UNITED STATES PATENT OFFICE.

NATHANIEL L. BRADLEY, OF WEST MERIDEN, CONNECTICUT, ASSIGNOR TO
BRADLEY & HUBBARD, OF SAME PLACE.

DESIGN FOR WINDOW-BRACKET.

Specification forming part of Design No. **8,057**, dated February 16, 1875; application filed December 5, 1874.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, NATHANIEL L. BRADLEY, of West Meriden, in the county of New Haven and State of Connecticut, have invented a new Design for Window-Bracket; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent a side view.

This invention relates to a design for bracket for suspending a vase or other ornament intended for windows, but may be used in other places, the trade-name being "window-bracket;" and the design consists in the configuration of the bracket as shown in the accompanying illustration, and hereinafter described.

The bracket consists of a main branch, A, of a vine, which forms the base. This is divided, the one part, B, turning back, the other part, C, curving outward, to form the hook by which to suspend the vase, the vine ornamented with leaves.

The method of attachment is no part of this design, the design for the bracket being the same whether used with or without a base or wall plate.

I claim—

The design for bracket, consisting of the branch A B C, as described, and shown in the accompanying illustration.

NATHANIEL L. BRADLEY.
