UNITED STATES PATENT OFFICE.

FREDERICK A. KETCHUM AND HENRY WILDE, OF CLEVELAND, OHIO.

IMPROVEMENT IN POCKET HONE, STROP, AND OIL-CUP COMBINED.

Specification forming part of Letters Patent No. **189,561**, dated April 17, 1877; application filed January 31, 1877.

To all whom it may concern :

Be it known that we, FREDERICK A. KETCHUM and HENRY WILDE, of Cleveland, in the county of Cuyahoga and State of Ohio, have invented a certain new and Improved Pocket Hone, Strop, and Oil-Cup Combined; and we do hereby declare that the following is a full, clear, and complete description thereof, reference being had to the accompanying drawings, making a part of the same.

Figure 1 is a side view of the invention. Fig. 2 is a side view of the same with the cover raised. Fig. 3 is a top view of the inside.

Like letters of reference refer to like parts in the several views.

The purpose of the above-said invention is to combine, in a convenient form and size, that may be carried in the pocket, a hone or oil-stone, strop, and a vessel, wherein oil may be placed for the use of the stone and strop, thereby combining in one the three articles aforesaid. A more full and complete description of the invention is as follows:

In the accompanying drawings, A represents a block, which may be of wood or other suitable material. In said block is partially

sunk a hone, B, having a portion of the stone above the face thereof, as seen in Fig. 2. C is a cover, hinged to one end of the block, as shown in Fig. 3, the inside of which is incavated for the admission of the exposed part of the hone on shutting down said cover.

The strop consists of a strip of leather, D, secured to the under side of the block. In the end of the block is a chamber or hole, in which is inserted a vessel for holding oil. Said vessel is indicated by the dotted lines *a*, Fig. 2, closed by a stopple, E; or the chamber itself may be the oil-receptacle.

As aforesaid, the above-described invention is intended to be carried in the pocket, and affords a ready and convenient means for stropping small cutlery.

What we claim as our invention, and desire to secure by Letters Patent, is—

As a new article of manufacture, the herein-described combined pocket hone, strop, and oil-vessel, having a hinged cap or cover, substantially as set forth and specified.

FREDERICK A. KETCHUM.

HENRY WILDE.
