

Design No. 9,963, dated May 8, 1877

Fig. 1

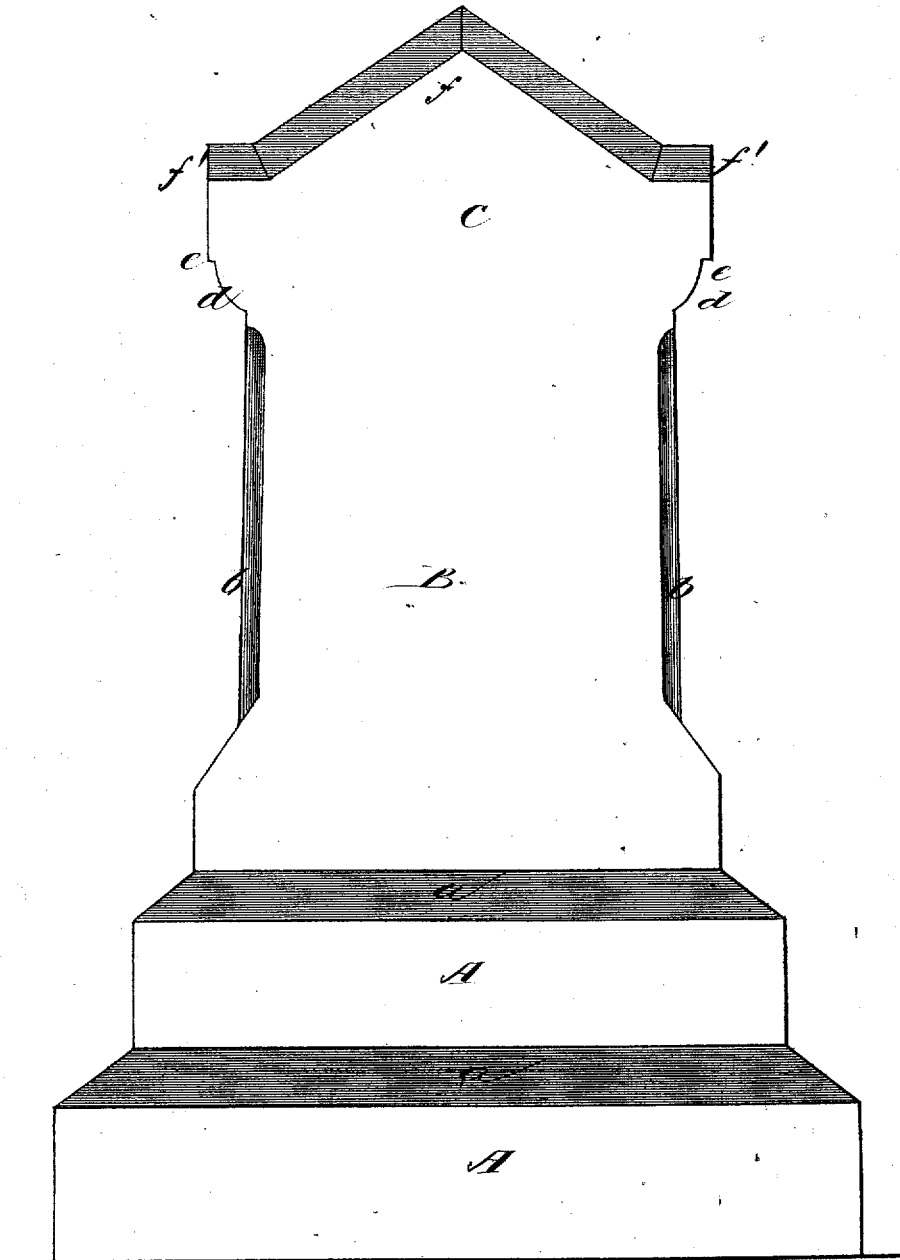

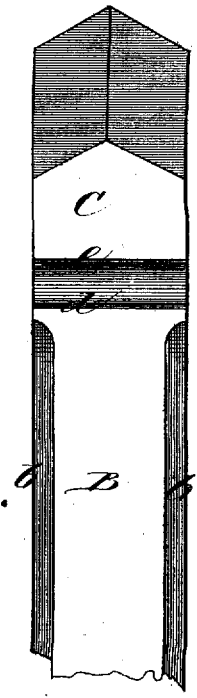

Fig. 2

No. 607.

UNITED STATES PATENT OFFICE.

JAMES MORGAN, OF BROOKLYN, NEW YORK.

DESIGN FOR A MONUMENT.

Specification forming part of Design No. 9,963, dated May 8, 1877; application filed April 27, 1877.

[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, JAMES MORGAN, of Brooklyn, county of Kings, and State of New York, have invented a Design for a Monument, of which the following is a specification:

The nature of my design is fully shown in the accompanying drawing, in which—

Figure 1 represents a front view, and Fig. 2 a side view, of the monument.

Similar letters of reference indicate corresponding parts.

The invention relates to a design for a grave-monument, having base stones or steps, plain middle portion, and plain top, enlarged by side-projecting parts, with cappings.

In the drawing, A A are the base stones or steps, which are connected with each other and the middle section B by tapering parts, the steps diminishing in width and height. The middle section B rises, by a plain square portion, from the base-steps; tapers then to the straight upper partition, having cut-away edges *b*, which run up nearly to the top C.

The top C projects, by convex side moldings *d* and a square step, *e*, from the middle section, having a central tapering cap, *f*, and horizontal side caps *f'*. The raised center cap *f* and the side caps have ridges, dishing toward the front and rear sides of the monument.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The design for a monument, having base-steps of diminishing size, with intermediate tapering parts, a middle section, with upper part of less width than the lower, and with cut-away edges, and a top with side projecting parts, raised center, and horizontal side caps with transverse ridges, substantially as described and shown.

JAMES MORGAN.
