UNITED STATES PATENT OFFICE.

HENRY W. DANN, OF WEST TROY, NEW YORK.

IMPROVEMENT IN SMOKING-CASES.

Specification forming part of Letters Patent No. **165,215**, dated July 6, 1875; application filed May 22, 1875.

To all whom it may concern:

Be it known that I, HENRY W. DANN, of West Troy, in the county of Albany and State of New York, have invented a new and Improved Smoking-Case, of which the following is a specification:

In the accompanying drawing, Figure 1 represents a perspective view of my improved smoking-case; and Fig. 2, a vertical transverse section of the same on the line *c c*, Fig. 1.

Similar letters of reference indicate corresponding parts.

My invention relates to an improved smoking-case that provides readily accessible compartments for tobacco, matches, and pipe in an elegant and convenient manner; and it consists of an oval case with central and end compartments, and hinged lids for the different articles, one of the end compartments being arranged with a tubular extension projecting into the central compartment for storing the pipe and pipe-stem.

In the drawing, A represents a case, preferably of flat oval shape to be conveniently carried in the pocket. The case A is divided into three or more compartments or receptacles, B, the central and larger one for tobacco,

the outer ones for the pipe, matches, and other articles. Each compartment is provided with a separately-hinged lid, C, that closes by a suitable spring-snap. For the purpose of storing a pipe with a stem of suitable length, a tubular extension, D, of one end compartment runs along the wall of the case, and projects into the central compartment, as shown in the drawing. The pipe-stem is introduced therein, so that the bowl is seated into the end compartment, and the pipe thus securely and neatly stored. All the necessary requisites for smoking are in this manner compactly arranged together, and at any moment within handy and convenient use.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

A new article of manufacture, consisting of case B, divided into three compartments, having a separate cover at each end, as well as in the middle, and provided with pipe-tube D, as shown and described.

HENRY W. DANN.
