# UNITED STATES PATENT OFFICE.

JOHN E. HEUÄCKER, OF NEWARK, NEW JERSEY.

## DESIGN FOR GLASS AND EARTHEN WARE.

Specification forming part of Design No. 9,661, dated December 5, 1876; application filed November 22, 1876.

[Term of Patent 14 years.]

*To all whom it may concern:*

Be it known that I, JOHN E. HEUÄCKER, of Newark, in the county of Essex and State of New Jersey, have invented a new and original Design for Glass and Earthen Ware, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making part of this specification, in which drawing—

Figure 1 represents a plan or top view. Fig. 2 is a transverse vertical section.

Similar letters indicate corresponding parts.

This invention relates to a design for a combination-dish of glass, porcelain, or clay, the rim of which is composed of two convex curves, which run into a rectilinear partition, and the outlines of which are united by segmental depressions.

In the drawing, the letter A designates my dish, which consists of two compartments, separated from each other by a rectilinear partition, *a*, from the ends of which extend the rims *b*. The top edges of the partition

and of the rims are convex, as shown in Fig. 2, and the interior line of the rims are composed of curves *c* and straight lines *d*, as shown in Fig. 1. At the points where the rims *b* of the two compartments join each other segmental depressions *e* are formed, as shown. By these means a combination-dish is obtained which has a novel and distinguishing appearance.

What I claim as new, and desire to secure by Letters Patent, is—

The design for a combination-dish, A, having a rectilinear partition, *a*, and rims *b*, composed of curves *c*, straight lines *d*, and segmental depressions *e*, all as shown and described.

In testimony that I claim the foregoing I have hereunto set my hand and seal.

JOHN E. HEUÄCKER. [L. S.]
