UNITED STATES PATENT OFFICE.

ALEXANDER CAMPFIELD, OF NEWARK, NEW JERSEY.

DESIGN FOR TRUNKS.

Specification forming part of Design No. **9,496**, dated September 19, 1876; application filed August 4, 1876.
[Term of Patent 3½ years.]

To all whom it may concern:

Be it known that I, ALEXANDER CAMPFIELD, of Newark, Essex county, New Jersey, have invented and originated a new and original Design for the Exterior of a Trunk, of which the following is a specification:

The nature of my design is clearly shown in the accompanying photographic impression, to which reference is made; and consists of a series of chevrons, differing in size, placed one above the other, and forming a series of small squares, four of which are, in turn, combined to form larger squares. Below the smallest chevron of each series is placed a bifid figure, and below the bifid figure a dot.

The small squares are so arranged that in the formation of the large squares two of the bifid figures and dots are brought into the

center of each of the large squares. The spaces surrounding the large squares are ornamented by a series of lines differing in length, placed one above the other, and running in a direction contrary to the lines of which the small squares are composed.

Having now set forth my invention, what I claim as new is—

The design, as shown, formed by combining a series of chevrons, differing in size, placed one above the other, and forming squares, with a diamond-shaped dot below the smallest chevron.

ALEXANDER CAMPFIELD.

In presence of—

A. SIDNEY DOANE,
W. V. H. HICKS.
