UNITED STATES PATENT OFFICE.

GEORGE W. SHEDD, JR., OF BOSTON, MASSACHUSETTS, ASSIGNOR TO
CHARLES C. TOPLIFF, OF FISHERSVILLE, NEW HAMPSHIRE.

DESIGN FOR BOTTLES.

Specification forming part of Design No. 9,495, dated September 12, 1876; application filed September 2, 1876
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, GEORGE W. SHEDD, JR., of Boston, State of Massachusetts, have invented a new and Improved Bottle, of which the following is a specification:

The nature of my invention is fully shown in the accompanying photographic illustration, to which reference is made.

The object of the invention is to provide a neat and striking design for a bottle for Cologne or other purposes; and the design consists of a rimmed cylindrical base part, a tapering neck with panels, and a smooth top or crown part of the neck.

Similar letters of reference indicate corresponding parts.

A represents the cylindrical base part, which has a bottom and top rim, *a*. The top rim *a* connects by a slight bulge with the tapering neck B, that forms panels, on which the firm, name of the article placed in the bottle, trade-mark, &c., may be molded. The

upper end of the paneled neck part communicates again by a bulging rim, *b*, with the slightly-tapering and smooth top or crown part C of the neck, into which the cork is inserted.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

1. The design for a bottle composed of a cylindrical base part, tapering and paneled neck part, and smooth top or crown part above paneled neck, substantially as shown and described.

2. The design for a bottle in which the middle, tapering, or neck part is paneled and connected with the base and top parts by bulging rims, substantially as shown and described.

GEORGE W. SHEDD, JR.
