Design No. 9,965, dated May 8, 1877

# UNITED STATES PATENT OFFICE.

JAMES MORGAN, OF BROOKLYN, NEW YORK.

## DESIGN FOR A MONUMENT.

Specification forming part of Design No. 9,965, dated May 8, 1877; application filed April 27, 1877.  
[Term of Patent 7 years.]

*To all whom it may concern:*

Be it known that I, JAMES MORGAN, of Brooklyn, county of Kings, and State of New York, have invented a Design for a Monument, of which the following is a specification:

The nature of my design is fully shown in the accompanying illustration, to which reference is made.

The design consists of a monument for graves, having pyramiddally-tapering base, plain middle section or trunk, and enlarged top or capital, with surmounting pyramidal cap.

In the drawing, A represents the base, which consists of three base stones or steps, *a b d*, of diminishing size and intermediate tapering parts *a'* and *b'* between the first and second and second and third step. An inclined step, *e*, rests on the uppermost step *d*, and has a concave groove, *e'*, dividing it near the center thereof. The middle section or trunk B rests by a narrow base-step, *f*, on the base A, tapers slightly toward the upper end, which has an ornamental band, *f'*, the capital C resting thereon. The capital C is enlarged, extending from the trunk B by a groove, *g*, concave molding *g'*, step *g''*, outwardly-inclined step *g'''*, to the square head of the capital. The capital C has raised center ridges *h* at each side, and supports a pyramiddally-shaped cap, D, with crowning-capital D' of smaller size than the main capital, but corresponding in

shape therewith. The crowning-capital D' has smaller side ridges than front ridges, and suitable ornaments to the face of the larger ridges.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

1. The design for a monument consisting, essentially, of a pyramiddally-tapering base, a middle trunk-section, an enlarged capital, with pyramidal surmounting cap, having smaller top capital, substantially as specified and described.

2. The design for a monument having a base part, consisting of steps *a*, *b*, and *d*, intermediate tapering parts *a'* *b'*, and inclined and grooved step *e e'*; next, of a trunk-section, B, with narrow base-step and top band; and, finally, of an enlarged capital, with surmounting pyramidal cap, and smaller top capital, substantially as specified and described.

3. The design for a capitol for monuments composed of a base-capital, with center ridges *h*, a pyramidal cap, D, and a smaller crowning-cap, D', with larger front and back, and smaller side ridges, substantially as described and shown.

JAMES MORGAN.
