UNITED STATES PATENT OFFICE.

CALEB B. MOCK, OF KENTLAND, INDIANA.

IMPROVEMENT IN COMBINED SHADE AND REFLECTOR.

Specification forming part of Letters Patent No. 153,412, dated October 17, 1876; application filed April 8, 1876.

To all whom it may concern:

Be it known that I, C. B. MOCK, of Kentland, in the county of Newton and State of Indiana, have invented certain new and useful Improvements in Combined Shades and Reflectors, of which the following is a specification:

The nature of my invention consists in a reflector placed in a hoop, with a movable hood or apron on the top coming down over the front, so as to control the direction of the rays of light, as will be hereinafter more fully set forth.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, which forms a part of this specification, and in which—

Figure 1 is a side elevation of my invention, and Fig. 2 is a vertical section.

A represents a cylindrical hoop of any suitable dimensions, having its ends cut inclined, and provided at top and bottom with suitable apertures, to be placed over the chimney of an ordinary lamp. These apertures are made near opposite ends of the hoop, in such a manner that when the hoop is in position a re-

lector, B, secured at the upper end of the hoop will stand in an inclined position, its upper ends being in a vertical plane closer to the light than the lower. On the top of the hoop A, at the open front end, is hinged a hood or apron, C, which comes down over the front, and may be adjusted at any angle desired, so as to control the direction of the rays of light.

This device may be made of any suitable material, such as, for instance, of glass; or the hoop may be made of paper, the reflector of glass or metal, and the hood of metal; and it may be applied to any common coal-oil lamp or gas-burner.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The inclined hoop A, reflector B, and adjustable hood or apron C, constructed and arranged substantially as and for the purposes herein set forth.

In testimony that I claim the foregoing as my own I affix my signature in presence of two witnesses.

CALEB B. MOCK.
