UNITED STATES PATENT OFFICE

FRANCIS T. FRACKER AND LOUIS WIDMAYER, OF NEW BRITAIN, CONN.,
ASSIGNORS TO P. AND F. CORBIN.

DESIGN FOR HINGES.

Specification forming part of Design No. 9,882, dated April 3, 1877; application filed March 16, 1877.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that we, FRANCIS T. FRACKER, and LOUIS WIDMAYER, both of New Britain, in the State of Connecticut, have invented or produced a Design for Hinges, of which the following is a description:

The design is shown in the accompanying drawing, the two leaves being disconnected. The faces of the hinge-leaves are made as sunken panels. The border of the panels may be left in straight lines or broken up by ornaments, as at *a*. Above the ornamented part of the border *a* is formed the scroll-ornament in relief, consisting of the two parts *b* connected to the center-piece *c*. The figures on each leaf are made to face each other, thus giving a pleasing effect when the hinge is open.

The cylindrical part or knuckle is made

with sunken panels, in which are placed in relief the arabesque ornaments *d e f*. The back part of the knuckle is ornamented in the same manner.

We claim as our production—

1. The design of the border of the panel *a* and the scroll-ornament *b c*, as shown in the drawing.

2. The design of a hinge-knuckle formed by the arabesque within a sunken panel, as shown in the drawing.

Signed by us this 15th day of March, A. D. 1877.

FRANCIS T. FRACKER.
LOUIS WIDMAYER.
