UNITED STATES PATENT OFFICE.

JACOB GULDEN, OF NEW YORK, N. Y.

DESIGN FOR MUSTARD-BOTTLE.

Specification forming part of Design No. **8,207**, dated March 16, 1875; application filed December 11, 1874.
[Term of Patent 3½ years.]

To all whom it may concern:

Be it known that I, JACOB GULDEN, of the city, county, and State of New York, have invented a new and original Design for a Mustard-Bottle, of which the following is a specification:

In the accompanying drawing, Figure 1 represents a side view, and Fig. 2, a central vertical section, of my new form of mustard-bottle.

This invention relates to a new form of mustard-bottle, which makes a pleasing effect, and is, by virtue of its configuration, better adapted to the holding of mustard or similar substances than the mustard-bottles usually employed.

My new bottle A has, vertically regarded, three subdivisions, *a*, *b*, and *c*. The base or lower part *a* has a straight vertical edge and is quite short, as shown. The main part or body *b* bulges out from the base *a*, forming a quarter-round connection *d* with the same. At the top the body *b* joins by a similar quarter-round connection, *e*, with the narrower

neck *c*. A straight short molding or band, *f*, is interposed between the neck *c* and the quarter turn *e* of the body *b*. The neck is at its lower part wider than in the middle, producing a concave outline until it reaches the band *f*, as shown. The upper part of the neck is straight and may be bounded by a top flange, *g*. This bottle has an appearance of compactness and strength. It has the useful effect that the usual quantity of mustard can be contained in a shorter bottle, thus making the ordinary tea-spoons and mustard-spoons better available. The ordinary mustard-bottles are of such length that a short spoon will be almost entirely concealed therein and rendered difficult to handle.

I claim as my invention—

The design for a mustard-bottle, composed of the parts *a*, *d*, *b*, *e*, *f*, and *c*, as shown.

JACOB GULDEN.
