## Section I INTRODUCTION

**1. Purpose.** This bulletin provides a storage serviceability standard for use in measuring the materiel readiness status of stocks in the custody of supply and storage activities.

**2. Scope.** This bulletin applies to all Department of the Army CONUS and overseas depots engaged in the receipt, storage and issue of TROSCOM materiel.

**3. Definitions.** a. Definitions for the majority of specialized terms used herein can be found in MIL-STD-109, Quality Assurance Terms and Definitions.

b. Definitions for other specialized terms are as follows:

(1) *Storage serviceability standard.* A written procedure providing storage methods and standards and prescribing the necessary requirements for the surveillance of materiel in storage.

(2) *Surveillance.* A system whereby supplies and equipment are subjected to, but not limited to cyclic, scheduled and special inspection and continuous actions to assure that material is maintained in a ready for issue condition.

(3) *Visual inspection.* An inspection by visual means to observe the item and/or its packaging and packing to detect deficiencies. Visual inspection normally does not require disassembly or testing of the item.

(4) *Technical inspection.* An inspection by visual means including disassembly, measuring (gaging), performance testing and/or laboratory testing.

(5) *Stage I corrosion.* Discoloration, staining. No direct visual evidence of pitting, etching or other surface damage.

(6) *Stage II corrosion.* Loose rust, black or white corrosion accompanied by minor etching and pitting of surface. No scale or tight rust.

(7) *Stage III corrosion.* Rust, black or white corrosion accompanied singly or in combination with etching, pitting or more extensive surface damage. Loose or granular condition.

(8) *Stage IV corrosion.* Rust, black or white corrosion progressed to the point, where fit, wear, function or life of the item has been affected. Powdered or scaly condition, with pits or irregular areas of material removed from the surface of the item.

(9) *Defects and Defectives.* A defect is any nonconformance of the unit of product with specified requirements. A defective is a unit of product which contains one or more defects. The classifi-

cation of defects and defectives is the listing of possible defects of the unit of product, or defectives, classified according to their seriousness.

(a) *Critical.* A critical defect is one that judgement and experience indicate could result in hazardous or unsafe conditions for individuals using or maintaining the product, or for major end items or units of a product, a defect that could prevent performance of their tactical functions. A critical defective is a unit of product that contains one or more defects.

(b) *Major.* A major defect is a defect, other than critical, that could result in failure, or materially reduce the usability of the unit of product for its intended purpose, or seriously affect the appearance when appearance is a major characteristic of the item. A major defective is a unit of product that contains one or more major defects.

(c) *Minor.* A minor defect is one that does not materially reduce the usability of the unit of product for its intended purpose, or is a departure from established standards having no significant bearing on the effective use or operation of the unit, or affects the appearance in a minor degree when appearance is a significant characteristic. A minor defective is a unit of product that contains one or more minor defects.

**4. General.** It is the Army's objective to attain and maintain a constant materiel readiness status of supplies and equipment in depot stocks. The scope of this objective is of such magnitude that only general guidelines are provided by Chapter 3, Section VIII of TM 743-200-1 for the quality evaluation of materiel in the custody of supply and storage activities. This standard supplements TM 743-200-1 by providing a systematic procedure for storage surveillance inspection of those items mentioned in paragraph 6 and indicates the limiting degree of deterioration, damage, unsatisfactory storage practices and other characteristics acceptable. It also establishes the basis for identifying material requiring segregation, remedial care and preservation or reclassification action. Applicable requirements of the standard may be used for performing receipt and preshipment quality control inspections.

**5. Comments.** Comments and suggestions pertaining to this bulletin should be submitted to the Commander, U.S. Army Troop Support Command, ATTN: AMSTS-SP, 4300 Goodfellow Boulevard, St. Louis, MO 63120.

## Section II

### STORAGE AND SPECIAL INSTRUCTIONS

**6. Applicable Items.** The provisions of this bulletin are applicable to those items listed in Appendix I.

**7. Preservation, Packaging and Packing.**

Preservation, packaging and packing will be in accordance with the packaging references cited in the Packaging Segment of the Army Master Data File (AR 708-1).

**8. Marking.** Marking will be in accordance with MIL-STD-129.

**9. Storage.** a. *Type.* Type of storage will be in accordance with SB 740-1.

b. *Age Control.* The items covered by this bulletin will be issued on a First-In-First-Out (FIFO) basis by date of manufacturer.

c. *Shelf-Life.* The items covered by this bulletin have an indefinite shelf-life.

**10. Formation of Lots.** The selection of representative samples for surveillance evaluation is based on the homogeneity of the lot. Subject to the limitations of this rule, inspection lots should be as large as possible. To encompass these principles, the formation of lots for surveillance will consist of manufacturer's lots, grand lots or mixed lots.

a. *Manufacturer's Lots.* The Manufacturer's lot, batch or control number will be used whenever possible in the selection of samples. This would include lots of sizable quantities in original packs.

b. *Grand Lot.*

(1) The grouping together of several lots of one manufacturer can effect an increase of lot size. However, the following conditions must be met by these lots before material can be considered for grouping into a grand lot.

(a) Identical stock number, class, type, model.

(b) Same manufacturer.

(c) Manufactured within a period of twelve months.

(d) Comparable storage history.

(e) Identical packaging.

(f) No known significant difference in quality.

(2) The grand lot may be formed when the complete analysis of all available data, including the conditions noted above and the technical

judgement of the surveillance team, indicate the homogeneity of all significant characteristics. The formation of a grand lot at a depot is only a paper transaction and does not require any rewarehousing or reworking of material. Where such grand lots are formed and sampled for surveillance, reports of results should include a complete description of the grand lot composition in each case. If the samples drawn from the grand lot indicate heterogeneity of the individual lots making up the grand lot, the grand lot will then be terminated and manufacturer's lot sampling substituted.

c. *Mixed Lot.* The mixed lot is formed of one or more lots whose identification by manufacturer or lot number has been lost and its relation to other lots cannot be determined. An example of this is depot rollback or repacks or represerved material. Several mixed lots may be grouped into grand lots if surveillance inspection data indicates that these mixed lots are similar in their significant characteristics.

**11. Storage Quality Control.** a. *Sample Selection.* Select samples of material in a manner that will assure each unit in the lot has an equal chance of being selected. Biased methods, such as selecting items from the same position in the container, pallets or stacks; taking items all from one location; or selecting items that appear defective, will not be utilized. The use of a table of random numbers as contained in the Department of Defense Handbook, H53, is recommended and will insure random selection of samples.

b. *Inspection.*

(1) *Frequency.*

(a) Controlled humidity warehouse--60 months.

(b) Controlled temperature warehouse-30 -- months.

(c) Noncontrolled temperature ware-house--24 months.

(d) Shed--12 months.

(e) Open--6 months.

(2) *Selection of sampling plan.* The sampling plan will be obtained from the Master Sampling Table, which reflects inspection level II and has been adapted from plans provided in MIL-STD-105.

	SECOND	125		250	18	19	26	27

AC = Acceptance Number

RE = Rejection Number

(a) *Single sampling plan.* A single sample plan, corresponding to the appropriate lot size and defect classification, is used involving lots of 25 items or less. A separate sample size and pair of acceptance and rejection numbers is shown under the column headed Major-A and Major-B. The numbers under the column headed AC refer to the maximum allowable number of defective item(s) in the sample that are permissible for acceptance. Conversely, the numbers under the columns headed RE refer to the minimum number of defective item(s) in the sample required to cause rejection of the lot.

(b) *Double sampling plan.* A double sampling plan, corresponding to the appropriate lot size is used if a successive stage cumulative acceptance and rejection numbers are indicated. The same sample size is used to determine the acceptance for both Major-A and Major-B defectives. The interpretation of the columns headed by AC and RE is the same as that described for the single sampling plan in (a) above. If at the first sampling stage, the number of defective items found is between the two numbers indicated in the column headed by AC and RE, an additional sample must be selected to arrive at an accept or reject decision for only one particular

defect class. If an additional sample is required for only one particular defect class, the inspection of the second sample will be restricted to only that particular defect class. For example, if the sampling table indicates acceptance for the Major-A defect class, but requires an additional sample to reach and accept or reject decision for Major-B defects, Major-A defectives so observed on the second sample will not contribute to lot rejection of the Major-A defect class. When a rejection number is reached in a second stage sample, inspection will be discontinued.

(3) *Inspection method.* Perform technical inspection of the selected samples. Functional or performance tests should be avoided unless there are significant indications that components of the items have deteriorated to a degree that operational problems will exist.

c. *Defect Classification.* Refer to Appendix II and III for listings of defects and their classifications. Defects should be classified as critical (when critical defects are considered), Major-A, Major-B or Minor, even if they are not considered to belong fully in these classes at the time of the inspection, but can reasonably be expected to be in these classes prior to the next scheduled inspection period. When inspection or testing of an item

reveals a critical defect, the lot represented will be rejected. Defects noted during the inspection and classified as minor will not be cause for rejection of the lot.

**12. Other Instructions.** a. *Rejected Lots.* Units comprising rejected lots will be afforded technical inspection on an individual basis to identify the degree of serviceability, condition and completeness in terms of readiness for issue or to identify actions underway to change the status of the material (AR 725-50).

b. *Repackaging of Samples Inspected.* Restore packaging of samples inspected and accepted to the level of the lot from which samples were drawn.

**DEFECTS**

Item	Defect	Classification			
		Major Minor			
		A	B		
PRESERVATION AND PACKAGING:	Inadequate or deteriorated to such an extent it will not provide protection against deterioration or damage during storage .....		X		
MARKING:	Incorrect marking and/or lack of identification or required special marking.....		X		
	Improper sequence or location of marking; incorrect method of marking used; improper size of marking applied .....			X	
PACKING:	Inadequate to the extent it will not provide protection against damage or loss .....		X		

### APPENDIX III ITEM DEFECTS

Individual item defects listings for each type of equipment covered by this bulletin are provided herein (appendix III-A through III-PP).

Attachments, Crane .....	Appendix III-LL
Auger, Earth.....	Appendix III-P
Breaker, Paving .....	Appendix III-C
Crane .....	Appendix III-B
Crane and Crane-Shovel Attachments .....	Appendix III-LL
Crushing, Screening, Scrubbing and Washing Equipment .....	Appendix III-Q
Distributor, Bituminous, Tankless Type .....	Appendix III-N
Distributor, Bituminous, Tank Type .....	Appendix III-L
Distributor, Water, Collapsible Tank .....	Appendix III-HH
Distributor, Water, Tank-Type .....	Appendix III-GG
Ditching Machine .....	Appendix III-I
Drier, Aggregate .....	Appendix III-BB
Drier-Mixer, Bituminous-Concrete Materials .....	Appendix III-T
Drilling Machine, Well .....	Appendix III-S
Drill, Pneumatic, Drifter I .....	Appendix III-R
Drills, Pneumatic .....	Appendix III-C
Dump Truck .....	Appendix III-J
Dust Collecting Machine .....	Appendix III-CC
Extractor, Pile .....	Appendix III-MM
Feeder, Aggregate .....	Appendix III-DD
Feeder, Fines .....	Appendix III-FF
Float Bridge, Concrete Finishing .....	Appendix III-PP
Gradation Control Unit .....	Appendix III-KK
Grader .....	Appendix III-G
Hammer, Piledriver .....	Appendix III-K
Heater, Bitumen .....	Appendix III-V
Heater, Concrete Mixer .....	Appendix III-X
Heater, Hot Oil .....	Appendix III-W
Kettle, Heating .....	Appendix III-O
Loader .....	Appendix III-H
Melter, Asphalt .....	Appendix III-Y
Mixer, Concrete .....	Appendix III-E
Mixer, Rotary' Tiller .....	Appendix III-AA
Paving: Machine .....	Appendix III-M
Piping System, Asphalt .....	Appendix III-OO
Roller .....	Appendix III-F
Rooter, Road .....	Appendix III-EE
Saw, Abrasive Disk .....	Appendix III-NN
Scraper .....	Appendix III-A
Snow Removal Unit .....	Appendix III-JJ
Spreader, Aggregate .....	Appendix III-U
Spreader, Concrete .....	Appendix III-Z
Sweepeer, Rotary .....	Appendix III-II

# THE METRIC SYSTEM AND EQUIVALENTS

## NEAR MEASURE

Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches  
 1 Meter = 100 Centimeters = 1000 Millimeters = 39.37 Inches  
 1 Kilometer = 1000 Meters = 0.621 Miles

## WEIGHTS

Gram = 0.001 Kilograms = 1000 Milligrams = 0.035 Ounces  
 1 Kilogram = 1000 Grams = 2.2 lb.  
 1 Metric Ton = 1000 Kilograms = 1 Megagram = 1.1 Short Tons

## LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces  
 1 Liter = 1000 Milliliters = 33.82 Fluid Ounces

## SQUARE MEASURE

1 Sq. Centimeter = 100 Sq. Millimeters = 0.155 Sq. Inches  
 1 Sq. Meter = 10,000 Sq. Centimeters = 10.76 Sq. Feet  
 1 Sq. Kilometer = 1,000,000 Sq. Meters = 0.386 Sq. Miles

## CUBIC MEASURE

1 Cu. Centimeter = 1000 Cu. Millimeters = 0.06 Cu. Inches  
 1 Cu. Meter = 1,000,000 Cu. Centimeters = 35.31 Cu. Feet

## TEMPERATURE

$5/9(F - 32) = ^\circ C$   
 212° Fahrenheit is equivalent to 100° Celsius

90° Fahrenheit is equivalent to 32.2° Celsius  
 32° Fahrenheit is equivalent to 0° Celsius

$9/5C + 32 = ^\circ F$
