UNITED STATES PATENT OFFICE.

FREDERICK S. SHIRLEY, OF NEW BEDFORD, MASSACHUSETTS.

DESIGN FOR GLASSWARE.

Specification forming part of Design No. **8,824**, dated December 7, 1875; application filed November 24, 1875.
[Term of Patent 34 years.]

To all whom it may concern:

Be it known that I, FREDERICK S. SHIRLEY, of New Bedford, Bristol county, in the State of Massachusetts, have invented a Design for Glass-Vase Bodies, of which the following is a specification:

The nature of my design is fully shown in the accompanying photographic illustration, to which reference is made.

A is the glass-vase body, made of an elongated bell shape, or like a flaring cone, and finished at its mouth or upper edge with flaring curved lips or scallops, as shown at *a*. The exterior surface of this vase-body is ground off to produce a lusterless appearance. B B are ribs, which extend from the line of the base up along the exterior surface of the vase body to the upper edge or mouth, terminating there, one at the center of each of the flaring lips or scallops. These ribs are nicked or serrated throughout their entire length, and are highly polished.

This glass-vase body is intended to be mounted on a standard or base of metal or other material.

I prefer to use clear or colorless glass for the body, but either the surface of the vase or the ribs, or both, may be colored; but I do not consider the coloring to be an essential element in my design.

I am aware that glass vases having a bell or cone shape, and with flaring scalloped lips and longitudinal ribs, are not new, and I do not claim them. The distinctive character of my design is found in serrated and highly-polished ribs extending the length of the vase-body, the surface of which is ground off or lusterless.

What I claim as my invention is—

The design for a glass-vase body, in which serrated and highly-polished ribs extend longitudinally along the ground or lusterless surface of the body, substantially in the manner described.

FREDERICK S. SHIRLEY.
