

Design No. 9,962, dated May 8, 1877

FIG. 1.

FIG. 2.

No. 606.

UNITED STATES PATENT OFFICE.

JAMES MORGAN, OF BROOKLYN, NEW YORK.

DESIGN FOR A MONUMENT.

Specification forming part of Design No. **9,962**, dated May 8, 1877; application filed April 27, 1877.

[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, JAMES MORGAN, of Brooklyn, county of Kings, and State of New York, have invented a Design for a Monument, of which the following is a specification:

The nature of my design is fully shown in the accompanying drawing, to which reference is made, and in which—

Figure 1 is a front view, and Fig. 2 a side view, of the monument.

Similar letters of reference indicate corresponding parts.

The design relates to a monument for graves; and consists of base stones or steps, a middle diminishing section, and side-projecting top section, with plain tapering cap and side ridges.

In the drawing, A A are the base stones or steps, of diminishing size and height, and connected with each other and with the middle section B by intermediate tapering parts a.

The middle section B has a square lower part and a slightly tapering upper part, connected therewith by concave side moldings *b*. The top C is slightly enlarged by sidewise-projecting moldings *d* and a square portion, *f*, having a cup tapering from the sides to the center, and having ridges *g*, beveling off from their center lines toward the front and rear sides of the top, as shown clearly in Fig. 2.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The design for a monument, formed of a base of steps with intermediate tapering parts, of a middle section with slightly-diminishing upper part, and of a top with projecting side molding, tapering cap, and beveled side ridges, substantially as shown and described.

JAMES MORGAN.
