) indicates this item has been previously listed under its next higher assembly. The "See Fig" notation in the description of the item will indicate the figure and index number at which the units per assembly can be determined.

1-3.8 Usable on Code Column Usable On Codes shall be employed to indicate specific usability items. The code used will be the same as the revision, i.e., "A" Usable On Code = Revision A, "G1" Usable On Code = Revision G1. The absence of a code indicates that this part is used in all models or revisions covered by this technical manual.

1-4 NUMERICAL INDEX. This section contains an alpha numeric listing of all parts that comprise the article.

1-4.1 Part Number Column. The order of precedence in beginning the part number arrangement on the first (left-hand) position of the part number is as follows:

Letters A through Z

Numerals 0 through 9

The second and succeeding positions of the part number from left to right are as follows:

- a. Space (blank column)
- b. Diagonal (slant)
- c. Point (period)
- d. Dash (-)
- e. Letters A through Z
- f. Numerals 0 through 9

Alphabetic "0's" are considered as numerical "zeros." "No Number" and "Commercial Parts" are listed in alphabetical sequence by the identifying noun in the part number column.

1-4.2 Figure and Index Number Column. The entries in this column provide a cross-reference by means of figure and index numbers to the listing of the part number in Section II (GAPL). The figure and index numbers for government standard and contractor standard hardware are listed showing the first appearance only in Section II.

1-4.3 **Quantity Per Article** The quantity shown in this column is the total quantity required for each article. The abbreviation "REF (reference) indicates that this item has been listed twice in Section II (GAPL), once under its next higher assembly with the total quantity used and once as a referenced item where a detail breakdown is listed.

1-4.4 **Source Code Column** Source codes are entered in the first and second positions of the uniform format and indicate to maintenance and supply personnel the source of acquisition for the item for replacement purposes, i.e. procured, stocked, manufactured, or assembled. Source codes, when and if assigned, are Source, Maintenance and Recoverability Codes assigned in accordance with NAVAIR INST 4423.2.

1-4.5 **Repair Code column.** The use of this column shall remain at the discretion of the prime contractor.

#### 1-5 REFERENCE DESIGNATION INDEX.

1-5.1 **The Reference Designation Index lists the electrical part reference designation numbers (first column) with their corresponding part numbers (third column) in an alphabetical and numerical sequence. This type of sequence differs from the alphanumeric sequence used described in paragraph 1-4.1 for the Numerical Index. This sequence is shown in the following example:**

B1  
W1  
1A1  
3A2R9  
3A2R10  
3A2R11  
etc.

1-5.2 **The figure and index numbers for locating a part in Section II (GAPL) appear opposite each reference designation number (in the second column). The part number remains in its original alphanumeric presentation,**

1-6 **ABBREVIATIONS** Abbreviations used in this manual are in accordance with MIL-STD-12-C.

1-7 **HOW TO USE THE ILLUSTRATED PARTS BREAKDOWN**

PICTORIAL REPRESENTATION  
GROUP NO. 00-0000-0-0

## WHEN THE PART NUMBER OR REFERENCE DESIGNATION IS KNOWN

- 1** When the part number is known, refer to Section III Numerical Index. Locate the part number and note the figure and index number assigned to the part number.
- 2** Turn to the figure number indicated and locate the index number referenced in the Numerical Index.
- 3** If a pictorial representation of the part, or its location is desired, refer to the same index number on the accompanying illustration.
- 4** When the reference designation is known, refer to Section IV Reference Designation Index. Locate the reference designation and note the figure and index number and the part number assigned.
- 5** Turn to the figure indicated and locate the index number referenced in the Reference Designation Index.
- 6** If a pictorial representation of the part, or its location is desired, refer to the same index number on the accompanying illustration.
