UNITED STATES PATENT OFFICE.

WALTER W. STANARD, OF BUFFALO, NEW YORK, ASSIGNOR TO JEWETT & ROOT, OF SAME PLACE.

DESIGN FOR PARLOR-STOVE.

Specification forming part of Design No. 9,320, dated May 30, 1876; application filed May 10, 1876.
[Term of Patent 7 years.]

To all whom it may concern :

Be it known that I, WALTER W. STANARD, of the city of Buffalo, in the county of Erie and State of New York, have invented and produced a new and original Design for Parlor-Stoves, of which the following is a full, clear, and exact description, reference being had to the accompanying photographic illustration, making part of this specification.

My invention relates to a design for the general configuration and ornamentation of a parlor-stove of cast-iron.

The nature of my design is fully represented in the accompanying photographic illustration, to which reference is here made.

A represents the top cover; B, the top ring; C, the ring connecting the latter with the case D surrounding the magazine; E, the frame of the combustion-chamber; F, the mica windows arranged in the doors thereof; G, the frame surrounding the fire-pot, and H the mica doors thereof; I, the top plate of the ash-pit; K, the case of the latter; L, the door thereof; M, the base-plate, and N the legs of the stove.

The top cover of A is provided with an ornamental hexagonal urn or vase, *a*, having handles *a'*, the lower parts of which are made perpendicular, while their upper portions are drawn inward over the top of the vase, as clearly shown.

The top ring B is formed with a plain edge or face, and provided on the adjacent convex portion with a circular band of ornaments, *b*.

The connecting-ring C is made in the form of an ogee molding, and provided with a narrow band of ornaments, *c*.

The case D is divided into several panels or fields by vertical bands *d*, provided with inclined parallel corrugations or ribs. Each field is provided with three columns in bass-relief, connected at the top by ornamented double arches, the space between each pair of columns being embellished with a sunk ornament, *d'*, as clearly represented. A narrow band of arrow-shaped ornaments is arranged around the upper and lower edge of the case D. The ring D' at the lower edge of

the case D is ornamented in the same manner as the top ring B.

The frame E of the combustion-chamber and the frame G surrounding the fire-pot are divided into the same number of panels as the case D by vertical corrugated bands corresponding with the bands of the case D, and the ring E', arranged at the lower edge of the frame E, and the top plate I of the ash-pit, are ornamented substantially in the same manner as the top ring B. Each of the panels of the frame E is provided with a door having two mica windows, F F, the tops of which are made semicircular, while their bases are straight, with a small circular arch in the center thereof. A narrow band of ornaments is arranged at the junction of the windows F with the frame E, and at the top the windows are provided with ornaments resembling clusters of grapes.

Each of the fields of the lower frame G is provided with a door, composed of two mica windows, the lower corners of which are made rectangular, while their upper corners are broken or beveled, as clearly shown. The faces of the window-frames are provided with parallel inclined ribs or corrugations and a narrow band of ornaments is arranged around the outer edge of the window-frames.

The case K of the ash-pit is made of a concave cylindrical form, and provided with several panels, R, the top of which is formed by a number of intersecting arches, and which are provided on their plain surface with a sunk ornament, as clearly shown. The space between the panels *k* is embellished with checkered work, the squares being alternately smooth and ribbed. Below the top-plate I of the ash-pit is arranged a band of pendent ornaments, resembling clusters of grapes.

The base-plate M is provided with three bands of ornaments of different width, the lower one being the widest, the next higher one of less width, and the upper band the narrowest.

The legs N are provided with a sunk ornament, arranged in a circular field, sur-

rounded by ribs radiating therefrom, as clearly shown.

I claim as my invention, and desire to secure by Letters Patent—

The design for the general configuration of the stove, and the ornamentation of the top cover A, top-ring B, connecting-ring C, case D, combustion-chamber E, mica windows F,

fire-pot frame G, mica doors H, plate I, ash-pit case K, base-plate M, and legs N, substantially as shown and described.

WALTER W. STANARD.
