DESIGN FOR STUDS AND BUTTONS.

Specification forming part of Design No. **10,045**, dated June 5, 1877; application filed May 11, 1877.
[Term of Patent $3\frac{1}{4}$ years.]

UNITED STATES PATENT OFFICE.

JAMES W. MILLER AND ISAAC M. MILLER, OF NEWARK, NEW JERSEY.

DESIGN FOR STUDS AND BUTTONS.

Specification forming part of Design No. **10,045**, dated June 5, 1877; application filed May 11, 1877.
[Term of Patent $3\frac{1}{2}$ years.]

To all whom it may concern:

Be it known that we, JAMES W. MILLER and ISAAC M. MILLER, of Newark, county of Essex, State of New Jersey, have originated a useful Design for Studs and Buttons, of which the following is a full, clear, and exact description, reference being had to the accompanying photographic illustration, making a part of this specification.

A represents the body of the stud or button D, which is to be made diamond-shaped. In the center of A are placed four or more balls, *b*, which are clustered together. At *c* are placed four posts *d*, *d*, *d*, and *d*, which extend a little above the top of the body A of the stud or button D. These posts are formed of two or more bars, on the outside of which is placed an imitation of a rope.

From post to post, across and upon the top of the body A, are stretched three or more cords of braided or twisted gold, *e*, and around the outer edge of the body A is placed a single and continuous cord of braided or twisted gold, *f*.

What we claim as our invention is—

A design for a stud and button, consisting of the diamond-shaped body A, when ornamented on the top and edge, as described, and provided on the side with the posts *d d d d*, substantially in the manner above described.

JAMES W. MILLER.
ISAAC M. MILLER.
