Attorney.

UNITED STATES PATENT OFFICE.

FRANK VOIGT, OF PHILADELPHIA, PENNSYLVANIA, ASSIGNOR TO HIMSELF,
HENRY N. GREEN, AND EDGAR K. FITLER, OF SAME PLACE.

IMPROVEMENT IN TOY FURNITURE.

Specification forming part of Letters Patent No. **180,680**, dated August 1, 1876; application filed
June 9, 1876.

To all whom it may concern:

Be it known that I, FRANK VOIGT, of the city and county of Philadelphia, and State of Pennsylvania, have invented a new and useful Improvement in Toy Furniture; and I do hereby declare the following to be a clear and exact description of the nature thereof, sufficient to enable others skilled in the art to which my invention appertains to fully understand, make, and use the same, reference being had to the accompanying drawings, making part of this specification, in which—

Figure 1 is a side view of a toy bedstead embodying my invention. Figs. 2 and 3 are views of opposite ends thereof.

Similar letters of reference indicate corresponding parts in the several figures.

My invention consists in forming toy furniture wholly or in part of slices or sections of nut-shells, whereby the natural contour of the interior and exterior of the shells is rendered available as carving and parts for the furniture, and novel and beautiful effects are produced by convenient and inexpensive means.

Referring to the drawings, A represents the head-board of a bedstead, and B the foot-board, and C the side rails thereof. The head and foot boards are built up of slices or sec-

tions D of nut-shells, and the side rails C are faced with similar slices or sections D of nut-shells. These slices or sections are artistically arranged relatively to each other, so as to produce the best effects of carved or open work, arches, corners, &c., and it will be seen that the appearance is novel and beautiful, and attractive and inexpensive toys may be produced.

It is evident that the invention is applicable to chairs, tables, and other pieces of toy furniture, care being taken to properly arrange the slices or sections relatively to the shape thereof.

The slices or sections may be cut or sawed longitudinally or transversely, according to taste or requirements.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

As a new article of manufacture, toy furniture constructed wholly or in part of nut-shells, substantially as and for the purpose set forth.

FRANK VOIGT.
