UNITED STATES PATENT OFFICE.

STEPHEN LONERGAN, OF LEWISTON, MAINE.

IMPROVEMENT IN SQUARES.

Specification forming part of Letters Patent No. **206,463**, dated July 30, 1878; application filed July 8, 1878.

To all whom it may concern:

Be it known that I, STEPHEN LONERGAN, of Lewiston, in the county of Androscoggin and State of Maine, have invented a new and useful combination of Try-Square, T-Square, and Bevel-Square, which invention is fully set forth in the following specification and accompanying drawing.

The object of my invention is to produce a try-square which may be easily and quickly converted into a T-square or a bevel-square, thus combining in one tool the uses of three.

In the drawing, A is the blade of the square, and B represents the half of the handle of the same, which is riveted to the blade A so as to form a right angle. C represents the half of the handle of the square, and is fastened to the blade A by means of the thumb-screw *a*. *d* represents the part which forms the bevel, which part shuts into the part C.

To form a T-square, the part of the handle represented by C is moved to the position as shown by the dotted lines *b*, where it is firmly secured by means of the thumb-screw *a*.

To form a bevel-square, the part represented by *d* is moved to any desired angle, and there secured by the thumb-screw *a*.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The device described, consisting of the blade A and the handle, composed of the parts B, C, and *d*, when combined and arranged as described, for the purpose set forth.

STEPHEN LONERGAN.
