## ILLUSTRATED PARTS BREAKDOWN

SECTION I  
INTRODUCTION

1-1. GENERAL This Illustrated Parts Breakdown (IPB) lists and describes the items necessary for the support of the Test Set, Program, TS-3596/GYX. This chapter is divided into four sections: Section I, Introduction; Section II, Group Assembly Parts List (GAPL); Section III, Numerical Index; and Section IV, Reference Designation Index. It is used for requisitioning, storing, issuing and identifying parts. It is also used to illustrate assembly and disassembly relationships.

1-2. SCOPE. This IPB reflects the listing of repair parts and/or assemblies. Under certain conditions, when ordering replacement parts, only a complete assembly or subassembly may be obtainable, e.g., matched parts. Programmed memory IC's are obtainable only from the prime contractor.

1-3. GROUP ASSEMBLY PARTS LIST This section contains the complete group assembly parts list separated into figures by main groups, or assemblies, and keyed to the associated illustration by figure and index numbers. The GAPL listing is arranged into seven columns: Figure and Index Number; Reference Designation column; Description; Part Number; Units per Assembly; and Usable on Code column.

a. FIGURE and Index Number Column. The first item in the figure and index number column is the figure number of the illustration of the assembly listed. The figure number is not repeated thereafter except with the first item of listings continued on succeeding pages. The second number is the index number to key the part to the

illustration callout. Identical parts occurring in the same general location on the equipment are illustrated and indexed but once. The relation of each part to its Next Higher Assembly (NHA) or main group is shown either by indention or by figure cross-reference note.

b. Reference Designation Column. This column contains all reference designations used in this IPB and assigned in the unit.

c. Description Column. The names used are the same as those assigned on the manufacturing drawings or in the Defense Supply Agency Cataloging Handbook H6. Attaching parts are listed immediately below the items which they attach. The relation of each part to its next higher assembly is either shown by indention or cross reference.

(1) Indention. Parts listed in this column are indented to indicate item relationship or NHA. The description of each assembly is followed in the list (excepting for attaching parts) by the descriptions of its components indented one column to the right. This indention indicates the relationship of the component to the assembly. To determine the next higher assembly of a part or assembly, note the column in which the initial letter of the description appears. The first item directly above, which appears one column to the left, is the NHA (except for attaching parts).

(2) Cross Reference. The notation ("SEE FIGURE \_\_\_\_\_ FOR BREAKDOWN") following the description of a part indicates that further breakdown of the part will be shown on the figure noted. The notation ("SEE FIGURE \_\_\_\_\_ FOR NHA") following the description of a part indicates that the correct assembly relationship of a part will be shown on the figure and index number noted.

(3) **Manufacturers Codes.** Part numbers other than those of the prime contractor or government standard are designated by a five-digit code in parentheses following the description of the part. These codes are obtained in accordance with the Federal Supply code for Manufacturer's Cataloging Handbook H4-1 and H4-2. A list of manufacturers names and addresses for codes used in this manual is included at the end of this section.

d. Part Number Column. Part numbers used in this column are selected according to the following order of preference: military standards, design activity numbers and vendor numbers,

The part numbers in this manual have been converted by deleting all dashes and spaces between alphabetic and numerical characters. All diagonals (/) denoting fractions in part numbers remain, and diagonals between alphabetic and numerical characters have been deleted.

e. Units Per Assembly Column. The quantity shown in this column represents the units required for one next higher assembly, or sub-assembly. The notation "REF" (Reference) indicates this item has been previously listed under its next higher assembly. The "See Fig." notation in the description of the item will indicate the figure and index number at which the units per assembly can be determined.

f. Usable On Code Column. The absence of a code symbol in this column indicates that this part is used in all models or assemblies covered by this technical manual.

1-4. **NUMERICAL INDEX.** This section contains an alphanumeric listing of all parts that comprise the article.

**a. Part Number Column.** The order of precedence in beginning of part number arrangement of the first (left-hand) position of the part number is as follows:

Letters A through Z

Numerals 0 through 9

The second and succeeding positions of the part number from left to right is as follows:

(1) Space (blank column)

(2) Diagonal (slant)

(3) Point (period)

(4) Dash (-)

(5) Letters A through Z

(6) Numerals 0 through 9

**b. Figure and Index Number Column.** The entries in this column provide a cross reference by means of figure and index numbers to the listing of the part number in Section II (GAPL).

**c. Quantity Per Article.** The quantity shown in this column is total quantity required for each article. The abbreviation "REF" (Reference) indicates that this item has been listed twice in Section II (GAPL), once under its next higher assembly with the total quantity used and once as a reference item where a detailed breakdown is listed.

**d. Source Code Column.** Source codes indicate to maintenance and supply personnel the source of acquisition for the item for replacement purposes, i.e., procured, stocked, manufactured, or assembled. Source codes, when and if assigned, are Source, Maintenance and Recoverability Codes assigned in accordance with NAVAIR INST 4423.2 SMR codes are listed for first appearance items only.

e. Repair Code Column. The use of this column shall remain at the discretion of the prime contractor.

1-5. REFERENCE DESIGNATION INDEX. The Reference Designation Index lists the electrical part reference designation numbers (first column) with their corresponding part numbers (third column) in an alphabetical and numerical sequence.

The figure and index numbers for locating a part in Section II (GAPL) appear opposite each reference designation number (in the second column). The part number remains in its original alphanumeric presentation.

1-6. ABBREVIATIONS Abbreviations used in this manual are in accordance with MIL-STD-12-C.

1-7. HOW TO USE THE ILLUSTRATED PARTS BREAKDOWN. Instructions on how to use the Illustrated Parts Breakdown are shown on the following pages.

# HOW TO USE THE ILLUSTRATED PARTS BREAKDOWN . . . . WHEN THE PART NUMBER OR REFERENCE DESIGNATION IS KNOWN

# HOW TO USE THE ILLUSTRATED PARTS BREAKDOWN . . . . WHEN THE PART NUMBER IS NOT KNOWN

**1** DETERMINE THE FUNCTION AND APPLICATION OF PART REQUIRED.

REFER TO THE TABLE OF CONTENTS AND SELECT THE MOST APPROPRIATE TITLE.

**2** TURN TO THE PAGE INDICATED AND LOCATE THE DESIRED PART ON THE ILLUSTRATION.

**3** FROM THE ILLUSTRATION, OBTAIN THE INDEX NUMBER OF THE DESIRED PART. REFER TO THE CORRESPONDING LISTING FOR SPECIFIC INFORMATION.

**4** TURN TO SECTION III AND LOCATE THE PART NUMBER LISTED IN ALPHA-NUMERICAL SEQUENCE. ONLY FIRST USAGE SHOWN FOR GOVERNMENT STANDARD PART NUMBERS.

**TABLE OF CONTENTS**
