ENCLOSURE "I"

CHANGES IN THE FREE WORLD

STATEMENT OF THE PROBLEM

1. To identify and assess prospective changes in the Free World likely to affect U.S. strategic capabilities through the 1964 to 1967 time period.

FACTORS BEARING ON THE PROBLEM

2. The Joint Chiefs of Staff have directed the Weapons Systems Evaluation Group to "recognize changes. . . in the Free World situation" as part of a report evaluating "offensive weapons systems that may be utilized in a strategic role, with emphasis on the 1964 to 1967 time frame."<sup>1/</sup>

3. The relationship between this country and other nations of the Free World has a direct bearing on the scope of U.S. military responsibilities and the means -- including both strategies and weapons systems -- by which they may be fulfilled. This interaction stems from two of the basic assumptions that have guided U.S. foreign policy since the start of the cold war:

a. That the long-term security of the United States depends in large measure on the containment of communist power, and

b. That the United States needs the active cooperation of other Free World nations both to balance communist military, economic and industrial power and to deter and/or defeat communist military aggression.

1/ Memorandum for The Director, Weapons Systems Evaluation Group, 9 July 1960. TOP SECRET.

Enclosure "I"

~~SECRET~~

~~SECRET~~  
~~SECRET~~

4. The military collaboration of other nations is important to the United States in two general areas: for the projection of important elements of its military power into the exposed areas on the Bloc periphery (and into the Bloc itself in time of war) the United States requires that other nations agree to deployment of U.S. forces and installations on their territory. In addition, the scope of the containment task requires that other free nations make substantial military contributions of their own to supplement, and where practical, to substitute for deployed U.S. forces.

5. The degree of this military collaboration depends on what is here referred to as "allied solidarity": the extent to which other nations share common defense objectives with the United States and incentives to achieve them through a collective defense effort. The importance of this cohesion is emphasized by those recent and adverse changes in U.S. strategic programs -- such as the outcome of the IREB deployment program and the withdrawal of nuclear strike aircraft from France -- brought about by political dissension within the Western alliance.

6. For these reasons, and because it is now impossible to foresee all those U.S. requirements for allied military collaboration that will arise by 1967, it becomes important to identify those trends and factors likely to influence the solidarity of the alliance in this period and, more particularly, to assess those factors that bear on the willingness of other free countries to cooperate militarily with the United States or at least to maintain a state of neutrality benevolent to the United States.

#### SCOPE

7. The emphasis in this study is on present trends and foreseeable changes in the relationship of the United States

Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
~~SECRET~~

~~SECRET~~

~~S E C R E T~~

to both military allies and uncommitted nations that bear on the degree of military collaboration the U.S. can expect from other members of the Free World through the mid-1960's.

8. Factors discussed in this regard include the attitudes of overseas governments and publics toward U.S. military strategy and the reliability of U.S. military protection, toward the presence of U.S. bases and nuclear strike systems on overseas territories, toward host nation controls over these bases and weapons, and toward the value of active participation in the collective defense effort.

9. Military implications of these trends and attitudes, and their possible effects on U.S. military capabilities, are discussed.

10. Prospective changes in the military posture of overseas free nations, such as the attainment of independent nuclear capability, are discussed primarily in terms of their effects on the alliance system. Military implications of these changes for the United States are recognized but no detailed predictions of national force levels, or of probable future contributions to the collective defense system, were made for this Report.

11. The discussion section of this Enclosure (Appendix "A") is supplemented by three Annexes. Annexes "A" and "B" are case studies of current trends in the United Kingdom and Japan that are likely to affect the future military collaboration of these nations with the United States.

12. The U.K. was chosen for detailed study because of its military importance to the United States and because it is the first secondary power to have developed its own independent

~~SECRET~~

~~SECRET~~  
SECRET

~~SECRET~~  
~~SECRET~~

deterrent. Its experience here is suggestive of some of the problems likely to arise if other allies acquire strategic nuclear capability. Japan, although unique in several respects, was chosen because of its importance to maintenance of an on-the-scene military capability in the western Pacific. The elements of non-Communist neutralism present in Japan also reflect attitudes in other Asian countries.

13. Annex "C" reviews trends in military technology, and anticipated changes in the composition of the U.S. strategic strike force, that are likely to affect U.S. overseas base requirements and the need for the military collaboration of allies in the middle 1960's.

#### SUMMARY

14. The United States has, and will retain for the foreseeable future, a vital security interest in denying additional areas of the Free World to the Communist Bloc.

15. Both for this purpose and for the deterrence of attack on the North American continent itself, the United States requires the active military collaboration of its allies and, at a minimum, a disposition on the part of neutral or uncommitted nations to resist subversion and not to interfere with the collective defense effort.

16. Allied military contributions to U.S. security take several forms. They may consist solely of permission for the U.S. to use bases or to deploy military forces on territory of strategic importance. They may consist of indigenous forces for the defense of territory considered of military value to the United States, or whose denial to the Communist Bloc is important for other reasons. A third form of allied military

~~SECRET~~

~~SECRET~~

~~SECRET~~

SECRET

contribution takes the form of advance agreements to take specific wartime actions contributing to the effective use of U.S. military power.

17. In only one area, that of overseas bases for the peacetime deployment of strategic bombers, are U.S. requirements for allied military collaboration likely to diminish in this period. Requirements for other types of allied military collaboration, and particularly that of contributing indigenous forces for local defense, are likely to increase in this period.

18. Not all U.S. military allies, much less all of the non-Communist nations, have been willing to join fully with the U.S. in the collective defense effort. A number of the NATO nations are failing to meet their "minimum essential" force requirements despite an economic capacity to do so. Two NATO members, Norway and Denmark, have refused to permit ICBM launching sites on their territories. France, the administrative and geographical center of the NATO alliance, has declined to cooperate adequately in several areas of military importance. Outside the NATO area, the refusal of Japan to allow nuclear weapons on her territory bears on the ability of the U.S. to defend that country and its own interests in the Far East. There is, in short, ample evidence that other Free World nations could contribute more effectively to their own defense -- and therefore to that of the United States -- should they be willing to do so.

19. Although many political, economic and psychological factors influence the attitudes of other nations toward the alliance with the United States, by far the most important is their confidence in U.S. military protection. Any decline in that confidence tends to undermine the cohesion of the alliance,

Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
~~SECRET~~

~~SECRET~~

despite nonmilitary influences (such as hope of economic gain or a general sympathy with U.S. objectives) that work in the opposite direction.

20. Allied estimates of this protection, and their own willingness to contribute to collective defense, have varied significantly in the course of the cold war. Confidence in the alliance system was highest when there was no significant threat to the security of the U.S. itself, and when U.S. atomic superiority seemed adequate for the protection of overseas territory from aggression. In more recent phases of the cold war the growth of Soviet strategic power has severely increased the threat to the U.S. and brought corresponding strains on the alliance system.

21. These strains are rooted in a widespread belief that the Soviet Union is now capable of inflicting the most severe destruction upon the United States, and that, as a consequence, the threat of U.S. strategic intervention is now a less credible (and therefore less effective) deterrent to communist aggression. Even in Western Europe, where the U.S. commitment is strongest, doubts about the reliability of U.S. protection have been an important factor in the decisions of Britain and France to develop their own nuclear deterrent forces.

22. Adding to this strain on the alliance system is a perceptible increase in public fears of war, particularly of involvement in a nuclear war through presence of nuclear strike systems on national territory or through rash military actions that might lead to "war by accident." The extent of these fears, and their effect on the policies of national governments, vary sharply from country to country. As such fears seem related to a growing public knowledge of nuclear weapons effects, however, they are likely to increase in the years ahead.

~~SECRET~~

~~SECRET~~  
~~SECRET~~

23. From the viewpoint of the United States these fears and attitudes have had, and will probably continue to have, adverse effects on the cohesion of the alliance. There has been increased questioning of military ties with the U.S., pressure for tighter host nation controls over U.S. bases and weapons systems, and -- particularly in Britain -- some sentiment for removal of all nuclear strike systems from national territory. In most instances these pressures are, by themselves, insufficient to cause a military ally of the United States to "go neutral", much less to voluntarily join the Communist Bloc, but they forecast increasing difficulties for the U.S. in eliciting allied military collaboration. They may also raise doubts about the performance of an allied nation in time of war, or in a crisis of such proportions that war appeared to be imminent. Particularly in the area of host nation controls over deployed U.S. strike systems, these pressures conflict with increasing U.S. military requirements for the assurance of rapid reaction from weapons systems.

24. Other influences on the propensity of Free World nations to collaborate militarily with the United States include their official estimates of the Sino-Soviet threat to their security, the contemporary public image of U.S. economic and military power relative to that of the Soviet Bloc, the value assigned uniquely national objectives (such as the retention of a colonial possession) and the future economic relationship of the United States to regional trade blocs.

25. Among the foreseeable changes in the Free World that are also of relevance to U.S. military capabilities are a further reduction in the colonial empires of our European allies and the consequent control of certain strategically important

~~SECRET~~

~~SECRET~~

~~SECRET~~  
~~SECRET~~

areas by governments both less able and less willing to resist Communist pressure. Another change that is likely to increase both U.S. military responsibilities and the difficulties of fulfilling them is the possibility that several of the authoritarian governments now militarily allied to the U.S. will be replaced in this time period by regimes more responsive to public opinion. While this by no means implies that popular regimes are more likely to side with the Communist Bloc, it is doubtful if the United States will be able to count on receiving as much support in these countries as it does today.

26. Appreciable increases in the military strength of some Free World nations can be expected by 1967, particularly in the nuclear weapons field. On balance, however, these additions do not now promise to be of sufficient magnitude to relieve the U.S. of its basic responsibility to deter all-out attack on the Free World, or to alter radically the military status of these nations relative to the United States or to the Communist Bloc. This applies particularly to the spread of independent deterrent forces. The military effectiveness of these forces must be heavily qualified, and their political effects are likely to bring additional strains on the alliance system.

27. Trends favorable to military collaboration with the U.S. that can be expected to endure through this time period include a widespread recognition that Sino-Soviet aggression is the principal threat to the security of Free World nations, and that the United States is the locus of countervailing power. This recognition, coupled to sympathy with the values upheld by the United States, establishes a fundamental tie between Free World nations and the U.S. but is not, by itself, sufficient to assure those military agreements which the U.S. may wish to obtain.

~~SECRET~~

~~SECRET~~

~~SECRET~~

~~SECRET~~

### CONCLUSIONS

28. In view of the present and prospective strains on the alliance system, and the intensity of the pressures likely to be placed on allied governments in a war crisis situation, United States strategic capabilities -- including offensive weapons systems and their associated command, control and communications systems -- should be made as independent as possible from the control of other nations.

29. Only those U.S. strategic weapons not dependent on the use of overseas territory or facilities should be relied upon for coverage of targets that pose a military threat to the continental United States. These targets include Sino-Soviet strategic weapon bases and associated command, control and warning systems. While some overlap here may be politically desirable, allied nuclear strike systems should not be assigned sole responsibility for such targets.

30. A policy of combined control over U.S. strike systems deployed on overseas territory should be adopted if host nation anxieties on this point become so severe as to jeopardize other aspects of military and political collaboration.

31. In view of declining allied confidence in U.S. strategic protection, it will become increasingly important for the solidarity of the Western Alliance that the U.S. increase the effectiveness of its own and allied defenses against limited aggression.

APPENDIX "A" TO ENCLOSURE "I"

POSSIBLE CHANGES OF MILITARY SIGNIFICANCE IN THE FREE WORLD

THE ROLE OF OVERSEAS FREE COUNTRIES IN U.S. NATIONAL STRATEGY

1. Changes in the character and intensity of the Sino-Soviet threat clearly have far-reaching effects on the military position and policy of the United States and of other countries of the Free World. The existence of this threat is, of course, the primary reason for almost all U.S. military and alliance policies.

2. Changes within the Free World also affect the military position and military requirements of the United States. This relationship stems from the manner in which the Sino-Soviet threat impinges on U.S. interests and from the ways in which the United States has been compelled to counter this threat.

3. U.S. foreign and military policy in the cold war rests today on two basic assumptions:

4. First, that U.S. security interests encompass more than the deterrence of attack on the North American continent. In addition, the United States has a vital military interest in denying the territory and resources of other Free World countries to the Sino-Soviet Bloc.

5. Second, that in order to fulfill this dual defense task, the U.S. needs both the active collaboration of its allies abroad and the willingness of many uncommitted overseas nations to resist Communist domination or, at a minimum, not to obstruct the defense efforts of the Western alliance.

6. There is clear evidence that, in the conduct of the cold war, the United States has not been concerned solely with the protection of its homeland. Its rearmament and efforts to

~~SECRET~~  
~~SECRET~~

~~SECRET~~

SECRET

create a system of military alliances got underway well before a direct threat to the North American continent came into existence. At least until the late 1940's, the Sino-Soviet Bloc possessed no significant striking power with which to hit North American targets. Now that this threat has come to exist, protection against it -- which in practice means deterrence through the threat of retaliation -- holds top priority in American military policy. But, rather than detracting from interest in the protection of overseas countries, this top priority objective has, in the present situation, enhanced American interest in those countries overseas that contribute militarily to deterrence of a direct attack on North America.

7. There are several reasons why it should be vital that Sino-Soviet expansion at the expense of overseas free countries should be prevented. Even if U.S. security interests were not involved, the United States is interested in the preservation of the independence of the non-Communist nations and is committed to the principle that world order and law rest on collective resistance to military aggression. However, because the cold war dictates that security considerations must necessarily prevail in the formulation of U.S. policies and because the overseas countries have more confidence in the reliability of American military support when it is grounded in U.S. security interests, this report will concentrate on those prospective changes in the Free World that bear directly on those security interests.

8. The United States has both a negative and a positive interest in denying overseas territories to the Sino-Soviet

~~SECRET~~  
SECRET

~~SECRET~~  
SECRET

Elcc. Negatively, the purpose of what has been called the containment policy is to prevent such further Sino-Soviet expansion as would upset the world balance of power. If this expansion were to take place, there would be danger that one country after another would fall under Sino-Soviet domination, until in the end the United States would find itself isolated in a sea of Communist continents. This does not mean that every inch of presently free territory is necessarily essential to a reasonable balance of military and economic power. If a country such as Laos fell under Communist control, measures might be taken to compensate for the loss. It does mean, however, that the long-run security and survival of a free America might be indirectly threatened by the Communist take-over, through military or non-military means, of those overseas territories that have strategic significance by reason of their geographical location or resources.

9. Positively, the American interest in denying overseas countries to Sino-Soviet control lies in the military benefits accruing from the active collaboration of many of these countries with the U.S. and the benevolent neutrality of others. These benefits facilitate the U.S. task of protecting both the overseas countries themselves and the North American continent. American realization of this need for military collaboration to promote U.S. security interests is responsible for the radical postwar break with the traditional American isolationist policies and the adoption instead of peacetime alliances with overseas nations.

#### THE CONTRIBUTIONS OF OVERSEAS COUNTRIES

10. The participation of overseas countries in the task of countering the Sino-Soviet threat is most important when it takes the form of direct military participation in a collective defense effort. The United States has sought to assure itself of such

~~SECRET~~  
SECRET

~~SECRET~~  
SECRET

military cooperation through alliances and mutual assistance and defense treaties, whereby allied countries promise contributions to the collective defense in return for U.S. commitments to assist in their military protection. Moreover, these alliance treaties are supplemented by other agreements which grant to the U.S. certain specific military rights, such as permission to establish bases on allied soil.

11. Allied military contributions can take several forms. They may consist solely of permission for the United States to place military forces or installations on overseas territory of strategic importance. In some cases, such as the provision of SAC airbases by Morocco and Spain, 

FOI (1)  
5520 (1)  
-331 (1)

 Substantial economic assistance or military aid is often a necessary quid pro quo for such arrangements.

12. A second major form of allied military contribution lies in the maintenance of indigenous forces for the defense of territory considered of strategic importance to the United States. In the case of Western Europe, these allied forces far exceed those which the United States is able to maintain there.

13. Allied and even neutral nations may also agree, in advance of military contingencies, to take specific wartime actions that contribute to the effective use of U.S. power. These may include such things as advance permission to overfly national territory, permission to use airfields not normally occupied by military forces, to protect U.S. military installations from sabotage or direct attack, or to conduct military operations that facilitate the use of U.S. strategic weapons systems. Whether these actions are in fact taken in emergency or wartime situations will depend on circumstances and pressures at the time.

~~SECRET~~

SECRET

Appendix "A" to  
Enclosure "I"  
SEC Report No. 50

~~SECRET~~  
SECRET

14. Not all free nations overseas have been willing to join fully in a collective defense effort that requires such positive and substantial contributions. Among U.S. military allies, the majority of the overseas NATO members has failed to meet their "minimum essential" force requirements despite a more or less general economic capacity to do so. Two NATO members, Norway and Denmark, have refused to accept [redacted] nuclear weapons.

8-1

1-301(a)

DOS

[redacted]

France has declined to cooperate fully in the coordination of NATO naval and air defense forces or to permit nuclear weapons to be stored on her territory under U.S. control. In this last case, conflicting political policies, within the alliance, have led to a degradation of military capability.

15. Other countries in Europe and Asia and the majority of the newly independent African states have preferred to forego the advantages of U.S. military support rather than to take sides in the East-West struggle. This does not mean that the attitudes and policies of the uncommitted nations are irrelevant to that struggle or that their neutrality has necessarily adverse effects on the collective defense effort.

16. To the extent that neutrality is in fact achievable for these countries, they deny themselves and their resources to the Communist Bloc. Those neutrals able and willing to maintain effective armaments make it more difficult for the Communist Bloc to impose on them in time of peace, and may present themselves as valuable potential allies in time of war. This is particularly true of the armed European neutrals, Sweden and Switzerland, who are strongly oriented toward the West and whose territory is likely to fall under attack in the course of a general war. These countries may also make effective indirect contributions

~~SECRET~~

SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

to U.S. military objectives through the United Nations and other international organizations. Sweden, for example, provided a hospital ship during the Korean War and has contributed ground forces to the U.N. Middle East and Congo operations. This is not to say, however, that the refusal to cooperate actively with the West in advance of hostilities does not make more difficult the tasks of containment.

17. It should be added that, if Sino-Soviet expansion is to be blocked, both allies and neutrals must make contributions in fields other than the military. Since this expansion could take place by means of infiltration or subversion or by voluntary shifts by free countries into the Soviet bloc, allied and neutral resistance to such forms of "indirect aggression" has come to be a prerequisite of successful U.S. security policy.

18. In view of the contributions, military and non-military, that overseas countries can make or refuse, and in view of the impact of their decisions on American security, it is important to identify the forces that shape these decisions and particularly any forces that tend to affect them in ways detrimental to U.S. security interests and the collective defense effort.

19. The military contributions that the United States can expect from its allies depends partly on their ability, but primarily on their willingness, to allow use of their territory by U.S. forces and to maintain effective military forces of their own. Their degree of cooperation in this regard is, of course, influenced by many non-military factors and is subject to change for political and economic reasons. In the case of equivocal or neutral countries, perhaps the most that can be expected in the near future is a disposition not to interfere with the collective defense effort and to maintain sufficient military power to assure at least internal stability.

~~SECRET~~  
~~SECRET~~

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

SECRET

20. No attempt will be made here to detail prospective changes in the ability of individual Free World nations to arm themselves, or to forecast levels of allied military forces for the period in question. Such an effort would involve predictions of the economic capacity and military technology of these nations; of the capacity and willingness of the U.S. to aid them, and of their ability to utilize and absorb specialized assistance.

21. Changes in the military posture of allied nations, particularly those changes involving nuclear weapons, may, however, have important effects on the policies pursued by their governments and therefore on the form and cohesion of the Western alliance. The implications of the independent nuclear deterrent forces are discussed later in this regard. It is also possible that improved allied capabilities may relieve the United States of some of the responsibilities for their defense and thus increase the military and economic resources that the U.S. can devote to other tasks. In other instances such as those of Denmark, Norway and Japan, the acceptance of tactical nuclear weapons could bring a substantial addition to the military capabilities of the alliance, but are less likely to be of such magnitude as to shift the overall balance of power between the Free and Communist worlds or to relieve the United States of its present responsibility to deter all-out attack on the Free World.

22. The emphasis here will be on the willingness of overseas countries to support -- or at least not to interfere with -- such military programs as the United States deems necessary for Free World security. In the case of U.S. military allies, their willingness to contribute to the collective defense effort will depend on what is here referred to as allied solidarity: the extent to which allied nations share common defense aims with the U.S. and are willing to achieve them through the collective

~~SECRET~~  
SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
SECRET

defense effort. This solidarity may rise or fall under the impact of the factors to be discussed in the following sections of this paper. In the case of the neutral countries, their willingness to make indirect contributions to the Western defense effort will depend largely on the extent to which they identify their own security interests with those of the Western alliance. Their disposition to sympathize and cooperate with U.S. security programs, where it is possible for them to do so, will be here referred to as their attitudes of benevolence towards the West.

23. Although the following sections will stress those forces that tend to undermine allied solidarity and neutral benevolence, it should not be forgotten that other forces may well be at work tending toward more favorable conditions of collaboration. Nevertheless, the adverse factors are here emphasized because those responsible for the planning and execution of U.S. military policy must be aware of any developments that might modify the current attitudes of the overseas free countries toward military collaboration with the U.S. It would be calamitous if the effectiveness of U.S. strategic systems were to depend on timely and specific actions by allied nations that, in a period of immediate crisis, might not be forthcoming.

#### FORCES AFFECTING ALLIED SOLIDARITY AND NEUTRAL BENEVOLENCE

24. Alliances are pacts of mutual military assistance. They can be expected to endure only as long as such assistance is mutually forthcoming. The crucial factor affecting the cohesion of the Western alliance has been the allies' confidence in the ability and willingness of the United States to afford them effective protection against aggression. Any decline in that confidence will therefore tend to undermine solidarity and possibly to destroy it altogether, even though other and less

~~SECRET~~  
SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
SECRET

tangible influences -- such as sympathy toward the U.S. or hope of economic benefits -- should be working in the opposite direction. No country can be relied upon to make those military sacrifices that expose it to the unparalleled risks of modern war, unless in return it anticipates a net gain in its own security from its collaboration. It cannot be said with similar certainty that an ally's expectations of increasing his security through alliance ties are sufficient in themselves to guarantee his continued support of the alliance. In some instances, rather than submit to what certain allies would view as humiliating subservience to the U.S. or American disregard for their vital interests, these countries have made it appear that they might forego the advantages of the alliance.

25. The behavior of neutrals is not solely determined by their sympathy with the cause of the bloc toward which they lean. Confidence in their military security also plays an important role. Neutrals will not choose to display any signs of partisan benevolence if they feel they would not, in turn, be protected against any retaliation that their actions might provoke. Regardless of their sympathy toward the Western alliance, the activities of certain neutral countries are limited by restrictions beyond their control: Finland and Austria are examples.

26. Although allied solidarity depends to a large extent on what expectations of American protection exist at a given time, it would be a mistake to assume that levels of future solidarity can be predicted and objectively measured by the actual ability and willingness of the United States to assist its allies in deterrence and defense. Expectations rest on estimates of this protection and on judgments affected by many psychological and political factors. People who, for whatever reason, distrust or

~~SECRET~~  
SECRET

~~SECRET~~  
SECRET

dislike the United States are likely to arrive at low estimates. Moreover, the value they attach to U.S. protection is in competition with other values. Some countries, or groups within a country, would prefer to forego protection against the Sino-Soviet bloc than to lose an element of national sovereignty in the alliance relationship. Others have put a higher value on uniquely national goals, like the retention of colonial possessions, than on the protection afforded by full cooperation with the Western alliance. The Sino-Soviet threat itself will tend to be downgraded by those who are more concerned, for example, with the dangers of nuclear war than with their own national independence.

27. Many of the neutral nations, particularly those in Asia or Africa, show greater sensitivity to factors other than military protection. The fact that these nations remain uncommitted is evidence in itself that their chief concerns lie elsewhere, although their own forces for defense, and even for the maintenance of internal security, are in many cases particularly deficient. Here, all the forces that make for antagonism against the West, against the present or former colonial powers, against "economic imperialism," against the white man -- particularly if he is known to discriminate against colored people -- militate against alignment with the West and have led in several instances to an attitude of benevolence toward the Soviet bloc and corresponding opportunities for the extension of Soviet power and influence.

28. In many of the underdeveloped countries, problems of economic progress and even the maintenance of internal stability are sufficiently pressing to preoccupy the national leadership. Such a focus on internal problems has absorbed their energies and resources and provides a strong incentive to avoid involvement in the cold war.

Appendix "A" to

29. Other nations may enter into formal defense arrangements with the United States, but the degree of their cooperation is restricted in practice by pressures of nationalism, isolationism, and a desire to play East against West for economic benefit. Several of the Latin American countries might be placed in this category.<sup>1/</sup> Such attitudes are conducive to the expansion of Sino-Soviet economic and political influence. They are less likely to lead to the absorption of these nations by the bloc or to effective military collaboration against the United States, although the "destabilizing" of the areas involved and the possible loss of U.S. facilities and bases in these areas may create troublesome military problems.

30. It should be remembered that the scope and intensity of allied cooperation and neutral benevolence can vary greatly with time and circumstances, and that these variations can significantly affect U.S. military capabilities. An allied nation may be willing in principle to accept the deployment of U.S. forces and installations on its territory. But such a concession may be of little value for the United States unless that ally feels so strongly the need for cooperation that he is willing also to accept a specific weapons system, such as nuclear-armed IREMs that may make it a target for Soviet attack. Similarly, a neutral country may close its eyes to U.S. or allied overflights over its territory, or, alternatively, it may not only protest against such flights but even threaten to enlist Soviet aid if they continue. An underlying sympathy with or commitment to the Western alliance is therefore no guarantee of military cooperation by the country concerned, and changes in the attitudes of overseas countries may have far-reaching implications for future American military plans.

<sup>1/</sup> An example is Brazil's cautious neutralist approach to the Cuban problem during the summer of 1960, in contrast to past Brazilian efforts to marshal support for U.S. policies at inter-American meetings. It is said that President Kubitschek sees this new approach as a way to pry U.S. support for his plan for Latin American economic development, Operation Pan-America, which he regards as essential to Latin American security. *BRAS*, No. 155, 10 August 1960, SECRET.

U.S. PROTECTION OF ITS ALLIES AND ALLIED CONTRIBUTIONS  
TO COLLECTIVE DEFENSE, 1948-1960

31. Among the factors affecting allied solidarity, none is more influential than allied expectations concerning the effectiveness of American military capabilities for deterrence and defense against Sino-Soviet aggression, on the one hand, and concerning the military contributions demanded of them for collective defense on the other. In both respects there has been a series of changes since the start of the cold war, and there are likely to be others between the present and the 1964-67 period. It stands to reason that there is least strain on allied solidarity when allied confidence in U.S. protection -- particularly in the effectiveness of U.S. strategic deterrent -- is high, and when there are few demands on the allies either for the deployment of American forces or for the strengthening of their own local defense capabilities. In the following discussion, the period between 1948 and 1960 will be divided into four phases; a fifth phase, starting in 1960 and continuing to 1964, will be discussed in the next section. These phases are not chosen arbitrarily, but coincide with a particular set of circumstances pertaining to assumptions and expectations of U.S. protection of the overseas countries and of allied military contributions to the collective defense effort.

Phase No. 1: 1948-1950

32. During the opening period of the cold war, from 1948 to the outbreak of the Korean War in 1950, the Soviet military threat was assumed to be directed primarily against Europe and, to a lesser extent, against the Middle East. Red China was still too weak to be regarded as a serious military threat. The North American continent was not in danger of a direct attack because the Soviet Union did not possess the means of striking North American targets with nuclear weapons.

~~SECRET~~  
SECRET

~~SECRET~~

SECRET

33. Under these circumstances, the primary military problem for the West was the protection of Western and Southern Europe against Soviet aggression. Protection was sought along the lines of the experience gathered in World Wars I and II. Local forces in Europe, later called the NATO "Shield", were to bear the chief burden of deterrence and defense, while the United States would supply supporting sea and air power, the latter rendered more effective by the then small stock of U.S. atomic bombs. The United States was also to serve as the military arsenal for the alliance.

34. One might have expected that NATO's requirements for substantial European ground forces on the World War II pattern would have placed serious strains on the relations of the European NATO members with the United States, which was by all odds the richest and most powerful member of the coalition. It did not do so, however, both because so many people in Western Europe, outside of government and military circles, did not take the Soviet military threat seriously and because the American commitment to help defend Europe was interpreted as an American guarantee of Europe's security. The American atomic monopoly and the weakness of a war-exhausted Soviet Union supported these views. Western Europe's sense of security was further enhanced by the presence of American occupation forces in West Germany, even prior to their commitment to the NATO Shield at the time of the U.S. decision to participate in the defense of Europe. As a result, little effort was made before 1950 to put Western Europe on the road to rearmament.

Phase No. 2: 1950 to 1953-54

35. The attack by Communist North Korea on the Republic of Korea brought about a sudden change in outlook, at least temporarily, although it did not change the basic strategic

~~SECRET~~  
SECRET

~~SECRET~~

SECRET

concept of NATO for the protection of Western Europe. The Korean attack was interpreted as convincing evidence that the Soviet Union, as well as Red China, was prepared to resort to military force for territorial expansion. Preceding the war in Korea, moreover, the Soviet explosion of its first atomic device in 1949 foreshadowed a direct and serious threat to the North American continent and provided another cause for the change in outlook. Hereafter, the United States would be faced with a dual military task: assisting the overseas countries to deter or defeat Sino-Soviet aggression against them, and deterring a direct Soviet attack on North America itself.

36. In view of these developments in the threat, three changes in the outlook of the U.S. and its allies occurred that were of significance for the alliance system.

37. First, both the West European and American governments were now convinced of the necessity of a very considerable rearmament effort to provide Europe with adequate Shield forces, allied and American. In accordance with the experience of World Wars I and II, it was to be the purpose of these forces to halt a Soviet drive to the West as far forward as conditions would permit. Accordingly, in 1950 it was proposed that West Germany should be invited and assisted to rearm, while at the Lisbon Conference of 1952, the NATO Council approved a Shield force goal of 96 divisions as the ultimate objective for its members.<sup>1/</sup>

38. Second, since Communist aggression had become possible, if not probable, in Asia, it was now deemed necessary that the U.S. should seek an alignment with the Asian nations along the periphery of the Sino-Soviet Bloc that would assure them of American military support.

<sup>1/</sup> Because of the failure of E.D.C., final approval of the 12-division West German contribution was delayed until early 1955. Moreover, out of the 96-division Lisbon goal, only about 40 were expected to be combat-ready in peacetime.

~~SECRET~~  
SECRET

~~SECRET~~  
SECRET

39. Third, while the apparent requirements for U.S. support of local defenses were greatly increased with the extension of the American defense perimeter along almost the length of the Iron and Bamboo Curtains, the United States was simultaneously faced with the task of building adequate strategic power to deter direct attack on North America itself.

40. The decision to create a powerful NATO Shield placed heavy pressures on a Western European public that was still reluctant to consent to major military sacrifices. The planned rearmament of West Germany further strained relations between the U.S. and its NATO allies who still regarded Germany with suspicion, and, moreover, it aroused grave misgivings in Germany itself. As a result, hardly had the Korean shock been absorbed when the Lisbon goals proved unattainable. German rearmament was not to get off the ground for several more years.

41. The reaction of the Asian free nations to the Communist threat was characterized by two extreme positions. On the one hand, the governments of South Korea and the Republic of China favored a buildup of their own national forces, coupled with maximum American deployment in the Far East. On the other hand, the uncommitted Asian states, and Japan as well, were unwilling to substantially increase their own forces and showed the first signs of opposition to the overseas deployment of U.S. forces.

42. Already during this period, however, the buildup of the American strategic force (the Strategic Air Command) was paving the way for another change in the strategic picture that was greatly to relieve tensions between the U.S. and its overseas allies as long as its effects were felt.

~~SECRET~~  
SECRET

~~SECRET~~

~~SECRET~~

Phase No. 3: 1953-54 to 1956-57

43. 1953 saw the beginning of a shift in U.S. strategy that came to be known as the "New Look".

44. With the development of its strategic nuclear power, the United States had attained a position of apparent military supremacy over the USSR. It was assumed, therefore, that the American threat of "massive retaliation" would suffice to deter Sino-Soviet aggression both against the United States itself and against its overseas allies, with the exception perhaps of marginal attacks or brushfire wars. On this assumption, the U.S. offensive or strategic force could bear the brunt of the dual task incumbent upon U.S. military power.

45. In Europe, where there was fear that any military conflict could lead to general war, there was now great if not complete confidence in the American "Grand Deterrent". Whatever incentive that had previously existed for the build-up of local European forces was thus undermined, and in fact a downward spiral then began in the levels of non-strategic forces maintained both by the United States and its allies. The European NATO nations concluded that they needed only to contribute enough forces to prove their active collaboration with the United States in the defense of Europe. This, in turn, would induce the U.S. to maintain forces on the Continent in sufficient numbers to trigger U.S. strategic intervention in the event of a Soviet attack confined to the European area.

46. It would be an exaggeration to say, however, that the NATO governments -- in contrast to the public in NATO countries -- had lost all interest in the Shield. But, in view of the public's reluctance to make the necessary sacrifices,

~~SECRET~~

~~SECRET~~

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
SECRET

these governments failed to attain the force levels, established at Lisbon, that were required for an adequate NATO Shield. They therefore agreed with the United States at the 1954 NATO Council meeting that tactical nuclear weapons were a necessary substitute for the missing conventional firepower. Since this decision implied NATO's willingness to initiate the use of nuclear weapons on European soil in response to a Soviet conventional attack, the European public's acceptance of the decision with little or no distress is strong evidence of the general confidence placed in the efficacy of the U.S. Grand Deterrent, as well as evidence of a public downgrading of the gravity of the Soviet military threat to Europe.

47. Moreover, Europeans found it difficult to understand why large Shield forces would be required or what function they would serve in a war in which, it was assumed, strategic forces would both be used and would dominate. In this context, a strong NATO Shield was no longer thought indispensable to prevent a Soviet drive to the West. Thus, much of the pressure on Europe to make greater sacrifices for its own protection was removed, since, as it appeared, SAC had raised a protective umbrella over both the U.S. and its European allies. With this American guarantee of Europe's security, the strategy of the New Look was admirably suited to enhance the solidarity of the NATO alliance.

48. Despite this promising outlook, there was already clear evidence, unnoticed by the public, that the strategy of the New Look would encounter increasing difficulties. In the very year in which the strategy was announced, the Soviets exploded their first thermonuclear device and increased their efforts to achieve long-range strategic delivery capabilities.

~~SECRET~~  
SECRET

~~SECRET~~  
~~SECRET~~

Phase No. 4: 1957 to 1960

49. This period began with a shock to official and public opinion throughout the Free World that was to undermine confidence in the reliability of U.S. strategic protection. In the summer of 1957, the Soviet Union claimed to have tested an intercontinental ballistic missile; in the fall, the launching of the Soviet earth satellite demonstrated in a most spectacular way the level of Soviet achievements in missilery.

50. From this time on, with the addition of long-range missiles to the Soviet inventory, the threat against the North American continent assumed new and more serious dimensions, thus multiplying the risks that the U.S. would have to assume in deciding to intervene with its strategic force in response to Soviet aggression overseas. Massive retaliation, in the form of a future U.S. first strike against Soviet targets of perhaps uncertain location, would risk increasing levels of destruction to the United States in return. No matter how much determination the United States henceforth expressed in its threats of massive retaliation, the credibility of its strategic intervention on behalf of its overseas allies, and therefore the effectiveness of the deterrent were bound to diminish.

51. One of the consequences of the appearance of the Soviet "counterdeterrent" was that the means with which the United States could protect its homeland and defend the overseas territories were no longer identical. For the first of these tasks, the U.S. now needed enough secure second-strike power to inflict unacceptable damage on the Soviet Union after absorbing a Soviet strike on its strategic force. Such retaliatory power was regarded as the best insurance against a Soviet temptation to eliminate U.S. strategic power by a surprise attack.

~~SECRET~~  
~~SECRET~~

~~SECRET~~

SECRET

52. For the protection of the overseas countries, however, now much more strategic power would be needed than even a secure second-strike capability could provide. Nothing short of a first-strike or counterforce capability could serve as a reliable deterrent to such overseas aggression as would leave the U.S. strategic force intact and with the option to intervene. A strategic force capable only of a strike at urban targets in the Soviet Union -- possibly the only strategy that a second-strike force could employ -- would fail to provide a credible deterrent against Sino-Soviet aggression overseas, because its very employment would invite the destruction of substantial areas of the United States.

53. Even in those allied countries where there had been few misgivings about the reliability of U.S. strategic protection prior to 1956-1957, attention now gradually turned to this problem. The alliances which were based on the expectation of this protection came under strain, although out of a common interest to preserve the deterrent value of the American strategic threat, official utterances remained necessarily guarded.

54. One effect of the change, however, was immediately obvious. The British committed themselves firmly to the achievement of an independent strategic nuclear force. The French followed suit, and interest in an independent nuclear deterrent capability spread even to countries with more limited resources. It remained an open question, however, whether the possession of such a capability was regarded primarily as a means of strengthening a nation's authority and freedom of action within the alliance, as a useful supplement to the American deterrent, or as a substitute for it, should the U.S. threat lose its credibility.

~~SECRET~~

SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

SECRET

55. A further effect of the change was a growing interest, at least among some military and strategic analysts in allied countries, in non-strategic forces for deterrence of limited forms of Sino-Soviet aggression or for defense against such attacks, should they occur. The possibility that the Communists might be increasingly tempted to initiate limited wars, even in Europe, could no longer be disregarded, once doubts had been raised about American strategic intervention in such conflicts.

56. One novel feature of this phase, from 1957 to 1960, seemed to impress the allies very little and to disturb them, if at all, only because it appeared to lead the United States towards an excessive preoccupation with the dangers of a direct attack on North America. This feature was one that has come to be known as the "missile gap". One would have expected the allied countries to become alarmed at the prospect, widely discussed in American circles, that growing Soviet ICBM capabilities would expose the American bomber force to a devastating surprise attack. Should such an attack occur and be successful, the overseas free countries would be extremely vulnerable to Sino-Soviet takeover. The fact that this consideration aroused less initial concern in the allied countries than in the United States was due, in large measure, to their less apprehensive views of Soviet military intentions.

57. Much stronger reactions appeared against another new feature of the military situation -- the program initiated in 1957 in which the European NATO members were asked to accept IRBM launching sites on their territories. These weapons were to serve as a temporary response to the Soviet ICBM threat

~~SECRET~~

SECRET

~~SECRET~~

SECRET

until such time as the United States would possess similar long-range missile capabilities. Because these IREM's were thought to supplement the Grand Deterrent in protecting the European countries as well as the U.S. itself, the United States expected that their deployment in Europe would be favorably received by the NATO powers. But, in fact, the response to this offer was much less enthusiastic than had been hoped. Largely because of fears of the Russian reaction, only three countries -- the U.K., Italy, and Turkey -- accepted the siting of IREM's in their territories.

58. By the end of the period, moreover, it was evident that U.S. strategic power was becoming less dependent on the use of overseas bases as longer range missiles and aircraft entered U.S. inventories. This trend had equivocal effects on allied solidarity. On the one hand, it strengthened the alliance by reducing U.S. requirements for those installations that host countries regarded as certain targets of any Soviet counter-force strike. On the other hand, it aroused fears that the United States might lose interest in denying the overseas territories to the Sino-Soviet bloc and might eventually return to its former isolationist policies. Such doubts about U.S. intentions undermined allied confidence in the alliance, however unfounded these doubts might have been. For, as mentioned earlier, the original U.S. motivation for adopting a collective defense policy was not the need for the overseas deployment of U.S. strategic forces to deter a direct strike at the United States, but rather the desire to forestall the indirect threat to American security from the gradual extension of Sino-Soviet control over the Eurasian continent and adjoining insular territories. The security of the overseas free countries was, and remains, a primary objective of American policy for this

~~SECRET~~  
SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

SECRET

reason; if it fails, the United States would be isolated and exposed to dangers of military inferiority.

59. Another change that made itself felt during this fourth phase had distinctly adverse implications for the allies and thus for the cohesion of the alliance. The increased vulnerability of the U.S. strategic force to a Soviet strike meant that top priority in American defense efforts would have to go to the maintenance of secure retaliatory strength. This called for the rapid development of a missile force to supplement much of the present bomber fleet, and it was apparent that increasing efforts would be required to protect the retaliatory force by hardening, dispersal, mobility, and more adequate warning of attack. These efforts to enhance the U.S. second-strike capability had little bearing on the credibility or efficacy of the threat of U.S. strategic intervention against Sino-Soviet aggression overseas, since such intervention would require substantial first-strike counterforce power. If there were few signs during this phase that allied solidarity had been shaken by this particular development, it was because only a small group of experts abroad had come to appreciate, prior to 1960, the difference between first-strike and second-strike capabilities.

DECLINING CREDIBILITY OF U.S. STRATEGIC INTERVENTION: ITS EFFECTS ON ALLIED SOLIDARITY, 1960-64

60. From the preceding discussion which has traced the evolution of American strategic capabilities and allied expectations of U.S. protection from 1948 to 1960, it may be possible to extrapolate certain trends that are likely to affect the alliance during the 1960-64 period. From these, the trends that will predominate at the start of the subsequent 1964-67 phase may perhaps be predicted.

~~SECRET~~  
SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

SECRET

61. It must be stressed, however, that in this section only one factor -- the most important of those affecting allied solidarity -- is being considered; namely, the character of allied expectations concerning American strategic protection in view of developments in the balance of military power. Other influences which may either reinforce or counteract the effects of this single factor on the alliance will be discussed later, as will the effects of all of these factors on the attitudes of the neutral or uncommitted nations. With regard to the neutrals, it is enough to point out here that a decline in U.S. capabilities to offer protection to overseas territories will have less of an impact on the policies of these countries, which have demonstrated their greater concern for the expected advantages of "going it alone" than for American protection.

62. In order to make even tentative predictions about trends in allied expectations of American protection during 1960-1964, several assumptions are necessary. For the purposes of this discussion it is therefore assumed that:

a. The United States strategic deterrent will continue to hold its predominant position among the means by which the U.S. can and will offer protection to its allies.

b. No technological breakthroughs, now foreseen, will afford the U.S. strategic force immunity from attack or will so enhance U.S. strategic counterforce power that the credibility of American strategic intervention in defense of overseas territories will be unquestioned.

c. The United States will not become involved in a general nuclear war during this period.

63. If these assumptions prove realistic, it would seem inevitable that allied confidence in the deterrent effect of

~~SECRET~~  
SECRET

~~SECRET~~  
~~SECRET~~

the U.S. threat of strategic intervention on limited aggression overseas will decline yet further and that such a decline will erode the major foundation on which allied solidarity has heretofore been based.

64. Even if the dangers of a crippling Soviet first strike against SAC were to disappear by 1964, the anticipated growth in size and security of the Soviet strategic force may, by then, push the strategic balance closer to the point of stalemate, in the sense that opposing strategic forces may tend to neutralize each other. This does not mean that, under such conditions, the U.S. Grand Deterrent would no longer provide the overseas allies with any degree of protection. The Soviet Union and Red China could never be certain that the United States would not fulfill its threat of strategic intervention, despite the risk of self-destructive consequences, rather than abandon its allies.

65. Although such Communist uncertainties about American intentions may continue to deter major overseas aggressions, it is doubtful whether allied confidence in U.S. strategic intervention will remain sufficiently strong in all cases to provide a firm basis for faith in the Western alliance and thus to elicit all the allied contributions to the collective defense effort that the United States might desire. Already in 1960, there are indications that the dangers of the allies' position, resulting from the declining credibility of the American nuclear deterrent, are being recognized both in the United States and abroad.

66. One manifestation of this concern over the dangers presented by the changing strategic picture was the decisions of two major U.S. allies to develop strategic deterrents of their

~~SECRET~~  
~~SECRET~~

~~SECRET~~

~~SECRET~~

own; additional countries are giving consideration to developing a nuclear capability. <sup>1/</sup>

E-1  
1-331(A)

DOO

67. The military import of these independent deterrents is qualified by the time necessary to achieve them, by their necessarily restricted capability, and by the proximity of the relevant allied nations to the Soviet Bloc. At least in their initial states, these forces are taking the form of "minimum" deterrents for retaliation against Soviet cities in case of war. Should they be used in an independent role, they would bring the almost certain destruction of the user nation.

CIA

File  
to  
CIA

~~SECRET~~  
~~SECRET~~

For this reason alone, it would be unwise for the United States to rely militarily on the employment of these allied strategic forces in time of war.

68. Another qualifying factor is the time requisite to achievement of indigenous nuclear capability. The French experience indicates that five or six years may be necessary for an "Nth country" to develop even a few nominal weapons suited to aircraft delivery. Development of high yield weapons for long-range missile delivery may take another three to five years.<sup>1/</sup> This schedule may, of course, be shortened by the cooperation of other technologically advanced nations; it could be greatly accelerated by the active aid of an existing nuclear power.

69. The present French difficulties in acquiring a strategic missile, and the recent British cancellation of the BLUE STREAK missile program, show that provision of a modern delivery system is one of the greatest stumbling blocks to achievement of a militarily effective nuclear capability. Even were the most modern weapons systems provided these nations by the United States,<sup>2/</sup> their proximity to the bloc makes more difficult the problems of protecting a strategic force. As has been frequently pointed out, these systems would be subject to a greater weight of attack by a greater variety of weapons, and with less warning time, than are those systems in the U.S. Proximity to the Bloc should also permit a shorter Soviet intelligence cycle for

1/

CIA

2/ The desirability of providing the most advanced U.S. weapons systems to other nations is not considered here.

200

~~SECRET~~

SECRET

location of mobile weapons and make possible a wide range of Soviet espionage and sabotage techniques. Dispersal of these forces outside the European continent may avoid some of these difficulties at the cost of added command, control and communications problems. The territory available to even the major colonial powers for this purpose, however, is shrinking rapidly.

70. A militarily important side effect of these independent deterrents is that both the justification and the expense of such forces leads to a reduction in other areas of national military power. This has been the British experience and it may well be the course of development in France once settlement of the Algerian question removes a primary incentive for maintenance of large conventional forces.

The result may be an inefficient distribution of military effort within the alliance and more serious "shortfalls" in the NATO Shield.

71. National deterrent forces, based on indigenous nuclear capability, are therefore unlikely to alter the basic East-West distribution of power in this time period, or to relieve the United States of any substantial responsibilities in deterrence of all-out attack on the Free World. The additional credibility that these forces may have as a deterrent to piecemeal Soviet aggression is balanced by their probable vulnerability and the fact that their actual use would be self-destructive. These problems are likely to exist whether these independent deterrents are controlled on a national basis or by regional blocs.

~~SECRET~~

SECRET

~~SECRET~~  
SECRET

72. The political effects of these independent deterrent forces are likely to generate conflicting strains on the unity of the Western alliance. The decision to create such a force itself reveals dissatisfactions with the alliance system, particularly in the desire of the nation involved for a greater political voice in alliance matters and for greater military protection than the alliance now affords it.<sup>1/</sup> To the extent that national strategic deterrents provide the possessor nations with a greater sense of security -- whether justified by the facts or not -- these nations may become less sensitive to the declining reliability of the U.S. Grand Deterrent. In this sense, national deterrents may remove a serious cause of political tension within the alliance. However, to the extent that these countries feel more secure, they will tend to place less value on their alliance with the United States and may, as a consequence, drift towards independent policies not necessarily consistent with U.S. desires and interests.

73. There are still other contradictory political effects that may arise from the development of independent strategic deterrents. If the countries desiring them are forced into expensive development programs by American reluctance to aid in their acquisition of the necessary weapons systems or by American legislation prohibiting the sharing of nuclear secrets, anti-American attitudes may result which will adversely affect

<sup>1/</sup> The role of exclusively national goals in the British decision to create an independent nuclear force is discussed in Annex "A" to this Appendix.

In the case of France, an independent nuclear force has been specifically justified on grounds that her aims differ in some areas from those of her allies. French Premier Michael Debre, discussing the French nuclear program before the National Assembly last July stated that modern states are categorized by "those that have the bomb and the rocket and others. Only the former will have the right to speak since the others will be merely satellites. On the other hand, our allies do not always share our ideas, particularly regarding Africa. Our possibilities of acting; and of simply being understood, will depend on many elements but among them will be a modern defense." WBSL, Middle East and West Europe, 25 July 1960, p. R1. their relations with the United States. On the other hand, if the United States becomes convinced of the inevitability -- perhaps also of the desirability -- of strategic deterrents in allied hands, whether as a supplement to or substitute for the U.S. strategic deterrent, American assistance programs might contribute to a heightened sense of allied solidarity. Conceivably, too, resistance to the deployment of U.S. bases for strategic operations on allied territory would be lessened if some of the American installations overseas proved useful to allied strategic forces.

OTHER INFLUENCES ON ALLIED SOLIDARITY AND NEUTRAL BENEVOLENCE, 1960-64

74. So far the discussion has been limited to changes in the relations between the U.S. and its allies that result from a deterioration of allied confidence in the American Grand Deterrent. But the threat of U.S. strategic intervention has not been the only form of American military support that has made the alliance valuable to the overseas countries. In Asia, there has been a continuing need for the presence of American tactical forces to cope with limited aggression. While NATO strategy has assumed U.S. strategic intervention in any military conflict above the level of border incidents, the presence of U.S. tactical forces in Europe has been regarded by the other NATO members as a major contribution to Europe's security and has helped to cement the NATO Alliance. The extent to which the U.S. will be supporting allied local defenses with tactical forces of its own by 1964 will therefore be of considerable consequence -- perhaps of decisive consequence in some individual cases -- for the state of allied solidarity in this period. The impact of this factor cannot now be predicted, however, as it is not known what level this form of U.S. military support for its allies will reach in the years ahead.

~~SECRET~~  
SECRET

~~SECRET~~

SECRET

75. A third form of American military contribution is the economic and military assistance made available to those overseas countries willing to improve their defenses against Sino-Soviet aggression. In the cases of the economically weaker nations of Asia, this U.S. contribution plays an important role in determining attitudes toward the alliance. Several of the NATO members could not support even their present level of military effort were it not for substantial U.S. assistance.

76. This aid may be of such value to individual recipient nations that it may preserve into the 1964-1967 period the allegiance of nations that might otherwise move away from alignment with the Western Bloc. Not only external security, but also internal stability and the continuation of existing regimes may depend on U.S. assistance programs. Caution should be exercised, however, in U.S. reliance on the continued effect of this aid in preserving the orientation of these nations toward the West or their contributions to the U.S. military effort. Where economic aid is most important to bolstering the internal political position of existing governments, these regimes frequently lack widespread public support. Several authoritarian governments of this nature in Europe and Asia are likely to be supplanted by the close of the period in question. Their successors may still find foreign economic and military aid essential, but their disposition to seek it elsewhere (and to forego alliance commitments in the process) may easily be greater. The revolution in Iraq, and the consequent withdrawal of that nation from the Baghdad Pact, occurred despite the programs of British aid to that nation; the case of Egypt is another example in this regard. While it is encouraging that the recent regime changes in Turkey and South Korea have not so far shaken the allegiance

~~SECRET~~

SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~  
~~SECRET~~

of these countries to the Western alliance, and particularly to the United States, both of these countries have been subjected to recent Communist aggression. The outlook is less encouraging for those countries, such as Libya, who may view the Communist threat with less apprehension and whose military contributions to the alliance are viewed almost exclusively in terms of economic advantage.<sup>1/</sup>

77. Despite these limitations in the ability of U.S. economic aid to solidify the alliance, the need for a relatively high level of military assistance to allied nations is likely to continue through the mid-1960's. Even in the unlikely event that all of the NATO nations were to undertake what the U.S. might consider to be their full share of the collective defense effort, the ability of NATO to meet present defense objectives would still depend on U.S. provision of a substantial amount of modern weapons to many members, and conventional arms to some of the member nations as well.<sup>2/</sup>

78. Despite some recent advances in this area, such as the European programs to produce advanced U.S.-designed fighter aircraft and missiles, the question of U.S. military assistance is likely to place strains on the alliance system in the period immediately ahead. Most of the NATO members are facing obsolescence problems in wide areas of their military equipments and may anticipate U.S. aid in solving them. The U.S., for its own part, has expressed a desire to concentrate its military aid on those modern weapons which it is best suited

<sup>1/</sup> In 1960, Prime Minister Kubaar requested an additional \$4 million, over the \$6 million in aid that Libya has received in the past five years, for a renewal of the U.S. base rights agreement. USAF, SIRAB, No. 123, 24 June 1960, SECRET/NOFORN.

<sup>2/</sup> A conclusion reached in the 1959 report of the United States mission to NATO. See The Blue Book, Report on the 1959 Annual Review and the NATO Defense Outlook, January 1960, TOP SECRET.

~~SECRET~~

to supply. Changes in the economic position of the United States, including a gold outflow and balance of payments deficit, are beginning to affect the ability of this country to sustain high levels of economic and military assistance. Future programs to stabilize areas of Africa and South America may impose competing demands on U.S. economic resources. Certainly the willingness of the United States to assist its NATO partners will depend to some extent on the trade practices of the evolving European economic blocs and the degree to which the more prosperous NATO members match their economic progress with increased military effort.

#### Fear of Nuclear War

79. Other military factors, related only indirectly to the protection afforded allied nations by U.S. strategic power, are likely to affect the cohesion of the alliance in this period. One such factor of mounting importance is a growing public awareness of the devastation likely to be inflicted on any participant in a general nuclear war. This has increased popular fears of military conflict in any form and created particular aversion to the use of nuclear weapons. Where there is a traditionally vocal and articulate pacifist minority, and where public opinion is influential in the shaping of foreign and defense policy, there are indications that sectors of the population might be willing to pay an extremely high price to avoid involvement in war.<sup>1/</sup> For these people the military protection afforded by the presence of nuclear strike forces on their territory may not only lose its attractiveness but may be actively opposed as making involvement of their nation in war

<sup>1/</sup> A November 1958 Gallup survey in Great Britain found that, given a choice between 1) involvement in a war in which nuclear weapons were used, and 2) coming to terms with the Soviet Union at any price, those surveyed chose the latter alternative by a 2 to 1 margin. See USIA/ORI, "West European Attitudes in the Wake of the Lebanon and Quemoy Crises," WE-56, January 1959, CONFIDENTIAL.

~~SECRET~~  
~~SECRET~~

~~SECRET~~  
~~SECRET~~

more likely. While this influence is strengthened by any belief that the effectiveness of such military protection has declined, it is likely to increase regardless of the actual military situation. A growth in neutralist sentiment abroad, and in corresponding pressures on allied governments, is anticipated by-product of wider public knowledge of nuclear weapons and the probable nature of nuclear war.<sup>1/</sup> At the least, one may expect increasing pressure on allied governments to minimize the chance of general nuclear war by making greater efforts to relieve East-West tensions. This pressure may be reflected in a willingness of these governments to make appreciable concessions to the Soviet Union, particularly where their own national interests are not directly involved, or to accept substantial risks in order to achieve disarmament agreements.<sup>2/</sup> Other likely effects are an increased allied interest in limiting the area and intensity of local conflicts and even in narrowing the range of alliance interests considered worth the risk of general war to protect.

80. In the face of these pressures, allied governments are likely to seek greater influence and control over U.S. foreign and military policies, and over the uses made of American bases on their territory, in order to promote a cautious or "non-provocative" Western approach to the Communist Bloc. These controls, or even the effort to achieve them, can have adverse military effects from the viewpoint of the United States. As one example,

<sup>1/</sup> See NIE 100-54, "Probable Effects of Increasing Nuclear Capabilities upon the Policies of U.S. Allies," 26 April 1954, SECRET.

<sup>2/</sup> Public pressures for disarmament, and even unilateral nuclear disarmament, have increased substantially in the United Kingdom in recent years. The nature and significance of this trend is discussed in Annex "A" to this Appendix.

~~SECRET~~  
~~SECRET~~

Appendix "A" to  
Enclosure "I"

~~SECRET~~  
~~SECRET~~

81. These apprehensions, and a growing public fear of nuclear war, could be aggravated should the U.S., without prior consultation with its allies, initiate the use of nuclear weapons in a limited war. They could have particularly adverse effects on the actions of allied governments should the Soviets precipitate a crisis of such proportions that a general war appeared inescapable.

Fear of Involvement through Presence of U.S. Bases

82. A related source of friction between the United States and some of its allies has stemmed from the presence of U.S. strategic air bases on their territory. While the governments involved have recognized the need for these bases, they have been subjected to increasing public criticism on grounds that they would necessarily involve the host nation in a nuclear war, if hostilities should break out.

83. These fears have been exploited with increasing boldness by the Soviet Union. In the aftermath of the U-2 incident, the Soviets extended their threats of nuclear attack even to air-bases from which unarmed reconnaissance flights are made in peacetime. While threats of attack on U.S. overseas bases have been a consistent feature of Soviet propaganda for many years, they may be taken with greater seriousness in the future. Such threats are already a factor in the refusal of Denmark and Norway to permit "foreign" military forces on their territory in peacetime. There are indications that similar apprehensions exist, or are thought by national governments to exist, in other nations where the U.S. might wish to place nuclear weapons. In this year's negotiations for rights to Wheelus Field in Libya, Prime Minister Kubaar requested that a joint communique on the talks state that storage of atomic weapons, or the

~~SECRET~~  
~~SECRET~~  
~~SECRET~~

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

SECRET

stationing of "espionage" aircraft, had been precluded. Following the Soviet U-2 threats, the Greek government issued a communique stating that there were no U.S. bases in Greece and emphasizing that each U.S. military overflight or use of Greek airports required individual clearance from the Greek government.<sup>1/</sup> On the following day the government of Saudi Arabia reassured its people that Dhahran Airfield was not a U.S. military base, that the U.S. was granted "purely technical facilities" at the airfield, and that no government had been granted permission to use Saudi Arabian territory or airspace for "military action" against any other state.<sup>2/</sup>

84. Despite generally optimistic attitudes concerning the actual likelihood of Communist aggression, public apprehensions about the "lightning rod" aspect of U.S. bases appear to be spreading in some countries. Many factors account for this paradox, but perhaps the most prominent is a widening public awareness of the destruction possible in a nuclear war. In several of those countries where there has been relatively little public concern on this issue --- Italy, the Philippines and Spain are examples --- there is also likely to be relatively limited public knowledge of nuclear weapon effects and the nature of nuclear war. In countries with authoritarian governments, such as Spain, the possibility exists that public apprehensions have not found a means of expression against officially sanctioned policy.

85. The importance of this factor, and the chances of increasingly adverse reactions to the presence of U.S. bases

1/ FBIS, DAILY REPORT, July 19, 1960, OOU.

2/ FBIS, DAILY REPORT, July 20, 1960, OOU.

~~SECRET~~

SECRET

~~SECRET~~

SECRET

and nuclear weapons, vary sharply from country to country. It is significant that the problem appears least serious in West Germany, Turkey and on Formosa, where Communist aggression is a well-recognized threat and where it is generally realized that effective resistance to it depends heavily on U.S. military support. Our experience with Japan, however, indicates that an ally's reliance on U.S. nuclear power for its security may be accompanied by refusal to allow <sup>1/</sup> important elements of that power on its national territory.

#### Fears of "Provocative" Weapons Systems

86. A third and closely related source of apprehension in some allied nations is the belief that certain types of U.S. weapons and installations increase the likelihood of war because the Soviets may consider them "provocative". Although the Soviets may indeed label any military force opposing them as "provocative", this argument is nonetheless used in a number of allied countries, including the United Kingdom, <sup>2/</sup> to advocate U.S. military withdrawal. This argument is also used to oppose the acceptance or use of "vulnerable" nuclear delivery vehicles in national armed forces. In Britain, both the V-bomber force and the acceptance of THOR IRBM's have been opposed on this ground. It is argued in this connection that "soft" or unprotected strike systems appear suitable primarily for a first strike and are thus more likely to encourage an attack on the host country than to avert it. This argument is not unnaturally used by those who accept the view that the current U.S. overseas base structure constitutes a provocative military encirclement of the Communist Bloc.

<sup>1/</sup> See Annex "B" for a discussion of Japanese attitudes toward nuclear weapons and collective defense.

<sup>2/</sup> The use made of this argument in the United Kingdom is discussed in Annex "A".

~~SECRET~~  
SECRET

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

87. There is of course an element of truth to this general argument, namely that weapons systems particularly vulnerable to a Soviet first strike are not the best means of averting one. For this reason, both the importance and the prevalence of this argument are likely to diminish as U.S. nuclear power, and possibly allied nuclear power as well, come to rest on less vulnerable weapons systems.

#### Fears of Accidental Explosions or War

88. The attitude of allied publics toward the deployment of U.S. nuclear strike forces on their territory may also be affected by a fear of accidental nuclear explosions or of "war by accident". Objections have been raised in this regard (as in the British Labor Party's June 1960 statement on defense policy) to flights of nuclear-armed U.S. aircraft over their territory. The recent U-2 and RB-47 incidents have led to some apprehension that ill-considered U.S. military activities overseas might raise the risks of accidental war.

89. In this connection, the possibility of a nuclear accident is likely to increase as control over these weapons passes to additional nations. Such an accident would be likely to spur pressure for nuclear disarmament, whether the weapon involved was under U.S. or foreign control.

#### The Issue of Controls

90. These apprehensions about nuclear war are reflected in a fourth area of friction between allied nations and the United States -- the question of host country controls over U.S. nuclear strike systems. The desire to impose such controls may, as in the case of France, stem in part from a desire to assert national sovereignty. But even in the case

~~SECRET~~

~~SECRET~~

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

of France,<sup>1/</sup> and particularly in the cases of the United Kingdom and Canada, there appears to be apprehension that the weapons or installations involved might be used in such a way as to lead the host nation into war without its consent. This concern is, of course, exploited by Soviet propaganda. It is further aggravated by the fact that host nations might not be able to exercise the prerogatives of national sovereignty over forces on their territory, should they wish to do so, in a crisis situation. The U.S., for its own part, obviously cannot agree to host nation veto powers over such weapons as are considered essential to its own security.

91. This conflict of interest is an element in the refusal of France and Japan to permit nuclear-armed U.S. forces to be deployed on their territories under essentially unilateral control in peacetime.

<sup>1/</sup> French President Charles DeGaulle, speaking on the need for national control of French armed forces, stated recently: "France considers that if atomic weapons are to be stockpiled on its territory these arms must be in its hands, in view of their nature and the consequences which their use could have. Obviously, France cannot allow its destiny, its very life, to be at the discretion of others." FBIS, Daily Report, Middle East & West Europe, 6 Sept 1960, p. R13. OUC.

~~SECRET~~

~~SECRET~~

~~SECRET~~  
~~SECRET~~

Effects on Neutral Attitudes

92. The effect of these apprehensions on the attitude of the neutral or uncommitted nations is moderated by the fact that, as a matter of definition, these countries do not permit the deployment of U.S. strike forces on their territory. The question of U.S. strategic protection is also of less relevance to the position taken by neutral nations -- as uncommitted states they have foregone a direct claim on U.S. protection. This does not mean, however, that they would have no interest in U.S. military assistance, should they be attacked, or that they would not regard the Western alliance with greater benevolence if their expectations of effective military support in a crisis were high. The Soviets have attempted to undermine any such expectations by drawing the neutral nations into their own campaigns against U.S. (or U.S.-donated) nuclear strike systems overseas and, by doing so, have made the attitudes of these nations relevant to the military capabilities of the Western alliance. Khrushchev's recent criticisms of Austria, for not protesting Italian acceptance of U.S. IRBM's, is a case in point. Similarly, an important factor in the refusal of the Scandinavian NATO countries to accept nuclear weapons is fear of Soviet reprisal against another neutral, Finland, whose position is of importance to their own security.<sup>1/</sup>

93. Those nations which have chosen neutrality largely to avoid entanglement in war are naturally sensitive to the possible dangers of nuclear weapons and to acts which they may regard as unnecessarily provocative of the Soviet Bloc. This attitude is reflected in the priority given to disarmament by,

SECRET.

~~SECRET~~  
~~SECRET~~

~~SECRET~~

SECRET

for example, India, and is indicative of the reaction which the United States might expect from these nations if it should initiate the use of nuclear weapons in a limited war.

#### Future Trends in Apprehensions

94. The preceding paragraphs have discussed several sources of friction within the Western Alliance that stem, by and large, from public and official fears of nuclear weapons and involvement in nuclear war. With the growth of nuclear capabilities on both sides of the Iron Curtain, it appears likely that these fears will increase in scope and intensity, though the rate of increase will vary considerably from region to region and from country to country. This general trend, however, will not necessarily mean that there will be a significant growth of apprehension in those nations, such as West Germany, which are particularly exposed to Communist aggression and which are well aware that their security rests, in large part, on Western nuclear capabilities. Moreover, it is possible that the development of national nuclear capabilities by some countries might result in more favorable attitudes toward these weapons within those countries. This appears to be the case in France, although trends in British attitudes would suggest the opposite conclusion. At present, in most Middle Eastern, Asian and South American countries there appear to be gradually rising apprehensions concerning the "nuclear menace" which in some instances will continue to have directly adverse effects upon the military capabilities of the alliance.

95. Before leaving this subject, however, it should be said that there are two military trends which will reduce the impact of these fears on the military capabilities of the United States

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

itself. One of these is the declining importance of overseas air bases to U.S. strategic power that should accompany the phase-out of the B-47 medium bomber force in the mid-1960's. Secondly, the problem of host nation controls should be eased somewhat as allied nations acquire their own nuclear weapons systems and, to at least some extent, gradually replace those U.S. tactical nuclear aircraft and missile systems now deployed in Europe. Such a shift in responsibility should ease the control problem, at the possible cost of U.S. doubts that the missions assigned to these allied forces would actually be performed in wartime.

#### Other Influences on Allied Attitudes

96. Of the variety of additional considerations affecting the willingness of overseas nations to cooperate militarily with the United States, the following are among the most important.

97. First, the estimates that other nations make of the nature and gravity of the Sino-Soviet threat to their security clearly influence their attitudes toward both the United States and their alliance commitments.<sup>1/</sup> In the past, one of the major difficulties that the U.S. has faced in eliciting military support has been the tendency of many overseas nations to show less anxiety on the subject of Soviet military intentions than has prevailed in this country. Although there have been occasions in the past when crisis situations, precipitated by the Soviets, have increased both allied military efforts and their willingness to cooperate with the United States, it does not necessarily follow that future crises, in the context of

1/ For a detailed area-by-area analysis for recent trends in this respect, see USIA/ORA, Free World Views of the U.S. - U.S.S.R. Power Balance, R-54-60, 29 August 1960. SECRET.

~~SECRET~~  
SECRET

expanding Soviet and Chinese economic and military power, will enhance allied solidarity. Somewhere along the line of rising anxieties, a point may lie beyond which some of the allies will not dare to continue their collaboration with the U.S. for fear of provoking hostile action by the Communist Bloc. Any decline in their expectation of effective U.S. military support increases the chances of such a negative attitude toward the alliance.

98. Moreover, in the minds of overseas publics, the relative standing of the Sino-Soviet bloc and the Communist system, compared with the standing of the United States and its institutions, bears heavily on their attitudes, wholly apart from the military considerations involved. To the extent that the Soviet bloc becomes attractive as a model for economic development, or as the "wave of the future", active military collaboration with the United States would become more difficult for foreign governments to support. It is likely, therefore, that the attitudes of many non-Communist countries will depend in part on the outcome of the ideological, economic and political aspects of the cold war. In this area the Soviets, by the alternate use of "peace propaganda" and nuclear threats, can play on the conflicting elements that militate against collaboration with the Western alliance.

99. It is obvious, moreover, that any cause of friction between overseas free countries and the United States will tend to place strains on allied solidarity and neutral benevolence. The alliance is most directly affected when these disputes concern military matters, such as disagreements on strategy, weapons systems, or distribution of the military burden. In this area, considerations of national prestige and feelings of what may be thought to be a humiliating

~~SECRET~~

~~SECRET~~

~~SECRET~~

~~SECRET~~

dependency on the United States may complicate the process of decision making. It is difficult to predict, even with regard to individual countries, whether the trend here is toward greater or lesser friction within the alliance. It is possible that the sense of independence which some allies may derive from their increased military power will facilitate the making of military agreements. It is perhaps more likely that this independence will lead these nations to become more demanding or more stubbornly insistent in promoting national, as opposed to alliance, programs.

100. It is less obvious that interallied disputes over economic and political matters place obstacles in the path of military collaboration. While one might expect that disagreements over tariffs, financial assistance or colonial policy would not seriously affect the values placed on the collective defense effort, such disputes tend to strengthen the hands of those in allied countries who are, perhaps for other reasons, unsympathetic or even hostile to military alignment with the United States.

101. Some of the gravest problems facing American alliance policy have arisen from the fact that some of our major allies have belonged to the category of colonial powers. Sympathizing with the movements for the termination of colonial rule, but still wanting to preserve the solidarity of the alliance, the United States has tended to antagonize both parties to the colonial conflict. The colonial power involved may, as in the recent case of Belgium, threaten to reduce its collective defense efforts in retaliation for what it considers U.S. failure to support it.

~~SECRET~~

~~SECRET~~

~~SECRET~~  
S E C R E T

102. However, as the process of emancipation proceeds and more of the colonial powers come to resign themselves to the liquidation of their empires, this source of conflict between the United States and its allies should diminish in the 1964 to 1967 period. The benefits of this trend, in improving allied solidarity, will, however, be offset by the fact that strategically important areas of the Mediterranean, Asia and Africa will have shifted from the control of U.S. allies to governments which are less able to resist Sino-Soviet pressures and which in many cases are likely to adopt a neutralist position in order to avoid involvement in the great power struggle.

103. Another source of interallied friction, often connected with the colonial issue, are the restrictions placed on some allied military contributions by their preoccupation with interests which they regard as vital, but which have only indirect relevance to the primary issues of the cold war. Disputes such as those between the Netherlands and Indonesia, Pakistan and India, Israel and the Arab States, France and the Algerian rebels, have diverted allied resources and military power from the collective defense effort. The positions taken by the United States in these disputes has driven, and may again drive, one or both parties into opposition to the U.S. and lead to subsequent reductions in, or withdrawals of, military contributions to the alliance. In this area, it is difficult to foresee whether American foreign policy will be more successful than in the past in mediating such conflicts or in gaining the sympathy of its allies by the manner in which it approaches the dispute or contributes to its solution.

THE PRESENT STATE OF THE ALLIANCE AND PROSPECTS FOR 1964 TO 1967

104. By 1960, conditions in the world had developed in a way that has permitted the United States to count on significant

SECRET

~~SECRET~~

~~SECRET~~

SECRET

military efforts and cooperation by a large number of allies, including the most powerful countries whose territory adjoins the Soviet Bloc, on varying degrees of benevolence from many neutral nations, on facilities to deploy important elements of its strategic force overseas, and on considerable allied contributions to the defense of territory considered of strategic importance to the United States. If it were not for symptoms of possible future deterioration of this situation, and for the inadequacy of the NATO Shield and other local defense forces, the present state of the collective defense system could, in view of the circumstances, be regarded as a considerable achievement.

105. There has, in fact, been widespread recognition throughout the Free World that Communist aggression constitutes the principal threat to the security of independent nations and that the United States is the locus of countervailing power. Even in countries like France and Italy, where strong Communist parties have existed and where many changes of government have occurred since World War II, military ties with the U.S. have been consistently supported. Moreover, where European public opinion has been able to express itself freely, large majorities have supported the alliance policies of their governments. The alliance has retained an underlying cohesion in the face of both rising Bloc military power and increasingly violent Soviet threats against individual countries. In some instances, as in the aftermath of the U-2 incident, Soviet excesses in attempting to exploit an issue to divide the Western nations have served to pull them more closely together. In the far East, Red Chinese brutality toward the Tibetans and aggressive moves against the Indian border caused India to reassess the gravity of the

SECRET

- 56 -

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

~~SECRET~~

Communist threat and the security provided by her own neutrality.<sup>1/</sup> Even among the new and uncommitted nations of Africa, the tendency is to look first to the U.S. for economic assistance, if not for military protection. It should be added, however, that preservation of the alliance has not prevented the loss of much territory and appreciable human and material resources once available to the collective defense system -- where European colonies have gained independence they have adopted a neutralist position toward the East-West struggle. Had it not been for the tide of colonial emancipation, most of Africa as well as India, Burma, Ceylon, Indonesia, Vietnam, Laos and Cambodia would today be parts of allied territory.

106. As far as the noncommitted countries are concerned, none has so far voluntarily opted to join the Sino-Soviet Bloc. None except Yugoslavia has a patently Communist government. However, by 1960, the number of countries that claim to be pursuing a policy of neutrality, and that lean more or less strongly towards the Communist Bloc, has grown considerably to include, apart from Yugoslavia, the United Arab Republic as well as Iraq in the Middle East, Indonesia and possibly Laos in Southeast Asia, Guinea and possibly other countries in Africa, and Cuba in the Western Hemisphere itself.

107. Looking towards the period of 1964-1967, those responsible for U.S. military policy have reason to be concerned with two types of trends relating to changes in the Free World:

a. First, with any adverse trends in allied solidarity and neutral benevolence that affect allied contributions and

1/ Even official spokesmen [redacted] acknowledged privately in 1959 that, in the final analysis, it was American military power that would determine the freedom or demise of vulnerable countries of Southeast Asia faced with the potential of Communist aggression. USIA, Free World Views, op. cit., p. 19, SECRET.

~~SECRET~~

- 57 -

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~  
~~SECRET~~

neutral noninterference with U.S. military policy and programs.

b. Second, with future U.S. needs for the active military collaboration of overseas allies. Such collaboration includes the provision of bases and facilities for U.S. forces and the maintenance of effective indigenous forces.

108. In this second area, it now appears that changes in the U.S. strategic strike force during the mid-1960's should reduce dependence on overseas bases for support for the strategic mission. B-47 medium bombers, the only strategic aircraft now deployed outside the Western Hemisphere, will decline steadily in number through the 1960-1965 period and are expected to phase out of inventory in 1965 to 1967. No plans known to the authors of this report call for the deployment of U.S. heavy bombers, ICBM's or U.S.-manned land-based strategic missiles outside of the Western Hemisphere.

109. This trend toward a declining reliance on overseas bases must be somewhat qualified. Depending on their actual wartime missions, it may remain militarily desirable to retain "reflex" medium bomber forces on the present SAC bases in Britain and Spain. Even with the phase out of the medium bomber force, these bases could remain useful for staging operations or dispersal of the theater air forces, and, possibly, for poststrike recovery of other aircraft. The importance of the present Canadian SAC bases to strategic air operations cannot be evaluated on the basis of the information available. These facilities have, however, been strengthened as the number of overseas SAC bases has declined. They could play an important peacetime role in support of air alert operations, should the Canadians relax present overflight restrictions. An important element of the 1964-1967 strategic force, the POLARIS FBM missile

~~SECRET~~

~~SECRET~~

submarine, is somewhat of an exception to this trend. It is a strategic offensive system scheduled for overseas deployment in increasing numbers through the 1960's. Deployment of the FBM submarines within range of their targets is not dependent on overseas tender bases, but the availability of such bases would increase the percentage of the force that can be maintained in patrol areas. As the force grows in size, and missile range extensions add to the feasible deployment areas, local logistic support will diminish in importance. These technological advances will also reduce the importance of allied cooperation in the communications and navigational areas of the FBM system.

110. In contrast to this general trend in the strategic mission field, overseas U.S. bases will remain important in a number of other areas. These include the collection of intelligence, provision of both strategic and tactical attack warning, control of the Bloc submarine threat, logistic support of U.S. tactical forces and the rapid transport of these forces to troubled areas. Rather than being reduced by technological innovations, these overseas base requirements may increase as additional areas of the world present military difficulties to the United States. The present extensive and partially successful Bloc campaigns to increase their influence in and to destabilize sections of Africa and Latin America indicate the scope of potential military problems in these areas. Even if the responsibility for maintaining stability in these areas should be formally accepted by regional organizations or by the U.N., it is evident that the United States will still bear the brunt of the military and economic burdens involved.

111. Other trends previously mentioned in this paper indicate, however, that increasingly greater allied contributions to

~~SECRET~~

SECRET

the alliance will be required. As the U.S. strategic threat loses deterrent value against limited aggression on overseas allies, the vital U.S. interest in denying control over these countries to the Sino-Soviet Bloc will call for greater allied contributions in the area of localized deterrence and defense and for greater flexibility in the rights granted to the United States to deploy its forces in these overseas areas. The changing international economic position of the U.S., the increasing military problems faced by the U.S. in its own defense, and the possibility of extensive economic aid programs to the underdeveloped nations are all likely to restrict the assistance the United States can give its technologically advanced allies in supporting their local defense forces. This possibility emphasizes the importance of increasing the allied collective defense contributions.

112. The chances for successful local defense are particularly vulnerable to adverse shifts in allied solidarity and neutral benevolence. Effective U.S. support for the defense of a particular country may require not only the use of its territory, but the granting of rights by other nations for overflight, staging areas, and even bases from which combat operations are conducted. Defense by local forces may therefore call for solidarity among allied countries themselves, as well as for solidarity with the United States. The French reluctance to provide logistic facilities needed for West German forces, and British opposition to the arming of West German forces with nuclear weapons, are cases in this regard.

113. It was mentioned earlier, in relation to several of the factors that have affected allied solidarity and neutral benevolence in the past, that their development during the next decade cannot be reliably predicted. However, since the emphasis in

SECRET

-60 -

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

SECRET

preceding sections has been on those trends foreshadowing difficulties for the collective defense system, it should again be mentioned that countervailing influences exist. Experience has shown that allied countries tend to rally to the support of the United States when relations between East and West become critical, particularly when a Soviet-precipitated crisis threatens their area of the world. The creation of NATO itself followed hard on evidence of such threats to Western Europe; its force goals were increased, if not met, under the influence of Soviet aggression in Korea. SEATO was a similar response. If one assumes, therefore, that its growing military and economic power will lead the Sino-Soviet Bloc to take a more aggressive approach in this period, the pull toward allied unity may increase.<sup>1/</sup> Even such confirmed neutrals as India have shown signs of alignment with the West, as evidence of Communist aggressive intentions toward them has become unmistakable. It was mentioned earlier, however, that the rise of Sino-Soviet power, accompanied by more aggressive use of nuclear threats and blackmail, may intimidate some of the free countries and increase their reluctance to cooperate militarily with the United States.

114. The outcome for individual nations will depend largely on their estimates of the alternatives open to them. The alternative of surrendering to the Bloc, or even of joining it voluntarily, would seem to presuppose Communist subversion on the level of an internal coup. While America's allies in Europe would seem to be relatively immune to subversion on this scale, some neutral and even allied nations in Asia might choose the road of affiliation with the Bloc unless given firm confidence in U.S. military protection or otherwise prevented from taking this course of action.

1/ Public opinion polls in the U.K. and France have shown a marked increase in attitudes favoring NATO participation during a period of sharpened East-West tension -- as in late May 1960 -- as compared with periods of apparent detente. See USIA/ORO, Post-Summit Trends in British and French Opinion of the U.S. and USSR, WE-64, June 1960, p. 15.

~~SECRET~~

~~SECRET~~

115. Another alternative, neutrality, may become a more serious possibility for many nations than it has been so far in the post-war period. The rise in Sino-Soviet power, a decline in the deterrent value of the U.S. strategic force, and the development of independent deterrent forces will all tend to strengthen the ranks of those who would wish to remain independent of the East-West conflict. Because the shift to neutrality of any country presently contributing to the collective defense system is likely to make more difficult the defense of its neighbors, such a transition is likely to produce a chain reaction.

116. No matter how strong is the inclination in allied and neutral countries to resist Communist Bloc expansion in this period, it seems unlikely that it will be possible fully to counteract those erosive forces discussed earlier in this paper. This is particularly true of the problems following from the decline in allied confidence in U.S. strategic protection. The allies will realize in time that every approach toward strategic nuclear stalemate raises the level of military action that the Soviets can dare undertake without risking the triggering of U.S. nuclear intervention. While in the areas of Asia that border on Red China, such intervention is considered unlikely anyway, a decline in solidarity may result from the rise in Red Chinese military power.

117. It would be possible, theoretically at least, to offset the adverse effects of nuclear stalemate on the strategic level by a buildup of local forces for deterrence and defense with a view to creating a balance of military power -- and thus a stalemate -- on the nonstrategic level of military confrontation. However, unless the United States is willing to continue to carry a considerable part of the burden of such a buildup of

~~SECRET~~

SECRET

limited war forces, the increases in allied military efforts and expenditures might play into neutralist hands and arouse opposition to the alliance policy from many quarters. There is also something of a vicious circle here: in order to be able to support overseas local defense efforts, the United States must be permitted to deploy tactical forces on or close to Eurasia; but if allied solidarity declines, this permission might become harder to obtain and, in turn, render more difficult the maintenance of the U.S. military support on which allied solidarity rests. In any case, whatever the trend, the dangers surrounding the Free World nations are so great, even under present conditions, that U.S. military policy and programs should be tailored with a view to maximizing the cohesion of the alliance and the military cooperation of its member nations.

#### REMEDIAL MEASURES

118. While many political, economic and ideological factors will affect both the future cohesion of the alliance and the attitudes of the uncommitted nations toward it, it is American military posture -- including the judicious choice of military strategies and weapon systems -- that will continue to be a primary influence.

119. Theoretically, the United States might seek better to protect its overseas allies by attaining a clearly decisive counterforce capability against the Soviet strategic arm. In practice, it now appears difficult enough to achieve and maintain a secure retaliatory force. It could also be said that an openly declared U.S. effort to achieve first-strike power could be self-defeating in terms of its effects on the alliance system. Should such efforts lead to an intensification of the arms race, its initiation by the United States might be regarded in some

SECRET

~~SECRET~~

~~SECRET~~

allied countries as a dangerous step toward war and, for this reason, encourage the flight into neutrality that it was designed to prevent.

120. In this context, allied confidence in U.S. military protection -- the backbone of the alliance system -- can be maintained only if doubts about the effectiveness of the Grand Deterrent are compensated for by expectations concerning other forms of U.S. military support. One form this support might take would be American technical assistance and active cooperation in the development of independent deterrent forces abroad. Several weighty arguments can be raised against such action. It can be held that such independent nuclear strategic forces will be of little military value and may subject the United States to serious new dangers. The Soviet Union might respond to such a move by providing Red China, and possibly some of the European satellites, with similar weapons under nominal local control. (There are, however, strong incentives for the Soviets not to act in this manner, and this has not been their response to the development of nuclear forces by England and France.)

121. Other risks of such assistance are those attendant on any spread of nuclear weapons -- increased danger of a nuclear accident, accidental war, or the less likely possibility of catalytic war. It is also argued that the development of such independent deterrent forces diverts allied attention and resources from the maintenance of conventional arms that may be a more useful contribution to the collective defense. U.S. technical and financial assistance can reduce the need for such a diversion, but may not outweigh nationalist pressures for the development of independent missile and weapon industries or offset the popular concept that strategic nuclear power can be

~~SECRET~~

- 64 -

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~

an effective substitute for conventional ground and air forces. There is also a fear that these weapons may fall into the hands of irresponsible governments, should some now unforeseen change occur in the nations to which we supply them, or should they in turn sell or loan these weapons to third parties.

122. Obviously, the lower the military effectiveness of these independent strategic forces, the less they can compensate for the dangers of abuse. Even so, the risks involved in supporting the efforts of allied nations to achieve them may be a price worth paying, if their establishment should prove psychologically indispensable for the preservation of solidarity with the most resourceful of the overseas free countries. If they believe they need such forces, a belief that may recede on further thought, they are likely to proceed with their development, whether or not assisted by the United States. The result would be to create most of the dangers feared from such a proliferation of nuclear forces, with none but negative effects on the alliance itself and little opportunity for the U.S. to influence the use made, or not made, of these systems.

123. It is unlikely that the spread of independent strategic deterrents will create such divisive strains as to destroy the alliance system itself. The experience of the United States and the United Kingdom argues otherwise. In the case of smaller and less powerful nations, the probable limitations on the size and nature of their deterrent forces are even less likely to make them militarily independent of the alliance.

124. The second principal form by which U.S. military protection of allied countries can be enhanced is through increased support

~~SECRET~~

~~SECRET~~

for local defensive forces. Whether American efforts directed at an increase in such support would have a beneficial effect on the solidarity of the alliance depends on the faith that the allies in question have in local defense as a form of protection against Communist aggression. As things stand today, such faith seems to be firm in South Korea and on Taiwan

B-1  
1-30-68

[REDACTED]

In Europe there is presently no such strong faith.

125. All NATO members, including the United States, are committed to the view that, apart from border incidents, no Soviet military attack on the NATO area can be effectively deterred or defeated except by the threat or use of American strategic intervention. It is possible that by the 1964 to 1967 period, the present almost exclusive reliance on the Grand Deterrent could, without danger to the alliance, be shifted to a greater degree of confidence in collective local defense. The force requirements of any such strategy of local defense in Europe cannot be discussed here. Undoubtedly, such a change would require substantial advances in tactics, tactical weaponry, and perhaps the establishment and equipment of advanced U.S. staging areas sufficient in scope to compensate for Soviet numerical superiority in those forces available and militarily useful for an advance into Europe.

126. Other elements of U.S. military policy can also influence the cohesion of the alliance. One of these concerns the question of host nation controls over those U.S. nuclear weapons deployed overseas. The risks involved in granting control over nuclear weapons, and particularly of granting others a right of veto over their use, are unmistakable. However, their effects in practice may be somewhat exaggerated. Nations on whose territory

~~SECRET~~  
SECRET

these weapons are stockpiled are likely to have access to them in an emergency, whatever is laid down in an agreement. They are likely to feel justified in doing so if the survival of their nation is believed to be at stake.

If allied pressure for some form of joint control over U.S. nuclear weapons on their territory persists, there is therefore something to be said for peacetime agreements that enhance solidarity, even where legal restrictions present some military risks.

127. Finally, there is the question of the lengths to which the United States should go in avoiding military activities that are interpreted as unnecessarily provocative by other Free World countries. At least one aspect of this problem will be greatly diminished by the 1964 to 1967 period, as a result of the anticipated reductions in U.S. strategic strike forces deployed on overseas bases. However, should the United States seek to give stronger support to the local defenses of other countries, it may easily discover that the deployment of tactical nuclear forces abroad will be regarded as no less "provocative" than that of strategic weapons, and in fact will require similar installations. It makes sense, however, to proceed on the assumption that increases in military protection will cancel

~~SECRET~~

~~SECRET~~

~~SECRET~~

SECRET

out any tendency towards increased apprehensions. Such hope would not be warranted with respect to those neutral countries that believed themselves to be in no need of outside military protection. Here, everything will depend on the extent to which the overseas people can be made to understand that the projection of American military power onto, or close to, the Eurasian continent, far from being provocative, is indispensable for the protection of Eurasian free nations and that it is the consequence of a geographical situation in which a ring of weak countries, far removed from North America, is exposed to the risks of aggression from the Sino-Soviet Bloc. Even so, U.S. military policymakers should be aware of the high degree of sensitivity, especially in neutral countries, to anything that may draw Sino-Soviet fire in their direction, as, for instance, overflights by military aircraft or military vessels in their coastal waters. If, in the face of growing Sino-Soviet power, and blackmail threats, the sensitivity of the non-Communist countries of Asia and Africa should increase in coming years, one of the gravest difficulties facing the U.S., in developing a military policy for the protection of the overseas free countries, will be its diminishing freedom of movement and deployment in areas of such strategic significance as North Africa, the Middle East, Southeast Asia and the Far East.

128. If military policy cannot be expected to counteract entirely the adverse trend now apparent in allied solidarity and neutral benevolence, it may be able to protect the United States, as well as U.S. vital interests overseas, against the worst effects of this trend. As for the security of the United States which rests on strategic nuclear deterrence, the solution lies in making the U.S. strategic force as independent of overseas

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

SECRET

~~SECRET~~

~~SECRET~~  
SECRET

deployment -- particularly of deployment in countries of questionable solidarity -- as technological conditions permit. There is no way of avoiding entirely the allied fears and erosive effects on confidence in U.S. support that will result from the lessening of U.S. dependence on overseas bases for its own security. Apprehensions will be expressed that this independence will generate isolationist inclinations in the United States. On the other hand, increased U.S. support for allied local defense and possibly for independent or regional allied strategic deterrents should go far in convincing the overseas countries of the undiminished U.S. interest in their security and freedom. Moreover, continued American determination to protect them, if necessary, through the threat of strategic nuclear retaliation will not only continue to give them a considerable measure of protection, but should help keep much allied solidarity alive. After all, no achievable degree of strategic nuclear stalemate is likely ever to remove the risks that the threat of U.S. strategic intervention poses to Communist planners contemplating major aggression against the overseas free countries.

ANNEX "A" TO APPENDIX "A"

BRITISH ATTITUDES TOWARD COLLECTIVE DEFENSE

THE PROBLEM

1. To explore those prospective developments in British foreign and defense policies that would adversely affect the essential solidity of the Anglo-American alliance and consequently might impair U.S. access to U.K. facilities for the basing or support of American strategic offensive systems.

SCOPE

2. This discussion explores the predominant currents in British opinion, past and present, toward the U.K.'s foreign policy objectives and defense requirements. Particular attention is given to those trends in attitudes that might portend significant changes in British collective defense policies and Anglo-American military collaboration. General trends in public opinion are discussed insofar as they suggest what might be the primary issues of debate in these fields in the foreseeable future. Because public attitudes will both influence and be determined by the stands taken by the two major parties, conceivable developments in Conservative and Labor security policies are examined in detail. In this respect, the future of the British independent nuclear deterrent is considered of particular importance, since its abandonment might result in significant shifts in British attitudes toward nuclear weapons and toward U.S. strategic nuclear systems deployed on or supported from British installations.

INTRODUCTION

3. Traditionally, British foreign and defense policies have been directed toward two main areas of concern: (1) the preservation of a balance of power among the European states as an

~~TOP SECRET~~

- 72 -

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~TOP SECRET~~

essential condition of the security of the British Isles, and (2) the security of British political and economic interests in Asia, Africa, and other overseas territories. In recent years, two developments have affected the pursuit of these traditional objectives. The balance of power struggle, formerly focused on the European Continent, stretched outwards to embrace most of Eurasia and North America, and, as a result of two wars and the rise of two other superpowers, Britain's relative power position in the world dramatically declined. Thus, a third interest emerged to become a keystone of British policy -- the Anglo-American alliance. Only by enlisting American assistance could the U.K. hope to preserve the security of its own home islands and of its overseas interests and dependencies.

4. Also in the postwar period, a shift took place in the geographical orientation of British policy: the U.K. began to regard the security of Western Europe as its area of primary concern, although its interest in the overseas areas remained high, particularly in the maintenance and development of the Commonwealth. A number of factors were responsible: the dissolution of large sectors of its colonial holdings, the replacement of its overseas military commitments and economic interests in many areas by American commitments and dollars, and, particularly, the immediate postwar spectre of Soviet expansion toward the West. With the Continent under the domination of the Soviet Union, the East-West balance of power would be shattered and the security of the U.K. would be most gravely threatened. With this assessment, the U.S. concurred at the time of the Marshall Plan and the creation of NATO and still concurs today. Thus, British and American security interests are deeply intertwined, although both the geographical situation of the U.S. and its position as leader of the Free World give it greater and wider interests and responsibilities than its British ally.

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

5. The close ties at practically every level of contact between the United Kingdom and the United States constitute without question one of the more significant relationships on the international scene today. The pattern of relations between them has generally been marked by a high degree of identity in thought and action which, in times of crisis, has tended to evoke an impressive congruity of purpose and policy. Ties of language, similar political and legal institutions, a tradition of collaboration against common enemies, and close contacts on the personal and cultural levels have all served to reinforce this sense of community between the two countries. For the United States, the alliance with the United Kingdom is of fundamental importance in view of the U.K.'s contributions to the power of the Free World: its industrial and financial resources, its strategic position off the European continent, its territories and outposts in other parts of the world, its military forces for collective deterrence and defense, and its provision of extensive facilities on its home islands and elsewhere for the deployment and support of U.S. military forces. All of these considerations, in addition to the U.K.'s respected status as a world power -- a status often greater than is measurable by the physical attributes of power -- have given the U.K. a privileged position in the American alliance network.

6. The essence of the Anglo-American alliance is in the basic unity of the two countries on their major objectives.<sup>1/</sup> Nevertheless, the U.S. and U.K. have sometimes differed deeply on

1/ On the level of public opinion, successive polls of British attitudes have indicated a high level of felt mutuality of interests with the United States, with only minor variations over the years. The latest poll, taken in February 1960, shows a slight gain over the average of previous years: out of 1221 respondents, 25% felt that the basic interests of the U.K. were very much in agreement with those of the U.S.; 55% fairly well in agreement; 9% rather different; 2% very different; and 10% no opinion (a net favorable response -- favorable answers less the unfavorable answers -- of 68).  
USIA/ORA, West European Climate of Opinion on the Eve of the Paris Summit Conference, WE-62, April 1960, p. 26, CONFIDENTIAL.

~~SECRET~~

~~TOP SECRET~~

the methods and approach appropriate to the pursuit of their common goals. On several occasions, their different interests in various geographical areas have led to a near rupture of relations between them or to policies undertaken unilaterally without the other's support. The relative rapidity with which Anglo-American relations have recovered from such occasions suggests that the forces which impel London and Washington together are substantially stronger than those that divide them.

7. Nonetheless, there are indications that some very real differences in outlook could develop between them over certain of the issues confronting the Western alliance, and it is possible that different politico-military approaches to these problems, in combination with existing sources of friction, could lead again to a deterioration in Anglo-American relations. In this study, for purposes of analysis, emphasis will therefore be placed on those British attitudes, official and non-official, that suggest divisive forces in the alliance rather than on those attitudes that sustain the large areas of agreement between the U.S. and U.K. This concentration on the adverse trends should not lead the reader to underestimate the strength and compass of the many forces that enhance the solidarity of the Anglo-American alliance.

#### DISCUSSION

##### U.K. CONTRIBUTIONS TO WESTERN COLLECTIVE DEFENSE

8. The United States regards the continued security of the U.K. from Soviet attack or domination as a priority objective of U.S. policy, but not only because of the historical and cultural bonds between them or because of expected British diplomatic support for American international aspirations. Two other considerations are also paramount. First, it is of primary importance

~~TOP SECRET~~

- 75 -

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

to the long-term security of the United States that the Communist Bloc be denied the territory and resources of the British Isles and of British overseas dependencies. Secondly, the U.K. can make positive, immediate and continuing contributions to U.S. military security in two important ways: (a) by supplementing U.S. military capabilities with its own military power, and (b) by permitting U.S. access to bases and other facilities on its territories. These two types of contributions will be briefly considered here, while the following sections of this paper will be concerned with political forces that might jeopardize these contributions to the alliance and to U.S. military security.

#### Active U.K. Military Contributions

9. The British military establishment, though gradually declining in overall strength during the past few years and subject to deficiencies in several areas, will remain an important factor in the world military balance in the 1960-1967 period.

The military importance of the Army is greater than its size alone would suggest both because of its overseas deployments and because of the substantial number of base facilities available to the U.K. from Gibraltar in the West to Singapore in the East.<sup>2/</sup> While these

1-301(a)

The Army has borne the brunt of the 1957 decision to reduce the levels of the British armed forces and to create smaller and more mobile nuclear-armed forces of long-term and highly trained regulars:

Although reductions in the BAOR have not been as great as originally contemplated, its planned qualitative improvements -- for example, the provision of CORPORAL and HONEST JOHN missile units -- are not expected to compensate for its present quantitative deficiencies by NATO standards. At present, it falls short of MC 70 requirements in both combat and service support units and in the modernization of conventional equipment.

U.S. Access to British Bases

13. From the American viewpoint, a most important British military contribution to the alliance is the availability of the British Isles as a major base area for offensive and defensive operations and for the logistic support of U.S. forces deployed in Western Europe. For the U.S. Air Force, the U.K. provides facilities for strategic and tactical air operations, air refueling, reconnaissance, logistic support and storage, communications, and the programmed BMEWS and MIDAS warning systems. For the U.S. Army, Southampton and Liverpool are supports of Bremerhaven POE, [REDACTED]

Das [REDACTED] The U.S. Navy has access to bases that stretch from Northern Ireland and the Hebrides to Wales and Southern England. These include facilities for anchorage, repair, storage and supply, naval air and ASW operations, navigational aids, communications and intelligence. <sup>1/</sup>

14. In addition, the United States benefits from the large number of U.K.-controlled territories outside the British Isles which are potentially available for the permanent or emergency deployment of U.S. forces and for the installation of supporting communications or technological facilities. In this respect, there are current overseas base requirements by the three U.S. services in 14 British colonies, protectorates or other U.K.-controlled territories. Of these, six represent new requirements of the past year for military installations on islands under U.K. control in the Pacific and Indian Oceans. <sup>2/</sup>

15. Even a close coordination of Anglo-American goals and tactics in the cold war will not alone guarantee the continued availability of all these facilities to the United States. There are two theoretically conceivable conditions under which current American base rights might be restricted or rescinded.

16. One highly unlikely possibility -- so improbable that it can be ruled out as a consideration -- is that the U.K. might narrow its political and military commitments and develop its military power, including a credible strategic deterrent, in such a manner and to such a level that it could hope to guarantee its own military security without further reliance on U.S. military power. If this were to happen, the U.K. might well feel that the presence of U.S. installations on its territories

<sup>1/</sup> For a listing of U.S. bases and base requirements in the United Kingdom, see United States Base Requirements Overseas (USERO), JCS 570/491, 20 July 1959, pp. 270-279. TOP SECRET.

~~TOP SECRET~~

might jeopardize its ability to act independently of the U.S., if necessary, either (1) actively in defense of its own interests, as at Suez, or (2) passively to avoid involvement in a conflict that did not directly concern U.K. interests. But, in view of present and foreseeable trends in weapons technology, the financial burdens alone of the efforts required to create such a level of independent military power, apart from the other almost insurmountable difficulties, would appear to rule out the possibility of its development by the U.K.

17. The other, more conceivable development is a sharp intensification of already evident British apprehensions over the risks attendant upon the continued maintenance of U.S. forces and bases in the U.K. British fears have recently concentrated on those elements, characteristics or uses of the American military establishment in the U.K. that might be considered "provocative" by the Soviets and that might therefore generate a nuclear war in which the British Isles would become a prime target for Soviet missiles. Concern has also been expressed over the possibility that the presence and deployment of the American strategic force increases the risks of accidental nuclear explosions which would endanger the safety of the British public and might trigger a nuclear war by accident or miscalculation.

18. The exact nature and extent of these fears will be explored in a later section. It is sufficient here to say that, to date, they have made their presence felt in significant pressures on the government only for closer British surveillance and control over the use of British air bases by U.S. forces rather than for a rescinding of current basing rights. But if these apprehensions increase -- and current trends indicate that they may -- it is not impossible that other American installations in the British Isles may also come under fire,

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~

particularly from groups on the left in the British political spectrum, from associated trade unions, or from the small but very vocal pacifist and neutralist groups. Already there have demands from these quarters for the removal of the U.S. strategic air bases. Whether these demands will multiply in volume and intensity to become a significant political force will depend, in part, on developing British attitudes toward the deployment of nuclear weapons on British soil -- the practicality and morality of these weapons as instruments of deterrence or defense for the preservation of Britain's security. In part, too, British opinion on U.S. bases will be influenced by its future assessments of the nature and extent of the Soviet threat, of the East-West power balance, and of the net advantages of continued direct involvement in the cold war, as well as by the degree of its confidence in the ability of the U.S. to protect the U.K. and in the wisdom of American leadership in the delicate period ahead. All of these assessments will determine Britain's attitude toward the American alliance, which will in turn be affected by the dominant British conception of the role the U.K. should play on the international stage. Therefore, before any prediction of future British attitudes toward the American base complexes in the U.K. can be attempted, it will be useful to examine trends in British opinion on all of these issues and then to explore the specific sources of apprehension concerning the U.S. base rights. As a background for this analysis of current British attitudes, the following section will briefly summarize the present structure and strength of the political parties whose views will determine the future direction of British policy.

TRENDS IN BRITISH ATTITUDES

The Domestic Political Scene

The Present Outlook for the Parties

19. With a substantial majority in the House of Commons, augmented in the general election of 1959, the Conservative government can expect to remain in office until the next election in 1963 or 1964, unless some severe crisis or national issue forces the government "to go to the country" in the meantime.

20. At present, Prime Minister Harold Macmillan's government looks strong, united and confident, and it enjoys substantial public support. While it presents an image of ability, experience and stability with such men as Lloyd, Lord Home, Butler, Watkinson, Thorneycroft and Sandys in key Cabinet posts, it is apparent that Macmillan himself assumes the lion's share of responsibility for the formulation of policy in the foreign and defense fields. Since Macmillan took over from Sir Anthony Eden in 1956, his personal popularity in the country has rapidly increased, while the position of the Conservative Party has also been aided both by the general trend in Western nations toward conservative regimes and, particularly, by Britain's increased and continuing domestic prosperity.

21. The opposition Labor Party, on the contrary, seeking to recover from its third and most severe electoral defeat in nine years, is plagued with internal dissension on a number of fronts. Its pragmatic, intellectual, moderate Socialist leadership -- Gaitskell, Wilson, Brown and Healey -- is under fire both from the left wing of the party and from the trade union movement which constitutes the most important source for the party's financial and electoral support. Moreover, Labor's electoral platform, which clearly failed to evoke public enthusiasm in

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

1959, is currently in process of revision by factions of the party which apparently cannot agree whether the program lacked appeal because it was too radical, because it was too conservative, or because it was neither. Two substantive issues in particular split open Labor's ranks during the course of 1960, to the detriment of the present leadership's authority and prestige. One was the question of the applicability of the party's traditional nationalization objectives to present-day British society and economic needs. In leading the movement for their revision, Gaitskell met with overwhelming opposition and defeat from party councils and with charges of political ineptitude from Labor ranks and from the press. The second issue, not yet resolved, has been the Parliamentary Labor Party's defense policy which has been subjected to increasing criticism from powerful trade unionists and those left-wing or pacifist groups which favor Britain's unilateral nuclear disarmament.

22. The outlook for the Labor Party is not at all promising unless these issues are resolved and unless the present leadership either regains the support of dissident groups or is replaced by new men who can unite and inspire the party. However, renewed Labor unity will not alone be sufficient to allow the party to present a serious challenge to the currently solid position of the Conservative Party. It is possible that Labor's position could be strengthened by a coalition with the small but vigorous Liberal Party, which was remarkably successful in the 1959 election in attracting the youthful voters and former Labor supporters disillusioned with the two major parties. Whether the programs of Labor and the Liberals could be made ideologically compatible is, however, an open question. Moreover, Labor's position in the country will probably be aided by the

almost inevitable swing of the political pendulum against the party in power, while the Tories would likely be damaged by a serious deterioration of the international situation which they failed to prevent or by any evidence of an economic recession, even by an apparent lag in Britain's economic growth rate vis-a-vis the growth rates of the Continental countries. But most observers feel that Labor is doomed to a long period of political stagnation unless it comes up with a program that will regain the enthusiasm and confidence of the electorate, and there is little agreement today -- or prospect of more than a meaningless compromise agreement -- ~~within Labor ranks~~ on what such a program should be.

### The Objectives of British Foreign Policy

#### Approaches to Foreign Policy

23. Despite a considerable contrast between the articulated approaches of the two major parties to international problems, in practice British foreign policy since 1945 has been remarkably consistent.<sup>1/</sup> While adjustments will be made to future changes in the world situation, British foreign policy can be expected to continue generally along past lines. These lines may be defined in terms of four broad and interlocking objectives: (1) the containment of Communist expansion into the present Free World area; (2) the mitigation or removal of all possible sources of East-West tension in order to reduce the risks of open conflict and to build the foundations of future coexistence with the Soviet bloc on terms acceptable to the West; (3) the maintenance of the military, political and economic security of the U.K. itself and of its overseas territories and interests; and (4) the prevention of any further decline in Britain's position of world power and influence.

1/ For an analysis of the high degree of consensus between the two parties on issues of Foreign Policy, see F.S. Northedge, "British Foreign Policy and the Party System", American Political Science Review, LIV, pp. 635-646 (September 1960)

~~TOP SECRET~~

24. The Conservative Approach. The Conservative Party -- and, of course, the present government -- regard these objectives in the light of the traditional "balance of power" concept. While the Conservatives have accepted the thesis that the Soviet threat has changed its character and methods since Khrushchev's accession to power, they do not discount the danger of the global military threat from the East as readily as do the Laborites. They see the cold war as a traditional power struggle, to which the natural and primary responses are policies of deterrence and containment, with concurrent but secondary emphasis on efforts toward relaxed tensions or East-West accommodation. The latter objective, however, has been accorded significantly increased importance in recent years by the Conservative Government -- since the Geneva Summit meeting in 1955, in proposals for disengagement on the Continent, in Macmillan's efforts to promote the Summit meeting of 1960, and in disarmament and test ban negotiations.

25. Nevertheless, priority has been given to the establishment and maintenance of a network of alliances based on the principles of interdependence and collective defense in the Free World. There is strong support in Conservative ranks for the American alliance and for NATO.<sup>1/</sup> Without these defense arrangements, it is felt that the security of the British Isles and of other British interests -- which, in the Conservative view, remain global -- would be endangered.

26. The Conservatives have shown considerably more concern than the Labor Party for the preservation of the U.K.'s status as a leading world power. The desire for such a role has led

<sup>1/</sup> Of a selected groups of Conservative parliamentarians polled in the spring of 1958, 85% felt that Britain should place a "high degree of reliance" on NATO for the defense of Western Europe, while only 62% of the Laborites polled gave a similar answer. Lloyd A. Free, Six Allies and a Neutral (The Free Press, Glencoe, Ill., 1959), p. 58.

Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~TOP SECRET~~

them to look beyond Britain's limited resources for other sources of military power and political influence. The American alliance is therefore regarded not only as a shield against the Soviet threat but also as a well of strength upon which Britain can draw in order to supplement its own ability to fulfill its other positive international objectives. Through its special relationship with the U.S. -- as America's "paramount ally" -- the U.K. can "tap the U.S. power line".<sup>1/</sup>

27. Underlying this concept is the Conservatives' assumption that the Anglo-American relationship should be one of true interdependence. If a high degree of coordination can be developed on British and American policies on all major issues in all parts of the world, it is argued, the U.K. will be able to influence U.S. policy and thus to make use of American power in support of British interests.

28. At the same time, British Conservatives are uneasy about the extent to which the U.K.'s world position should be allowed to depend exclusively on the American alliance, when it is obvious that U.K. and U.S. interests -- though often coincident -- occasionally diverge. Other alternative sources of power should be developed. One is a strengthened and unified Commonwealth in which, it is hoped, Britain can remain the recognized and influential leader. Another is the U.K.'s independent strategic nuclear capability which will assure the U.K. of a voice in the councils of the great powers and augment its ability to take action -- or not to take action -- independently of the U.S. if need be. Most of all, the Conservatives feel that their possession of an independent deterrent provides them with a form of leverage with which to influence American policies and thus, paradoxically,

I/ 1974 pp 01-02

to persuade the Americans to recognize the principle of interdependence on issues vital to the U.K.

29. There are indications in recent years, however, that the Conservative Party is moving toward a reduced image of the world power position that the U.K. can hope to maintain. The Suez experience, which initially spurred Conservative desires for an independent power base in the form of a strategic nuclear capability, had the contrary long-term effect of shaking general confidence in the U.K.'s ability to remain a world power. Moreover, the succession of crises in Malaya, Suez, Kenya and Cyprus raised serious doubts on the net advantages, practicality and reliability of maintaining a global network of overseas bases, which in any case seemed less necessary in view of the U.K.'s reduced direct responsibilities in overseas territories.<sup>1/</sup> Finally, despite optimistic official estimates by the Defence Ministers, some doubts are now expressed, even in Conservative circles, about the present and future credibility of the British nuclear deterrent. The Conservative Party shows an increasing disposition to place greater emphasis on the American alliance, rather than on the creation of an independent British power base, as well as to recognize that Britain can no longer claim the rights or responsibilities of a first-class power. This development, however, has not diminished the British Government's insistence that the principle of Anglo-American interdependence works both ways.

30. The Labor Approach.<sup>2/</sup> In contrast, the Labor Party, which has not had control of the Foreign Office since 1951, has long been ready to admit that the U.K. is no longer a great power and should discard the trappings of great power status.

<sup>1/</sup> See Lt. Col. Dewitt Armstrong, "The British Revalue Their Strategic Bases", Survival, Vol. 2, No. 2, March-April 1960, pp. 73-80.

<sup>2/</sup> See "The British Labor Party's Overseas Policies", Current Intelligence Weekly Summary, OCI No. 4969/59, 1 October 1959, p. 5. ~~SECRET.~~

31. Like the Conservatives, Labor's objective has been the preservation of Britain's security and well-being, but primary emphasis has been placed on efforts to relieve East-West tensions, to promote coexistence and to avoid war, while British contributions to the East-West balance of power have been regarded as a necessary but secondary approach. This is not to say that the majority of Laborites discount the importance of collective defense against the Soviet threat or of Britain's role in the Atlantic alliance. In a 1958 poll, seven out of ten Labor parliamentarians rejected the concept of British neutrality in the cold war, while two-thirds of the group favored high reliance by the U.K. on NATO.<sup>1/</sup> But NATO is regarded "...not only as a military bulwark but as a basis from which peaceful coexistence can be negotiated."<sup>2/</sup> Moreover, in terms of traditional British Socialist doctrine, the collective defense effort is considered a necessary but, hopefully, temporary substitute for the maintenance of peace by the United Nations which will remain unable to guarantee the security of its members as long as it is divided into rival blocs.

32. The Labor Party accords significantly greater importance to the UN as a political force and symbol of the world's aspirations for peace than do the Conservatives. It should be made "...the keystone of British foreign policy", according to Labor's recent manifesto on foreign policy and defense, and Britain must take the lead in strengthening the authority of the United Nations with the eventual aim of transforming an unstable system of cooperation between sovereign nations into the foundations of effective world government.<sup>3/</sup>

1/ Free, Op. Cit., pp. 58, 77.

2/ Foreign Policy and Defense, NEC/PS/58, issued by the Labour Party Press and Publicity Dept., 22 June 1960.

3/ Ibid.

33. These proposals suggest the Labor Party's underlying traditional mistrust of the balance of power system and of its effectiveness in preserving international peace for any extended period of time. These suspicions of the power-political approach to foreign policy are particularly evident less among the present Parliamentary leadership than among a number of back-benchers on the Labor side of the House of Commons, the Old Guard Socialists and former League of Nations supporters, and certain left-wing or pacifist Laborites. It is the contention of these groups that the U.K. should concentrate not so much on building military alliances and counter-alliances as on policies that would promote East-West accommodations and that would enhance Britain's international moral stature and influence as substitutes for the physical power the U.K. can no longer mount.

34. In contrast, the present Labor front bench, more apt to take a less "idealistic" approach to Britain's problems, is willing to give full credence to the concept of collective defense under present world conditions and the necessity of Britain's fulfillment of its military obligations to its allies. It was a Labor Prime Minister who initiated the British military atomic program in 1951, and up to June of this year the party officially endorsed the Government's maintenance of the independent nuclear deterrent in the absence of a general or -- under the "non-nuclear club" concept -- a limited disarmament agreement. The June 1960 Labor proposal that the U.K. should abandon its independent nuclear capability reflects the leadership's view of Britain's appropriate role in international affairs and in the Western alliance. While -- they argue -- the U.K. is incapable of creating a credible deterrent of its own and must rely on the American deterrent for security against

~~SECRET~~

~~TOP SECRET~~

strategic attack, it must give firm support to the Western alliance by increasing its contributions to the West's conventional armory.<sup>1/</sup>

35. At the same time, Labor feels less of a need than its Conservative opponents for Britain's direct and all-embracing dependence on American power, since it places a lower estimate on the gravity of the Soviet military threat and is less concerned with bolstering Britain's global ability to meet the Soviet threat in the overseas areas. It would therefore like to see the U.K. exercise a greater degree of independence from the United States in promoting measures which, it hopes, will reduce the risks of war, such as its disarmament schemes and Gaitskell's plan for military disengagement in Europe. A number of considerations lead the Labor Party to give high priority to this objective. Although Labor downgrades the likelihood of a Soviet military attack, it is considerably more apprehensive than the Conservatives about the dangers of nuclear war under present strategic policies and deployments. It is less willing to risk Britain's future on what it sees as an all-or-nothing policy of nuclear deterrence, and it particularly deplores NATO's apparently progressive commitment to a nuclear strategy at the expense of capabilities for a conventional response to a military incident in Western Europe. Moreover, it is more optimistic than the Conservatives about the possibilities of achieving better relations with the Soviet bloc through constant efforts to exploit opportunities for East-West accommodation, efforts in which it hopes Britain will take a leading role and thereby enhance its moral influence and international respect. Except for Labor's rejection of the independent deterrent, the differences between official Labor policy and the policies

~~TOP SECRET~~

of the Conservative government are not substantial and are centered mainly on the issue whether priority should be accorded to collective defense efforts or to policies promoting a relaxation of tensions. But the current official line of the Labor Party on foreign and defense policies may suffer modifications under rising pressures in party circles for immediate unilateral nuclear disarmament, greater control over or the removal of American strategic bases, and a cutback of defense expenditures. Such proposals could lead in turn to proposals for Britain's withdrawal from NATO and neutrality in the cold war, if the present leadership of the Labor Party were ousted.

#### Possible Areas of Conflict on Anglo-American Objectives

36. Despite a substantial degree of concurrence at present between the two British parties on the goals of British foreign policy, it is apparent that the Conservatives' approach is closer to that of the United States. Nevertheless, while the U.S. supports the four major objectives of British foreign policy suggested above,<sup>1/</sup> there is still scope for significant Anglo-American differences over the approaches best suited to their achievement. If differences should become acute and acerbate relations between the U.S. and the U.K., the climate of British opinion on the U.K.'s military contributions to the Atlantic alliance could be adversely affected. The possibilities of such differences will therefore be summarily examined in the following pages.

#### Containment of Sino-Soviet Expansion

37. Although containment of Communism within its present borders remains a primary goal of British policy, most British analysts differ with their American counterparts with regard to the nature

<sup>1/</sup> Containment, relaxation of tensions, U.K. security, and U.K. prestige.

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

and gravity of the Sino-Soviet threat. The Labor Party in particular and the Conservatives, to a lesser extent, hold that there has been a fundamental and significant change in the Soviets' cold war strategy. The dangers of Communist expansion, they believe, are now primarily political, economic and psychological, rather than military: as the recent Sino-Soviet ideological dispute suggests, Khrushchev would be reluctant to jeopardize his country's economic progress and international political gains by aggressive military adventures that might unleash a general war.

38. American observers, on the other hand, have shown a greater concern for the potential dangers of rising Soviet military capabilities, particularly in the missile field, and are deeply suspicious of Khrushchev's occasionally professed desires for peaceful coexistence and nonmilitary competition with the West. Such policies of detente are regarded as essentially tactical shifts in the Soviet Union's basic strategy of territorial aggrandizement. At the least, American leaders are unwilling to bank on the sincerity of Khrushchev's peaceful gestures to the extent of relaxing U.S. efforts to strengthen the West's collective defense posture.

39. The gap between British and American estimates of the threat has narrowed since the 1960 Summit breakup and Khrushchev's missile threats and interference in Cuba and in the Congo. But if it widens again under a new Soviet peace offensive, it could have serious consequences for Anglo-American collective defense planning<sup>1/</sup> and could lead to differences over the choice of specific policies in a number of other fields.

Relaxation of Tensions

40. Recognition of Britain's diminished power has encouraged general acceptance of the proposition that the major role in containing the Soviet Bloc must be played by the United States. This belief, coupled with an acute awareness of the U.K.'s inability to protect itself if war is not avoided, has led the British government to place an increasingly heavy emphasis on another and concurrent policy objective: the reduction of East-West tensions while improving the international conditions favorable to peaceful coexistence. The prevailing British estimate of Soviet intentions -- that the Soviets would prefer nonmilitary forms of competition with the West -- leads to the same conclusion: that serious efforts must be made to cash in, whenever possible, on any apparent Soviet desires to resolve outstanding issues. To this end, the Macmillan government, with the support of the Labor opposition, has taken the lead in the Western camp to promote such East-West negotiations at all levels, including the Summit, as might cushion the severity of the cold war and reduce the likelihood of accidental or intentional war. With few illusions that such negotiations could lead to a general settlement, the official approach has been to work toward ad hoc adjustments on specific issues -- trade, European disengagement, disarmament, a nuclear test ban, open conflict situations like Indochina or potential danger spots like Berlin -- whenever opportunities for settlement appeared to open up.<sup>1/</sup>

41. In contrast, the American government has more often viewed with skepticism the value and potentialities of East-West negotiations than its British colleagues, especially negotiations in

1/

ICA

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~~~SECRET~~

public conferences or Summit meetings where failure could -- and, in May 1960, did -- result in a sharpening of cold war tensions. In the American view, existing diplomatic channels remain a sufficient, and often a preferable and more effective, instrument for achieving satisfactory settlements. The American approach is therefore somewhat at variance with the general British view that more serious and more positive efforts should be made to provide the Soviets with opportunities to negotiate.<sup>1/</sup> It should be added, however, that many Conservatives remain privately skeptical of the wisdom of these efforts. Macmillan's attempts to bridge the East-West gap have been, in part, a response to general public weariness with the cold war and to the Labor Party's threat to monopolize the "peace" issue. This was particularly the case prior to the 1959 election.

#### Maintenance of Britain's Security

42. In pursuit of this objective, Britain has placed primary reliance on its collective defense arrangements, particularly NATO and the American alliance, and secondary reliance on the development of its own military forces. British attitudes on defense policy will be the subject of the next section; here it is sufficient to point out that while the U.S. subscribes to the objectives of current British defense policy -- deterrence of war on all levels, particularly strategic nuclear war, and defense against attacks that do occur -- the U.S. and U.K. may differ on the application of that general policy in specific circumstances.

<sup>1/</sup> In British public opinion polls since 1956 on the relative standing of the U.S. and USSR, in the seriousness of their efforts to achieve disarmament, for example, the high opinion of the U.S. dropped to virtually a standoff with the USSR in February 1960. Nevertheless, the U.S. still led the Soviet Union by a considerable margin in British public estimates of the sincerity of its interest in disarmament. Later polls may indicate an increase in U.S. standing, in view of the Soviet withdrawal from the Geneva disarmament conference.

~~TOP SECRET~~

- 96 -

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~~~TOP SECRET~~

43. Differing geographical interests will be a particularly potent factor of diverging assessments of defense priorities. The postwar contraction of Britain's overseas interests and commitments, both in its leased bases and colonial possessions, has progressively narrowed the scope of areas in which the U.S. and U.K. share heavy security responsibilities. Since the war the Labor Party and, more lately, the Conservatives have been willing to admit that Britain's stakes in the Far East, Southeast Asia and now the Middle East are declining. One may predict that the U.K., with its limited military resources, will be increasingly reluctant to take such grave risks in defense of overseas areas as the U.S. may feel justified, particularly those areas threatened by Red China.

44. On the other hand, British observers are increasingly concerned that in future years American readiness to come to the assistance of the U.K. and of Western Europe will decline as the utility of European strategic bases for the immediate defense of the North American continent declines, and as Soviet strategic capabilities pose increasingly severe retaliatory sanctions against U.S. strategic intervention in a war initially confined to the European area. As confidence in American strategic protection declines, the incentives for Britain's contracting out of its commitments to NATO and to the U.S. could increase if there appeared to be little hope of redressing an adversely shifting continental balance of power. While a head-in-the-sand British retreat to a neutralist and isolationist policy seems a highly unlikely development -- whether based on independent nuclear capabilities or on unilateral disarmament -- it is a conceivable development if noninvolvement in a nuclear conflict should become the paramount consideration guiding British security policy.

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

~~SECRET~~

Continued U.K. Prestige and Power

45. The U.K.'s diminished power position since World War II is attributable to a number of developments, including the concurrent rise of the U.S. and USSR as world superpowers, the weapons revolution which left the U.K. particularly vulnerable to a strategic strike, the dissolution of its old imperial system, and its limited financial and industrial potential capable of supporting only a moderate military establishment. Given these conditions, there is wide agreement that the U.K. must rely heavily on American support to preserve its present power position and to achieve its international goals, but necessity has not made a virtue of the fact.

46. In some quarters, the response to the U.K.'s sudden and necessary abandonment of its centuries-old central role on the world stage has been to deny the degree of the U.K.'s dependence on the U.S., or to resent this apparent development. Thus, the almost universal acceptance of the American alliance as a buttress to Britain's power is often accompanied by a seemingly paradoxical urge that the U.K. maximize its ability to act independently of the alliance. This feeling is reinforced by the constant irritations inevitable within an alliance where coordination is attempted on so many aspects of policy, as well as by occasional major differences on foreign policy issues and on estimates of strategic necessities. For a large segment of British opinion, the ability of the U.S. to run the Western show remains on trial, and generalized contrasts are sometimes drawn between the youthful, exuberant idealism of American foreign policy and the experienced, measured, realistic approach of British diplomatists. On occasion, confidence in the United States is badly shaken by such episodes as the Suez crisis, the

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

- 98 -

~~SECRET~~

~~TOP SECRET~~

handling of the U-2 incident or the Summit failure at Paris.<sup>1/</sup>  
In addition to British uncertainties concerning the skills of American policymakers, there is also apprehension that the U.S. may fail to support the U.K. when one of its vital interests is endangered (as at Suez) or that the U.S. may involve the U.K. in conflicts in which it has little direct interest.

47. To cushion the U.K. against unwelcome developments in U.S. policy, it is often argued that Britain should develop some sources of power independent of the American alliance. Such has been the justification for proposals to tighten Commonwealth bonds or to associate more directly with the Continental countries in economic -- and even political -- arrangements. The maintenance of the British independent nuclear deterrent has also been supported on this ground, and, significantly, one of its foremost official justifications is its value as a lever to enable the U.K. to influence the direction that American policies will take.

48. In addition to these general areas of foreign policy where differences could arise to jeopardize Anglo-American unity, four other specific issues should be mentioned as past or potential sources of friction. First, the British have regarded with some uneasiness the support and encouragement the U.S. has given to the enhancement of West German power and the confidence it has placed in the reliability of the Federal Republic as an ally. As Churchill disapproved of the American "one-track mind"

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

~~SECRET~~

approach to Nazi Germany at the close of the war, many Britons now deplore what they feel is a similar U.S. overconcentration on the Soviet threat. American support of West Germany's integration into "Little Europe" has not allayed British fears of future German dominance in Europe or of German adventurism in the years ahead. Secondly, West European integration has become a source of irritation between the U.S. and the U.K. While both countries will suffer commercially from the Common Market's external tariff, the United States is willing to pay that price for the expected advantages of West European political union, even one from which the U.K. excludes itself. Thus, the U.S. has strongly backed integration as a means both of tying Germany to the West and of creating a firm bulwark against the Soviet threat. In contrast, the U.K. has favored participation in a looser and broader association, primarily because of its Commonwealth preferential tariff obligations and because of its reluctance to submit British independent action to supranational controls. Thirdly, the different approaches of the two countries to East-West trade has caused some friction between them. Vitally dependent on its industrial exports, the U.K. has been unwilling to support all the restrictions on trade with the Bloc that the U.S. feels are necessary.

49. Finally, and most important in terms of a serious future Anglo-American rift, is the absence of a common policy toward Communist China and the Formosa Straits. While Britain has sought to preserve its remaining Asian interests, particularly Hong Kong, by recognition of Red China and by a willingness to deal with that country when necessary, many British feel that the American policy of enforced isolation of China, like that of Russia in 1917, breeds despotism within and acquisitiveness

~~TOP SECRET~~

~~TOP SECRET~~

~~SECRET~~

without. It is quite possible that the British government will vote for Red China's admission to the U.N., and both British parties regard the offshore islands as properly within the jurisdiction of mainland China. While the U.K. has not yet tried to force these issues with the United States, a future crisis in the Formosa Straits could lead to sharply differing views on the action to be taken. In the past, such divergent views have not seriously disrupted Anglo-American relations, although occasional clashes have taken place, as, for example, over Indochina in the spring of 1954. In the future, the consequences for the alliance could be far more grave.

#### British Attitudes Toward Collective and National Defense

50. Future American access to military facilities in the U.K., particularly those that support U.S. strategic systems, will be determined not only by the continued basic compatibility of U.S. and U.K. foreign policies, but also by developing British attitudes on issues relating to the security of the U.K.: in particular, the net advantages and reliability of the American alliance; the risks that U.S. bases pose for Britain's security; the relative strength of British armed forces; and the wisdom, practicality and morality of a defense policy based on nuclear deterrence and an independent British deterrent.

51. In recent years, public discussion of these issues has taken place within the context of debates on developments in British defense policy, in the Parliament, within the parties, in the press and in nonofficial circles. It is within this context that the major lines of British opinion will be explored here, inasmuch as the views that determine the future shape of British defense policy will also have a profound impact on the ability of the U.S. to retain its British bases.

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

- 101 -

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~

~~SECRET~~

52. The debate on Britain's defense requirements has often been confused. The issues are immensely complex; strategic thinking in the U.K., even on the highest levels, is currently in a state of flux; the information necessary to balanced judgments on such a variety of issues is not readily available, or can be interpreted in different ways; and the choices are all difficult. Moreover, the existence of nuclear weapons with their hitherto inconceivable destructive power has introduced an emotional element into the debate which has sometimes clouded the more rational considerations, particularly in nonofficial circles. Attitudes have also been conditioned by single dramatic events -- like the Bikini test results, Suez, or the recent RB-47 incident -- that act as catalysts for existing but dormant fears which are then transformed into an effective political force. Problems introduced in this manner are not always debated in terms of the other-relevant but not so dramatic factors. In short, while heavy reliance on the American alliance and on the U.K.'s independent deterrent remains official British policy, few people in the U.K. can see any certain and valid answer to Britain's security problem in the nuclear age that is anything better than the lesser of many evil choices. But, from the widespread and intense debate that has been developing on defense issues, it is clear that an extraordinarily high percentage of the British public is, to a greater or lesser extent, concerned.

53. The current spectrum of British attitudes on these issues can best be understood and evaluated against the background of what has been called the "nuclear debate" of the postwar years. The development of concepts and public reactions falls roughly into four periods: (1) security under the American nuclear umbrella, 1945 to 1954; (2) the debate on nuclear testing, 1954

~~TOP SECRET~~

- 102 -

~~TOP SECRET~~

to 1956; (3) general approval of the "New Look" in British defense policy, 1957 to 1958; and (4) increasing doubts on the British independent deterrent, 1958 to 1960. A brief survey of these periods, together with an analysis (in the following section) of current attitudes on the specific subject of the U.S. bases, may indicate the trends in British opinion toward reliance on U.S. military power that will determine the future of the U.S. base system in the U.K.

#### Reliance on U.S. Nuclear Capabilities, 1945 to 1954

54. In the immediate postwar period, British opinion generally regarded the American atomic bomb as a potentially important force for world peace. As long as the American atomic monopoly was maintained there was little sentiment in favor of the creation of a British bomb, although there was some resentment over the U.S. refusal to share its atomic secrets with the nation that had contributed its scientific talents to the wartime development of the atomic bomb.

55. After the Soviets exploded their first atomic bomb in 1949, however, the U.K. became the only one of the Big Three without an atomic capability and, many Britons felt, without adequate power to influence the policies of either the U.S. or USSR. This consideration was dramatized in early 1951 when developments in the Korean War indicated that atomic bombs might be used and might generate a general war in which the U.K. would be involved. In view of the evident weaknesses of Britain's military capabilities, a public and official reevaluation of British defense policies took place, which resulted in the decision of Prime Minister Attlee's Labor government to produce the British atomic bomb, successfully tested a year later. The Conservative government followed Labor's lead in deciding in 1955 to create

~~SECRET~~

- 103 -

~~TOP SECRET~~

~~TOP SECRET~~  
~~SECRET~~

a British thermonuclear capability. Both decisions initially met with substantial public support, for they seemed to promise that Britain could again claim great power status, that it would no longer be totally dependent on the U.S. for deterrence from strategic attack, and that the British bombs would contribute both to the deterrent posture of the Free World and to Britain's influence within the Western councils.<sup>1/</sup> The opposition Labor Party, with the notable exception of Aneurin Bevan, concurred in Prime Minister Churchill's H-bomb decision.<sup>2/</sup>

The Nuclear Testing Debate, 1954 to 1956

56. Only a few months later, there appeared the first substantial public doubts about nuclear weapons in general and about British nuclear weapons in particular. These apprehensions, which have since multiplied, initially concentrated on the issue of nuclear testing as the result of a wide dissemination of information about the destructiveness of the H-bomb and the dangers of its fall-out.<sup>3/</sup> Opposition to the British manufacture and testing of nuclear weapons increased under the impact of the American AEC's report, in February 1955, on the effects of the Bikini H-bomb tests of the previous year, which was widely publicized. The testing issue was also brought dramatically before

TOP SECRET

the public eye in a major debate in the House of Commons in March on a resolution to halt all further testing until an international conference determined the long-term radiation hazards.

57. Exploited by the left wing of the Labor Party as an election issue in 1955, public sentiment for a test ban continued to grow and reached a climax in June 1956 with the publication of a report by the respected Medical Research Council which expressed fear over the possible long-term genetic effects of Strontium 90. The effect of this report was such that Prime Minister Eden was constrained to announce Britain's willingness to consider negotiations for an international test ban apart from a discussion of general disarmament. By the summer of 1956, public opinion in the U.K. favored such a test ban, with or without general disarmament,<sup>1/</sup> although opinion was more evenly divided whether the U.K. should proceed with its own H-bomb tests.<sup>2/</sup>

58. By the end of the year, however, perhaps under the impact of Britain's military weakness at Suez, there was a significant shift of opinion against the concept of a separate test ban and against the unilateral postponement of Britain's thermonuclear tests.<sup>3/</sup>

General Approval of the New Defense Policy, 1957 to 1958

59. By 1957, the Conservative government, now led by Prime Minister Macmillan, adopted a tougher line toward the Soviet Union and, at the Bermuda Conference with President Eisenhower in the Spring, reversed its previous test ban policy by agreeing

not to consider negotiating an agreement on nuclear production or testing except within the framework of a satisfactory general disarmament agreement.

60. Moreover, the Defense White Paper,<sup>1/</sup> announced in April 1957, marked a significant turning point in the character and objectives of British defense policy.

CIA

62. The Suez operation had brought into question not only the adequacy of Britain's military strength to achieve its vital national goals, but also the value of its overseas deployment. The conviction grew that the political costs of maintaining overseas bases against mounting anti-colonial pressures would be heavy, while the declining importance of British economic and colonial interests in Asia and the Middle East seemed to suggest that a reevaluation of its overseas commitments would be in order. By 1957, the Macmillan government was faced with a choice between increasing the defense effort to meet the commitments and to assure the security of the British Isles as well and, alternatively, concentrating the defense effort to achieve

<sup>1/</sup> Defence: Outline of Future Policy, Cmnd. 124, April 1957

Enclosure "I"  
WSEG Report No. 50

more satisfactory results within a narrower range. In choosing the latter course, the government committed the U.K. to a five-year policy that constituted a radical revision of both the size and character of the whole defense program.

63. The new defense policy, which has been little modified in succeeding years, was based on two major assumptions: in the words of the White Paper, (1) "...that there is at present no means of providing protection for the people of this country against the consequences of an attack with nuclear weapons [so that] ...the overriding consideration in all military planning must be to prevent war rather than to prepare for it;" and (2) that "...in the true interests of defense...the claims of military expenditure should be considered in conjunction with the country's financial and economic strength." Thus, the U.K. chose to place primary reliance for its security on the policy of strategic nuclear deterrence, while limiting the share of its resources -- particularly manpower -- devoted to defense.

64. It followed from the latter consideration that Britain should (a) make reductions in the overall strength of its military forces, then 700,000 men, down to 375,000 by 1962;<sup>1/</sup> (b) abolish conscription by 1960; and (c) reduce the number of British forces deployed abroad, on the grounds that Britain could not afford to continue its "disproportionately large contribution" to NATO nor the "substantial demands on British manpower" by garrisons in British colonies and protectorates; meanwhile, Britain would (d) arm its forces with atomic weapons, and (e) create a mobile central reserve force in the British Isles that could be rapidly dispatched to any trouble spot by a strengthened RAF Transport Command or by naval "commando carriers".

WSEG Report No. 50

54. For strategic nuclear deterrence, the British government would not to rely solely on American capabilities, but rather to speed the development of its own nuclear deterrent power. According to the 1957 plan, the means of delivering the British bomb would remain the British medium-range strategic bombers of the V-class which would later be supplemented by ballistic missiles, supplied initially by the United States,<sup>1/</sup> until such time as the U.K. had perfected its own missile capability.

55. This latter objective of the 1957 White Paper has never been fulfilled. In April 1960, under mounting criticism that the British fixed-site BLUE STREAK intermediate range missile was already obsolete before it was operational, the Defence Ministry finally abandoned its military strategic missile program. It was decided instead that the life of the newer V-bombers would be extended into the late 1960's by the provision of the air-launched ballistic missile, SKY BOLT (GAM-87), to be supplied by the United States.

56. The 1957 White Paper on defense was very well received by the British press where it was widely reported. There was virtually unanimous praise for the government's "courageous and realistic" reevaluation of the national defense policy in the light of the country's economic capabilities and the development of nuclear weapons.<sup>2/</sup>

57. By placing primary reliance for Britain's defense on the nuclear deterrent, the Macmillan government forced Labor to modify its stand on the issue of nuclear weapons. In the subsequent House of Commons debates that followed in the spring of 1957, it became apparent that the Labor Party was divided

~~SECRET~~

~~TOP SECRET~~

between two factions which have been unable to resolve their positions in subsequent years: (1) the more moderate group, which initially supported the government's nuclear deterrence policy but which was still willing to postpone British nuclear tests until the prospects of an international H-bomb disarmament agreement were further explored; and (2) the left-wing and pacifist groups which pressed for an unconditional ban on testing and on the manufacture of the British thermonuclear bomb. Despite a large-scale propaganda effort by the latter group led by Aneurin Bevan, the government remained firm, and on May 15, 1957, the first British H-bomb was successfully tested.

69. Public opinion polls at the time indicated that the government had correctly assessed the mood of British opinion which appeared little affected by the vigorous anti-test campaign -- of the spring of 1957.<sup>1/</sup> A growing consensus developed that nuclear weapons would remain necessary as long as the USSR refused to negotiate a reasonable disarmament plan, and by October 1957 the annual Labor Party Conference had rejected the proposal for a unilateral British nuclear ban, with even Aneurin Bevan reversing his position.<sup>2/</sup> Up to 1959, the British public generally went along with the government's new defense policy which has also commanded the active support of the Labor Party's front bench in Parliament.

~~TOP SECRET~~

70. Public attitudes toward a British nuclear capability during this period seemed to vary directly with estimates of Britain's ability to remain a great power, and with estimates of the value and reliability of the American alliance. Despite the Suez experience, four-fifths of Britons polled in late 1956 had rejected the proposition that Britain should abandon its claims to "great power" status and should concentrate instead on affairs in the British Isles.<sup>1/</sup> For the U.K.'s maintenance of its role of international influence, one of the prime prerequisites seemed to be a nuclear capability.

71. Support for the new defense policy seemed also to stem from severe doubts after the Suez experience as to the dependability of the United States as an ally. Many Britons, including those who had opposed the government's Suez policy, wondered to what extent the U.K. could afford to count on American support in the future, in view of the fact that the U.S. had dared openly to oppose the U.K. when at Suez it had felt that its vital interests were at stake.<sup>2/</sup> Despite rekindled British enthusiasm for the alliance during the winter of 1957 to 1958, evidence of Soviet missile achievements provided new reasons to doubt the certainty of American assistance. Increasingly, the British nuclear deterrent began to be supported on

~~TOP SECRET~~

~~SECRET~~  
~~SECRET~~

the ground that it would provide independent insurance against the Soviet strategic threat in the event that the U.S. should decide not to "commit suicide" for the defense of Europe.

Increasing Doubts About the Independent Deterrent, 1958 to 1960

72. During 1958 and 1959, the British public generally remained convinced of the validity of the new defense policy, as long as the cold war continued and as long as no general disarmament agreement was reached. Nevertheless, several developments during these years indicated growing dissatisfaction and uneasiness, both in the general public and in responsible circles, over the value of the independent deterrent and the risks that it entailed. The resulting debate on Britain's own nuclear capabilities generated ideas and political movements that might well affect British defense policy in the future and, conceivably, the prospects of the American base system in the British Isles.

The Campaign for Nuclear Disarmament

73. One of these developments was the nonparty Campaign for (Unilateral) Nuclear Disarmament whose annual mass demonstration marches -- the first in 1958 from London to the atomic research center at Aldermaston -- have attracted considerable public attention and not a little public sympathy. The proposals of the CND, if taken seriously and carried to their logical conclusion, could have grave consequences for American basing rights in the U.K., for the CND holds that "Britain must...renounce unilaterally the use or production of nuclear weapons, and refuse to allow their use by others in her defense." If ultimately adopted by the government, this program would mean not only the withdrawal of all nuclear weapons systems and their support facilities from British soil, but could easily lead to Britain's

~~TOP SECRET~~

~~SECRET~~

abandonment of its NATO commitments and eventual adoption of a position of neutrality in the cold war: results which most CND supporters have probably not envisioned.

74. The CND cannot, however, be dismissed as a pacifist stunt or even as a temporarily hysterical reaction to the nuclear menace. Its adherents are growing and include a number of respected citizens,<sup>1/</sup> and its 1959 Trafalgar Square rally drew out Frank Cousins, leader of Britain's largest trade union, and, as speaker, Robert Willis, chairman of the Trades Union Congress. Moreover, the CND draws on many old strands in the British political tradition -- genuine anti-militarism, Christian pacifism, direct public protest and action for "what is right", the "Little England" concept, nationalism (in the belief that other countries cannot ignore Britain's dramatic moral lead), and anti-Americanism. But, most importantly, it plays on British weariness with the never-ending cold war and on increasing apprehensions over nuclear weapons, the East-West arms race, the destructiveness of modern war, the risks and uncertainties of deterrence policies, and the U.K.'s particular vulnerability to a strategic strike.<sup>2/</sup>

75. Although the CND attracted -- and has since gained <sup>3/</sup> little support in Parliament or in the responsible press, at the

1/ Including J. B. Priestly, A. J. P. Taylor, Victor Gollancz, Philip Toynbee, and Bertrand Russell.

2/ For an analysis of the elements of the CND's appeal, see David Marquand, "England, the Bomb, The Marchers", Commentary, Vol. 29, No. 5 (May 1960), pp. 380-386.

3/ It exerts its pressure mainly through the Labor Party in Parliament, particularly through the Victory for Socialism wing of the Party. Among the Laborite Press, the Daily Herald, the Tribune, and the New Statesman and Nation all supported unilateralism until they abandoned it in favor of the new "nonnuclear club" policy of the Labor Party, announced in June 1959.

popular level its successes have been striking. <sup>1/</sup> It is remarkable as the one organization on Britain's otherwise drab political landscape that can inspire mass enthusiasm on a political issue. But it is most significant because its activities have happened to coincide with a noticeable shift of opinion in responsible circles where doubts are growing on the validity of the independent deterrent concept. Thus, the first of the CND's objectives -- the abandonment of Britain's strategic nuclear capability -- has gained respectability, not because it is morally "right" or because it will induce other nations also to "opt out" of the nuclear race, but because it may become politically expedient. Should the government decide that continued maintenance of the independent deterrent is impractical for a country of Britain's size, location and resources, it is probable that the CND would be strengthened in the pursuit of its other objectives which would have more serious implications for the U.K.'s alliance policies and U.S. strategic deployment.

Labor Party Opposition to British Nuclear Capabilities

76. Doubts on the British nuclear deterrent were also strengthened by a second important development in this period: the shattering of the common front that the two major parties had previously presented on the issue of nuclear weapons.

77. In June 1959, the Labor Party adopted its "non-nuclear club" proposal that would have traded Britain's nuclear status for a pledge by other nations to restrict nuclear weapons to the U.S. and USSR alone.

78. Theoretically, the proposal gave British opinion a third option beyond the alternatives of unilateral nuclear disarmament and retention of nuclear weapons pending a general disarmament agreement. Practically, the proposal seemed to fall

1/ In 1958, about 5000 marchers, supported by clergymen, intellectuals, trade union leaders, and some Members of Parliament, protested at Aldermaston. In 1959, the CND's Easter weekend march from Aldermaston to London drew a crowd of about 20,000 listeners with about 15,000 of them having participated in the march and 3000 having marched all the way. The 1960 march showed increased CND strength, with about 30,000 at Aldermaston and a crowd of 40,000 in Trafalgar Square.

~~TOP SECRET~~ ~~SECRET~~

between those two existing stools, despite its appeal to those who were searching for a way to halt the spread of nuclear weapons and calling for positive British leadership in the field of disarmament. The nonnuclear club idea failed to elicit more than nominal support at all levels of opinion.<sup>1/</sup> Only a handful of papers welcomed the proposal as a new attack on the problem of nuclear weapons and disarmament: the semi-official Laborite Daily Herald, the pro-Labor Daily Mirror, the Socialist New Statesman, and the Liberal News Chronicle. Only the independent-Liberal Manchester Guardian and independent-Conservative Sunday Observer supported the nonnuclear club without reservation as a "reasoned and responsible" policy for preserving the Atlantic alliance while seeking to limit the spread of nuclear weapons and deemphasizing them as symbols of prestige. In Parliament, the more pacifist or unilateralist backbench Labor members felt the new proposal did not go far enough, but on the other hand there were signs that a few Conservative M.P.'s were sympathetic to the concept. While the public reaction might have been tested during the general election in October, 1959, events conspired to generate public indifference to the proposal. A complicated scheme to put across

~~TOP SECRET~~

to the electorate, it attracted less public interest than expected, largely because of the wave of optimism about East-West relations after Khrushchev's visit to the United States. If the great powers seemed less likely to fight, there seemed to be less reason to worry about the bomb. Of those who took notice of the proposal, some dismissed it as a cynical -- even hypocritical -- preelection maneuver which would have little chance of success if put into effect; France or subsequent nations struggling toward a nuclear capability would not be willing to renounce their achievements.<sup>1/</sup> Others felt that the proposal hedged the issue and that the Labor Party should have taken a firm stand either for or against the deterrent -- for retention or for unilateral nuclear disarmament. Many others did not understand the nonnuclear club idea.

79. It was also clear that the nonnuclear club proposal had done little to resolve the fundamental split on defense policy between the Labor Party's moderate leadership and its unilateralist-pacifist wing which was gaining ground, particularly among the trade unions which hold considerable power in Labor circles.<sup>2/</sup> Against this wing, Gaitskell and his shadow

~~TOP SECRET~~

~~TOP SECRET~~

Cabinet defended the U.K.'s retention of the independent deterrent until the nonnuclear club was brought into existence, and he insisted as well on Britain's responsibilities to NATO and to the United States. But Gaitskell was also under attack within the party on other grounds: the party's poor showing in the 1959 election under his leadership, his "intellectual" approach, and his abortive attempt to modify the party's constitutional clause on nationalization policy all had aroused considerable resentment.

80. To counter the rising unilateralist tide and to buttress its position of leadership in the approaching Labor Party Conference, to be held in October 1960, the Gaitskell wing implicitly abandoned the nonnuclear club thesis in a new policy manifesto, issued in June 1960 by the National Executive Committee that was intended to resolve the widening schism on defense policy.<sup>1/</sup> The manifesto admitted that "...a country of our size cannot remain in any real sense of the word an 'independent nuclear power'", and it proposed that "...in future our British contribution to the Western armoury...[should] be in conventional terms, leaving to the Americans the provision of the Western strategic deterrent."

81. The Gaitskell group therefore opposed in principle the maintenance of the U.K.'s own strategic deterrent, but, unlike the unilateralists, continued to support the concept of a Western strategic deterrent, to be supplied by the United States. The manifesto nevertheless remained equivocal on Britain's appropriate contribution to that deterrent. While it avoided an

~~SECRET~~

~~TOP SECRET~~

outright attack on the U.S. bases, it criticized patrols of nuclear-armed aircraft and called for the abandonment of the THOR IRBM's deployed in the U.K.

82. Subsequent parliamentary debates have indicated that the Gaitskell group does not favor the immediate abandonment of the British deterrent, but rather envisions a gradual phasing out of British strategic nuclear capabilities as the present V-bomber force becomes obsolete. It is evident the Labor front bench regards with skepticism the government's contention that the promised SKY BOLT ASM can substantially extend the life of the V-bombers as credible and reliable delivery vehicles.<sup>1/</sup>

83. In contrast to the unilateralist position, the defense manifesto emphasized Britain's continued collective defense commitments, particularly to NATO, in other fields than that of the strategic deterrent. At the same time, the document echoed the concern of a number of Laborites (and of some back-bench Conservatives as well) that "...the NATO armies in Europe are perilously dependent on nuclear weapons", at the expense of conventional capabilities.<sup>2/</sup> In proposing full strategic dependence on

1/ SKY BOLT has been criticized on the grounds that it is as yet a hypothetical solution to the problem of the delivery system; that the U.S. might decide to abandon its development, leaving Britain in the lurch; and that interdependence in weapons development with the U.S. undermines the independence of the British armed forces. See the discussion of Labor's stand in the Manchester Guardian Weekly, 14 July 1960.

2/ Continued criticism has been directed in particular against the government's announcement in the 1958 Defense White Paper that even a conventional major Soviet attack would be met with nuclear weapons: "...it must be well understood that, if Russia were to launch a major attack on them [the Western nations], even with conventional forces only, they would have to hit back with strategic nuclear weapons. In fact, the strategy of NATO is based on the frank recognition that a full-scale Soviet attack could not be repelled without a resort to a massive nuclear bombardment of the sources of power in Russia." Cmnd. 363, February 1958, p. 2, paragraph 12.

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

American power, the manifesto rejected the alternative of a European independent deterrent on the grounds that it would encourage the dangerous spread of nuclear weapons to additional countries; the spectre of a Germany armed with nuclear weapons was particularly decried.<sup>1/</sup>

84. Again, the manifesto failed to bridge the gap between the moderate Labor leadership and the foremost proponents of unilateral nuclear disarmament, notably Frank Cousins and Earl Russell who refused to accept it as a compromise and who continued to gather support for the immediate abandonment of the nuclear deterrent and removal of U.S. bases from the U.K. Then, in September 1960, the substantial confusion with the party on defense was further compounded by the astounding performance of the delegates to the Trades Union Congress, meeting on the Isle of Man. Before the conference were two motions: one concerning the official Labor Party-T.U.C. defense policy and the other in favor of unilateral nuclear disarmament, proposed by Mr. Cousins. The delegates voted to adopt both policies, though the latter by a larger majority, despite the apparent incompatibility of the two proposals. If the Labor Party Conference in early October either repeats this contradictory performance or votes a clear unilateralist mandate, the leaders of the Parliamentary Labor Party will be on the spot.<sup>2/</sup> Either they will

1/ The proposal of a European strategic deterrent as a alternative to the British deterrent was presented in Alastair Buchan's widely-circulated book, NATO in the 1960's (Institute for Strategic Studies; Frederick A. Praeger, N. Y., 1960). Gaitskell, himself, was in favor of the NATO deterrent through May of 1960.

CIA

2/ In that conference, the unilateralist trade unions did in fact muster enough votes to reject the June Labor-T.U.C. defense manifesto which had emphasized reliance on the American strategic deterrent and on NATO. Instead, the conference passed two unilateralist resolutions advocating Britain's renunciation of the testing, manufacture, stockpiling and basing of all nuclear weapons in the U.K., as well as opposing patrols of nuclear-armed aircraft from British bases, missile bases in the U.K., and any defense policy based on "the threat of the use of strategic or tactical nuclear weapons." However, Parliamentary Labor Party leader Gaitskell, who can expect to command the support of about three-quarters of the Labor M.P.'s, has refused to accept these proposals and has stated his intention always to oppose neutralist policies for the U.K.

have to reject the Conference's dictates and proceed on their own, or they will have to struggle to reinterpret their policies in a pretense that they are following the Conference's motions. In either event, their position will not be enviable, and their ability to present constructive criticism on defense policies will be seriously compromised by their growing isolation from the bulk of Labor's membership.

85. In the meantime, the spokesmen for the Conservative government have remained firm against all attacks on the usefulness, credibility or morality of a defense policy emphasizing the independent nuclear deterrent. Whether the government will continue to remain firm is yet uncertain. Certainly, the decision to abandon the BLUE STREAK military missile program and to stake the maintenance of the British deterrent on the future willingness of the U.S. to supply a yet-undeveloped missile, the SKY BOLT; was not an easy one, and it illustrates the practical difficulties that the British deterrent will increasingly face. The BLUE STREAK decision was, moreover, a severe blow to those Conservatives who feel that only a British-developed delivery vehicle can assure the U.K. of a truly independent strategic force.

86. Defense policy has now entered the political arena and promises to become a major issue between two parties whose political outlook in other fields is surprisingly harmonious and at a time when few other issues can arouse public interest. Public pressures for the abandonment of Britain's nuclear capabilities can be expected to rise, if present trends continue. It may be that the government will feel that such pressures cannot be ignored and, along with the practical difficulties of maintaining the deterrent, will justify its abandonment. On the other hand, for the government to admit that the major emphasis of its five-year defense program was misconceived would

~~TOP SECRET~~

certainly be regarded as a severe political defeat which the Conservatives must hope to avoid. While it is now impossible to predict with certainty which considerations will become the dominant ones structuring Conservative policies, it seems possible that financial, technological and strategic difficulties, as well as public pressures aroused by unilateralist crusaders, will lead the government eventually to abandon the deterrent, whether within its present term of office or shortly after 1964. On the other hand, if the U.K. should succeed in negotiating the dispersal of the V-bomber force on U.S. bases outside the British Isles, the government may regard the future of the British deterrent as more promising. The British abandonment of the deterrent, if it did take place, would, of course, bring into sharp focus the question of the U.S. nuclear strike forces and support systems relying on British installations, as well as the RAF-manned THOR missiles now deployed in the U.K. As long as national strategic nuclear forces remain a major element of the British military establishment, there are fewer grounds on which to criticize the employment of British facilities by similar U.S. forces. If the British forces were abandoned, for whatever reasons, public pressures for rescinding U.S. base rights could be expected markedly to increase.

87. Thus, the future of the British strategic deterrent will be an important determinant of British attitudes toward nuclear weapons of all kinds, and ultimately toward U.S. nuclear weapons systems operating or supported from U.K. facilities. While the strength and direction of opinion on the issues of nuclear deterrence and defense have been traced in the preceding pages, a brief summary of the reasoning behind those convictions may cast some light on the possibility of shifts in the official position under the impact of the nuclear debate.

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~~~SECRET~~

88. The following arguments represent different strains in the thinking of the proponents and opponents of the deterrent; within each group are many people clearly influenced by several but not all of the arguments employed on either side. The vast majority of those who advocate abandonment of the strategic deterrent, for example, present suggestions of alternative defense strategies, such as reliance on the American deterrent, greater British contributions to the conventional aspect of the overall Western collective defense effort, or the creation of an independent NATO strategic deterrent. Only a few opponents of the British deterrent now conclude that Britain should move all the way to a policy of unilateral conventional as well as nuclear disarmament, removal of the American bases, abandonment of its NATO commitments, and neutrality in the cold war.

89. It should also be noted that opinions on the independent deterrent do not always split neatly along party lines. A few prominent Conservatives, including ex-Defense Minister Antony Head, have declared themselves opposed to the independent deterrent, while a few back-bench Laborites have vigorously defended it.<sup>1/</sup>

The Official Position: Arguments for the Retention of Britain's Independent Nuclear Capabilities

90. The British independent deterrent has been justified:

a. As a contribution to the strength of the Western alliance. It is argued that Britain should share fully in the burdens of Western defense, and that its nuclear

<sup>1/</sup> See, for example, the remarks of Labor M.P.'s R. T. Paget and Woodrow Wyatt during the debate on abandoning BLUE STREAK. 622 H. C. Debs., No. 101, Cols. 247-256, 291-300. Antony Head's position was set forth in the same debate, ibid, Cols. 256-261.

capabilities are a significant addition to U.S. strategic power and to the Western strategic deterrent.

b. As providing leverage for exerting influence on American policy: to strengthen the U.K.'s hand vis-a-vis the U.S. (1) in resolving interallied differences and in formulating common policies, particularly those policies concerned with the deployment and use of U.S. nuclear weapons; <sup>1/</sup> (2) in countering conceivable future American isolationist tendencies or reluctance to participate in a war confined to Western Europe, under conditions of a U.S.-USSR nuclear standoff; and (3) in gaining access to American nuclear information, or to American strategic delivery systems.

c. For the preservation of the U.K.'s status as a major world power. Without strategic nuclear capabilities in a world in which two other atomic powers are operating, it is felt that the U.K. will no longer retain its great power role, its capacity to sit in on or promote nuclear disarmament negotiations, nor -- with regard to its missile program -- its prospects of gaining additional international prestige through space achievements.

d. As a minimum deterrent against Soviet attack or Soviet missile blackmail. It is feared that both the increasing vulnerability of the continental U.S. to Soviet missile retaliation and the diminishing U.S. strategic dependence on European bases will undermine the reliability of U.S. strategic intervention against limited Soviet aggression in Europe, whether in the form of a major conventional attack or a missile strike confined to one country.

The U.K. must therefore provide its own strategic deterrent.

1/ In a public interview in 1958, Prime Minister Macmillan stated that possession of the H-bomb had had a great influence on U.S. policy and "...made them pay greater regard to our point of view." Department of State/Bureau of Intelligence and Research, Britain and the Western Alliance, Intelligence Report No. 8093, 25 August 1959, p. 2. SECRET/NOFORN.

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~

e. As a support for British freedom of action abroad. It is argued that the independent nuclear capability will help the U.K. preserve its relative freedom of action to defend or assert its interests in situations where American and British interests diverge.<sup>1/</sup>

f. As an economic means of achieving security. It is argued that an essentially nuclear force would provide the most defense for the least cost ("a bigger bang for the pound"), while the consequent reduced reliance on massive ground forces justifies the politically popular abolition of conscription.<sup>2/</sup>

The Position of the Opponents of Continued Retention of an Independent Nuclear Deterrent

91. Some of the arguments against the independent deterrent concern its nuclear aspect, but others relate to the practical difficulties of maintaining an effective British delivery system under developing strategic conditions. Questions are also raised about the value of an independent deterrent capability within the context of a reputedly "interdependent" alliance system, and the adverse effects of the British deterrent effort on NATO's solidarity and military effectiveness are deplored.

1/ While this argument has been less prominent as the limits of British freedom of action are more generally accepted, it is still put forward from time to time. During the recent BLUE STREAK debate in April, Mr. R. T. Paget, a Labor M.P., remarked: "I cannot conceive that I should wish to live in a world in which we can never assert our rights anywhere without first obtaining American support. If we ever have occasion to assert our rights anywhere in the world, I do not want to be entirely naked in front of a Russian threat or Russian blackmail." 622 H. C. Debs. 249, 27 April 1960.

2/ This argument, an important factor in the initial popularity of the 1957 Defense White Paper, no longer appears very persuasive in view of the apparent costs of maintaining the deterrent.

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~

92. The arguments against the independent deterrent, a number of which indicate developing British attitudes toward American strategic forces based in the U.K., may be summarized in the following categories:

a. That a British strategic retaliatory force will be too vulnerable or too expensive to maintain as an effective and credible independent deterrent, because:

(1) The attack warning time available to forces in the British Isles will be minimal or nonexistent;

(2) A political decision to retaliate would be extremely difficult to reach within this time limit;

(3) Britain is too small for the adequate dispersal of a land-based retaliatory force;

(4) Increasing enemy missile accuracy rules out even the costly expedient of hardening;

(5) Budget limitations preclude the development of more than one British strategic delivery system, on which the enemy can concentrate both his attack and his defenses;

(6) And even the currently planned delivery system for the mid-sixties (the advanced V-bombers equipped with the American SKY BOLT, GAM-87) will be too vulnerable, if based in Britain, in view of the prohibitive costs of an extensive airborne alert.

Alternative retaliatory systems or alternative deployments are rejected on other grounds: that land-based POLARIS would be nearly as vulnerable as BLUE STREAK or the V-bombers and THOR's; POLARIS dispersed on surface ships would be too detectable; and a POLARIS submarine program is considered beyond the limits of the British economy. Moreover, it is argued, the joint-control problem that might be raised by the dispersal of the

~~SECRET~~

V-bombers to a global network of American or other bases outside the U.K. would compromise the independent character of the deterrent. Thus, that the destructive potential that a vulnerable and limited British force could be expected to mount in response to an enemy strike would be so small as to be ineffective as a deterrent.

b. That, if the British strategic force is ineffective as a deterrent, it will not strengthen Britain's ability to stand up to the USSR in the absence of American support. If -- it is argued -- the British force cannot provide reliable insurance against Soviet missile blackmail, it will not significantly increase Britain's resolution to act independently of the U.S. in defense of vital British overseas interests, even by conventional means, in the face of Soviet retaliatory threats. Nor can the British deterrent ensure Britain's security if the United States should, for some reason, renege on its commitments to come to Britain's assistance.

In answer to the specific points made by the supporters of the independent deterrent:

c. That the British strategic force is such a minimal contribution to the total strategic posture of the West that it cannot be considered significant or decisive.

d. That British international prestige and influence, both vis-a-vis the U.S. and vis-a-vis other nations, are built on other U.K. assets besides the independent deterrent: its long experience in international affairs, Macmillan's proven ability and world position as a leader and diplomat, the U.K.'s leading role in the Commonwealth, its pivotal position in NATO and other collective defense arrangements, and its economic power. Moreover, it is

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

argued, it would be dangerous if its possession of nuclear weapons should encourage the U.K. to pursue lines of policy not supported by actual British military capabilities.

e. That the possibilities of Britain's strategic isolation are slim: a major Soviet attack on any NATO country -- or the threat of such an attack -- that does not evoke American support is highly unlikely; if, however, either event should occur without U.S. reaffirmation or fulfillment of its alliance commitments, the U.K. is lost, whether or not it possesses a strategic force.

Two further arguments illustrate the ambivalent attitudes of the opponents of the independent deterrent toward the Soviet military threat; they both discount its gravity and fear its possible consequences for the U.K.:

f. That the Soviet threat has shifted from the military sphere to the political, economic, and psychological battlefields; Britain's resources should therefore be concentrated on efforts to combat the threats in those areas.

g. That Britain's nuclear force, if not effective as a deterrent, makes the U.K. a certain target if a general war occurs. Fears are directed particularly against any fixed-site missile systems deployed in the U.K. -- whether the abandoned BLUE STREAK or the American-supplied THOR squadrons -- and to a lesser extent against land-based strategic bombers -- the V-bomber force, as well as those elements of SAC deployed on British bases. In view of their assumed vulnerability and primary utility as "first-strike" weapons, these systems are regarded less as deterrents than as invitations to attack, and it is supposed that such an attack would turn the U.K. into a "nuclear

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~  
SECRET

~~TOP SECRET~~

~~TOP SECRET~~

incinerator". The logic of this argument, if accepted as a major justification for a decision to abandon the deterrent, would have profound implications for the future deployment of U.S. strategic forces in the U.K., inasmuch as the U.K.'s strike force is only one element of the military forces on British soil that might lead the enemy to regard the U.K. as a worthwhile target in a general war. To eliminate all elements that serve as "lightning rods" to attack, the U.K. would have to demand the removal of U.S. forces and support systems -- particularly any nuclear-armed aircraft and missiles -- and if this approach were carried to its logical conclusion, the U.K. might even scrap substantial amounts of its own nonnuclear defense capabilities, withdraw from NATO, and contract out of the cold war.

h. That a reduction in the number of nuclear powers lessens the risks of war by accident;

i. That Britain's renunciation of its nuclear capabilities will facilitate general nuclear disarmament by encouraging other would-be "Nth nations" also to abandon their efforts to create independent deterrents;

j. And that the policy of the independent deterrent is based on the "exploded fallacy" that "we shall prevent war by preparing for war".<sup>1/</sup> As a number of old-school Socialists believe, the independent deterrent represents Britain's involvement in the inevitable progression from balance of power policies to alliances and counteralliances, to a spiraling arms race, to rising tensions, to bluff and counterbluff, and finally to war. The U.K., they argue, must somehow break out of this chain of events and lead other nations to abandon the balance of power principle

<sup>1/</sup> Mr. K. Zilliacus, an ex-League of Nations official, in the 1960 defense debate, 618 H. C. Debs. 67, 1 March 1960, col. 1, col. 1090.

SECRET

~~TOP SECRET~~

in favor of some form of federative or supranational political system.

k. That the U.K., unable to provide a reliable deterrent of its own, must seek to preserve its security through policies based on the principle of alliance interdependence. To date, it is argued, British defense policy has been a factor of increasing NATO disunity. The British nuclear deterrent has aroused the concern of other NATO governments that the U.K. might follow an independent course of action in the event of a serious challenge to the security of continental Europe. This suspicion has accelerated the trend that has been plaguing SHAPE's efforts to coordinate and integrate NATO forces in recent years -- the increasingly national orientation of the defense policies of NATO members and their reluctance to place their forces under NATO control.

93. Similarly, it is charged, NATO's growing reliance on a nuclear strategy -- in part a consequence of Britain's post-1957 defense policies -- operates as a divisive force in the alliance. Such a strategy will greatly compound the problem of joint decision-making in a crisis by increasing the risks of Europe's nuclear devastation if war should occur and thereby encouraging neutralist or independent action. The possibility that NATO might prove unreliable as a collective defense organization may force other NATO members, besides France, to consider the feasibility of developing their own national strategic deterrents. And the further proliferation of nuclear weapons, whether acquired from the U.S. or through national development programs, will aggravate interalliance suspicions, especially if Germany should obtain even tactical nuclear weapons.

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~TOP SECRET~~

TOP SECRET

94. Moreover, it is argued, the concept of alliance interdependence -- already nominally official British policy -- implies a division of labor and specialization of functions among NATO members which would maximize NATO's ability to create a graduated system of deterrents, from the strategic-nuclear level down to the level of deterring a limited conventional conflict. In this allocation of roles, it is felt, the U.S. is in the best position to make the strategic-nuclear contribution, while the other NATO countries, including the U.K., should concentrate on conventional forces.

95. A number of critics of official policy are concerned that Britain's concentration on strategic deterrence has reduced the effectiveness of its conventional forces. Not only has this strategy been used to justify the intended reduction of the British army and of the forces committed to the Continent, but it has also encouraged other European NATO states to relax their efforts to meet NATO's ground force objectives. It is argued that the present inadequacy of NATO's Shield force endangers NATO's ability to deal with minor disputes or to "enforce a pause" and buy time for diplomatic intervention or for a decision whether to initiate the use of nuclear weapons.

96. While most opponents of the independent deterrent insist that interdependence means reliance on the U.S. strategic deterrent, others suggest that Britain should join with certain continental NATO members in the development of a NATO or WEU deterrent. Such a force, established separately from the American deterrent, would hopefully achieve many of the objectives that the independent British deterrent was unable to obtain. A credible NATO deterrent could be created, its proponents believe, because its European basis would (1) reduce its vulnerability by

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

TOP SECRET

- 129 -

~~SECRET~~

~~TOP SECRET~~

providing greater scope for dispersal and mobility, and (2) allow a pooling of the financial, material, and scientific resources of a number of countries in an effort that is beyond the limits of any single country. And, if achieved, it would be expected (3) to provide insurance against the possibility that the U.S. might decide not to "commit suicide" for the defense of Europe; (4) to give the European countries a larger voice in NATO policies by reducing their dependence on the U.S.; (5) to reverse present trends toward NATO disunity by removing the incentive for national deterrents; (6) to mitigate the "Nth country" problem, thereby facilitating future disarmament efforts. It may be supposed that proponents of the NATO deterrent are among those convinced of the hopelessness of maintaining an effective British deterrent, but anxious to find some means of avoiding complete strategic -- and hence substantial political -- dependence on the U.S. There are serious objections to the concept, especially with regard to the difficulties of decision-making.

British Attitudes Toward U.S. Bases

87. The recent U-2 and RB-47 incidents prompted a wide-ranging discussion which has been valuable in clarifying British attitudes toward the presence of U.S. bases in the British Isles. From the debate in press and Parliament and from recent opinion surveys, it appears that there is widespread sentiment in favor of continued U.S. access to British facilities, but that there is also a strong desire for tighter British surveillance and control over the purposes for which the bases are used.

90. Only from the extreme left and from the small but articulate pacifist groups are there demands for the total withdrawal of U.S. forces of all types from British bases, but these demands are not new. From its inception in 1958, the Campaign

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~~~SECRET~~

for Nuclear Disarmament had advocated the dismantling of U.S. strategic bases as part of its scheme for ridding the U.K. of the "nuclear menace". This follows from the premise of the CND leaders that the risks of an outbreak of nuclear war -- almost inevitable, they say, with a continuing arms race and with American strategic aircraft and missiles poised for a strike at the USSR or on alert overhead -- are far greater and far more appalling than the risks or consequences of the military domination of the U.K. and Western Europe by Soviet forces. It is better, Philip Toynbee contends, to betray an alliance than to betray the human race.<sup>1/</sup> Bertrand Russell, another CND leader, holds that Britain must break with NATO and abandon the "protection" provided by nuclear weapons: "Britain derives no degree of safety whatever from the American alliance or from nuclear weapons, whether British or American. On the contrary, reliance upon America and nuclear weapons increases the likelihood of the total destruction of the population of Britain."<sup>2/</sup> Whether or not the British government or people like it, he argues, British territory will be used in the future by the Americans for some purpose as obnoxious to the Soviet Union as the U-2 reconnaissance flight. For this minority pacifist group, the RB-47 incident, originating from the Brize Norton SAC base against which the CND had marched in past years, seemed to confirm their fears.

99. In the trade union movement is the heaviest and most politically potent support for rescinding U.S. basing rights in the U.K. Leader of the trade union unilateralists, Frank Cousins, pointed to the U-2 incident as dramatic evidence of the

~~TOP SECRET~~~~SECRET~~

need to abolish American bases in Britain,<sup>1/</sup> and most unions committed to unilateral nuclear disarmament for the U.K. also favor the withdrawal of all "foreign bases".

100. Such sentiments are not, however, shared by the majority of the Parliamentary Labor Party or by its moderate leadership. Even Ernest Shinwell, on the left of Labor's political spectrum, admitted that, while Britain must go on boldly advocating disarmament, it must nevertheless continue to rely on the American strategic deterrent: "I do not believe that the time has yet arrived to say to the United States: 'Take your aircraft and your missiles out of this country,' but I think the time will come when that may happen."<sup>2/</sup>

101. It has been Labor policy to support Britain's commitments to NATO and its responsibilities for Western defense. While in the last two years the Labor Party has broken with the government's defense policy on the issue of the independent nuclear deterrent, its leaders in Parliament -- Gaitskell, Brown, Healey, and Wilson -- have placed no less emphasis on the need for a Western strategic deterrent as a condition of Britain's security. Labor's June 1960 manifesto on defense explicitly recognized that, in the absence of a credible British deterrent, reliance would have to be placed on the strategic deterrent supplied by the U.S.

102. The position of the Labor Party on the necessity of American strategic bases and support facilities in the U.K. will, however, remain equivocal until the current intraparty conflict

~~TOP SECRET~~

~~TOP SECRET~~

on defense policy is resolved. To date, it should be emphasized, the party's official platform has not opposed the continuation of the American bases, although it has pressed for increased British surveillance and control over the purposes for which the bases are used, measures advocated over a year ago in its 1959 election platform.<sup>1/</sup> While the 1960 defense manifesto expressed concern over the dangers of patrols of nuclear-armed aircraft, its reaffirmation of Britain's NATO responsibilities and reliance on U.S. deterrent power seemed to imply official Labor support for continued U.S. access to those facilities necessary to the maintenance of the U.S. deterrent.

103. That the Gaitskell group opposes any moves to rescind U.S. base rights was evident in the debates on the RB-47 incident in July, where the discussion was confined to the issue of British surveillance and control. But this official position will undoubtedly be challenged in the future as in the present by left-wing Laborites, and it is doubtful if the leaders of the Parliamentary Labor Party can make any further concessions on defense policy or American base rights without abandoning the party altogether to the unilateralists' viewpoint.

104. The Conservatives, on the other hand, have stood firmly for the necessity and desirability of American strategic bases and support systems in the U.K. Few of them feel that the U.K.'s independent deterrent, if as they hope it can be maintained, can ever be a reliable substitute for American strategic power. Prime Minister Macmillan has nevertheless agreed that American

<sup>1/</sup> On June 23, 1959, the Labor Party agreed to advocate "tighter control" over American bases in the U.K., but reaffirmed that the next Labor government would honor Britain's commitments to NATO.

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

use of the bases must be supervised in Britain's interests, and that he will seek closer liaison and continuous and intimate consultation on such American flights as could be regarded as provocative by the Soviet Union. In requesting a review of the original Truman-Attlee bases agreement of 1951, the government was responding to strong public pressures for measures that would insure the U.K. against the possibility that future U-2 and RB-47 incidents might occur from British bases. The government feels that new understandings that will coordinate U.S. operations with British policies will, in fact, strengthen the Anglo-American alliance by allaying public suspicions or apprehensions about U.S. employment of the bases.

105. In the British press, comments upon the plane incidents have generally concentrated on the need for adequate joint controls over American reconnaissance or other "provocative" activities originating from the British bases. It is significant that few dailies or journals have questioned the desirability of retaining the U.S. bases themselves. As the conservative Sunday Times asserts, the bases are part of the joint defense system for the advantage of the whole Western alliance; they are an agency of the deterrent under which we all shelter and whose protection is all the more vital, the less independent power Britain itself has.<sup>1/</sup> But, the Times cautions, the U.K., has the right and duty to insist on certain overall conditions or limitations -- that the program of operations from the bases should be known to the U.K. as party to the joint activities, and should be open to negotiation between the two parties; and that

~~SECRET~~

~~TOP SECRET~~

no operation should be carried out in such a way as to effect a casus belli, to be needlessly provocative, or to risk damaging Britain's relations with its other allies by use of their air-space without their knowledge.<sup>1/</sup>

106. Much emphasis in the press was given to the so-called "provocative" character of the flights which was regarded as unjustifiable -- especially in the case of the RB-47 -- in terms of the military advantages that might be reaped by such reconnaissance.<sup>2/</sup> Fears were also expressed that there might be inadequate U.S. political controls over military and intelligence activities.<sup>3/</sup> At the same time, however, the Soviet threats of missile retaliation appeared to be encountering the law of diminishing returns. By mid-summer, the British press was generally discounting the gravity of the Soviet threats on the grounds that they were primarily designed to split the Anglo-American alliance. Instead, the predominant British reaction was in favor of measures to strengthen the alliance through improving liaison on the use of the bases.<sup>4/</sup>

107. The "spy plane" incidents have been useful in clarifying the present state of British opinion on American base rights

1/ British Information Services, Today's British Papers, 18 July 1960, p. 5.

2/ See, e.g., the Observer, 18 July 1960.

3/ The Economist commented: "If there is British uneasiness today about trusting to the apparently unwritten understanding between Mr. Truman and Mr. Attlee in 1951, it is chiefly because the effectiveness of American political control of the intelligence services has come increasingly to be doubted." From the article "Intelligence Should Be Intelligent," The Economist, 16 July 1960, p. 247.

4/ See the Manchester Guardian Weekly, 14 July 1960, p. 1: "A new and fuller agreement...is a step taken to strengthen our alliance...The one thing that could shake the alliance would be the sense that the Americans were not playing fair with their allies. That is what the revised agreement on consultation...should guarantee and be known to guarantee."

Annex "A" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

~~TOP SECRET~~

in the U.K. When the issue suddenly and dramatically became a question of urgent importance, the British public betrayed its uneasiness over the use -- or misuse -- of the bases. Public opinion surveys following the U-2 incident indicated continued approval of the American military presence in the U.K., though significantly less favorable attitudes toward the U.S. air bases specifically than toward the stationing of U.S. armed forces in general.<sup>1/</sup> At the same time, however, the polls discovered a marked rise in neutralist public sentiments: the British public's willingness to side with the U.S. in the present world situation dropped to the lowest point yet recorded [REDACTED]<sup>2/</sup> Moreover, a majority felt that the U.S. was not justified in making the U-2 flights, despite the U.S. argument that they were necessary to prevent surprise attacks.<sup>3/</sup>

ICA

Check with you ICA

103. Nevertheless, The Economist's analysis of the public reaction is encouraging:

"This disquiet concerns the workings of the alliance. It does not, except among a familiar minority, call in question either the validity of the alliance or the extent of British obligations under it. The bulk of feeling in the country, and on both front benches in the Commons,...has been plainly that the Atlantic alliance is indispensable and that, within the alliance, British bases ought to be available to the Americans for

ICA

ICA

Annex "A" to  
 Appendix "A" to  
 Enclosure "I"  
 WSEG Report No. 50

all military purposes...The British point is [only] that such flights...must be carried out within the common obligations of the alliance and for the common advantages of the allies...The Government ought to be aware of, and approve, all the purposes for which British bases are being used, and ought to possess the demonstrable right of final sanction of activities...that have direct political implications and require the use of political judgment.<sup>1/</sup>

109. One can expect, therefore, that the United States will continue to have access to the bases for military strike, reconnaissance, and logistic operations. While these operations will require the knowledge and approval of the British government, it is doubtful that this will seriously restrict their scope while the present government remains in office -- another three years, at least, in the absence of some unlikely and unforeseen crisis. When and if the Labor Party regains office, current trends within the party seem to support the pessimistic prediction that the moderate wing may have lost control in the face of powerful unilateralist pressures. If this occurs, the Labor platform will include proposals for the removal of, at a minimum, the most "provocative" of the American forces or installations in the U.K.: almost certainly any nuclear-armed aircraft of the U.S. Air Force and the RAF-manned, American supplied and controlled THOR missiles.<sup>2/</sup> Whether under new leadership the party would also advocate the withdrawal of all U.S. base rights, including those rights that the U.S. is now requesting for the support of FBM submarines as well as access to other facilities for naval support and for strategic warning and reconnaissance, is more questionable, unless

<sup>1/</sup> July 16, 1960, p. 247.  
<sup>2/</sup> In 1958, Labor had proposed a suspension of the construction of all missile bases in Britain until Summit talks had explored the possibilities of a wider understanding with the USSR. See Labour's Foreign Policy, 1958, p. 3.

WSEG Report No. 50

~~TOP SECRET~~

~~SECRET~~

the Labor Party determines to go the full way to neutralism and abandonment of all British commitments to the Western alliance.

110. Current estimates of public attitudes suggest that a Labor program advocating the withdrawal of all U.S. strike and support systems would find little appeal among British voters, unless some grave and major crisis seriously shakes confidence in U.S. strategic support and protection or greatly intensifies fears of unjustifiably rash and "provocative" U.S. actions. It is much more likely that the British people would accept the abandonment of Britain's independent deterrent in the future, should it prove necessary for military, financial and political reasons. But it is also likely that they would favor continued reliance on the American strategic deterrent and contribute those facilities in the U.K. that are necessary to its effectiveness, though preferably not airbases for strategic nuclear strike forces or launching sites for ICBM's.

#### CONCLUSIONS

111. The United States places high value on its alliance ties with the United Kingdom for a number of reasons, among them: the basic similarity of American and British international objectives and policies, the U.K.'s influence as a world power, its technological, industrial and financial resources, its strategic location off the European Continent and its outposts in other areas, its active military contributions to the Free World's arsenal, and its provision of extensive facilities for the deployment and support of U.S. ground, sea, and air forces.

112. The Anglo-American alliance with the Canadian alliance, the firmest in the American alliance system, rests ultimately on the continued unity of British and American international objectives and on

Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

~~TOP SECRET~~

their continued concurrence on the foreign and defense policies best suited to achieve these ends. As long as the Conservative government remains in office, substantial agreement can be expected to prevail in both these fields, although occasional differences in approach and priority may arise. Particular difficulties may stem from increased British pressure for a greater voice in the West's military and political approach toward the Communist Bloc. While it does not now appear likely that the Labor Party can gain office before 1964 and possibly not for several years thereafter, present trends within the party suggest that many of the foreign and defense policies of a future Labor government would be incompatible with U.S. interests. One such policy might be that of unilateral nuclear disarmament and the removal of U.S. bases from British soil, presently urged by an apparent majority of the party's trade union membership.

113. The most important single factor affecting British attitudes toward the alliance will be the degree of official and public confidence that U.S. military policies and deployments will, on balance, enhance the security of the U.K. against both nuclear devastation and Communist domination. Such an estimate will depend on the future dominant evaluation of the primary threat to U.K. national interests.

114. In this respect it is conceivable but not likely that the evident dangers of Communist aggression could, in the future, be eclipsed by severely intensified British fears of involvement in a general nuclear war. The effects of such a development on British national and collective defense policies would be far-reaching. At present, only a small (but vocal) minority conclude

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~TOP SECRET~~

- 139 -

~~SECRET~~

~~TOP SECRET~~

~~SECRET~~

~~TOP SECRET~~

that the possible dangers of the "nuclear menace" would justify the risks involved in British nuclear disarmament and in a neutralist reorientation of British policies. The vast majority of Britons now reject that conclusion and its implicit assumption that nuclear devastation and neutralism are the only alternatives.

115. It is nevertheless significant that the widespread disposition at present to downgrade the likelihood of general war has not offset the steady increase in public apprehensions about the consequences for the U.K. of such a war. These apprehensions have led to more skeptical opinions on the practicality and desirability of a national or collective nuclear deterrence strategy for the preservation of Britain's security, if such a strategy requires strategic bases on the British Isles.

116. Public apprehensions concerning nuclear war are not likely to affect the Conservative government's present reliance on the threat of strategic retaliation to deter an attack on the U.K., against which -- the government has admitted -- the U.K. could not be defended. However, the practical difficulties and expense of maintaining an adequate and secure British retaliatory force may lead the U.K. to abandon its independent deterrent within a few years and to place total reliance for its strategic protection on the American strike force. Such a move would probably not be accompanied by reductions in British military contributions in other fields to NATO or other collective defense arrangements, and British facilities for the support of U.S. strategic systems would likely remain available. Nevertheless, continued British pressure can be expected for full knowledge and greater control of U.S. military operations from U.K. bases and for joint consultation on the use of nuclear weapons both from British soil and elsewhere.

ANNEX "B" TO APPENDIX "A"

JAPANESE ATTITUDES TOWARD COLLECTIVE DEFENSE

PURPOSE

1. To examine current trends in Japanese attitudes toward defense problems, and identify those likely to affect Japan's military collaboration with the United States through the mid-1960's.

SCOPE

2. Japanese public and official attitudes toward the cold war, rearmament, nuclear weapons, and military collaboration with the U.S. are reviewed in the context of Japan's postwar political development and military importance to the United States. The future implications of these attitudes for the U.S.-Japanese military alliance are then examined.

BACKGROUND

3. Following Japan's military defeat in 1945, the country was governed for seven years through the offices of the Supreme Commander for the Allied Powers. A primary objective of this government was to provide for the basic democratization of Japan and to insure that it would never again commit armed aggression. To this end a series of major social, economic and political reforms were instituted by SCAP, including a Constitution that barred war as an instrument of Japanese policy. Militarists were purged from the Japanese political parties; the Emperor reduced to the titular head of government; local autonomy encouraged; labor unions established; and large land holdings broken up. There were also major "trust busting", taxation, voting and educational reforms.

4. To a surprising degree these institutional reforms were accepted by the Japanese people and have interacted with

Annex "B" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

~~SECRET~~

~~SECRET~~  
~~SECRET~~

ideological, social and economic forces to produce permanent social change. This factor, coupled to a widespread Japanese respect for America, and Japan's continued dependence on the U.S. for both defense and trade, made it easy to assume that Japan would endure as both a Western democracy and a U.S. military ally. For this reason the wrath and violence that erupted in Japan over ratification of the U.S.-Japanese security treat last May, the cancellation of President Eisenhower's visit, and the downfall of the Kishi government all came as considerable shocks to the United States.

5. These events made it apparent that there was a measure of public discontent with the foreign and military policies pursued by the Japanese government since the nation became independent in 1952. As most Western observers agreed that the new treaty was in fact acceptable to the large majority of the Japanese people, the May 1960 riots were perhaps most significant in the questions they raised about the durability of Japan's new political institutions. It appeared that the concept of a parliamentary democracy was still threatened by such Japanese political traditions as minority intransigence and "direct action."

6. The scope, duration, and intensity of the Spring riots and demonstrations also highlighted several trends in Japanese public opinion on defense matters that had been gaining in strength during the past several years. As these attitudes bear directly on Japan's future role as an ally of the United States they are of considerable importance. It should be remembered that Japan, since the occupation, has become the most prosperous and dynamic of the non-Communist nations of Asia. It is in a unique position and has great potential for contributing to the development of

Annex "B" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

the newer Asian and even African states. In 1959, its 90 million people produced a GNP of \$30 billion and provided an export market for over \$1 billion worth of U.S. goods, a new high in both categories. Militarily, Japan is the most important link in the chain of islands which provides logistic facilities and bases indispensable to an economical and effective defensive position in the Western Pacific. These profound changes in Japan's domestic life and international position over the past fifteen years are the background against which the Japanese attitudes and opinions, discussed in the following paragraphs, must be placed.

#### DISCUSSION

##### JAPAN'S CONTRIBUTIONS TO COLLECTIVE DEFENSE

7. In terms of its present military potential, the active contributions that Japan can make to Western collective defense efforts are relatively small.

8. While Japanese ground forces have progressed during the last ten years from what was essentially a police reserve into a relatively well-trained force capable of operations at the division level, this force is considered incapable of sustained defensive operations without heavy U.S. strategic, naval and air support. The Ground Self-Defense Force, created in 1950, to replace the National Police Reserve, was granted an air force in 1954, and its mission expanded from the maintenance of public order to include the repulsion of foreign attack. At present, its strength is estimated at 171,500 men, an increase of about 41,000 over its 1954 strength. Unofficial plans are for a 180,000 man ground force, consisting of twelve infantry and one mechanized division organized on pentomic lines. The GSDF suffers from inadequate maneuver areas and its naval and air forces are considered incapable of providing adequate

troop lift support. These military shortcomings result in large part from the continued absence of any substantial public or official support for large-scale rearmament efforts. For the foreseeable future it is likely that Japan will remain heavily dependent on U.S. advice and assistance in the defense field and that the GSDF will continue to be almost totally dependent on U.S. naval and air support for its effectiveness.<sup>1/</sup>

9. Japan's most significant contribution to U.S. military objectives in the Far East is therefore its availability as a base for logistic and combat operations. Without access to present storage, air, and naval base facilities on the Japanese islands, the difficulties of establishing an effective deterrent/defensive posture in the Far East would be greatly compounded. In addition to their support of U.S. forces deployed in Korea, Japanese facilities are of particular importance to operation of U.S. naval forces in the Western Pacific. Yokosuka, Honshu, Japan, is the principal naval base for WESTPAC forces, providing bulk supplies of POL and ammunition in addition to major facilities for ship repair. Sasebo, Kyushu, Japan, is a major fleet anchorage and includes the largest POL reserve west of Pearl Harbor. It has been estimated that loss of these two bases alone would require upwards of 50 additional supply ships to maintain the present readiness of the Seventh Fleet. Possible alternatives to the Japanese bases, such as Guam and Okinawa, do not have commensurate facilities. Other U.S. military installations on the Japanese Islands, such as electronic intercept and target-fixing facilities, would be difficult or even impossible to duplicate elsewhere.

JAPANESE ATTITUDES ON NATIONAL SECURITY POLICYThe Political Climate

10. The political background for examination of Japanese opinion on security relations with the U.S. can perhaps best be characterized as an uneasy parliamentary democracy. The great majority of public offices in Japan are held by members of the conservative Liberal Democratic Party (LPD). A minority opposition is furnished by the Japanese Socialist Party (JSP), which has won approximately one-third of the total number of seats in the Upper and Lower Houses of the Diet since the war, and a small Japanese Communist Party (JCP).<sup>1/</sup> But this strong plurality of the LPD overestimates its ability to incorporate into legislation public and party opinion on many issues. Several reasons, arising from difficulties encountered in merging traditional Japanese practices with the postwar political institutions, may be given for this disparity. The first is that many Japanese do not yet trust the political parties to be responsive to their desires. At the mass level, there are many adherents to the thesis that politics is synonymous with graft and corruption. Thus the parties often find it difficult to attract and hold popular loyalties and support. Secondly, a straightforward legislative program in Japan is constantly threatened by factionalism within the parties. It is seldom that a party leader can guide through the Diet major bills for more than two years at a time without suffering such bitter opposition that he loses nomination

<sup>1/</sup> Of the 467 seats in the Lower House of the Diet, the LPD now controls 286; the JSP, 163; the JCP, 1; and 15 are vacant. The Socialists enjoy their greatest strength at this national level. At the prefectural level they are much weaker, with 482 Socialists in the prefectural assemblies, representing 18.5 percent of the total number. Further drastic declines are shown at the city and district levels where they have 908 Assemblymen or 4.6 percent, and at the rural town level where the Socialists represent only 0.6 percent of the elected officials. Robert A. Scalapino, "Japanese Socialism in Crisis," Foreign Affairs, January 1960. Although the Communists control few offices anywhere, they still are supported by 1 million voters out of 40 million. They are particularly active on issues concerning security policy and often attempt to infiltrate or consolidate with the Socialists in order to be heard. See C.I.W., "Japanese Communist Party," 25 August 1960 (SECRET).

as his own party's candidate in the next election. Either he does nothing important, or he leads and falls. Finally, there still exists in Japan a basic discomfort with the principles of majoritarianism. Historically, the Japanese are used to long and arduous compromises on important issues, rather than to that acquiescence by the minority to the will of the majority upon which effective parliamentary democracy rests. The tendency of the Socialists and Communists to revert to direct action and protest demonstrations to force their views onto the majority has contributed to this distrust, even among conservatives. Minority rights are not enthusiastically guarded by the majority when the minority resorts to the subversion of basic institutions.

11. An example of these aspects of Japan's political climate was furnished by the political machinations during ratification of the U.S.-Japan security treaty. Suspicions were first aroused about the Kishi administration's conduct in negotiating and ratifying the treaty -- and by inference about the treaty itself -- by factions within his own Liberal Democratic Party.<sup>1/</sup> These factional leaders attacked Prime Minister Kishi for more than a year, often to advance their personal interests, though less than 10 percent of the Liberal Democratic Party members in the lower house failed to support him when it actually came to a vote. This provided an opening for the left wing opposition parties and organizations to mount a campaign against the government. These

1/ For example, Kono Ichiro, one of the most powerful conservative factional leaders arraigned against Kishi, contended that a change in leadership was necessary to maintain any relations with Communist China and the Soviet Union after the ratification of a treaty of such duration (ten years). Kono leads a group known as the Shunjukai, some of whom absented themselves from Diet debate and voting through "ill health" in opposition to Kishi. Other "anti-mainstream" factions in the LDP were headed by Matsumara, Miki, and Ikeda. Factionalism on issues other than the security treaty, and other problems, also threaten the unity and even existence of the JSP.

groups, which oppose the conservative administration on almost all issues and are vocal, aggressive, and well-organized, resorted to the violent tactics which brought down the Kishi administration. With the help of a leftist press jealously conscious of its new rights of free expression, they created a widespread impression that their actions were justified by the government's suppression of its legislative opposition. This impression was a major factor in the public's toleration of the subsequent demonstrations and violence.

12. The difficulties attending revision of the security treaty are only the most dramatic of a series of open controversies which have developed over the role of the U.S. in the general area of Japan's national security. Fundamentally, these differences have arisen as a result of another general trend in Japanese politics. This is a tacit but growing desire of many Japanese to see Japan re-emerge eventually as a leading country in Asia and to occupy a position as a "bridge" between Asia and the West. The probable path of such a development has been intensively studied.<sup>1/</sup> To provide larger markets for her burgeoning industry, it is expected that Japan will particularly seek to extend her political and economic contacts with the states of Southeast Asia. For example, Japan has continued to term near-future "normalization" of her relations with Communist China a necessity.<sup>2/</sup> That most

1/ See "The Position of Japan in the Far East and in International Politics 1965-1970," Tempo Report No. 58TMP-41, Technical Military Planning Operation, General Electric Company, Santa Barbara, California, 31 December 1958.

2/ In early August 1960, a Chinese Communist delegation attended the Tokyo Labor Convention and the Sixth World Conference Against Atomic and Hydrogen Bombs. They were the first Chinese visitors to Japan since Peiping broke all but nominal trade relations in mid-1958 after Japan refused to make political concessions verging on recognition. The group was refused an extension of their two-week visas by the Ikeda administration, which considers their political demands for resumption of trade out of proportion to its value when compared to the \$1 billion U.S. trade balanced in Japan's favor. O.N.I.B., 25 July 1960, 11 August 1960 (SECRET).

Japanese would not advocate such a rapprochement without the approval of the U.S. is also symptomatic of her goal of maintaining her Western ties while moving into this more neutralistic position. The present wide debate in Japan on national security issues illustrates the development of this trend. These issues include, but are not limited to: the extent of Japan's involvement in the cold war; the nature and control of U.S. bases in Japan, and the stationing of U.S. troops on Japanese soil; Japanese rearmament; and nuclear weapons, nuclear weapons testing and the establishment of missile bases in Japan.

Japanese Attitudes Toward Present Involvement in the Cold War

13. The attitudes of the Japanese concerning Japan's present involvement in the cold war reflect considerable ambivalence. On the one hand, the practical advantages that accrue to Japan from her present economic and military ties to the U.S. and the West are clearly and obviously appreciated by the conservatives in general; on the other hand, there are many -- including conservatives -- who feel, explicitly or implicitly, that the alliance with the U.S. precludes real independence (dokuritsu)<sup>1/</sup> and freedom of action for Japan. The continued presence of U.S. forces in Japan and the evident U.S. influence on the foreign policy of its government is often interpreted to mean that the U.S. is simply conducting the occupation in a new, more subtle, form. The contention of the leftists and some conservatives that the alliance with the U.S. does not really leave Japan free to develop and pursue an independent, genuinely Japanese, foreign policy, is a charge that evokes considerable popular mass appeal. The slogan dokuritsu is one of the few slogans used by all

<sup>1/</sup> The slogan dokuritsu (independence) became popular, interestingly enough, after Japan emerged from the era of American Occupation, and is invariably employed only in relation to Japan's ties with the U.S.

political parties, and is clearly a reflection of renascent nationalist feeling. The call for greater Japanese independence implies that Japan must reduce her ties with the U.S., and from this it is only a short step to the argument that Japanese policy must move in a direction of greater neutrality in the cold war.<sup>1/</sup>

14. Despite indications that the Japanese desire greater independence, and that at least one-third of the electorate supports the Socialists and their policy of neutralism, the fact remains that the cornerstone of present Japanese foreign policy is close cooperation and alliance with the U.S. and the Free World. Nonetheless, it is clear that no Japanese Government can afford to ignore the widespread sentiments which favor neutrality, and it is in recognition of these attitudes that the predominant goal of Japanese conservatives can best be described as that of securing greater freedom of action for Japan within the framework of close Japanese-American relations, rather than in terms of independence per se or neutrality.

Attitudes Towards the U.S.-Japan Treaty of Mutual Cooperation and Security

15. The alignment of Japan with the Free World is most graphically expressed by its defensive treaty arrangements with the U.S. Since the end of the occupation on April 28, 1952, when the Treaty of Peace restored Japan's sovereignty, the security relationship with the U.S. has been determined by the

<sup>1/</sup> Indicative of Japanese orientations toward the cold war are the results of the following question put to Japanese parliamentarians during early 1958: "Would you approve or disapprove of Japan being as neutral as possible in the cold war under present circumstances?"

	<u>Total</u>	<u>Liberal-Democrats</u>	<u>Socialists</u>
Approve	68%	52%	97%
Disapprove	24%	37%	0%
Qualified Answer	5%	6%	3%
No Opinion	3%	5%	0%
	<u>100%</u>	<u>100%</u>	<u>100%</u>

It will be noted that one-half of the Liberal-Democrats join almost all Socialists in approving a policy of as high a degree of neutrality as possible for Japan. See Lloyd A. Free, Six Allies and a Neutral (The Free Press, Glencoe, Ill., 1959), pp. 42-47, 50-52.

Annex "B" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

Security Treaty signed at San Francisco on September 8, 1951. The Security Treaty continued to a substantial degree the rights to bases in Japan that the U.S. had exercised during the occupation. It provided the U.S. with unlimited rights to station in Japan forces for the maintenance of peace in the Far East and the security of Japan, while not binding the U.S. to defend Japan. By 1957, however, Japan had made great progress toward lessening its dependence on the U.S. Its regaining of stature in the family of nations was attested by its election to the Security Council of the United Nations, its growing defense capabilities, and its improving economic vigor. It was at this time that Japan began to press for revision of some of the "one-sided" treaty arrangements.

16. The process of negotiation for this revision continued until the U.S.-Japan Treaty of Mutual Cooperation and Security was signed by the foreign ministers of both countries on January 20, 1960. The overall aim of the Kishi administration during the bargaining was to achieve a greater degree of control over the use of U.S. bases and to clothe the treaty with more indicia of partnership and equality between the parties. Kishi's purpose was to meet the growing uneasiness in Japan over the provisions of the former treaty and to remove the stigma of coercion that had attached to it; i.e., that the arrangement was one which was prenegotiated by SCAP during the preparations for withdrawal and hence was part of the price Japan paid for the ending of the occupation. The U.S. was, in general, anxious to avoid any serious breakdown in relations with Japan that might occur if the U.S. appeared so truculent as to antagonize a large number of Japanese.

17. The new treaty included a number of significant revisions. The U.S. right to veto arrangements for the entry of a third power into Japan was removed, as was the right of intervention

Annex "B" to  
Appendix "A" to  
Enclosure "I"  
WSPC Report No. 50

by U.S. forces into any large-scale internal disturbance in Japan. The U.S. undertook a specific commitment to regard attack upon Japan as one on itself, thus placing Japan in the same position as American's NATO allies. These changes were intended to remove any considered derogation of Japan's equal sovereignty and dignity. The treaty was also changed from one of unlimited duration to one lasting only ten years. Finally, there were incorporated the following changes:

"Article IV: The parties will consult together from time to time regarding the implementation of the Treaty, and, at the request of either Party, whenever the security of Japan or international peace and security in the Far East is threatened. . .

"Article VI: . . . The U.S. is granted the use by its land, air, and naval forces of facilities and areas in Japan.

"..The use of these facilities and areas as well as the status of U.S. armed forces in Japan shall be governed by separate agreement. . ."

The latter agreement, commonly described as the Japan Status of Forces Agreement, includes many provisions of similar agreements with NATO countries in addition to the following diplomatic note of January 19, 1960:

"Major changes in the deployment into Japan of U.S. armed forces, major changes in their equipment, and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under Article V (reply to armed attack against either party in the territories under the administration of Japan) shall be the subjects of prior consultation with the Government of Japan." <sup>1/</sup>

18. There was also established a special committee to be used as appropriate for the consultations specified above. Called the Security Consultative Committee, the membership includes for Japan: the Minister for Foreign Affairs and the Director General of the Defense Agency; and on the U.S. side, the U.S. Ambassador

<sup>1/</sup> For the text of the entire treaty package as well as discussion of its meaning and application see Treaty of Mutual Cooperation and Security with Japan, Hearing before the Committee on Foreign Relations, U.S. Senate, 86th Congress, 2d Session, June 7, 1960.

to Japan and the Commander-in-Chief, Pacific.

[REDACTED]

DOS

-30116  
(d)

19. Although the wording of the treaty is somewhat open to interpretation, it was understood by the U.S. negotiators to mean that prior consultation through the Security Consultative Committee would be required before the introduction into Japan of nuclear weapons and "large missiles" (i.e., changes in "deployment") and before the initiation of military combat operations from Japan against areas outside Japan,

[REDACTED]

DOS

B-1  
1-30116  
and (d)

Without speculating on the speed or results of such consultation in the event of a U.S. desire to use the Japanese bases for combat operations in the Formosa Straits, Vietnam, or elsewhere in Southeast Asia, their availability is of substantial value. The bases and facilities are first of high logistic importance. For example, it is estimated that the availability at the Yokosuka Naval Base of overhaul and repair facilities permits the maintenance of the Seventh Fleet at a high level of battle-readiness at a saving of hundreds of millions of dollars a year compared to the cost of maintaining these vessels from bases nearer the U.S. Secondly, the very presence of the bases is of psychological import as the perimeter of resistance to Bloc expansion, somewhat in analogy with Berlin. Their existence also implies that the Soviet Union can never totally discount their possible use to a greater degree than the Japanese government would now allow.

20. After the text of the new treaty was made public on January 20, 1960, the Kishi administration began the process of 1/ United States-Japan Treaty of Mutual Cooperation and Security, Congressional Briefing Book,

[REDACTED]

DOS

B-1  
1-30116  
(d)

its presentation to the Japanese people and to the Diet for ratification. The terms of the treaty evoked a national debate of major proportions. The spectrum of Japanese attitudes towards the treaty ranged from absolute opposition by the Socialists and Communists, who favored immediate neutrality,<sup>1/</sup> to a somewhat reluctant acknowledgement by the majority of the people that it was a necessary requirement for continued Japanese security. The various arguments employed by those who opposed the treaty were not without appeal to many Japanese who, while supporting the government's position, would nonetheless prefer a situation in which U.S. bases and other concomitants of the security treaty were no longer needed. These arguments may be summarized as follows:

a. Close ties with the U.S. preclude Japan from being completely independent.

b. Japan's present relations with the U.S., though intended to defend her against external aggression, actually invite attack. If a major conflict should break out between the Sino-Soviet Bloc and the U.S., Japan would be caught in the middle and subjected to both offensive and defensive actions, while abrogation of the treaty and other ties with the U.S. would reduce this risk of involvement in nuclear war.

c. The countries of Southeast Asia would be much readier to cooperate with Japan if she were no longer closely tied to the U.S.

d. Japan, together with India, would become a powerful "third force" to which other uncommitted nations can rally, and international tension and the risk of another world war

---

<sup>1/</sup> It is only quite recently that the Communists adopted their present, though undoubtedly interim, position urging Japanese espousal of neutrality. During the Korean War, for example, the Communist position was that Japan should reject neutralism on the score that one could not be neutral between the forces of aggression led by the U.S. and those of peace led by the Sino-Soviet Bloc. The Central Committee of the Japanese Communist Party passed a resolution on 18 January 1959, proposing the abrogation of the Security Treaty with the U.S., together with abolition of all military bases. It further urged that Japan should establish "honorable relations" with the U.S. and all nations of the world, and that Japan should remain neutral and refuse to join any military alliance.

~~SECRET~~

~~SECRET~~

would be lessened by adding Japan's industrial base and technology to the neutralist camp.

e. Japan would get the best of both worlds by playing an uncommitted role in the cold war, since both sides realize that a breakdown of the Japanese economy might force Japan into the arms of the other side.

21. These arguments exert a sufficiently powerful attraction on the electorate that even the Liberal Democrats feel compelled to take them into account by employing socialist and neutralist slogans.<sup>1/</sup> However, both the Kishi and Ikeda administrations clearly rejected their main thrust, and remained for close though qualified cooperation with the U.S., as has most of the electorate. In the Diet elections of 1958 and 1959, in which foreign policy issues played an unusually significant part, the voters were given an opportunity to decide between two clearly opposing positions -- that of the Socialists who advocated rapprochement with Communist China and the Soviet Union (and whose platform called for a policy of Japanese neutralism in the cold war) and that of the Liberal Democrats who stood for a continuation of the status quo -- that is, alliance with the U.S. and the Free World. The outcome of both the elections was a victory for the Kishi administration.

22. The new treaty was presented to the Japanese Diet for ratification on 5 February 1960. The legislative battle which ensued, the most bitter and protracted in the postwar political

<sup>1/</sup> The Japanese Socialist Party has received about one-third of the total vote in national elections since World War II. This strength has induced the Conservatives to adopt for themselves certain elements of the Socialist foreign policy platform. In the past these borrowed policies and slogans have included demands for closer ties between Japan and other Asian countries, and for complete equality in Japan's relations with the U.S. See I.I. Morris, "Foreign Policy in Japan's 1958 Elections," Pacific Affairs, September 1958, pp. 229-235.

~~SECRET~~

~~SECRET~~

~~SECRET~~

~~SECRET~~

history of Japan, terminated with final effective ratification on 19 June 1960. Some of the legislative opposition sprang from a fear of exacerbating tensions in the Far East, particularly with respect to negotiation of certain territorial claims with Russia<sup>1/</sup> and hope for improvement of trade relations with Communist China. If the Bloc had taken offense at the terms of the 1951 U.S.-Japanese treaty, Japan could have explained that it had not been voluntarily undertaken. By negotiating a new treaty, Japan could no longer deny its responsibility for its orientation toward and commitments to the United States. The anti-treaty forces also attacked it on the score that it permitted U.S. forces stationed in Japan to fight in other areas in the Far East, such as Formosa and South Korea, and that this might involve Japan in hostilities between the U.S. and a third power. The Kishi administration attempted to counter this argument by making the most of its success in securing the U.S.'s agreement to "prior consultation," arguing that such consultation would prevent Japan from becoming engaged in hostilities against its

<sup>1/</sup> The Japanese have declined to conclude a peace treaty officially ending World War II with the Soviet Union until the USSR recognizes these claims. At one point the Soviet Union had agreed to return part of the claimed islands in return for Japan's signature to the peace treaty, but in November, 1959, withdrew the offer as diplomatic retaliation for the Kishi administration's refusal to seek abrogation of the 1952 U.S.-Japan Security Treaty and her opting instead for this revision of it. Japanese public opinion was outraged by this Soviet action, and even extreme non-Communist left-wing elements joined in support of the government's declaration deploring the Soviet action. Paradoxically this probably helped rather than hindered ratification.

~~SECRET~~

~~SECRET~~

will. However, even some supporters of the government appeared to discount the right of prior consultation as such a guarantee. <sup>1/</sup>

23. In guiding the treaty through to Diet ratification, Prime Minister Kishi was subjected to much personal vilification. Although he had allowed more than three months' debate on the treaty, his opposition had used this time largely for emotional appeals to the public. In late May, when Kishi moved to cut discussion and ratify the treaty, the Socialists were still demanding additional time for debate. Immediately before the balloting they resorted to a sitdown strike, a boycott of the Diet, and strong-arm tactics, but a majority of the Lower House approved the treaty on 20 May 1960. Action by the Lower House becomes final if the Upper House remains in session for thirty more days without acting to change it. Hence, when the Diet session, which ordinarily would have terminated on May 26, was extended for fifty days by another majority vote on May 26, the demonstrations which had punctuated opposition to the treaty since early November 1959, reached a climax. Reports indicate that 62,000 took part in Tokyo and 202,000 throughout the country, many of the participants being members of the Socialist and Communist parties, the General Council of Japanese Trade Unions, and the Federation of Student Self-Government Associations. While the demonstrations failed to halt

<sup>1/</sup> The Asahi and Yomiuri, two of Japan's largest and most influential newspapers, criticized the revised treaty for not containing a firmer guarantee that the U.S. would not act without Japanese consent on any aspect of the new security agreement requiring consultation between the two countries. The Yomiuri stated: "The phrasing of the joint communique (referring to the Eisenhower-Kishi communique of 19 January 1960) indicates that assurance of prior consultation is not a right to be enjoyed by Japan but something to be granted when America deems it necessary. The implications are obvious . . ." Yomiuri, January 20, 1960.

the final effective ratification of the treaty on 19 June 1960, they did succeed in forcing Kishi to promise his resignation and request the cancellation of President Eisenhower's visit, the timing of which made many believe it was designed to bolster Kishi's own prestige. The strong minority opposition, aided by the Liberal Democratic party factionalism, thus made ratification a Pyrrhic victory for Kishi personally. The election of Ikeda to replace Kishi has done little to heal this factionalism, and herein may lie the seeds for the future downfall of another conservative administration.<sup>1/</sup>

24. The process of securing ratification for the treaty has brought home the fact that, while the treaty has the support of the majority of the Liberal Democrats and most important business groups, their support was by no means unqualified. Further, the general public's acceptance of the Liberal Democrats' stress on Japan's need for close cooperation with the United States and protection against Communist attack does not necessarily imply popular enthusiasm for these positions on the part of the Japanese people. The indications are that, for the present at least, most Japanese look upon the question of close ties with America as necessary in view of Japan's weak military and economic position, and that the security treaty, although not desirable in and of itself, is something which, in the circumstances, cannot be helped. This attitude reflects a pragmatic rather than an ideological approach to the ties with the U.S. From the Japanese point of view, the relationship has risks and drawbacks, but at

<sup>1/</sup> Kono and the Shunjuikai were not included in the new cabinet announced by Ikeda in early July, 1960. Kono presently favors the creation of a new conservative party in Japan as a result. See Tokyo newspaper Kyodo, in English, 12 August 1960.

the same time it is looked upon as one in which the advantages outweigh those to be gained from pursuing the alternative advocated by the Socialists.

25. The violent success of the public demonstrations brought out the fact that a militantly organized minority can impose its will against the wishes of the majority. While Ikeda has pledged himself repeatedly to the same policies as Kishi, and to the implementation of the new treaty as the foundation of his domestic and diplomatic policies, the possibility of jeopardization of the U.S. military position in Japan by demonstrations or strikes against the bases must not be overlooked. The Socialist and Communist parties and the Sohyo Labor Organization have adopted resolutions to oppose the implementation of the treaty whenever possible. However, the excesses of these groups will more likely have the opposite effect. A recent public opinion poll shows that the Socialists have reached a new low in popular estimation. <sup>1/</sup> The several prefectural elections since Ikeda's election by his party have resulted in wide margin wins for Liberal Democrats, especially in the rural areas, despite an intense effort by the Socialists to expand their influence. <sup>2/</sup>

<sup>1/</sup> The poll, just concluded by Asahi, a large Tokyo newspaper, showed the Ikeda administration enjoys greater popular support than any other government since 1951. The public presently favors the Liberal Democratic Party 3 to 1 over the Socialists, who were at their lowest ebb in the Party's history. Of particular interest is the shift away from the Socialists in youth and highly educated groups:

	<u>LPD</u>	<u>JSD</u>
Age 20-29	33%	26%
Highly Educated	37%	27%

J-2 Intelligence Bulletin, 12 August 1960 (SECRET, limited distribution).

Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

The violent minority has also weakened public opposition to the use of the Self-Defense Forces to quell serious riots, though this would still be an unpopular move. There have been investigations and arrests of leaders of the anti-pact rallies by local police boards.<sup>1/</sup> Finally, as a result of the public relations efforts by each of the U.S. bases, combined with the economic and social benefits of employment at the bases, it became more difficult for the 3.7 million workers of Sohyo to leave their jobs, however willing they were to pass resolutions at union conventions.

Attitudes Toward Rearmament

26. Japanese popular reactions to the rearmament issue are not easy to define. Polls and other surveys<sup>2/</sup> indicate a gradual, albeit reluctant, acceptance by the Japanese people of the need for some sort of national defense force. Beyond this no consensus is discernable. As a domestic political issue the entire question has become one of the most controversial in Japan. The Socialists oppose rearmament strenuously and make it a major issue in their election campaigns. The Liberal Democrats support limited rearmament, but the enthusiasm of their support has wavered in the past. The future strength of a national defense force may well have received a boost from the recent June riots. While political considerations may continue to militate against the use of the military to quell internal disturbances, the Ikeda administration

1/ The police investigations also established that the mobbing of U.S. Presidential Press Secretary James Hagerty at Haneda Airport on 10 June 1960 was planned and directed by members of the JCP and the extremist Zengakuren student organization. chic  
in pi  
10A

had pledged itself to prevent such occurrences and is expected to move ahead quietly with contingency plans to cope with possible new outbreaks of serious violence.<sup>1/</sup> The primary reasons cited against rearmament may be summarized as follows:

a. Article IX of the 1947 Constitution,<sup>2/</sup> the so-called anti-war clause, calls for Japan to become a completely demilitarized state;

b. The economic and financial resources of Japan cannot stand the burden which rearmament would entail without reducing the standard of living and thus adversely affecting or even destroying its democratic freedoms and institutions.

c. Small scale rearmament would not contribute to the security of Japan since it would be militarily insignificant in an era of nuclear weapons and ICBM's.

d. Large-scale rearmament, as well as U.S. bases and U.S. forces on Japanese soil, invites attack from the Soviet Union and Communist China.

27. The supporters of some kind of rearmament, particularly the Kishi government and the conservatives in general, have argued that if Japan is to exercise any world influence it can do so

1/ ONIB, 9 August 1960 (SECRET).

2/ It reads as follows: "Aspiring sincerely to an international peace based on justice and order, the Japanese people forever renounce war as a sovereign right of the nation and the threat or the use of force as a means of settling international disputes. In order to accomplish the aim of the preceding paragraph, land, sea, and air forces, as well as other war potential, will never be maintained. The right of belligerency of the state will not be recognized."

only by having its own military forces -- that is, something more formidable than the present National Self-Defense Force.<sup>1/</sup> The conservatives contend that world Communism is a definite threat to Japanese independence and that the pacifist and neutralist argument of strength through weakness is not impressive in the light of the cold war. The Kishi government favored an amendment to the Japanese Constitution to clarify the right of rearmament and would have passed such an amendment if it could have assured itself of a two-thirds majority in both Houses of the Diet.<sup>2/</sup> In practical political terms, however, the Liberal Democrats, although spearheading the drive for constitutional revision, made no mention of it in their platform in the May 1959 general elections because they feared that it was a politically disadvantageous issue. Even among conservatives there is ambivalence at the grass roots level on this issue and, at least on

<sup>2/</sup> This appears unlikely for the present. The left-wing and staunchly anti-revisionist segment of the Lower House can apparently count on at least 166 votes; six more than are necessary to defeat a bill or amendment. At a minimum, the conservatives must increase their support in the House by at least this margin before revision becomes feasible. In the May 1959 elections the Socialist Party captured 166 seats, an increase of six over the February 1955 elections. Socialist gains have, in general, been due to their use of slogans opposing constitutional revision, rearmament, nuclear testing, and the Security Treaty with the U.S. In view of the solidarity of the existing alignment of forces opposed to this particular issue, it is almost certain that only future general elections resulting in an extraordinary victory for the pro-revisionist forces could bring about constitutional revision.

the emotional level, the appeal of the Socialists on this particular question is not without some attraction to many conservative Japanese voters.

28. One final factor of relevance to Japanese attitudes toward rearmament is the economic factor. There is widespread belief, shared by all parties, that the costs of rearmament on a meaningful scale would place an intolerable strain on the Japanese economy. This position is taken by a number of conservatives who are inclined to favor rearmament on other grounds, and was reflected in the negative attitude of the Kishi administration to United States urging that Japan assume a larger share of its defense burden. The political attractiveness of this argument is not lost to the Japanese who see in it a lever to obtain the maximum amount of financial assistance from the United States.

Attitudes Toward Nuclear Weapons, Nuclear Weapons Testing, and the Establishment of Missile Bases in Japan

29. The subject of nuclear weapons has been hotly debated in the Diet, with the Socialists and Communists bitterly attacking any proposal to introduce either nuclear weapons or guided missiles into Japan as a violation of the Constitution. In 1958 the Japanese Government decided that the possession of offensive nuclear weapons would be unconstitutional, but on the question of whether or not defensive nuclear weapons also ran counter to the Constitution, it remained noncommittal. In assessing Japanese

Annex "B" to  
Appendix "A" to  
Enclosure "I"  
WSEG Report No. 50

popular attitudes toward the nuclear weapons and nuclear weapons testing, it must be borne in mind that Japan's experiences at Hiroshima and Nagasaki have understandably generated an extraordinary degree of emotional sensitivity on this point.<sup>1/</sup> The Japanese suffer from what some have termed "radioactive neurosis," expressed by extreme hostility to any further nuclear weapons testing, and particularly to testing in the Pacific which, in the past, has contaminated Japanese fish catches. The antinuclear movement in Japan has been able, with the fishing issue, to provide itself with an economic basis for its emotional appeal for the cessation of nuclear testing and the abolition of all nuclear weapons.

30. After the "Lucky Dragon" incident, the Japanese Diet urged that further nuclear weapons testing by all parties be cancelled. The Soviet Union appeared to accede to this demand seven months later and thereby scored a substantial propaganda victory in Japan, one reinforced by the United States' rejection of the proposal. The fact that the U.S.'s offer to suspend testing came six months after the Soviet offer apparently contributed to the relatively meager impression it made on the general public. The Soviet resumption of testing undoubtedly neutralized some of the favorable responses generated by the original announcement of a test ban, but Soviet propaganda and psychological warfare was

<sup>1/</sup> Japanese-American relations were seriously affected by the 1954 "Lucky Dragon" incident in which the Japanese tuna boat was caught in radioactive fallout near Bikini atoll, and a crew member subsequently died. There was another near crisis in 1959 when the oceanographic survey ship "Takuyo Maru" passed through heavy radiation to the west of the U.S. Central Pacific testing grounds and crewmen only avoided the injuries of the "Lucky Dragon" crew by prompt decontamination procedures.

able to mitigate much of the unfavorable response by shifting the onus for the resumption of testing to the U.S. <sup>1/</sup>

31. Closely related to the widespread Japanese opposition to nuclear weapons testing, is the fear held by many Japanese that the U.S. intends to stockpile nuclear weapons on Japanese soil. The pressure of public opinion on this issue <sup>2/</sup> forced both Kishi and Ikeda to issue numerable assurances that the U.S. will not be permitted either to stockpile nuclear weapons in Japan or to establish missile bases on Japanese soil. Given the temper of the general public on this issue, it is highly unlikely that any Liberal Democrat would jeopardize his political career by publicly recognizing that the denial of nuclear weapons to U.S. forces in Japan may seriously degrade the very purpose for which they are there. It appears almost certain that Japan will not permit either the introduction of nuclear weapons into Japan or to the use of U.S. bases to launch combat operations involving conventional weapons against targets elsewhere in the Far East. <sup>3/</sup>

<sup>1/</sup> It will be recollected that the Soviet announcement calling for the cessation of nuclear weapons testing was timed in the hope of forcing the U.S. to cancel its long scheduled Hardtack test series, and in the knowledge that if the U.S. refused to do so, the Soviet Union would be in a position to employ such refusal to resume its own testing of nuclear weapons.

WSEG Report No. 50

32. During the past year the issue of nuclear weapons has been relatively quiescent, probably because there have been no recent nuclear tests in the Pacific; however, public revulsion against nuclear weapons continues unabated, with left-wing elements<sup>1/</sup> raising the issue again in connection with the national debate on the revised security treaty. By the terms of the revision the Kishi administration made the subject of prior consultation any innovations which would introduce nuclear weapons or strategic missiles on Japanese soil. If the U.S. approached the Japanese Government for permission to do so, the U.S. would raise an issue which would not only be vigorously opposed by the Liberal Democratic administration but which would also generate considerable opposition from the general public. In a poll of Japanese parliamentarians<sup>2/</sup> in early 1958, more than eight out of ten opposed the "...establishment of long-range missile bases here in Japan," with 77 percent of the Liberal Democrats agreeing with the negative view.<sup>3/</sup>

DCS

- 1/ The Sixth World Convention Against Atomic and Hydrogen Bombs on 2 August 1960 adopted several resolutions militantly opposing both the development and deployment of nuclear weapons and the revised security treaty. The sponsor of the convention, the Japanese Council Against Atomic and Hydrogen Bombs, while the author of considerable propaganda appearing in public news media, is publicly opposed by the conservative administration.
- 2/ Conducted under the auspices of the Institute for International Social Research by The Central Research Services, Inc., Tokyo, in 1958. Approximately 100 parliamentarians, proportioned between the Upper and Lower Houses in accordance with their total respective memberships and in proper proportions in terms of political parties, were interviewed.

34. The general public seems to have accepted with aplomb the Kishi administration's announcement that it intends to acquire for the Self-Defense Force surface-to-air and air-to-air missiles. HAWK missile bases have been built by the U.S. on Okinawa, and MACE sites are being introduced on the Ryukyuan Islands, although local legislatures have opposed them because of the land they require and the offensive capabilities of the MACE (range 650 to 1000 miles).<sup>3/</sup> Socialists have continued to decry these activities as leading inevitably to the establishment of larger missile bases, the introduction of nuclear weapons and as subjecting Japan to an ever greater danger of becoming a target for nuclear weapons.

CONCLUSIONS

35. For the next several years, Japan's common interests with the United States and the advantages she derives from the U.S. Alliance will probably be sufficiently great to preclude any real break from this tie. At the same time, however, Japan can be expected to seek those opportunities which will decrease her dependency on the U.S. This effort will continue to be strengthened by strong Japanese desires for an international detente, Japanese fears of possible nuclear war, and Japanese hopes that accommodation between East and West would permit Japan to reappear on the international scene as a spokesman for Asia and as an Asian power.

36. The Japanese are likely to remain strongly opposed to increasing their participation in the military aspects of the Japanese-American alliance. While continuing to seek the benefits of U.S. military protection, Japan will probably resist U.S. pressure that she assume greater responsibilities and a larger share of the defense burden. However, with the revised Security Treaty now ratified, it seems reasonable to believe that the present U.S. military position in Japan might be maintained for several years, inasmuch as present trends in Japanese politics would seem to auger a continuance of conservative rule.

37. Japan's future military collaboration with the United States cannot, however, be regarded with complacency. There are several developments that could adversely affect this collaboration. These would include Chinese Communist acquisition of nuclear weapons or the occurrence of even a limited nuclear war in the Asian area. While such developments might, in theory, be expected to stiffen Japanese efforts to resist aggression, the opposite reaction is foreshadowed by the longstanding Japanese aversion to nuclear weapons and by the recent weakening of confidence in the ability of the U.S. to protect Japan in time of war. At a minimum

~~SECRET~~

~~SECRET~~

SECRET

there is likely to be continued friction over the presence of U.S. military bases in Japan and efforts by the Japanese government to satisfy public opinion by appearing to exercise greater control over U.S. use of those bases.

38. The importance of Japanese military collaboration is underlined by the fact that many of the facilities that the United States would require for wartime operations -- particularly those relevant to the augmentation or evacuation of U.S. forces in Korea -- have been returned in recent years to the control of the Japanese government. Moreover, existing U.S. bases and installations will remain dependent on indigenous labor and suppliers. For these reasons, the U.S. must remain alert to Japanese reactions to changes in the world situation that would alter this present support. Should there develop an economic crisis in Japan which the U.S. seemed unwilling or unable to alleviate, or should the Sino-Soviet Bloc appear to have gained a decisive military position over the United States, the benefits of close ties with the U.S. may appear less attractive to the Japanese than those which they might hope to derive from either neutralism or closer relations with the Bloc.

39. While the vast majority of the Japanese people reject Communism as an ideology, Japan may still be susceptible to a Soviet diplomatic offensive. The Soviets are in a relatively powerful bargaining position vis-a-vis Japan, due to their continued occupation of island territories which have been considered by the Japanese as a traditionally integral part of the country. The Soviets may offer to recognize Japanese territorial claims to these islands in exchange for the closing of U.S. bases in Japan or an American evacuation of Okinawa. This offer could be coupled with favorable trade concessions to Japan in the

Asian Bloc countries and coupled to various security arrangements, such as peace guarantees and proposals for denuclearized zones in the Far East. These offers would be likely to have considerable public appeal in Japan and to intensify current pressures for curtailment of Japan's military ties with the U.S. and adoption of a neutralist position in the cold war.
