UNITED STATES PATENT OFFICE.

RUDOLPH CHRISTESEN, OF WEST MERIDEN, CONNECTICUT, ASSIGNOR
TO THE MERIDEN BRITANNIA COMPANY, OF SAME PLACE.

DESIGN FOR BAND FOR PLATED WARE.

Specification forming part of Design No. 8,596, dated September 7, 1875; application filed April 20, 1875.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, RUDOLPH CHRISTESEN, of West Meriden, in the county of New Haven and State of Connecticut, have invented a new Design for Banding; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent a face view.

This invention relates to a design for the article of manufacture commonly termed bands or banding for plated ware. This is made in strips or ribbons, rolled or stamped in dies, and cut to lengths required, to be placed around or upon various articles of plated ware as an ornament. This has heretofore been made with straight edges only, the ornamentation coming within the straight edges.

The object of this design is to make this article of banding much more ornamental, and, consequently, adapted to a greater variety of uses; and it consists in a banding, the edges of which are provided with tongues or scallops, as shown in the accompanying illustration, and more fully hereinafter described.

The edges of the band are formed in a succession of scallops or tongues, *a*. These may be considerably varied in form without materially changing or departing from this design. The surface of the article may be ornamented in any desirable style, the scallops allowing a much more varied and extended ornamentation than has heretofore been possible, said ornamentation being here represented by a succession of medallions; but this ornamentation forms no part of this design.

I do not wish to be understood as broadly claiming articles of table and other service ornamented by an irregular belt or border, this design being confined to the article of manufacture known as banding.

I claim—

The design for banding, consisting of a single strip or ribbon, the edges of which are formed in a succession of scallops or tongues, substantially as illustrated, and herein described.

RUDOLPH CHRISTESEN.
