UNITED STATES PATENT OFFICE.

CHARLES H. CHASE, OF NEWPORT, RHODE ISLAND.

IMPROVEMENT IN SUMMER STOVES.

Specification forming part of Letters Patent No. **181,040**, dated August 15, 1876; application filed July 1, 1876.

To all whom it may concern:

Be it known that I, CHARLES H. CHASE, of Newport, in the county of Newport and State of Rhode Island, have invented a new and Improved Summer Stove, of which the following is a specification:

The invention will first be described in connection with the drawing, and then pointed out in the claim.

Figure 1 is a sectional elevation of the stove and oven contrived according to my invention, the section being taken on line *x x* of Fig. 2; and Fig. 2 is a horizontal section on the line *y y*, Fig. 1.

Similar letters of reference indicate corresponding parts.

A is the fire-pot, of any suitable form or construction, large enough to cover the pot-hole of an ordinary stove, and being flat on the top, and having an opening, B, therein, in which a cooking-pot may be set, and which may be closed by the cover removed from the pot-hole of the ordinary stove on which this

stove is set, and at D it has a diving-flue, into which the smoke passes through a damper, F, to escape into the large stove at E, so that the flue of the latter serves for the flue of the summer stove. G is the oven to be used in connection with this stove for baking. It is detachably set on the top of the stove, and has a flue, H, passing around it from the opening I through its bottom, where the smoke enters, to another opening, J, where it escapes into the diving-flue D and passes off as when the oven is not used, the damper F being closed when the oven is used.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

A stove attachment having fire-pot A, openings E I J, oven G, flue H, damper F, and diving-flue D, as shown and described.

CHARLES H. CHASE.
