UNITED STATES PATENT OFFICE.

WILLIAM W. LYMAN, OF MERIDEN, CONNECTICUT, ASSIGNOR TO MERIDEN
FLINT GLASS COMPANY, OF SAME PLACE.

DESIGN FOR GLASS SHADES.

Specification forming part of Design No. **10,134**, dated July 31, 1877; application filed June 20, 1877.

[Term of Patent 7 years.]

To all whom it may concern :

Be it known that I, WILLIAM W. LYMAN, of Meriden, in the county of New Haven and State of Connecticut, have invented a new Design for Glass Shade; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawing constitutes part of this specification, and represents a sectional side view.

This invention relates to an improvement in the form of glass shades or globes, such as used for illuminating purposes; and consists in the peculiar configuration shown in the accompanying illustration, and hereinafter described.

The general outline of the shade is spherical. Near the top, or at a point where the

sphere measures about two-thirds of its largest diameter, or about four-fifths the vertical diameter of the shade, as at *a*, the surface turns upward in a reverse curve, but contracting, the extreme height being substantially level with the vertical pole of the spherical part, and as shown in the drawing. At the bottom the usual flange *d*, for holding the shade, is provided.

I claim—

The design for glass shade, consisting of the spherical body, contracted from a point, *a*, or at about four-fifths the height of the shade, in a reverse curve to the top, as shown in the accompanying illustration.

WILLIAM W. LYMAN.
