UNITED STATES PATENT OFFICE

JOHN W. BURGESS, OF NEW YORK, N. Y.

DESIGN FOR HANDLES FOR DISHES.

Specification forming part of Design No. **10,234**, dated September 11, 1877; application filed July 23, 1877.
[Term of Patent 7 years.]

To all whom it may concern:

Be it known that I, JOHN W. BURGESS, of the city of New York, county and State of New York, have originated and designed a Handle for the Covers and Sides of Dishes and other goods of earthenware, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making a part of this specification, in which—

Figure I is a side view, and Fig. II a top view, of my design.

A represents the handle, which consists of two square-formed segments, B B, the lower parts of which are attached to the cover or dish.

These segments are ornamented on the edges and top with straight moldings *b b*. The segments are joined together at the top by aid of a circular disk or ball, *c*, surmounted with an ornamental Greek cross.

In the top of the cover, or on the sides of the dish, whereto the handle is attached, are placed ornaments *d d*, in form of ends of bands, running out from the lower part of the handle over the surface of the cover or dish.

A band, *e*, is placed across the lower end of the handle, where the ornaments *d d* commence.

What I claim as my invention is—

A design for handles for dishes, consisting of the base-molding with its diverging end straps *d* and band *e*, and the semicircular top B, ornamented at its center with the ball or disk *c*, surmounted with an ornamental Greek cross, as shown and described.

JOHN W. BURGESS.
