# UNITED STATES PATENT OFFICE.

CHARLES KITSCHOLT, OF NEW YORK, N. Y., ASSIGNOR TO NICHOLAS MULLER'S SONS, OF SAME PLACE.

## DESIGN FOR INKSTAND-SUPPORTS.

Specification forming part of Design No. 8,556, dated August 3, 1875; application filed June 22, 1875.  
[Term of Patent 7 years.]

### CASE G.

*To all whom it may concern:*

Be it known that I, CHARLES KITSCHOLT, of the city, county, and State of New York, have invented a Design for Inkstand-Supports, of which the following is a specification:

The nature of my design is fully represented in the accompanying drawings, to which reference is made, and in which—

Figure 1 is a side, and Fig. 2 a plan view representing my design aforesaid.

The base A is of oblong shape, and each of its ends, as from *a* to *b*, forms the one-half of a hexagonal figure, these semi-hexagons being connected at front by an entrant curve, *c*, the back being straight, as from *b* to *b*. At this back *b* is a vertical pillar, B, terminating at top in ornamental painted figures *a'*. Moreover, midway from each lateral surface of the pillar aforesaid may spring a downward and outwardly-curving arm, *d*, connecting with the back *b* by small vertical columns *b'*. In each end portion of the base A is a recess or cavity,

*f*, and at each end of the base aforesaid is a horizontal ornamental band, *g*, attached at one end to the contiguous column *b'*, at the other to a similar column, *c'*, at the front of the base and midway to a like column, *f'*, at the extremity of the base.

The ends and front of the base are rabbeted, as shown at *n*, and from the upper edge of the rabbet the surface slopes upward and back, as shown at *r*, to the upper surface of the base.

I propose to make this design in bronze, or other metal or hard material.

What I claim as my invention is—

The design for an inkstand-support, comprising the oblong base A, formed with semi-hexagonal ends and the pillar B, the whole having the contour substantially as shown and described.

CHARLES KITSCHOLT.
