UNITED STATES PATENT OFFICE.

JAMES W. TUFTS, OF MEDFORD, MASSACHUSETTS.

DESIGN FOR CASINGS OF SODA-WATER APPARATUS.

Specification forming part of Design No. **10,137**, dated July 31, 1877; application filed July 5, 1877.
[Term of Patent 14 years.]

To all whom it may concern:

Be it known that I, JAMES W. TUFTS, of Medford, in the county of Middlesex and State of Massachusetts, have invented and produced a new and original Design for the Casing of a Soda-Water Apparatus, of which the following is a full, clear, and exact description, reference being had to the accompanying photograph, making part of this specification.

In the photograph, A represents the casing of a soda-water apparatus, the base of which is of rectangular form. The front and rear sides *a b* extend up vertically, while each of the two opposite ends *c* is beveled or inclined inward from the base to the flat top or cover *d*, thus relieving the casing of the square or box-like appearance which would be presented if the ends *c* extended upward in vertical plane. The front and rear plates *a b* are each beveled or inclined from *e* to *f*, to correspond to the inclination of the ends *c*, and are each

provided with an ornamental top or projection, *g*, sloping on each side from the point *f* to the apex *h*, a unique and ornamental design being thus produced.

If desired, the casing A may be embellished with panels or tablets, to give it a more highly-finished appearance.

What I claim as my invention, and desire to secure by Letters Patent, is—

The design of the casing A, having vertical front and rear sides *a b*, with ornamental projections *g*, sloping on each side from the point *f* to the apex *h*, and inwardly and upwardly inclined ends *c*, substantially as herein shown and described.

Witness my hand this 29th day of June, A. D. 1877.

JAMES W. TUFTS.
