UNITED STATES PATENT OFFICE.

GEORGE H. HANCOCK, OF RICHMOND FACTORY, GEORGIA.

IMPROVEMENT IN STOVE-PIPE ATTACHMENTS.

Specification forming part of Letters Patent No. **183,297**, dated October 17, 1876; application filed July 15, 1876.

To all whom it may concern:

Be it known that I, GEORGE H. HANCOCK, of Richmond Factory, in the county of Richmond and State of Georgia, have invented a new and Improved Stove Attachment, of which the following is a specification:

In the accompanying drawing, Figure 1 represents a side elevation of my improved stove attachment, and Fig. 2 a top view of lamp-holding box or bracket.

Similar letters of reference indicate corresponding parts.

My invention relates to an improved attachment for stoves of all kinds, which provides an adjustable and convenient device for drying clothes, and a support for setting the lamp into any position relative to the stove; and the invention consists of a standard secured to the stove, with an adjustable clothes-drying fork or rack, and an adjustable lamp-support.

In the drawing, A represents an upright supporting standard or post, that is rigidly secured to the top plate or other part of a stove. A friction-box, B, with rubber lining or clamp screws, slides along standards A, and may be set to any height thereon. The friction-box B has guides for a sliding bar, C, that carries at its outer end a pivot-socket, D, to which a drying fork or rack, E, is swiveled,

which is, by means of the standard and sliding rod, readily set closer to, or farther from, the stove, as described.

The standard A supports in a top bracket, A', a sliding bar, F, at the end of which is adjusted, in a suitable friction or clamp box, F', the downward-extending rod G, which carries at the lower end the retaining-clamp box or bracket G' for the lamp, so that the same may be placed in any suitable position above or near the stove.

The attachment forms, in a simple manner, a neat and convenient clothes-drying and lamp-supporting device, which may be placed on any stove and set to any position required.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

A stove attachment composed of a supporting-standard, A, attached to stove, with adjustable arms C and F sliding in guide sockets or brackets thereon, and supporting, respectively, a swiveled clothes rack or fork, E, and an adjustable lamp box or bracket, G', substantially in the manner and for the purpose set forth.

GEORGE H. HANCOCK.
