UNITED STATES PATENT OFFICE.

REBECCA SIDDALL, OF WASHINGTON, DISTRICT OF COLUMBIA.

IMPROVEMENT IN HAND-PROTECTORS FOR BROOM-HANDLES.

Specification forming part of Letters Patent No. 184,918, dated November 28, 1876; application filed October 26, 1876.

To all whom it may concern:

Be it known that I, REBECCA SIDDALL, of Washington, in the District of Columbia, have invented certain new and useful Improvements in Hand-Protector for Brooms; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification.

The nature of my invention consists in the construction and arrangement of a hand-protector for brooms, handles, and other analogous devices, as will be hereinafter more fully set forth.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, in which—

Figure 1 is a side view of a broom embodying my invention. Fig. 2 is an enlarged perspective view of the hand-protector detached.

A represents an ordinary broom, with handle B. C represents a sleeve or tube of suitable dimensions, made of rubber or other suitable elastic or flexible material, which sleeve is placed on the broom-handle B, and capable of being adjusted up and down on the same, while it is held by friction at any point on the handle where it may be placed: D represents a cap or sleeve closed at one end, also made of rubber or other suitable elastic or flexible material, to be placed upon the end of the broom-handle B.

The object of this invention is to form a protector to prevent the blistering or otherwise injuring the hands of the person using the broom, and the sleeve being movable upon the broom-handle, it can be adjusted to suit the operator.

I do not confine myself to any particular shape of the hand-protector, nor to any material of which it may be made, only so that it shall form elastic or flexible hand-holds on the broom.

My invention may be applied to other analogous devices as well as on a broom-handle. When the broom is worn out, the protector can be applied on another broom.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. A broom-handle, or other analogous device, provided with a detachable and adjustable rubber sleeve, C, for the purpose set forth.

2. The cap D and sleeve C, applied to a broom-handle or other analogous device, as herein set forth.

In testimony that I claim the foregoing I have hereunto set my hand this 25th day of October, 1876.

REBECCA SIDDALL.
