# UNITED STATES PATENT OFFICE.

SAMUEL RUST, OF NEW YORK, N. Y.

MODE OF APPLYING A SHADE TO SAMUEL RUST'S AND OTHER LAMPS.

Specification of Letters Patent No. 565, dated January 9, 1838.

*To all whom it may concern:*

Be it known that I, SAMUEL RUST, of the city of New York, county and State of New York, have invented a new and useful  
5 improvement in Samuel Rust's patent lamp for lighting houses, stores, and other places, which patent is dated December 5, A. D. 1837, and consists in applying the shade to Samuel Rust's patent lamp and other analogous lamps, which patent was granted October 6, A. D. 1835, and has been since sold  
10 to William Rowe, of Fishkill, Dutchess county, State of New York, and that the following is a full and correct description of said improvement as invented or improved by me.

The nature of my invention or improvement in the lamp above mentioned, consists in a convenient mode of applying the shade  
20 to the said Samuel Rust's patent lamp and other analogous lamps, which invention, or improvement, completely obviates the obstruction of the roller which regulates the wick and is in place of inserting the roller  
25 into the shade holder of the lamp, or within or between the supporters or holders of the shade as has been used in said patent lamp. This mode of using the shade consists of attaching the shade holder to the top of  
30 the tube, or socket (which receives the wick) above the roller with the roller inserted into or at the side of the tube, or socket, between the top of the stopple or lamp and the shade holder, as A, Figures 1 and 2, or the shade  
35 holder is attached to the tube, or socket, on top of the stopple, as B, Fig. 3, where the

roller of said lamp is inserted into the stopple as A, Fig. 3. The shade holder is made with a hole in the middle to fit the tube, as C, Fig. 4 and is made with arms, or holders  
40 for the shade, projecting from the hole, or body of the shade holder, or may be made any other convenient way, and may have a rim for the shade to rest on, or otherwise as convenience may require. The shade-holder  
45 when attached to the tube above the roller as described, is beautifully calculated to be applied to second hand as well as new lamps of this kind, glass, and metal, and the lamp  
50 may be handily used at pleasure either with or without the shade or shade-holder as convenience may require.

I do not in this patent claim as my invention or improvement, a stopple, or a roller, or the insertion of the roller into a  
55 stopple, or into a tube; neither do I claim the application of a shade to the said Samuel Rust's patent lamp and other analogous lamps on the insertion of the roller into the shade holder of the lamp, but I claim—  
60

The attaching of the shade holder to the tube or socket of the lamp above the roller combined as aforesaid, or in any other way essentially the same, and for which I request Letters Patent.  
65

Witness my hand this twenty-first day of December one thousand eight hundred and thirty seven.

SAMUEL RUST.

Witnesses:

C. NAGLE,  
J. N. RUST.
