# UNITED STATES PATENT OFFICE.

HENRY B. ADAMS, OF NEW YORK, N. Y.

## IMPROVEMENT IN CUFF-HOLDERS.

Specification forming part of Letters Patent No. **160,636**, dated March 9, 1875; application filed June 25, 1874.

*To all whom it may concern:*

Be it known that I, HENRY B. ADAMS, of the city and county and State of New York, have invented an Improved Cuff-Holder, the object of which is to hold the cuff in a desirable position relative to the hand and outer sleeve of coat or dress, of which the following is a specification:

In the accompanying drawing, Figure 1 is a top view of the holder. Fig. 2 represents the same attached to the cuff and sleeve.

The holder may be made of any suitable metal, either of wire or sheet metal; when from the sheet metal, it is cut therefrom by dies. It consists of two arms, which form an open eyelet at one or both their ends, and which arms are made to have a slight spring, in order that the eyelet, at either or both ends, may open and clasp over and around the shank of a button. The small leather disk attached to the holder is for the purpose of attachment to

the coat or dress sleeve; but the holder may be attached to the sleeve by a button, hook, or eye by varying the form of the holder. A A represent the spring-arms; B, the disk.

When the holder is made open at both ends, the center is not separated by the die.

It is very plain to all that this holder may be made single or double—that is, to snap at both or either end—and may be made adjustable to the cuff and sleeve by many forms of the device.

What I claim as my invention is—

The cuff-holder consisting of the spring-arms A and disk B, constructed and arranged substantially as described and shown, and for the purposes set forth.

HENRY B. ADAMS.
