UNITED STATES PATENT OFFICE.

DANIEL A. KIMBARK, OF CHICAGO, ILLINOIS, ASSIGNOR OF ONE-HALF HIS
RIGHT TO GEORGE W. DAILEY, OF NEW HAVEN, CONNECTICUT.

DESIGN FOR CARRIAGE-STEPS.

Specification forming part of Design No. **9,461**, dated August 22, 1876; application filed July 24, 1876.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, DANIEL A. KIMBARK, of Chicago, in the county of Cook and State of Illinois, have invented a new Design for Carriage-Step; and I do hereby declare the following, when taken in connection with the accompanying drawings, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent, in—

Figure 1, a top or face view; Fig. 2, a front-edge view; and in Fig. 3, a section on line S S.

This invention relates to a design for carriage steps, with special reference to the upper surface, the object being to produce the necessary roughened surface, and at the same time an ornamental effect; and consists in the peculiar arrangement of ribs, as shown in the accompanying illustration.

On the surface of the step a circular panel is formed by a raised rib, and from the center six radial ribs extend to the circular border, forming three pair, and within each pair an inwardly-turned segment extends, from the intersection of one rib with the circle to the intersection of the other, as shown in the accompanying illustration, the ribs being of Λ form.

I claim—

The design for carriage-step, herein described, consisting of the circular rib, combined with the radial ribs and intersecting segments, as shown in the accompanying illustration.

DANIEL A. KIMBARK.
