AU 291

EX

OR D 9,960

Design No. 9,960, dated May 8, 1877

No. 604.

UNITED STATES PATENT OFFICE.

JAMES MORGAN, OF BROOKLYN, NEW YORK.

DESIGN FOR A MONUMENT.

Specification forming part of Design No. **9,960**, dated May 8, 1877; application filed April 27, 1877.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, JAMES MORGAN, of Brooklyn, Kings county, New York, have invented a Design for a Monument, of which the following is a specification:

The nature of my design is fully shown in the accompanying drawing, to which reference is made.

The invention relates to a design for grave-monuments; and consists of two base stones or steps, with tapering intermediate parts, and of an obelisk-shaped middle portion, with enlarged capital or top.

In the drawing, A and B are the base-stones, of diminishing size, which are connected by a tapering part, *a*, interposed between the first and second step.

The second step is connected, by an ogee molding, *b*, and small square step *d*, with an

obelisk-shaped middle portion, C, of tapering shape, that supports the enlarged capital D. The connection of the middle portion C and capital D is made by a raised band, *e*, and outwardly-curved part *f*.

The capital has water-shedding ridges *g*, with central curved and ornamented cappings *g'*, of varying shape.

I claim as my invention—

The design for a monument, formed of base of steps of diminishing size, intermediate tapering parts, a middle obelisk-shaped portion, with raised top band, and of an enlarged capital with inclined ridges and central raised cappings, substantially as shown and described.

JAMES MORGAN.
