# UNITED STATES PATENT OFFICE.

CHRISTIAN HERTER, OF NEW YORK, N. Y.

## DESIGN FOR A BRACKET.

Specification forming part of Design No. **8,695**, dated October 5, 1875; application filed August 27, 1875.

[Term of Patent  $3\frac{1}{2}$  years.]

*To all whom it may concern:*

Be it known that I, CHRISTIAN HERTER, of the city of New York, N. Y., have invented a Design for a Bracket, of which the following is a specification:

The illustration discloses the nature of design.

A is a wall-plate of any appropriate shape, from near the top of which springs a horizontal pipe, that is connected at right angles with a second horizontal pipe, B, at the ends of which are the vases C. D is an ornamental supporting-piece, that has the upper ends of its frame *d* carried over the pipe B, its lower part being reduced toward a point, and inclined inward and secured to the lower end of the wall-plate. The piece D is an open-work design of a vine and flowers, being a modification of a design which I have described and claimed in an application for Letters Patent of the United States, which I have prepared and filed, and which said design I do not therefore claim herein.

The vases C are mounted in forms and

adapted to present the *ensemble* of inverted conoids. Their upper parts terminate in pipes which are supplied with globe-rests and globes of any appropriate shape.

I prefer to make the cups or vases of Japanese or Chinese ware, and mount them in metallic forms; but I do not consider the colors of the material selected an essential element of the design.

What I claim as my invention and production, and desire to secure by Letters Patent, is—

1. A design for a bracket or gasalier, in which a cup or vase, of the shape shown, is mounted in a form, and employed substantially as specified.

2. A design for a bracket, substantially as shown.

Witness my hand this 21st day of August, A. D. 1875.

CHRISTIAN HERTER.
