UNITED STATES PATENT OFFICE.

HERMANN J. MÜLLER, OF NEW YORK, N. Y.

DESIGN FOR CLOCK-CASES.

Specification forming part of Design No. 9,008, dated February 15, 1876; application filed February 5, 1876.
[Term of Patent 3½ years.]

To all whom it may concern :

Be it known that I, HERMANN J. MÜLLER, of the city, county, and State of New York, have invented a new and original Design for Clock-Case, of which the following is a specification :

The nature of my design is fully represented in the accompanying photographic illustration.

A are the feet of the case, the surfaces of which are slightly inclined inward and upward, and are ornamented with sunken leaves and vines. The lower and inner edges of the feet A are curved, and have a scroll in relief, formed upon their upper parts.

In the center of the base is a shield, B, in relief, and ornamented with sunken vines and leaves. At the sides of the shield B are raised scrolls upon projections D, surrounded with a raised edge.

Upon the upper corners of the projections D are triangular ornaments C, having their lower edges scalloped, and being ornamented with sunken dots and lines.

At the tops of the feet A are formed rounded shoulders E, having square shoulders F above and below them.

From the upper shoulders F the lower part G of the body of the case rises with a slight inward curve, is ornamented with sunken leaves and angular and curved lines, and has a scalloped ornament, H, upon its middle part.

The edges of the lower part G of the body of the case are ornamented with a concavity, I, and a projection, J.

Upon the middle part of the side edges of the body of the case is formed an arm, K, the lower end of which is curved inward and upward, and joins the said edges. The upper end of the arms K is made in the form of a leaf,

and is ornamented with leaves and lines. The middle part of the arms K is connected with the edge of the case-body by an ornamental stud, L.

Upon the top of the case is an ornament M, made to represent leaves, arranged around a central boss, having a star formed upon it. The ornament M is ornamented with leaves and lines.

Beneath the lower side parts of the ornament M are two ornaments, N, leaving openings between them and the stem of the ornament M. The ornaments N are made with scalloped lower edges, and are ornamented with lines.

Upon the edges of the case, at the lower ends of the ornaments N, are formed rounded projections O, which are ornamented with lines and small circles.

Upon the side edges of the case, at the base of the arch or curve of its upper part, are formed ornamental projections P, made with a pointed outer part, having their upper and lower edges ornamented with curved projections and concavities, having their inner edges scalloped, and having in their faces ornamental recesses.

The doorway and door-frame are made with semicircular ends and parallel sides, and are ornamented with angular lines, triangular and circular dots, and other shaped figures, as shown in the illustration.

I claim as my invention—

A design for a clock-case, consisting of the ornamental configuration herein shown and described.

HERMANN J. MÜLLER.
