# UNITED STATES PATENT OFFICE

JAMES M. BROOKFIELD, OF BROOKLYN, NEW YORK.

## DESIGN FOR TELEGRAPH-INSULATOR.

Specification forming part of Design No. **9,858**, dated March 20, 1877; application filed February 1, 1877.  
[Term of Patent 14 years.]

*To all whom it may concern:*

Be it known that I, JAMES M. BROOKFIELD, of Brooklyn, in the county of Kings and State of New York, have originated an Improved Design for Telegraph-Insulators, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making part of this specification, which drawing represents a side view of my insulator.

This design consists in the combination of a cylindrical shaft, a semicircular bead projecting beyond this shaft, a semicircular groove, and a hemispherical top, whereby a novel and ornamental appearance is imparted to my insulator.

In the drawing, the letter A designates my telegraph-insulator, which is formed with a cylindrical shaft, *a*, a semicircular bead, *b*, projecting beyond the surface of said shaft, a

semicircular groove, *c*, forming the hollow member, whereby the bead *b*, is connected to the hemispherical top *d*.

By these means an insulator is obtained which has a novel and ornamental appearance.

What I claim as new, and desire to secure by Letters Patent, is—

The design for a telegraph-insulator composed of a cylindrical shaft, *a*, a semicircular bead, *b*, a hollow member, *c*, and a hemispherical top, *d*, all as shown and described.

In testimony that I claim the foregoing I have hereunto set my hand and seal this 29th day of January, 1877.

JAMES M. BROOKFIELD. [L. s.]
