# UNITED STATES PATENT OFFICE.

GEORGE A. BLAKE, OF NEW HAVEN, CONNECTICUT, ASSIGNOR TO BLAKE BROTHERS HARDWARE COMPANY, OF SAME PLACE.

## DESIGN FOR SASH-PULLEYS.

Specification forming part of Design No. **8,771**, dated November 9, 1875; application filed October 26, 1875.  
[Term of Patent 7 years.]

No. 24.

*To all whom it may concern:*

Be it known that I, GEORGE A. BLAKE, of New Haven, in the county of New Haven and State of Connecticut, have invented a new Design for Sash-Pulley; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent a perspective view.

This invention relates to a design for a face-plate of window-sash pulleys—that is to say, the pulley which is set in the frame, and over which the window-cord runs; and it consists in the ornamentation of the face-plate, as shown in the accompanying illustration.

The plate is formed with a matted ground, and with an edge around the plate in relief, forming a panel. A similar edge is also formed around the pulley-opening, and the space within the panel is ornamented by a "trefoil" tracery inclosing the screw-hole and working into the edge, as clearly shown in the accompanying illustration.

I claim—

The design for face-plate for sash-pulleys, consisting of the trefoil ornamentation on the face-plate, as described, and shown in the accompanying illustration.

GEORGE A. BLAKE.
